BRANCHES IN ALL THE PRINCIPAL CITIES

Whoever It Was That Said "Nothing Could Be Better Than Its Weakest Part," Hit the Nail Squarely on the Head

There are a hundred ways of making writing paper, but only one way to make it right — right in color, surface and strength — and that is the way we make BROTHER JONATHAN BOND.

BROTHER JONATHAN BOND is for the better class of business stationery. It has gained a reputation for quality which is the envy of every bond paper manufacturer. We make it in tremendous quantities, which gives us an advantage in production cost, the benefits of which we are glad to pass on to our customers. You can be proud of every lot of stationery you turn out on BROTHER JONATHAN BOND and feel confident that it will earn repeat orders for you.

BROTHER JONATHAN BOND is made in matchless white and a wide assortment of beautiful tints. It can be had in plain or linen finish, with envelopes to match.

Send for a copy of "An Exhibit," which shows the complete variety of colors, actually printed, lithographed, die-stamped and embossed in modern letter-head form.

The Firm of Practical Men

The C. I. Johnson Mfg. Co. is the only firm of practical men in the Northwest handling printing machinery. By the term Practical Men, is meant the ability to take down and erect and rebuild any machine or machinery used in the printing business. That is what three out of four of the members of this firm can do.

When the owners, the men at the head of the business, are practical men in their line, does it not seem reasonable that they will see that machines are right before delivering them, when these men know from their own knowledge whether a machine is properly rebuilt, not having to rely on some other party's word or opinion?

Are not practical men apt to know what is needed to fill your requirements and to deliver what you want and what you expect? Are not practical men likely to be careful when they buy machines and buy only those which they know from their own knowledge can be rebuilt properly?

The personnel of the C. I. Johnson Mfg. Co. is composed of practical men, and when they say that a machine is ready to be shipped and to do the work as it ever did, in the hands of competent workmen, the purchaser knows that he is getting what he bought.

Send for latest "Big List of Johnsonized Machinery," giving descriptions and prices on fifty-five rebuilt cylinder preses and ninety-nine rebuilt miscellaneous machines, most of them now in stock.

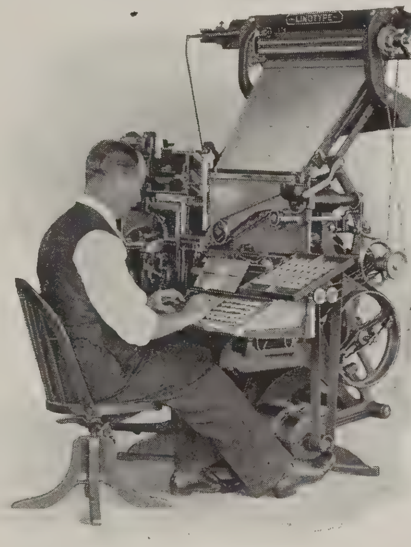
LINOTYPE

Model 10
Single-Magazine Two-Letter Linotype



$2,250
Sold on Easy Terms

The Amador Ledger,
Richard Webb, Prop.

Jackson, Cal., March 16, 1912.

Mergenthaler Linotype Company.

Gentlemen:—I installed a Model 10 in November, 1911, and am pleased to bear testimony to the excellence of the machine. Am perfectly satisfied with it in every way. It has given us not the least trouble, and during the whole time it has not cost one cent for repairs.

Had never operated a Linotype keyboard before, and had not seen one in operation more than half a dozen times. Without any instruction other than one week by an expert who assisted in installing it, I have met with no difficulty in operating it.

With less help, I have been able to get out an eight-page all-home-print paper in shorter time and entirely without the aid of plate matter. It has been of much assistance in the job department also.

I consider the machine a "dandy." Just the thing for a country office. It measures up to all you claim for it, and I would not dispense with the "Linotype Way" for any consideration.

The Model 10 is all right.

RICHARD WEBB.

The New Toggled Oswego Lever

CUTS LIKE CHEESE AND DOES NOT RACK YOUR BACK

(Patent Pending)

A new device on *Oswego* Cutters that makes the final cut a pleasure.

No jumping on the lever to get the knife 'way down.

Note the new straight girders, taking all the strain direct against the frames.

No bellied table to gouge the cut.

No knife-bolt slots to waste your time adjusting.

Just the cleanest, quickest, strongest, handsomest Lever Cutting machine that over a third of a century's experience and work along this one line of cutters is able to produce.

This pictures only one of the ninety sizes and styles of the *Oswego* and *Brown & Carver* and *Ontario* cutters that are made at Oswego as a specialty. Each Oswego-made cutter, from the little 16-inch Oswego Bench Cutter up to the large 7-ton *Oswego Auto Rapid Production* Cutter, has at least three points of excellence on Oswego Cutters only. Ask about the Vertical Stroke Attachments for cutting shapes.

It will give us pleasure to receive your request for our New Book No. 8, containing valuable information. Won't you give us that pleasure?

REDUCE COSTS OF PRODUCING PRINTING

TURN WASTE INTO PROFIT

by the old-time method of economy; not cheese-paring economy, but wise and real economy; save the waste.

In every office there is a large daily accumulation of waste paper; it is worth money—a great deal of money. If you save it all, buy a WOLVERINE BALER (sold for $45 or $60 according to size) you can declare a dividend from proceeds of sale. And you will improve sanitary conditions; reduce risk by fire, pay 100% to 200% on the necessary investment, encourage economy in your force.

We make and sell type.

The Goal

has changed since the chariot-driver contested for Royal favor.

Yet the qualities which enabled the driver of those days to win are the qualities we are using today to win business. The race is no less spectacular because it employs brains instead of chariots.

The best that his horses and equipment could do under the most favorable circumstances—that was all the driver could ask.

This is the standard which BARNES-CROSBY COMPANY sets for itself—*the making of illustrations and printing plates which will give you the greatest service in the race against competion.* To do this we operate our Chicago plant day and night—employ a staff of over a hundred artists, and have extended our organization until it touches almost every great commercial center. These are the facilities we place at your command.

The Babcock Flat-Beds

The Babcock Flat-Beds

We make flat-bed presses; nothing else. We do not make rotary, web or offset machines. We concentrate upon Babcock flat-bed presses the best in brains and work, tools and materials, that we possess or can obtain. Our success depends entirely upon them. Nothing is overlooked that will add to their perfection.

Three styles and eleven sizes of the Optimus two-revolution, and seven styles and fourteen sizes of one-revolutions, cover all classes of flat-beds in general use. Every printing purpose within their broad range is provided for. One is especially made for the richest and most difficult work of the metropolitan manufacturer of printing, and another for the country office. A third will print pony work surprisingly fast at 3600 an hour, and a fourth will print a seven-column quarto at 2600 or more. For other kinds of work we have its proper press. Any one of them is made automatic by attaching a mechanical feeder. Some we adapt to special requirements, and use for printing tin, steel, wood, bags; for cutting, creasing, etc.

None of them have equals at moderate cost in speed or quality of product. When they were better than all others, they had to be better; when we believed it impossible to build presses as good, they had to be better; and when we believed them the best possible, they had to be better. This is the spirit controlling the construction of Babcock presses. They will satisfy you.

Hamilton's MODERNIZED COMPOSING-ROOM FURNITURE

NOW AVAILABLE IN WOOD OR STEEL

QUALITY is the first consideration in high-grade and costly business furniture. Few buyers realize that the price can be put at almost any point necessary in meeting competitive requirements.

BUT The absolute minimum price can not be reached without the manufacturer sacrificing his legitimate profit or the customer suffering through a lowering of the standard in quality.

It has always been the policy of the Hamilton Company to maintain and constantly improve the quality of its product, placing the price at the lowest possible point consistent with that quality. This policy of maintaining quality which includes stability and practicability as well as appearance is doubly applicable to the new and comparatively costly line of pressed steel equipment.

We will not be satisfied in occupying any other position before the most critical printing trade than to have it known that our product is the best available and the best possible according to the present development of the art. Certainly the construction of an economical line of composing-room furniture is a necessary adjunct of the printing art.

Views as to One Cent Letter Postage and Second Rate Mail Matter

DISCUSSIONS of postage rates and their effects on publications are interminable and yet there are doubtless some good results to come from these discussions.

Editor I. W. Heminger discusses these subjects at some length in an issue of the Findlay, O. "Republican," commenting on an address of Charles William Burrows, in favor of one cent letter postage. While we give herewith his views, we wish to remark that there are many other questions than those that he presents that are to be considered.

It is only a theory that one cent letter postage will be of great benefit, or whether such a rate would be just under all conditions. First class mail matter demands and receives special care and promptness in delivery. The payment of a higher rate of postage, shown by the stamps on the letters, indicates special value and commands care and prompt delivery and results in securing the attention and consideration of the person addressed.

For these very reasons there is much matter that could be sent at one cent rate, that is now sent under letter postage in order to secure these desirable ends. There should be a discriminating rate for first-class matter, just as certainly as a greater rate is charged for the shipment of diamonds than for the shipment of wheat by express or transportation companies.

Newspapers and periodicals promote the business of the Postal Department in first-class matter to the amount of millions of dollars each year, besides directly rendering a service to the people who constitute the government, in informing them as to, and educating them in, all matters necessary to the conducting their government and in carrying forward all the educational, commercial and industrial activities.

Without the newspapers and periodicals, free government in this broad land, reaching over such vast territory, would be impossible and all trade and industry would languish. The press is today the most useful and effective arm of free government.

The other matters involved have been so frequently discussed in these pages that further reference thereto, here, is not deemed necessary. To our mind, the belief of injury from the circulation of metropolitan dailies, or other publications, in a local field is not well founded. There are some sixty neighborhood papers published in the city of Chicago, where the great dailies are published, and these neighborhood papers are prosperous and popular.

The county-seat paper gives the county-seat and all the local county news from the different neighborhoods which the metropolitan papers can not give, and discusses and promotes all the local and county interests. The county-seat dailies are taken because of the local news and the existence of local dailies has greatly curtailed the circulation of the great city dailies, so that these have become largely home papers.

There was a time when the New York Daily Tribune was taken throughout the whole nation, but this is no longer the case. The general, outside circulation of the great city dailies, in proportion to the increased population, is much less than was the case thirty or forty years ago. The people want the home news first and when the home daily gives the general news to an extent to satisfy demands, the home residents will take the home daily and discard the city daily. All this has been our experience when publishing a local daily, and

274313

we now publish a neighborhood weekly in Chicago within six miles of the publishing houses of four great morning and six afternoon dailies, some of these issued every hour from 12 m. to 6 p. m., and it is a most profitable publication, considering the actual cost of production. It is the local or neighborhood news that does the trick.

Make the home daily or weekly to contain all the home news, for that is what the readers want, and there will be little need to fear outside competition.

We take little stock in the one cent letter postage propaganda. It is not well founded and its falacies should be shown. But here is the editorial by Editor Heminger:

Newspapermen's Delusions

Charles Wliliam Burrow's address in Findlay the other night advocating one cent letter postage was primarily an attack upon the privileges enjoyed by periodical publishers in the rate of one cent per pound accorded second class mail, under which all periodical publications are classed. The gist of the whole affair was that if the matter now carried at the rate of one cent per pound were made to pay its prorata share of the cost of transporting and delivering it, the rate for letters could easily be reduced one-half and the postal department still made self-sustaining, which is no doubt true.

All newspapers are included in the second class department and would therefore be naturally presumed to oppose any increase in the rate of postage to be charged for the transmission of their publications through the mails, and as a matter of fact practically all of them are. However, there is room for a difference of opinion, even among publishers, on this question, for there is such a marked difference between the characters of publications that what might seem to be favorable legislation for all of them is really detrimental to many, and the pathetic feature of the whole matter is that they are deceived into believing the contrary.

The country publisher, the publisher of the ordinary county-seat daily, imagines that he is benefited by the operation of the law granting him a rate of one cent per pound on the papers he mails to his subscribers, but under the ruling of about five years ago by which the free-in-county privilege was withdrawn, he is not only not benefited, but the so-called "privilege" becomes a positive detriment to his interests.

As a result of this privilege his field, his territory, that which rightfully belongs to him, is thrown open to every publication in the country on equal grounds so far as cost of transmission through the mails is concerned, and the city papers are able to come into direct competition with the local papers to his serious loss. These city papers, on account of the advertising resources and possibilities behind them are able to charge for their space in proportion to their circulation regardless of the figure to which it amounts, and they soon approach the point where circulation receipts are practically ignored and the advertising receipts become so great that they can afford to practically give away their papers in order to maintain a certain standard of circulation which will warrant the charge made for advertising. This cheap circulation comes into direct competition with the local paper, which has not only a limited field for circulation, but its advertising resources are also limited. It cannot charge above a limited amount for its advertising space regardless of the amount of circulation it may secure because its advertising patrons are limited in their trade and cannot afford to pay more, as they can in the larger cities.

For these reasons it is apparent that if the free-in-county privilege were restored to newspapers, and the rate for all papers and other publications sent to subscribers outside the county of publication, increased to actual cost, the papers published in the smaller cities and county seats would be the beneficiaries. The comparatively small number of subscribers the papers published outside the larger cities have outside their own county would make the actual increase in their postage bill so small as to be negligible, while the increased rate would make it impossible for the larger city papers to flood the local papers' territory at a rate so cheap that it cannot be profitably combated. Local papers would thus be enabled to increase their circulation within their own immediate territory, where the increase would benefit their advertising patrons, to an extent that would offset any loss they might have on account of having to increase their subscription rates to those outside the county to cover postage charges.

Another advantage that would accrue to the local papers would be the securing of a large amount of general advertising which is now placed in city papers through the notion that they cover all the territory anyhow.

For years the newspapers of the country were deluded by the belief that they were enjoying a great privilege in exchanging advertising space for transportation, and many were indignant when the government stopped the practice, but it has developed that it was a mere delusion and not a money-making exchange.

For years the newspapers were deluded by the notion that it was good business policy to send the paper to a subscriber indefinitely without getting paid for it, and never stop it unless specifically ordered to do so, and may-be not then. Uncle Sam put a stop to this practice by ordering that papers guilty of that practice be denied the privilege of the mails if they should send their papers to subscribers more than a limited time after the term paid for had expired. Some newspapers have continued the old practice in spite of the law, but newspapers that followed the order have found the new arrangement so profitable and agreeable, not only on their own but the subscribers' part, that they wonder why they ever did otherwise.

There are other delusions under which country newspapers are living that will sooner or later be brushed away, and indeed many publishers have already thrown off the spell, and among the delusions might be included the false notion that party loyalty should prevent a newspaper from selling advertising space to political candidates of the opposing party, and that civic loyalty should prevent them from accepting legitimate advertising from merchants in neighboring cities.

But the greatest of them all is that the second class privilege is an asset when in its last analysis it is a liability, and a serious one at that.

* * *

SECRETARY ALLEN RESIGNS

We regret to make the announcement that Secretary Henry Allen of the Ben Franklin Club of America has tendered to President W. J. Hartman his resignation to take effect as soon after January first as his successor can be appointed.

In a letter, bearing date of December 17, Secretary Allen asked to be relieved of the cares of the office because of the illness of his wife which made it imperative for him to stay at home more than his duties will permit. He continued: "I shall always look upon the closing year of 1912 with pleasure and pride. In all organization work there are at times periods of disappointments and want of encouragement but in our case they have been overshadowed by the progress we have made. The growth of the movement has been steady and permanent. Nothing can stifle it in the future."

Secretary Allen has occupied the position of secretary of the Ben Franklin Club of America for a year and during that time he has done efficient personal work in fifteen different states, that he has visited. Wherever he has gone he has been cordially received, his personality making him staunch and true friends. He has never allowed difference of opinion on organization matters to alter friendship.

Mr. Allen has made no definite plans yet for the future, but it is safe to say that it will not be long before he makes a connection which will not only be satisfactory to himself personally but of mutual advantage to the firm he connects with. He will not, however, seek any organization appointment. He has already been the recipient of a number of letters from the officers and members of the executive committee expressing sincere regret at the reason and cause of his resignation.

Aid to Utilizing Parcels Post on Rural Routes

IN a brief presented before the United States Postal Commission at New York City, in October, 1906, the editor of this journal, representing the National Editorial Association, urged, as a means of wiping out the deficit occasioned by the newly installed Free Rural Mail delivery system, that a parcels post service be established on rural routes for the accommodation of the dwellers on these routes, and showed how great a convenience and saving of time and labor this would prove to the rural residents, especially in busy seasons of the year.

To this plan there could be no objections on the grounds of centralizing the business in the great municipalities or the building up of mail order houses to the injury of merchants in the smaller cities of the country.

This plan was not adopted but the evils and injustices of a general or unlimited parcels post, with uniform charges for the whole country, were, in a measure, avoided by fixing graded charges for the differing distances of transportation. The same principle might be applied to all mail matter as is now the practice in Canada.

The new system of parcels post goes into operation this month and with the idea of useful service to subscribers — which ever should be the actuating motive and aim of all newspapers — the Daily Republican of Red Wing, Minnesota, makes the following offers in a double column announcement, on the first page of its issue of December 21:

> Beginning with the first of the year the city and the country will be drawn still closer together by parcels post. This means that the interchange of commodities will be greatly facilitated, that the people of the country will be able to get by mail much of the merchandise which they need and that the people living in the city will receive from the country, by mail, many of the products raised on the farm. In this connection, The Republican wishes to make itself as useful as possible to the community which it serves by assisting in making the parcels post from the very start as complete a success as possible both for the people living in the city and those living in the country. Farmers will find in The Morning Republican and in The Weekly Republican the advertisements of Red Wing business houses that are anxious to get their trade. Farmers should telephone or write to these concerns and make their wants known and they will inform you with regard to the price and other details. If you cannot find in the advertisements just what you want, communicate with The Republican office and a representative of this paper will call on the merchant best situated to furnish the goods desired and select the goods for you, or communicate with you before so doing if there is any doubt about getting exactly what you want. Also, The Republican will purchase anything, even if it is not advertised, and no charge will be made for the service.
>
> The Republican assumes no responsibility in these matters except to act as messenger and purchasing agent, to accommodate its patrons in the country and in the city.
>
> **Will Find Market**
>
> If the farmers have anything they wish to dispose of, such as butter, eggs, poultry, fresh meats and dairy products, The Republican will endeavor to find a market for the same among the local dealers in such products or other patrons of the paper, giving preference to Republican subscribers and advertisers.
>
> If experience should prove that the arrangement suggested be of direct benefit in a commercial way to the patrons served, and provided the volume of such business should become too heavy to handle simply as an accommodation, then a reasonable charge, to be agreed upon, will be made, for the time and the trouble involved, but not, however, until ample notice has been given. To begin with the services of the paper will be absolutely free.
>
> Therefore, beginning with the first of the year, the people of the country and the people of the city, who wish to trade with one another, or exchange commodities with one another through the channels of parcels post, are all invited to make The Republican the medium through which to deal. Packages can be sent over the rural routes out of Red Wing at five cents for the first pound and one cent for each subsequent pound, no package to be larger than eleven pounds, the postage on the largest package being fifteen cents. When a shipment is heavier than eleven pounds it can be divided into two or more packages, each package being weighed and charged for separately.
>
> The general rules governing parcels post shipments have been published in The Republican. Any point which has not been fully explained will be made clear to any one who will 'phone or call at The Republican office.

This plan seems like good business policy and ought not only to prove beneficial to the patrons of the paper, both subscribers and advertisers, but should result in a kindly feeling toward the paper and an increase of advertising patronage, if not also of subscriptions.

There is no reason why every home paper, with a rural clientele, should not adopt and announce such a system for making the publication doubly useful. The announcement will do good and is good newspaper diplomacy, even if the paper should be required to render very little of the service proposed.

It will set the dwellers in both city and country to thinking about and using of the rural parcels post service to their mutual benefit. If the city dweller wants five or ten pounds of fresh butter or a dressed chicken, or any other produce of the farm, he can telephone his farmer friends and have it sent in by parcels post at a very small cost. So if a farmer wants any fresh beef from the butcher, sugar from the grocer or any other article of merchandise from the store, or a piece to replace a broken part of a farm machine, he can telephone and have the same sent by parcels post, and often save a half or a whole day's time for a man and team. Broken parts of a plow or other implement or machine can be sent to a shop and be returned in the same way.

But the thought here intended to be enforced is for the home paper to show its willingness and ability to serve its patrons in a practical and effective manner.

THE MEXICO LEDGER
R. M. White & Son, Editors and Proprietors

Mexico, Mo., Dec. 16, 1912.

National Printer-Journalist,
Chicago, Ill.

Gentlemen: Enclosed find draft for $2.00, subscription to August 1, 1913. We cannot get along without the good old reliable National Printer-Journalist.

Yours truly,
R. M. WHITE,
Editor.

"Looking Backwards"

By Joseph Lewis French

WHEN I first knew Joe Chapple some fifteen years ago, he was a young man with a high ideal and very little money. In fact, if he had not been able to inspire others with his ideal, both financially and spiritually, this story would not have been written. But men who have a real mission are always able to do that. He had come on to Boston from Iowa and Wisconsin — the former his native state where ever since he was grown up enough to wear "galluses" he had been wrestling with the problems of journalism. For Joe is a born journalist, and he has proved it almost from the cradle. The dreamy Western boy who was yet a born hustler — strange combination, and one who no other country under the sun but America has yet produced — had as I say an ideal. And when he saw Boston, the great cradle of American liberties, that ideal, a dream it was, really began to take form in his mind. Here was the place to fulfill it. Here under the shadow of Bunker Hill, and among the most sacred traditions and associations of our national birthright, was the place to found a great national magazine, a periodical that should stand before all things else for the spirit of true Americanism past, present, and to come.

Difficulties were mountainous but what were difficulties to this Western lad who had earned his own living, aye, and helped support the family ever since he could read. His schooling was obtained in that greatest of all universities, the hard-knocks school of Western prairie journalism. He was ready for anything. When fortune is confronted by a spirit like this she simply drops her eyes and acknowledges herself beaten. Then she opens her hands. Slowly at first for Joe Chapple, who was to be still further tried out as to the real stuff he was made of in the metropolis of New England cultivation, a very different scene to that which he had been accustomed. But his rugged strength of character and open sunny nature very soon began to win him friends. He found an opportunity to realize his chosen ideal, the founding of a national magazine in Boston, in a periodical of high partiotic aim, but much narrower scope, called the Bostonian. This he purchased outright, changing the name of the very next number to the National Magazine. The circulation list that he got with the Bostonian was a very small one indeed for a man who wanted to address a whole nation. He had no capital to build up a big circulation by advertising and other methods. He must work slowly, toilfully, to build it himself by the infusion of his own wonderful personality. This was the keynote of the National from the start. No other magazine has ever been launched in America with quite the same aims and purposes. None other had ever behind it such a combination of good will to all mankind and sheer grit, as this one, in its founder.

With the first number of the National, issued in 1897, Joe Chapple began to talk to his readers, to take them by the hand and tell them the little homely things that they really wanted to know. Not too much about himself and the National, but he seemed from the first almost to enter the very home circle of the average American family and become one of its members. Here was an attitude that was irresistible, and the response soon came. Month after month the circle of his readers grew all over the country. Joe Chapple became something more than an editor. He became a living personality, a philosopher of homely things, a kindly friend, a counselor. That is what he stood for to every one of his thousands of readers as month by month the great family of them grew. He traveled even to remote parts of the country and lectured and talked before representative audiences everywhere, and thousands of his readers thus came to shake his hand and to know him in person. Never, he tells me, has he felt more happy and proud in the sense of fulfillment of his life work, than when some homely old farmer has met him on the street of some town far from Boston and "talked it over," all over again. He visited foreign lands in the interests of his readers and met personally and talked with the great ones of the earth. In this way the readers of the National have met face-to-face, Bismarck, Gladstone, Queen Victoria and Ruskin, and many others. Always on the move in his own country; special feature writer, and correspondent, as well as editor of his own magazine, he has met within the past decade and a half nearly if not quite every man of national importance, and this meeting means something more than a hand grip and a word of cheer. In every case, thanks to his rare journalistic gifts, he has been able to converse with these men, to learn their views and to give them to the country at large. Some of the greatest men in America he knew so well that it might almost be said he literally lived with them. Of these was the late President McKinley, who, both at the White House and at Canton, enjoyed many an hour's chat over a quiet cigar with Joe Chapple.

If the reader of this has a file of the National of the nineties, and will turn to the article "How I Met Bismarck" in the number of July, 1898, he will get some idea of Chapple's, then a youth of twenty-four, marvelous talent for impressing himself on even the greatest men. Allied to this splendid capacity as a "mixer" — it is something much more than that — is his simple good nature and kindness of heart. The years have only mellowed him, and though he stands today the head of one of the most flourishing concerns in Boston, he is the same kindly, simple Joe Chapple that those who knew him and worked with him in his first year of the National, as the writer did, have always known. This side of the man's nature has unfolded itself not only in his magazine but in ways which have made the whole country sit up and take notice. Such publications as "Heart Throbs" and "Heart Songs" have made the name of Joe Chapple familiar literally as a household word, from coast to coast, and far into the wilds of Canada. Their circulation and influence have been so far-reaching that they may be truly said to have accomplished a national mission.

In addition to his duties as editor and publisher and great American traveler — there is no part of the world except the far East and South America which he is not familiar with — he has always been incessantly busy as author with a string of something like a dozen books to his name; of these, "Happy Habit" reveals the man at his best. It is a collection of essays of a philosophically cheering nature that few contemporary writers of the English language would not have been glad to acknowledge as their own. In it Joe Chapple has given of his very best inmost self, and the ripest fruit of his thought and cultivation — the gleaning of a closely packed lifetime. The book ought to be in every home in the civilized world.

* * *

Now I had known all these things of Joe Chapple and I had watched the growth and increase of the National Magazine for years. But I had seen very little of its editor, only a chance handshake, a little chat, congratulations, and so goodbye. Returning to Boston after an absence of some years spent in roaming the country, fifteen months of it abroad, I inquired for the headquarters of the National Magazine. I remembered the old days in the little room at the top of the building in Bedford street where editor, artists, writers, engravers, the solitary bookkeeper, and little "Joe," the office boy, all worked packed in together. I had heard of great changes but I knew not what was to materialize. When finally taking the car from the South Station, as so many recent pilgrims to the shrine of the National have done, I reached 952 Dorchester avenue, great indeed was my surprise.

In the first place, "952" stands for at least a dozen numbers. Here was a handsome new three-story building, some 150 feet long, from which a bright new American flag was streaming. This flag floats from the roof during every working hour. For years Joe Chapple has refused to speak in a hall that did not display the national emblem. The building, as I afterwards learned, was a little wider than its length and contains some 49,000 feet of floor space. Downstairs there is an array of presses of the newest patterns that can print literally anything on earth. The splendid color covers of the National, as well as the body of the magazine, are turned out here. And here, away out in the country almost, with plenty of light and air and space about it, is a press-room that is really beautiful. Pretty hard word to find for a press-room. Come out; O! ye readers of the National, and see this one. The walls on two sides of the building are nearly all semi-transparent glass, and the ceilings are whitened. This is no cellar as most city press-rooms are, but a clean wholesome room in which it is a delight to stand. Adjoining is an ample room for the bindery. Upstairs I tramped to the editorial and business offices and was welcomed by three Chapples. The inimitable Joe came out from a large inner sanctum, quarters that any editor in the land might envy, and introduced me at once to brother "John," almost a copy of himself in face and figure, who has general charge of the whole plant; and brother "Will," who is the capable advertising and business manager. Another brother, "Bennett," has charge of the New York office of the National.

Every one of them have come on from their Western homes to take a hand since the National has begun to grow. Each has his place, and it is not only a happy family but a quartet of industrious and enterprising young men, whom for brains and personality of the right type it would be hard to beat anywhere in America. The hour I spent here in the National quarters, till later Joe and I went uptown together to call on a few old friends, will always be one of the most memorable of my life. Here on every hand were the marks of a shining success, of a work accomplished, of ideals realized and ambitions won.

Every face in the large general office room reflected the happiness of the worker amid ideal surroundings. The employers were kind, there was plenty of sunlight, the air was pure. It was all like a happy family, a sort of miniature of the great happy family of National readers.

It is only on rare occasions, indeed, in the course of our pilgrimage through life, that we are permitted to meet and greet old friends who have won. And my heart overflowed as, after many years, I grasped Joe Chapple's hand in his beautiful sanctum, amid this scene of ideal industry of which he was the creator.

Illustrations of the National Magazine establishment will be shown in the February issue.—Editor.

ERNEST L. PETERSON, N. D.

We are presenting herewith the facial reproduction in half tone of a lively North Dakota editor, of rotund and solid proportions, who, by antithesis, is often called by his comrades "Slim."

He is editor and publisher of "The Globe" at Milton, N. D., which is, in the local view, deemed to be the center of the Earth planet. He made himself noted at the recent meeting of the National Council of the National Press Association by proposing, and putting in a boost for, a trip to the Mindegaavan celebration in Norway for the National Press Association in 1914. He believes he can land that trip. He also was appointed chairman of the auditing committee of the N. P. A., at the meeting in Chicago.

Ernest L. Peterson, N. D.

Mackay, Advertising Manager Lanston Monotype Company; E. St. Elmo Lewis, Advertising Manager Burroughs Adding Machine Company.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 352 Wyoming Ave., Scranton, Pa.

THE printer or publisher often gets inquiries as to advertising from possible and probable users of what he has to sell, and he should endeavor to put himself in the place of advertisers of all kinds. It is not sufficient for a printer or a publisher to learn how to advertise his own business, though what he learns about that will, of course, help him in considering other advertisers' needs. The successful printer and publisher today must needs have a general knowledge of advertising — he has the brains to apply it, or he would not be in the printing or publishing business, or else he ought to be in something else. In this connection I print extracts from an analytic letter I have just written to a real estate company in Nebraska. It may prove suggestive as to the numerous points of an ad that call for criticism:

"I have just received your layout and copy for an advertisement. I think the plan is a good one and certainly worth trying.

"I think that your idea of having thirty or forty letters a rather too elaborate follow-up system. I believe that a good many people that answer real estate ads are merely doing it for curiosity's sake. It seems to me that this is so in connection with real estate rather than in any other business. I think you are doing well to leave something for the prospective customer to write you about, as it gives you an excellent opportunity for follow-up letters.

"The size of cut of farm that you specify seems to be pretty small for a 300-acre farm. I should think that you could better afford to spend more money on your paper advertising and less for the follow-up.

"It does not seem to me that the following sentence is particularly good:

"'This farm is not perfection, but it is probably as nice a farm as there is in this country.'

"It would strike some that there is a good deal left unsaid about a farm that is advertised as not being perfection. We do not, as a usual thing, look for perfection in anything in this world, and there are certainly very few farms that are perfect. I do not exactly know what is meant by, 'It is probably as nice a farm as there is in this country.' I presume you mean in the district or county, or in some limited area, rather than the whole United States, for it is a pretty broad statement to say that it is probably as nice a farm as there is in the whole country. This would be a rather difficult matter to prove. I do not believe in the negative suggestion made by the assertion, 'This farm is not perfection.' I also think that if by 'country' you mean the United States, it is too positive a statement.

"I think this is a very good part of the ad:

"'Big new barn very carefully built less than two years ago — and you know there is more worry and work for the average farmer about building his barn than there is [about, or in, building] his house, and not much fun in it. You save all this when you buy this property.'

"It seems to me that you are trying to get a good deal of matter in a very little space. I do not know, however, where you are going to insert this advertisement. Possibly it is in one of the rural papers, whose prices are very high and which have very small though clear type.

"Your frankness as regards what you think the property is worth will probably touch a responsive chord in some minds; but I think you could express this sentence a little clearer:

"'If you buy this farm you can pay for it quicker than you can a farm in Iowa or Illinois, at the prices land sells for there,' etc.

"This has a sort of humorous suggestion, as you have just stated that you want them to pay you for the farm very quick. Would it not be better to say: 'If you buy this farm it will pay for itself quicker,' etc.?

"I should be very much pleased to hear from you after you have sold the farm, and would like to know how much money you will have expended in your advertising, and what prospects for selling other property you find such advertising may bring you. I often ask this of advertisers, and in my own experience I have been very careful to find out just what percentage of profit was being made through the various kinds of advertising I had done. After all, it is the money that the ad brings in that is the true test. Sometimes, of course, an advertisement does not pay as it should, and sometimes we cannot gauge just what conditions brought this about, publicity of any kind being not yet an absolutely exact science. We are, however, learning a good deal about it on general principles, although we cannot always tell by looking at the advertising cat how far she will jump."

* * *

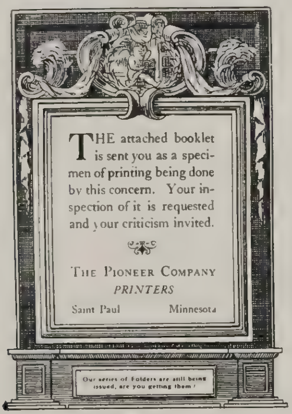
"Wait Till You Come to Forty Years"

I wish heartily to congratulate so able a newspaper as the South Bend, Ind., Tribune on reaching its fortieth birthday. When I say, "able," I am using this word in a large sense, and include the editorial, business, subscription and advertising departments on a paper whose excellence is known wherever a gentleman — or lady — from Indiana is to be found. And if there is anywhere on earth that this is not so, it must be on the Sahara Desert, where men are burrowing in the earth in the same way as they did for unnumbered centuries; "where there ain't no Ten Commandments," and, naturally, no newspaper.

* * *

A Suggestion From Eighteenth Century Artists

Ornamental borders such as were so popular in the days of Hogarth are in considerable vogue in present-day advertising, which has for years welcomed old-style ideas that could be used to embellish "modern instances" of good typography. Some of the leading stores of New York that are especially anxious to secure the high-class trade use such borders frequently. Here (1) is one in brown from the Pioneer Company of St. Paul, which has been the pioneer in many good ideas for printers. The initial is red. Such borders as these surely attract favorable attention, and this slip is an example of a very modest reference to an enclosed booklet, which is quite as good as the slip. I have advertisements over one hundred years old with just such borders.



THE attached booklet is sent you as a specimen of printing being done by this concern. Your inspection of it is requested and your criticism invited.

Ever-fresh Typography

I have just discovered a job (I use the singular, for a letterhead and the envelope in which it is mailed should properly be considered one job) which was probably sent me years ago (note the 1900), and which I put in an envelope containing data for an article for which I needed a good many examples. It is on tangerine-tinted Old Hampshire Bond, the tint of the envelope being more decided than that of the letterhead. "It was composed," wrote Mr. Silve, "from suggestions made in your department." It is not a copy — it has the true Silve-an originality. On the envelope (2a) the heavy rules, name and lanthorns are red; remainder black. On the other job (2b) top rules, lanthorns and brackets are red. This is just as up-to-date a job today as when it was made. Such original work as this is perennially fresh.

The Devil His Due

A slip 14x3½ inches is filled on both sides with the good words said of Taylor, Nash & Taylor, of San Francisco, by the trade press and other good authorities, and delighted patrons of this print-plant. This (3) is the title page of a delightful book (all the type of which is italic) written for this firm by a newspaper man who has won wide fame. The entire book has rubrical lines like those herewith shown (at the top is a margin), the left-hand pages having narrow panels, on which comic illustrations are pasted at the top. The Devil who inspires Mr. Irwin's muse is not His Satanic Highness (or Lowness), but his namesake for whom, in

No. 3

the words Doc Munyon utters with uplifted finger, "There is hope!" Here are the two last verses of the epic:

"When most we need the little fiend
It pains us, on the level;
For though we hunt both high & low
We cannot raise the Devil —
Perhaps he's gone to take a nap
For two hours by the clock,
Perhaps to play a game of craps
With friends across the block.

"Keep on, mischievous imp, for when
Apprentice days are over
You will become a journeyman
And hold your job in clover;
On such a day you'll cease to be
A diabolic sprinter;
The Printer's Devil will become
A Devil of a Printer."

The book is printed on tinted laid stock, with an harmonious cover with the title and the unique but simple monogram of the firm. They show themselves to be not only good printers, but also good advertisers.

✢ ✢ ✢

"Sworn To"

The postal law that recently came into force requiring a statement of the ownership, management, circulation, etc., of newspapers, did not meet with the approbation of many publishers. But it had no terrors for the Chicago Tribune Company, which not only published the statement in the paper, as required, but also used it in a handsome folder, with a dignified seal and the title, "Sworn To."

✢ ✢ ✢

There is an abundance of blank space in the blotter of The Marsh Printing Company, New Philadelphia, Ohio — considerably more than what is on the ordinary blotter. It takes real skill in arrangement to avoid having such a job as this appear skimpy, but here the skill is apparent. I should like to see this compositor's ability exercised on a fuller job. The "P" and the rule of the inner panel are antique red; the stock is salmon. The spacing between letters of the long Ronaldson line, and the resisting of any temptation there may have been to space the Old English similarly, are among the typographical effects that give the job a certain charm.

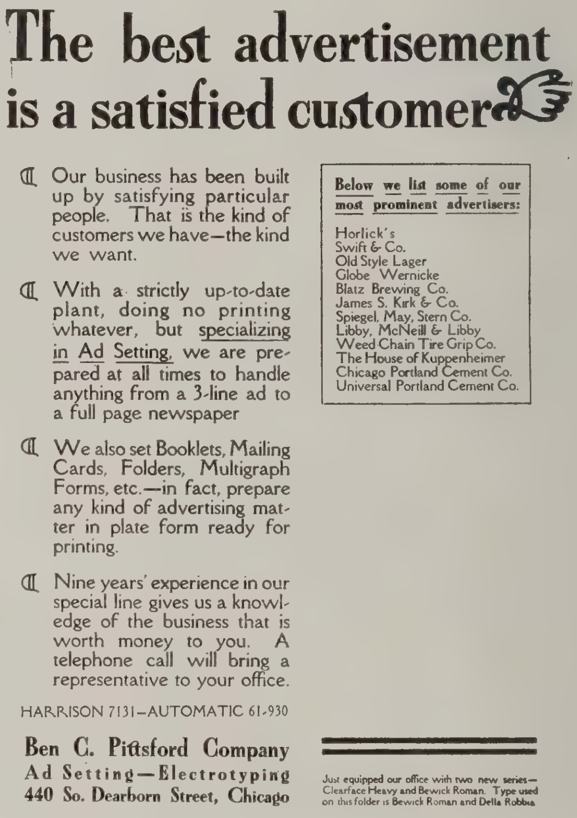
An Ad-setter's Folder

A special field in which many are engaged is advertisement composition. This field is, however, one that is itself, as a general thing, very insufficiently advertised. Hence it is that I am especially pleased with the handsome four-page folder, "Who Sets Your Ads?" of the Ben C. Pittsford Company, of which the second page is shown as 5. There! I've torn the index finger — but I've probably saved a little on the cut by doing so, and the point of the finger is on the third page, close to a reproduction of a full-page newspaper ad for The House of Kuppenheimer, the upper left-hand corner of which is pasted on the folder. This ad, with the exception of the price, "$20 to $25," which is pleasingly prominent, is set entirely in Caslon Old Style. The reproduction was made from the first proof submitted to the customer, who wrote on the corner: "B. C. P. This adv. is just as perfect as any I've ever seen"—and of course this is reproduced likewise. The "satisfied customer" is, of course, a good advertisement; but his words of satisfaction should be used in some such striking manner as this to convey to "prospectives" the fact of his pleasure. And where such a beautiful ad as this, in such good haromny with the illustrations, is the



The best advertisement is a satisfied customer

¶ Our business has been built up by satisfying particular people. That is the kind of customers we have—the kind we want.

¶ With a strictly up-to-date plant, doing no printing whatever, but specializing in Ad Setting, we are prepared at all times to handle anything from a 3-line ad to a full page newspaper

¶ We also set Booklets, Mailing Cards, Folders, Multigraph Forms, etc.—in fact, prepare any kind of advertising matter in plate form ready for printing.

reason for the satisfaction, it is an excellent plan to reproduce it with the written comment.

Blank space in the body of an advertisement is much in vogue at present. Sometimes in a newspaper advertisement it is simply space wasted. Here it is effective, particularly as the opposing page is full.

* * *

Not Too Much Red

The arrow has been used considerably in advertising — so much so, in fact, that one especially striking is necessary when the object is to attract attention to a considerable degree. The dart on this blotter (6) is especially attractive. It is one of the parts that is red in a job that is mostly green. Such important words as "gets," "holds," "stays," "no more," are in red, as is the firm name. The two lines below the dart are also red. Now there are many jobs where altogether too much red is used. But here is one where the red is so splendidly distributed that it counts in every case. If the dart alone were red, the job would really not be so effective. And so it is a blotter especially worthy of study, being the work of a real compositor.

Picture Pretty, Even Though Not Especially Apropos

Instead of a card, J. H. Wimberly, advertising manager of the Daily Clarion Ledger, of Jackson, Miss., hands a folder, of which each leaf is of card size and texture. This (7) in green and brown, is what first strikes the eye. The second page (back of this) has a testimonial, with this head:

Got Results for "Gilster's Best Flour."
It Will Do the Same for You.

The third page has Mr. Wimberlys signature, with "Advertising" in white Gothic letters in the flourish, "Catchy and Original Ideas" also lettered, and the address. This is one of them.

* * *

"Don't Forget the Little Print Shop at De Soto"

O. Byron Copper, who is a "Little Friend of All the World," has a most attractive pet name for his establishment, and there is true rhythm in the line he uses on the card of which this (8a) is the address side. This is in orange, with the exception of the name and address of the Argus Press. On the other side is the message shown as 8b. It will be a long time before such simple typography as this, in harmonious colors, goes out of style. The trouble with the use of double rules in some jobs is that they sometimes cut a discussion in pieces. Here, however, they are rightly used, as is natural by one of Mr. Copper's experience and discernment, which he employs so well in his eminently readable and popular department.

Don't Forget The
Little Print-Shop
▦ at De Soto ▦

¶ When you need anything in the line of printed things, just remember the little print shop at De Soto. It is popularly known as a "city print shop in the country." It is manned by an expert in his calling, and equipped, not elaborately, but wisely, with good printing machines and the best and latest in American type faces. It prides itself on high grade papers and the very best printing inks money can buy. These combined with skill in the art of type-setting insures top notch service. Send your orders in by mail, and they will receive prompt and careful attention.

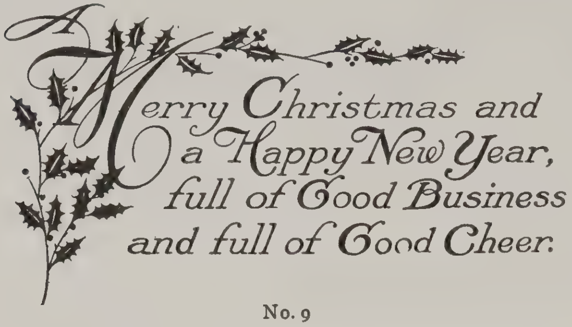
"Sentiment in Business"

The large booklet, "Sentiment in Business," sent me by Lester P. Winchenbaugh, the publisher, of Boston, Mass., is the handsomest exposition of Christmas and New Year cards I have seen. This is the start of the "argument":

> **SENTIMENT IN BUSINESS**
>
> The everyday courtesies of life are entering more and more into business of today. It is universally recognized among the most progressive and successful business men that **it pays to be courteous.**
>
> **IT IS GOOD BUSINESS**
>
> at least once a year to express your appreciation of the patronage you are receiving and to extend to your business friends your well wishes.
>
> In no better or more economical way can this be done than by sending out a card or letter during the holiday season.

"Everyday courtesies" is good, and that reminds me that some of the most successful of the contributors to this department inject sentiment (not sentimentality, but sentiment) into their business all the year. They give the impression that they are really interested in others' business success — and it takes a smart man to give such an impression if he doesn't mean it — and these good printers do mean it! — it's the N. P.-J. spirit, you see. Before next Christmas I hope to refer to this splendidly prepared sample book again. I show one motto card (9), which is an example of how business is mentioned on several of the specimens.



A Merry Christmas and a Happy New Year, full of Good Business and full of Good Cheer.

Good Stuff

The Pacific Coast has turned out a good many good printers with an originality that enhances their goodness much. Shake hands with Harry Spencer Stuff, who has a name to conjure with, and is not at all backward in ringing in the changes on his sirname. Here (10a) is an artistic slip with distinct advertising value, and here (10b) in red and black, is a proclamation that is pleasingly ornate, in keeping with the humorous grandiloquence with which the advertising boosters of the coast are wont to fill their announcements and programs. "This Stuff Person" has sent me other work better than this, which deserves more extended notice, which will be duly extended. But there is a distinct and pleasing "difference" as regards this work and other work you have known, is there not?

A Print-shop's Newspaper Advertising

This newspaper ad (11) of a job printing office

Here is a Fact
that bears upon the
Selling Power of
Your Advertising

We produce hundreds of pieces of Printing of widely varying character. Something learned from each goes to make the experience we will apply to the production of *your* printing. The ability to make use of this experience, and the practice of freely offering it, is the most valuable portion of the *service* we render.

The Irwin-Hodson Co.
92 FIFTH STREET
Office and Factory, Fifteenth and Glisan Streets

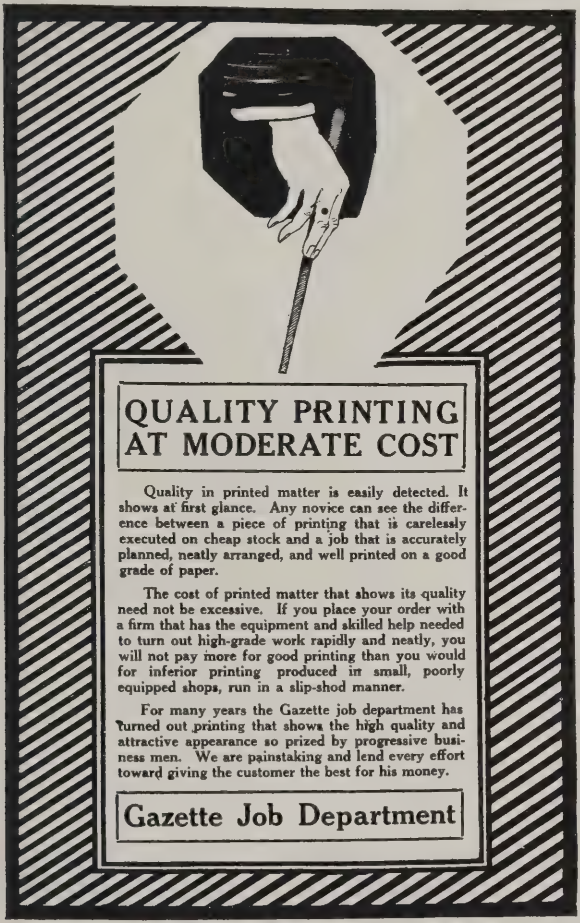
No. 11

has a distinctly pleasing appearance. It was evidently set in the print-shop. I saw an excellent ad in a newspaper the other day, of the same order — at least it was once excellent, but the printing firm that used the newspaper to advertise its work had evidently run the ad too long without examining it from time to time, to see whether it retained its pristine clearness. In this ad the outer border is showing signs of wear.

✢ ✢ ✢

A Job Department's Newspaper Ad

Even though the hand in this ad of the Berkeley, Cal., Gazette job department (12) is drawn by an artist that has not yet acquired the artistic strength that is so often effective in such drawing, the border is sufficiently strong, and the lines, together with the white space, just hypnotic enough not to rob the text of its particular strength and effectiveness. This ad is the most prominent thing in the paper. Did it bring business? I bet you it did.



QUALITY PRINTING AT MODERATE COST

Quality in printed matter is easily detected. It shows at first glance. Any novice can see the difference between a piece of printing that is carelessly executed on cheap stock and a job that is accurately planned, neatly arranged, and well printed on a good grade of paper.

The cost of printed matter that shows its quality need not be excessive. If you place your order with a firm that has the equipment and skilled help needed to turn out high-grade work rapidly and neatly, you will not pay more for good printing than you would for inferior printing produced in small, poorly equipped shops, run in a slip-shod manner.

For many years the Gazette job department has turned out printing that shows the high quality and attractive appearance so prized by progressive business men. We are painstaking and lend every effort toward giving the customer the best for his money.

✢ ✢ ✢

Near the Limit

A real estate man sends me this (13) horrible example of what is sometimes sent to a customer who orders printing by mail from unknown parties instead of having it done at a fair price in their own home town. I do not suppose the engraver will show all the marks made by furniture and quads sticking up, but the composition alone is pretty nearly the limit, though I have seen worse. There are no wrong-font letters, anyhow — possibly because the printer had not many fonts. This is sometimes commendable; but there are other virtues in modern composition besides the negative one of not calling for the sign "wf." Here is a printer who advertises largely in the trade press. Why not study the printing trade journals? How little it would have taken to make a satisfactory, if not a particularly artistic, job of this, instead of one that made an indignant customer.

✢ ✢ ✢

The Waterloo, Iowa. Evening Courier has recently installed a new three-deck Mergenthaler Linotype Machine No. 9, which makes five linotypes, all used exclusively for newspaper work. This would seem unusual for a town of the size of Waterloo, but General Manager A. W. Peterson states that they are all profitably employed and useful.

"IT HAS EVER BEEN A STRONG FORCE FOR GOOD IN ITS FIELD"

R. HOE & CO.
Office, 504-520 Grand Street
New York, Dec. 9, 1912.

Mr. B. S. Herbert,
National Printer-Journalist,
4618 Ravenswood Park, Chicago, Ill.

Dear Mr. Herbert: We hope that it is not too late for us to congratulate both Mr. Herbert and the National Printer-Journalist on the quarter centennial of the latter, and to hope that the former will be spared for many years to come, to continue the work to which he has given such a large part of his life.

We are always pleased to see the National Printer-Journalist, knowing as we do that it has ever been a strong force for good in its field, and that it will continue to be so as long as Mr. Herbert remains at its head.

With best wishes for the continued success and prosperity of your paper, and with kindest regards to Mr. B. B. Herbert and yourself, we are

Yours very truly,
R. HOE & CO.,
WM. TILLINGHAST.

✢ ✢ ✢

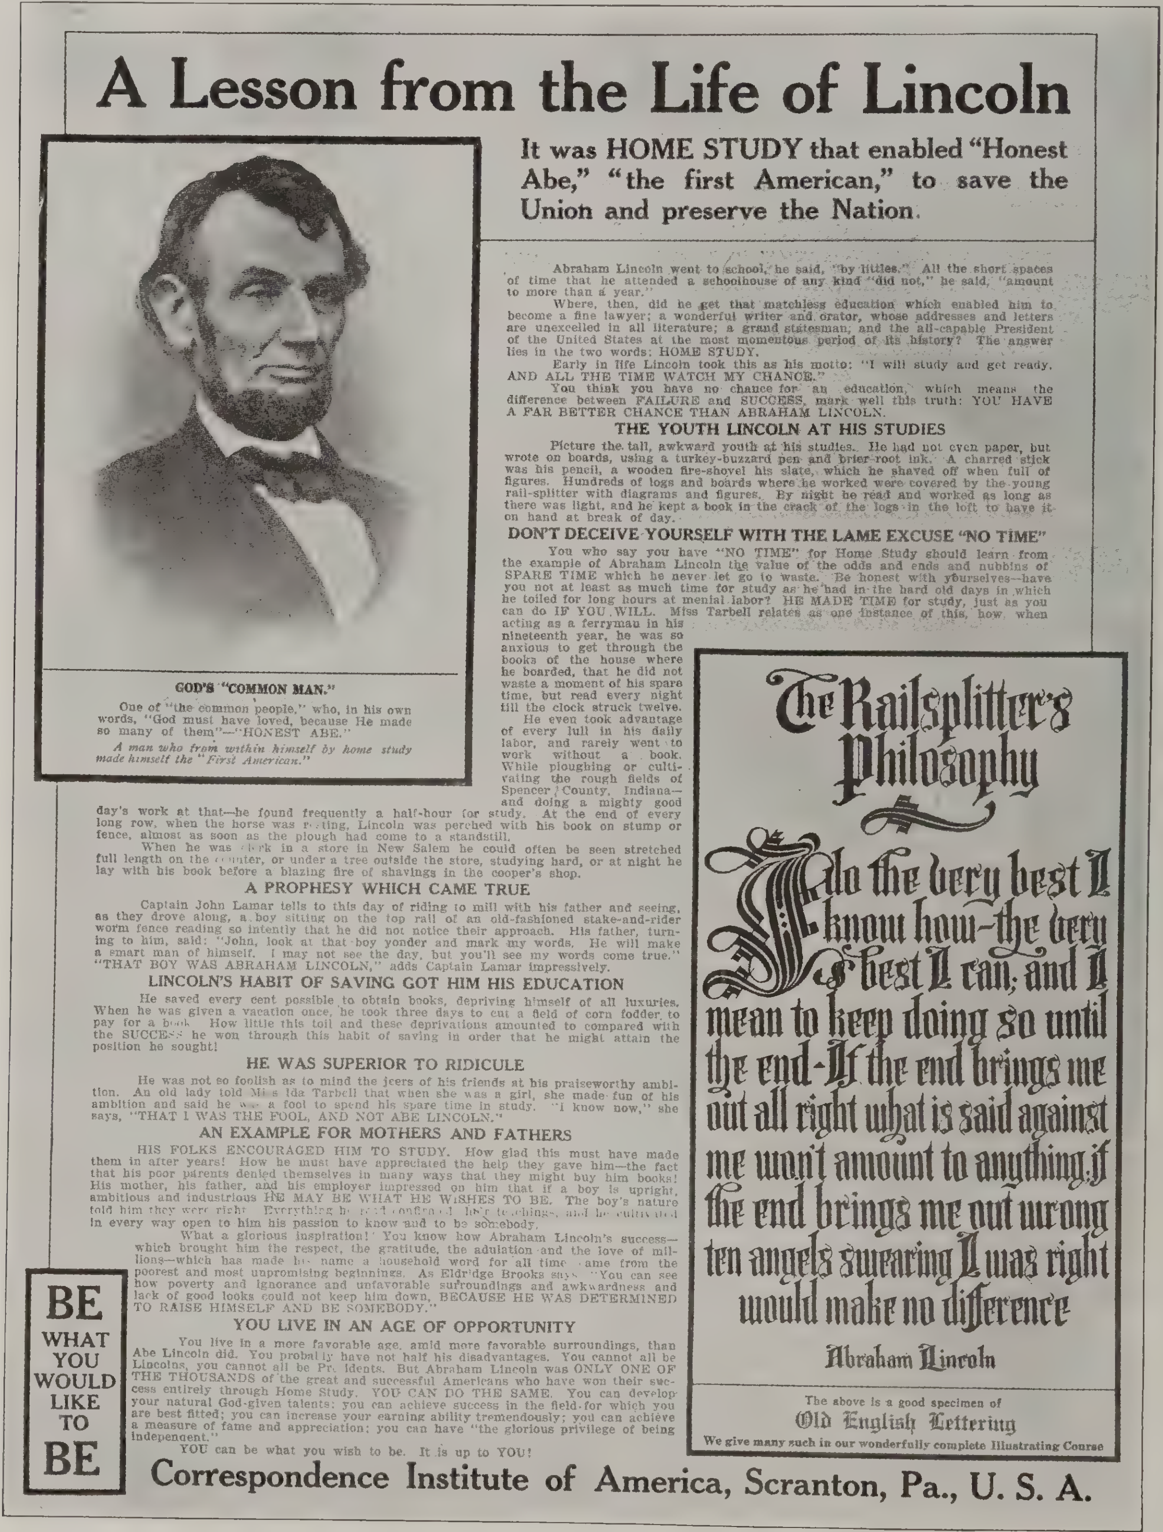
Look Ahead

St. Valentine's Day is worthy of advance attention on the part of printers and publishers this month. It offers innumerable chances to the advertiser who realizes how human nature is not yet tired of such festivals.

"Chambers' Book of Days" is a valuable book for an ad-writer to own. It tells of all the old festivals, and gives innumerable ideas as to illustration.

And remember — in January — that the birth-days of two great Americans occur in February.

Wouldn't Lincoln have made a great advertising writer? His homely sayings have lent zest to many an ad of late years. Here (14) is an ad I wrote and designed for a firm that is now out of business — but not on account of the ad, I have been assured. Poor advertising was the cause, I believe, but that was long after I had anything to do with the firm. Mine may have been poor; but it was honest. And misleading advertising done by an ad man for an honest firm, may work incalculable injury. It behooves honest men to see that nothing that has even the appearance of evil gets into their advertising.



A Lesson from the Life of Lincoln

It was HOME STUDY that enabled "Honest Abe," "the first American," to save the Union and preserve the Nation.

GOD'S "COMMON MAN."

One of "the common people," who, in his own words, "God must have loved, because He made so many of them"—"HONEST ABE."

A man who from within himself by home study made himself the "First American."

Abraham Lincoln went to school, he said, "by littles." All the short spaces of time that he attended a schoolhouse of any kind "did not," he said, "amount to more than a year."

Where, then, did he get that matchless education which enabled him to become a fine lawyer; a wonderful writer and orator, whose addresses and letters are unexcelled in all literature; a grand statesman; and the all-capable President of the United States at the most momentous period of its history? The answer lies in the two words: HOME STUDY.

Early in life Lincoln took this as his motto: "I will study and get ready, AND ALL THE TIME WATCH MY CHANCE."

You think you have no chance for an education, which means the difference between FAILURE and SUCCESS, mark well this truth: YOU HAVE A FAR BETTER CHANCE THAN ABRAHAM LINCOLN.

THE YOUTH LINCOLN AT HIS STUDIES

Picture the tall, awkward youth at his studies. He had not even paper, but wrote on boards, using a turkey-buzzard pen and brier-root ink. A charred stick was his pencil, a wooden fire-shovel his slate, which he shaved off when full of figures. Hundreds of logs and boards where he worked were covered by the young rail-splitter with diagrams and figures. By night he read and worked as long as there was light, and he kept a book in the crack of the logs in the loft to have it on hand at break of day.

DON'T DECEIVE YOURSELF WITH THE LAME EXCUSE "NO TIME"

You who say you have "NO TIME" for Home Study should learn from the example of Abraham Lincoln the value of the odds and ends and nubbins of SPARE TIME which he never let go to waste. Be honest with yourselves—have you not at least as much time for study as he had in the hard old days in which he toiled for long hours at menial labor? HE MADE TIME for study, just as you can do IF YOU WILL. Miss Tarbell relates as one instance of this, how when acting as a ferryman in his nineteenth year, he was so anxious to get through the books of the house where he boarded, that he did not waste a moment of his spare time, but read every night till the clock struck twelve.

He even took advantage of every lull in his daily labor, and rarely went to work without a book. While ploughing or cultivating the rough fields of Spencer County, Indiana—and doing a mighty good day's work at that—he found frequently a half-hour for study. At the end of every long row, when the horse was resting, Lincoln was perched with his book on stump or fence, almost as soon as the plough had come to a standstill.

When he was clerk in a store in New Salem he could often be seen stretched full length on the counter, or under a tree outside the store, studying hard, or at night he lay with his book before a blazing fire of shavings in the cooper's shop.

A PROPHESY WHICH CAME TRUE

Captain John Lamar tells to this day of riding to mill with his father and seeing, as they drove along, a boy sitting on the top rail of an old-fashioned stake-and-rider worm fence reading so intently that he did not notice their approach. His father, turning to him, said: "John, look at that boy yonder and mark my words. He will make a smart man of himself. I may not see the day, but you'll see my words come true." "THAT BOY WAS ABRAHAM LINCOLN," adds Captain Lamar impressively.

LINCOLN'S HABIT OF SAVING GOT HIM HIS EDUCATION

He saved every cent possible to obtain books, depriving himself of all luxuries. When he was given a vacation once, he took three days to cut a field of corn fodder to pay for a book. How little this toil and these deprivations amounted to compared with the SUCCESS he won through this habit of saving in order that he might attain the position he sought!

HE WAS SUPERIOR TO RIDICULE

He was not so foolish as to mind the jeers of his friends at his praiseworthy ambition. An old lady told Miss Ida Tarbell that when she was a girl, she made fun of his ambition and said he was a fool to spend his spare time in study. "I know now," she says, "THAT I WAS THE FOOL, AND NOT ABE LINCOLN."

AN EXAMPLE FOR MOTHERS AND FATHERS

HIS FOLKS ENCOURAGED HIM TO STUDY. How glad this must have made them in after years! How he must have appreciated the help they gave him—the fact that his poor parents denied themselves in many ways that they might buy him books! His mother, his father, and his employer impressed on him that if a boy is upright, ambitious and industrious HE MAY BE WHAT HE WISHES TO BE. The boy's nature told him they were right. Everything he read confirmed their teachings, and he cultivated in every way open to him his passion to know and to be somebody.

What a glorious inspiration! You know how Abraham Lincoln's success—which brought him the respect, the gratitude, the adulation and the love of millions—which has made his name a household word for all time—came from the poorest and most unpromising beginnings. As Eldridge Brooks says: "You can see how poverty and ignorance and unfavorable surroundings and awkwardness and lack of good looks could not keep him down, BECAUSE HE WAS DETERMINED TO RAISE HIMSELF AND BE SOMEBODY."

YOU LIVE IN AN AGE OF OPPORTUNITY

You live in a more favorable age, amid more favorable surroundings, than Abe Lincoln did. You probably have not half his disadvantages. You cannot all be Lincolns, you cannot all be Presidents. But Abraham Lincoln was ONLY ONE OF THE THOUSANDS of the great and successful Americans who have won their success entirely through Home Study. YOU CAN DO THE SAME. You can develop your natural God-given talents; you can achieve success in the field for which you are best fitted; you can increase your earning ability tremendously; you can achieve a measure of fame and appreciation; you can have "the glorious privilege of being independent."

YOU can be what you wish to be. It is up to YOU!

The Railsplitter's Philosophy

I do the very best I know how—the very best I can; and I mean to keep doing so until the end-If the end brings me out all right what is said against me won't amount to anything, if the end brings me out wrong ten angels swearing I was right would make no difference

Abraham Lincoln

The above is a good specimen of
Old English Lettering
We give many such in our wonderfully complete Illustrating Course

BE
WHAT YOU WOULD LIKE TO
BE

Correspondence Institute of America, Scranton, Pa., U. S. A.

The ad is in red and blue — maybe no engraver will want to tackle the blue. The long line of the head, the caption, "God's 'Common Man,'" the initial, the BE's, and the address line, are red.

Chicago's New Advertising Building

Only Building in the World Devoted Exclusively to Advertising

The advertising interests of Chicago have set an example to the advertising interests of every other large city, by erecting a mammoth sixteen story building known as the Advertising Building, and to be rented entirely to advertising and publication interests. This is the only building of the kind in the world. It costs $350,000 and the land it occupies is valued at $450,000.

The corner stone of the building was laid with impressive ceremonies Saturday, November 16. The members of the association formed in line at their present club rooms at Monroe and Clark streets and marched four abreast behind a platoon of police and the Daily News band, to the new building at 119-123 W. Madison street. Here addresses were made by A. F. Chamberlain, the retiring president of the Chicago Advertising Association; James M. Dunlap, the newly elected president; J. R. Woltz, an ex president of the association, who is given credit for having originated and engineered the project; and Seth Brown, publisher of Standard Advertising. The corner stone was laid by Mr. George W. Coleman, president of the Associated Advertising Clubs of America.

In the evening a brilliant banquet was held at the new Sherman hotel, at which addresses were made by officers and members of the association, and an able address was read from the pen of Arthur Brisbane of New York, who could not be present at the event.

The building is forty-five feet front by ninety feet deep, sixteen stories in height. It is architecturally a departure from the dull monotony of the skyscraper type, being a harmonious blending of red brick with white tile. Twenty-eight million pounds of steel were used in its framework.

The top three floors of the building will be occupied by the Chicago Advertising Association as its club home. Suitable space will be devoted to dining room, billiard room, library, reading room and to other club activities. Twelve floors are being rented or leased by advertising agencies, publishers, publishers' representatives and other advertising interests, while the main or store floor will be rented for commercial purposes. Seventy per cent of the space of the building has already been leased and the balance is being rapidly taken up. The building will be ready for occupancy before May 1, 1913.

An active library committee of the club is now collecting a library on advertising and selling topics that it is hoped will be the greatest and most practical library of the kind in existence. This library forms only a part of the educational work which the club will carry on as soon as it occupies its new quarters.

The Chicago Advertising Association was the first advertising association to be formed in America, and for that reason it is now called the mother of the ad clubs of America. Over 150 such clubs are now in existence in other cities, most of which are affiliated into a national organization known as the Associated Advertising Clubs of America.

The completion of this building is only one more milestone in the upward progress of a calling that is only beginning to come into its own among the business interests of the world, and when any man who is interested in advertising, gazes at this towering skyscraper, his heart fills with a sense of pride at the dignity and stability of a calling which plays so important a part in building the business of others.

* * *

Teachers of Journalism Organize Conference

The American Conference of Teachers of Journalism was organized at Chicago on November 30 by professors of journalism representing fourteen colleges and universities. The officers of the new organization are: President, Willard G. Bleyer, University of Wisconsin; vice-president, James Melvin Lee, New York University; secretary-treasurer, H. T. Harrington, Ohio State University; additional members of the executive committee, Talcott Williams, Columbia University, and F. W. Scott, University of Illinois. It was decided to have the next meeting of the conference at the University of Wisconsin, November 28 and 29, 1913.

Those who attended the meeting at Chicago were: Merle Thorpe, University of Kansas; Frank L. Martin, University of Missouri; W. G. Bleyer and Grant M. Hyde, University of Wisconsin; Fred Newton Scott, University of Michigan; J. W. Piercy, University of Indiana; F. W. Scott, University of Illinois; N. W. Barnes and E. E. Troxell, De Pauw University; Robert W. Neal, Massachusetts Agricultural College; Rev. J. E. Copus, Marquette University; Charles Dillon, Kansas Agricultural College; F. W. Beckman, Iowa State College of Agriculture; Talcott Williams and J. W. Cunliffe, Columbia University; John M. Cooney and James Keeley, Chicago Tribune, Notre Dame University; J. O. Rankin, University of Minnesota College of Agriculture; George Miller, University of Cincinnati; Frank L. Blanchard, editor of Editor and Publisher; B. B. Herbert, editor of National Printer-Journalist; B. F. Chittick, Inland Printer; J. B. Gairing, Publishers' Auxiliary.

The members of the conference made an inspcction trip to the plant of the Western Newspaper Union Saturday morning and visited the Chicago Tribune plant as the guests of James Keeley, Saturday night.

Talcott Williams read a paper on "Technical Instruction in Journalism," which was discussed by Charles Dillon, N. W. Barnes, F. L. Blanchard, J. W. Cunliffe, and James Keeley. The amount and character of practical experience to be given students in courses in journalism was discussed by Merle Thorpe, J. W. Piercy, F. W. Scott, Talcott Williams, and J. W. Cunliffe.

Statistics compiled by Walter Williams of the University of Missouri and presented in his absence by Frank L. Martin showed that instruction in journalism is being offered in thirty colleges and universities in this country. These institutions are: Beloit College, University of California, University of Colorado, Columbia University, De Pauw University, Iowa State College, University of Illinois, University of Indiana, University of Kansas, Kansas State Agricultural College, University of Kentucky, University of Louisiana, University of Maine, Marquette University, Massachusetts Agricultural College, University of Michigan, University of Missouri, University of Nebraska, University of North Carolina, University of North Dakota, Notre Dame University, Ohio State University, University of Oklahoma, University of Oregon, University of Pittsburgh, University of South Dakota, University of Utah, University of Washington, University of Wisconsin, New York University, and the University of Southern California.

In three of these universities, Marquette, Columbia and Missouri, instruction in journalism is organized in the form of a professional school and in seven others it constitutes a separate department of the university — Oregon, Notre Dame, Kansas, Washington, Wisconsin, Iowa College of Agriculture, and Kansas State Agricultural College. The statistics were based upon a list of questions sent to 200 American colleges and universities.

Plans were considered for the establishment of a lecture bureau similar to that established by the Associated Advertising Clubs in order to secure the services as special lecturers of well known editors and writers to address the students of journalism in the various colleges and universities.

The St. Louis Monotype Keyboard School

For many years the Lanston Monotype Machine Company have maintained a school in Philadelphia in connection with their factory for the training of monotype operators, for which, of course, no tuition fee has been charged and where any compositor who has the natural qualifications has been able to acquire a thorough knowledge of the operation of this versatile machine.

Many compositors, however, are so situated that the expense of a trip to Philadelphia and their personal maintenance while there is beyond their financial ability, and in recognition of this condition the St. Louis Typographical Union No. 8 in conjunction with the Lanston Monotype Machine Company are now installing in the city of St. Louis at 915 Pine street, a very complete school for the instruction of monotype keyboard operators.

The establishment of this school will serve a two-fold purpose. It will enable the users of monotype machines in the Middle West to obtain a larger supply and better grade of operators than heretofore has been possible, and will permit compositors, who have the proper qualifications, to obtain this valuable course of instruction without the expense of a long trip to the East. We understand that there are already applications on file which will strain the capacity of the school for several months, and care is naturally being taken by the directors, one of whom is the president of the St. Louis Typographical Union and the other the local monotype representative, to select the applicants in accordance with their ability to finish the course in the shortest possible time.

One feature of the school is that each pupil will receive individual instruction and thus be enabled to advance as rapidly as he can acquire the knowledge regardless of the progress of the other pupils in the school at the same time. The school will likely be in full operation on or about January 6, 1913, and communications regarding tuition should be addressed to the St. Louis Monotype Keyboard School, 915 Pine street, St. Louis, Mo.

* * *

Presented With a Loving Cup

For an industry as young as that of photo-engraving, to have passed twenty-five years in the employ of one firm is a record to which few men can lay claim, and to have those twenty-five years of service recognized in a fitting and substantial way, is an experience that still fewer men have enjoyed. But that is what happened to Louis Stein of the Electro-Light Engraving Company, Saturday noon, November 23, when he was presented with a silver loving cup and a purse of gold pieces by the firm. Mr. Wilson, the president, made the presentation, and in a sincere and earnest manner expressed the pleasure which he and his associate, Mr. Morley, felt in paying tribute to Mr. Stein's continuous and devoted service during twenty-five years in their employ. "We hope we have occasion to do this oftener in the future," said Mr. Wilson. Mr. Stein, taken entirely by surprise, naturally overcome by this splendid token of esteem, in accepting the cup and purse said that spoken words would not adequately express the fullness of his heart. Mr. Morley then said a few words in a heart-to-heart manner, expressing the hope that pleasant relations between office and shop would continue, and that all hands would realize that their interests were identical.

This is the third employe that has thus been honored by the Electro-Light Engraving Company, others being Enno Ennen and Edward Anderson.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

HOW many times have people come into my office (and yours, too, no doubt) and expressed themselves disparagingly of the newspaper business, because of the (what seems to them) endless building up each day or week only to tear down again. They say that our work seems so useless, endless and monotonous that they cannot understand how we bear it.

But, whenever I have had the opportunity, I have always attempted to explain to such visitors how in that very feature of the newspaper and printing business lies one of its principal charms. The casual visitor in a printing office makes the serious error of looking upon the composed form as the finished product of the printer, whereas the printed sheet is the finished product, and I need not here enter into a discussion of the life or lasting qualities of that product. We all know that many newspapers and hundreds of books have been treasured in a good state of preservation long years after even their creators were gathered unto their fathers.

And as regards the sameness of the work, what at a glance may look like monotony is to me in reality the most pleasing of varieties. Each and every edition of a newspaper — distinct and different in many ways from any of those which have gone before — distinct and different from any of those which are to come hereafter — is written, composed, impressed and cleared away again to make way for the next edition, which in its turn is to be as distinct and interesting in its individual differences as any of its predecessors.

While there is of necessity a similarity in the various processes employed in the making of each edition of a newspaper, yet it seems to me that there is more of a variety offered than in the daily tasks of many another calling. The editor and reporter find relief from monotony in the ever-changing character of the day's news, and the same things offer relief to the men who reduce the copy to type. The ad-men find renewed inspiration and variety in the way in which requirements in their department vary, and likewise the makeup-man finds new ideas and new propositions confronting him in each succeeding day's work, and by these he brings out effects which preclude the possibility of real monotony in the tasks of the pressmen. Even in the seemingly monotonous matter of distribution on hand-set sheets, there is always enough difference in the character of the type to be distributed, to insure freedom from overwhelming ennui.

But possibily the keenest felt feature of the newspaper business, which often strikes the uninitiated as pure monotony, whereas it is the real newspaper-maker's highest source of inspiration and encouragement, is the constant repetition of editions — the perpetual issuing of one edition after another. I have called this our highest source of inspiration and encouragement, because the newspaper-maker is just like the little old-fashioned school boy who used to work his 'rithmetic 'zamples on his slate. You remember the boy and the slate, the latter now condemned as unsanitary and both now about extinct.

When the current edition of the paper is not so good as usual, as some editions of all publications are sure to be, then the problem has been wrongly worked — there has been a mistake somewhere, and the clearing away for the next edition is equivalent to the old-fashioned school boy's sousing of his slate with a wet sponge, or that more convenient substitute of a saliva-soaked fist. It is like rubbing out the wrong figures to start all over again — to make a new and better beginning.

And when an excellent edition of the paper has been the happy achievement of the office, it is like having gotten the answer right. You remember how joyful a feeling used to swell the heart of that little old-fashioned school boy, years ago, and fairly radiated throughout his whole being, when on turning to the answers in the back pages of Ray's Arithmetic he found there a row of figures as representing the correct answer to example No. 4440, which agreed exactly with the result of his laborious work on the unsanitary slate. He simply felt like jumping clean over the rough desk before him, and hollering "Whoopee!" at the top of his lungs — and sometimes he did, too — and that's just exactly the way that little old-fashioned school boy feels today (if he happens to have grown up into a newspaper-maker), when the problems of the print shop have been worked out right and the current edition is a success.

Forest Grove, Ore., Nov. 22, 1912.

Under separate cover am forwarding copies of numbers 2 and 3 of the Forest Grove Press for your criticism. All the best looking advertisements set by Ray D. Baldwin, who lately joined us as foreman and job man, coming from Marshall, Minn. Editorial and news articles, heads and make-up by the undersigned, who took charge November 1, purchasing a half interest from Mr. J. N. Hoffman, the associate editor.

We seek an unbiased opinion at your earliest opportunity, judging the paper from the standpoint of arrangement, composition and news value of display.

Thanking you, very truly, GEO. E. SECOUR.

In every feature the Forest Grove, Ore., Press is a modern newspaper. Its six-columned pages are all home-printed with good impression and even distribution of ink. How nicely the first page is made up can be seen from the reproduction shown herewith (Exhibit 1). It is not often that one sees so much care and taste displayed in a front page as is conspicuous in this example. The heads are perfect in every particular, both in wording and typography, the way in which both of the two stair-step lines have been made of equal length being especially pleasing, as is also the uniformity of the size and shape of all corresponding inverted pyramids. The use of the double-column cartoon at the top of the two central columns seems to be a regular feature, and one that adds spice and interest to this page of the paper. As the Press is printed all at home, as previously intimated, the news-service is particularly good. The matter is almost exclusively along local subjects and very well handled by editor and compositor. The editorial work proper is replete with the right spirit — a spirit of abundant local pride and confidence. It is fairly good as to diction, too. And as to the ad composition, the displayed columns contain some extremely neat and pleasing examples. The principal reason why this is true is because the compositor has a proper appreciation of the value of simplicity of design and abundance of white space. A few of the best specimens are shown as Exhibits 2, 3, 4, and 5.

✣ ✣ ✣

Chicago, Nov. 18, 1912.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: I receive the National Printer Journalist every month, and being an old-time newspaper man I enjoy reading your department immensely.

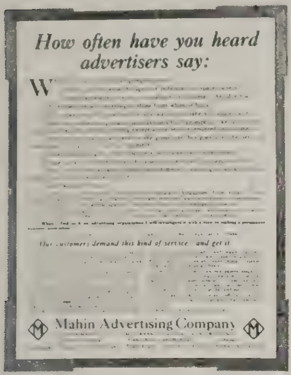
I am at present in charge of the advertising composition of the Mahin Advertising Company, and, by the way, I have the neatest, cleanest and most modern composing room in the United States. The place is a treat to any printer who loves the beautiful — plenty of light, air and general surroundings unsurpassed.

Any time you are in Chicago I would appreciate the honor of a call from you so you can see for yourself.

I take great pains in the selection of the proper type faces and borders in every ad we turn out, and I wish you would take the trouble to look these few samples of composition over and comment on them. They are ads that have either appeared in magazines or newspapers and are every-day work.

Very respectfully,
NED P. KEYES,

In as much as that all of us who write and read this department of the National Printer-Journalist are much interested in advertisement setting, and particularly in good advertisement setting, this contribution from Brother Ned P. Keyes will be found of considerable interest. It has pleased me to include herewith five reproductions from the budget Brother Keyes has submitted, which are shown as Exhibits 6, 7, 8, 9, and 10. In my opinion these specimens represent the highest class of advertisement creation, and their creator has included with them such able criticisms and explanations as to why certain things have been done in their making, that I cannot do better than to quote what he says regarding these exhibitions, as follows:



How often have you heard advertisers say:

Our customers demand this kind of service and get it

No. 10

Supt. Printing Department, Mahin Advertising Co.

Ads Nos. 6, 7 and 8 are a series of Pyrolite Coal I set for newspapers. You will notice that I have used good, strong Gothic for display and Scotch Roman for body. The borders harmonize with the type used and this series of ads have been very effective.

Ad No. 9 is a full page ad for the American Magazine. Here I have used Caslon old style throughout. You will notice that this type fits in with the drawn border very harmoniously and with the proper white space around the illustration at the top makes a very pleasing furniture ad.

Ad No. 10 is one I set for our agency and was run as double page ad in Printers' Ink, and to my thinking was by far the best set ad in that issue. The border I made up with three brass rules — three different kinds — and gives the appearance of a border drawn and engraved, and is just as effective.

* * *

Eustis, Fla., Oct. 5, 1912.

O. Byron Copper, De Soto, Wis.

Dear Mr. Copper: Like a bad "copper," I am continually turning up at the unlooked-for place at the unexpected time, so here I am again. This time I come as the mechanical end of the Eustis Lake Region, which has just incorporated and put in a $15,000 printing plant here. It is quite needless to add that the outfit was my own selection, from the monotype, Miehle and Dexter automatic cutter and Dexter folder down to the gauge pins and copper spaces.

That our equipment is ideal goes without saying, in the light of the foregoing. We have almost everything a fellow could wish, except a big enough house to hold it all.

So far our help in the mechanical department consists of two young ladies and myself. That makes of me the machinist, monotype operator, pressman, stoneman, devil and goodness knows what all else. I am less than a month old (or about a month old) on the monotype, and when I say that we set at least fifty galleys (over twenty of which were crowded out) of monotype matter, besides all the ads, moving the old plant, and setting up and testing out new machinery, all the first week, you will realize we were going some. Of our two girls, one is a two-thirder and the other a pretty good printer.

All this to take up your time and prepare you for the two copies of the Lake Region under separate cover.

Look 'em over and give us all you think they deserve, both the good and the bad; but, in telling the bad, please temper it just a little with the thought of the awful rush that we have experienced.

With best wishes to you and the good old N. P.-J., I am,

Yours fraternally,

ROYAL B. CHILD.

There is always great rejoicing over the return of a long-lost child, and more especially if it be a Royal Child, and so the department of Newspaper Criticisms this month can rejoice right. Brother Child first became a contributor to this department years ago when he was one of the proprietors of the Champion, at Arcadia, Fla., where he immortalized himself (at least with this department) by working some great reforms in his work through studying the columns of trade journals. As may be surmised, his present handiwork — The Eustis Lake Region — coming from a $15,000-plant, is something more than the ordinary. But at the outset I cannot forego the remark, based on a careful and kindly examination of all three copies before me, that with so much wealth behind it, the Eustis Lake Region is not what it should be. Of course, I realize that Brother Child has not yet gotten settled down to business when these issues of the Region were printed; he doubtless had a lot on his mind and an overwhelming lot of work to attend to, and a thousand and one other things to handicap and prevent him from doing his best. In time, therefore, I sincerely hope and expect to see something a whole lot prettier issued from this costly Eustis printing plant. The principal feature which prevents the highest degree of beauty in this paper's pages at present is the lack of uniformity in heads. The use of the italic in upper and lower case effect in the scare heads, and especially in the short stair-step effect, gives anything but a pleasing and dignified aspect. In fact, dignity is the quality missing in a great deal of the mechanical making of this paper. To define just what "dignity" in typography is, is somewhat difficult, but not hard to recognize wherever apparent. Harmony of type faces and faces of least grotesqueness, plain, clean-cut borders, exclusive use of series, abundant and intelligent employment of white space, are a few of the things that make dignity in composition. The same principles applied to the typography of a newspaper will bring out dignity, just as they do in advertisements. For instance, we must discriminate against fanciful borders for box heads, against faces of jaunty style, against everything, in fact, that is not prim, and neat, and modest. And, above all, let us see that each head of each respective style is a duplicate of its sister in size and shape as well as typography. The Eustis Lake Region is printed all at home. It has pages of six columns each, and is impressed with excellent success on a superior grade of white stock, which takes a half-tone with good effect. The Region is edited by a Kentucky colonel (who is vastly different from the Kentucky colonel of song and story, inasmuch as that he is strongly opposed to whisky drinking) by the name of Clarence E. Woods, who is doing some very creditable work in his department. As proof that Brother Royal B. Child is an artist, and understands how to incorporate plenty of dignity in his work, I reproduce one of his ads (Exhibit 11). And another good specimen is shown as Exhibit 12.

Hartford, Wis., Oct. 16, 1912.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: I am mailing you under separate cover a copy of the last two weeks' publication, together with several specimens of ads clipped from the files during the last six months.

Would be pleased to hear any criticisms which you may see fit to make on the typographical arrangement of the display matter.

I take considerable pride in any ad that I may set, and always try to make it as attractive as conditions will permit.

Am an enthusiastic reader of the National Printer-Journalist, and believe that every painstaking, intelligent printer should read the contents of this magazine from cover to cover, as lots of exceptionally good information can be found stored in its columns.

Thanking you in advance for any comments which you may make, no matter how severe, I beg to remain,

Very truly yours,
CLARENCE V. R. B. HATHAWAY,
Superintendent of Mechanical Department.

No. 17

By the enormous bunch of samples which he submits, and by the style of the composition in each, Brother Hathaway succeeds in convincing me that he is a compositor of clever ideas and much mechanical ability, but as the package of samples is so large, I shall be unable to show but a small per cent of them, and shall be obliged to lay aside the Hartford Times itself for consideration in a future installment. Ten of the ad specimens from this contributor are exhibited herewith as Nos. 13, 14, 15, 16, 17, 18, 19, 20, 21, and 22. The first specimen in the assortment, no less than the second, well illustrates the originality and cleverness of this compositor. In the latter we have an effect which ordinarily might be considered as freakish, but as an ad of a cloth remnant sale, it is highly appropriate and commendable. Note how the dotted effect gives the appearance of real "print" or calico. The balance of the list may all be passed with no further comment than that they are worthy of much praise, down to the last specimen, which is probably as remarkable a type picture as has ever been shown in this department. This is of the "freak" order of ads, which should never be encouraged for regular practice, but which, nevertheless, will always excite attention and comment wherever they appear. Aside from the picture, the typographical part of this specimen is very good, showing taste and skill in selection of type and arrangement of display.

No. 22

✣ ✣ ✣

Mt. Victory, Ohio, Oct. 9, 1912.

Mr. O. Byron Copper, Editor the Argus,
De Soto, Wisconsin.

Dear Brother: The first thing I turn to when I receive the National Printer-Journalist each month is the department of newspapers. I think it one of the most helpful features of any trade paper published anywhere, and am always anxious to get it to see what you comment on. The Journalist is truly the publication for the country paper. Others are good and I like them, but it is the best.

Have often thought I would answer some of your preamble talks to your valuable contributions on the editorial, advertising and make-up of newspapers, for I am more or less of an idealist myself. The $1.50 for subscription is my hobby, as you will note. The clean front page is another, graded news and items, plain rule border, home-interest editorials — all but the big ads at the bottom. I am not wholly converted to the idea as yet, but agree with you that it is good, since some of my big ad patrons have preference for top of page.

I have lost some of my best advertisers here in town the past year and have gotten after out-of-town business, at the same time getting in some hard licks in behalf of the home paper for the non-advertisers to let soak in. See articles on advertising.

Am mailing you a few copies of the Observer for criticism — my first offense at bothering you. Butcher it if you want to, for I think there is nothing like wholesome criticism to straighten a fellow out, and I always benefit from the ones you gave others as well as I may from what you choose to give me. I beg to remain,

Fraternally yours,
JOE PENNOCK.

Although, through some unfortunate error, Brother Pennock's paper did not reach me, still I could not refrain from quoting his esteemed letter above, because of the cheerful, helpful message which it contains. Along with this letter, too, came a budget of advertising matter pertaining to the Mt. Victory, Ohio, Observer, Brother Pennock's paper, which shows several things. First, this budget shows that our esteemed brother from the Buckeye State, is a consistent believer in the value of advertising, and uses the same "dope" for stimulating his own business which he recommends as a stimulant for the business of his fellow citizens. He is also a believer in living rates for printer-journalists — as his avowed championship of the $1.50 rate attests, and furthermore has adopted the cash-in-advance-stop-when-up plan. And that he is an all-around progressive newspaper-maker — one after my own heart — there is much evidence. An inspection of his paper would be a pleasure, of which I hope I am not to be cheated, in the near future.

* * *

Canova, S. D., October 19, 1912.

O. Byron Copper, De Soto, Wis.

Dear Sir: I am enclosing a little publication that we are issuing from our office for criticism in your department of the National Printer-Journalist. I have profited by your remarks in the work on our paper and think maybe you can give some pointers on this new paper, although it is probably a little out of your line, not being a weekly paper. It is a church paper, and almost entirely set in Swedish, and that is no snap, either, if you don't know a word of it, but have to follow each word and letter. The paper is set up entirely on our Junior. This is our first issue and the press work could be improved on but we had to rush the thing out. Thanking you for the past favors and with the best wishes I am,

Yours truly,
DEAN C. TRIPPLER.

The little publication which Brother Trippler submits is wholly within "my line," perhaps, but as I am sorely lacking in knowledge of the Swedish language, I am at least unable to pass an opinion on contents. The presswork is a trifle "pale," as the brother has confessed, but typography and general makeup is entirely pleasing — being very neat and modest throughout. I am easily convinced that the composition of this publication from the Swedish copy is anything but pleasant.

* * *

Fairfax, Minn., Nov. 15, 1912.

Mr. O. Byron Copper, De Soto, Wis.

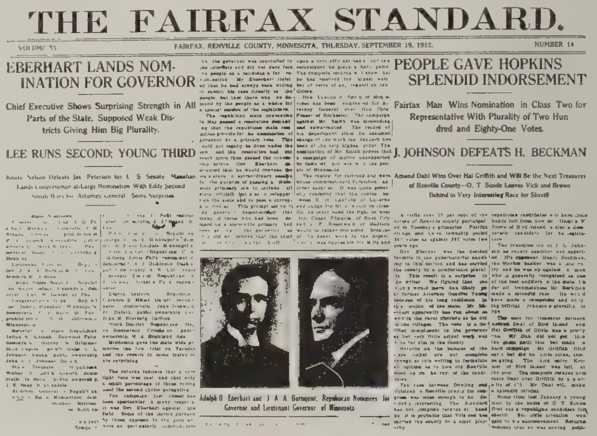
Dear Sir: Some time ago I took the liberty to send a few issues of the Fairfax, Minn., Standard to you for inspection and comment, if you deemed the paper worthy of the latter, and take this opportunity to thank you for the just criticism, as well as the compliments you gave the paper.

Am today, under separate cover, sending you three issues of the Standard. The one of June 20, 1912, is being sent you with the hope that first page make-up will be treated to the best of your judgment. August 15, 1912, the Standard issued a special souvenir edition of thirty-two pages, and you will no doubt find a number of good and bad things in that issue which you could pass judgment on. The issue of September 19, 1912, contains a double page advertisement set by Dewey Zettel and Carl Vincent, and the boys wished to have you review it; know that you will agree with me as to the correctness of this fine typographical piece of work.

Again thanking you for past favors, and trusting that in some future issue of the National Printer-Journalist we may find comment on these editions sent you, we remain,

Fraternally,
FAIRFAX STANDARD PRINTING CO.,
Phil Ploof, Secretary.

I am always glad to hear from old friends — friends who have had notice in these columns before, as well as from those who come for their first visit, hence the welcome accorded this contribution.



THE FAIRFAX STANDARD.

on this front page; and, that my readers may share the pleasure, herewith I reproduce it as Exhibit 23. For the benefit of Brother Child, particularly, I beg to emphasize the fact that here is a specimen of what I term dignified newspaper work, as applied to typography and makeup. And, speaking of dignity and ideality in newspaper headings, observe those shown in the next exhibit, No. 24, which is the upper half of the first page of the Standard for September 19. Here is surely a beautiful letter for headings of this style, although I cannot approve of division of words in the main cap lines, as in evidence in one of these handsome heads. The souvenir edition, issued on August 15, 1912, commemorating the fiftieth anniversary of the battle of Fort Ridgely, was a very fine and commendable effort, consisting, as Brother Trippler says, of thirty-two pages. In the next exhibit, No. 25, is to be seen the double-page ad set by Brothers Zettel and Vincent, which, I am sure, could not be much better. It is a tasteful, delightful specimen, with especially strong display, proper reservations of white, and easy adaptation of the matter to the space. In the proper place I forgot to say that the special edition must have been treasured by Standard readers as a highly valuable addition to Minnesota history. Many of the articles supplied are from the pens of persons who lived contemporaneous with the Indian uprising in 1862, and from some of those who participated in the fighting and bloody hardships of those stirring days, and who correct many common errors of written history. Besides these excellent columns of historical matter, I note many attractive half-tones, historical and modern, and hundreds of inches of displayed advertisements. I close with heartiest congratulations for the enterprising makers of the Fairfax Standard, on the success of their efforts as up-to-date newspaper-makers.

Twenty students will be graduated with the degree of Bachelor of Journalism this school year from the School of Journalism of the University of Missouri. This is twice the number graduated last year. The number of graduates has increased each year. The graduating class the first year of the school numbered one; the second year, six; the third year, nine; and the fourth (last) year, ten.

Agricultural Extension Through Newspapers

To President Andrew M. Soule, of the Georgia State College of Agriculture, belongs credit for introducing a new feature of agricultural extension in connection with newspapers. Realizing the importance of the weekly and daily press for carrying agricultural information to the masses, he obtained for his staff a newspaper man from one of the large dailies of the South, a graduate of an agricultural and mechanical college, who not only knew newspapers but agriculture. To him he gave title of "Editor" of the college.

Co-operating with the editor, a campaign plan was worked out. The weekly press of the state, it was decided, could not be effectually used without supplying prepared plate. At once 150 papers of the state gladly accepted the offer to use plate service furnished by the college each week. The expense of the plate, even to free delivery to the publisher, was borne by the college extension fund. The importance of meeting the entire expense is evident when it is realized that a big corporation of the country is ready to furnish any weekly paper two columns of live agricultural matter each week delivered free of cost, and when it is appreciated how much of the good will of the publishers is obtained in this way.

It is estimated that fully a quarter of a million readers are reached each week by use of the weekly press in the manner indicated, with live, helpful agricultural matter designed especially to meet the needs of the farmers of the state and make possible a way to bring the college into direct connection with the largest number of people of the state.

Furthermore, the editor sends out from the college news items to the daily press, prepared in newspaper form. The college being the head of the corn club, tomato club, soil survey and farmers' institute work of the state, it is prolific of news. The largest possible use of publicity in this way is exercised, and it is estimated that as many as a quarter of a million readers are reached from two to three times a week with items associated with the State College of Agriculture. So that every week a half a million and more people of the state are brought into touch with the college and most of them in a direct and helpful way.

At the meeting of the presidents of agricultural and mechanical colleges of the United States recently held at Atlanta, President Soule told of the work which he had inaugurated. It stirred up much interest, many questions being asked as to the details of putting the service into effect. Apparently many of the college presidents had found a solution to their problems of extension work by use of the press of their respective states.

CHARLES A. WHITTLE.

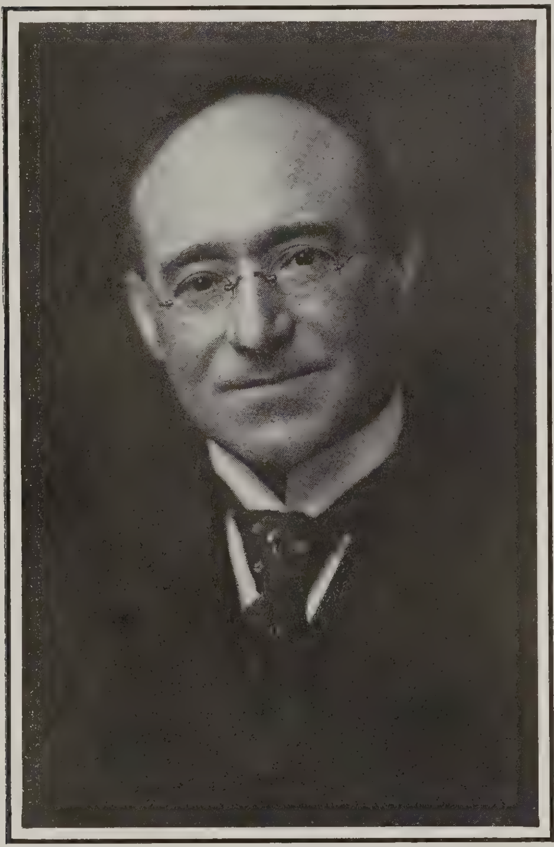
* * *

President Hill has just announced that the annual Journalism Week at the University of Missouri would be Monday, Tuesday, Wednesday, Thursday and Friday, May 12, 13, 14, 15 and 16, 1913. The program will include this year, as in previous years, addresses by some of the most distinguished American journalists. The Missouri Press Association, the Woman's Press Association of Missouri, the Association of Past Presidents of the Missouri Press Association, and the Daily Newspaper Publishers' Association are among the organizations of newspaper makers that will meet in Columbia during the week.

The Success of Leslie's Weekly

HUNDREDS of the readers of the National Printer-Journalist will rejoice in the recent great success of Leslie's Weekly, under the guidance of Editor John A. Sleicher who has ever been a friend and comrade of the editors of this country. He has been a frequent attendant upon and a speaker at the National Editorial Association since the convention in San Antonio in 1888, when he delivered a most instructive address on "Relation of the Provincial and Metropolitan Press" and accompanied the party on the memorable excursion to the old city of Mexico, where a reception was tendered by President Diaz.

He is a good traveler, a good companion and a broad minded friend; is full of sympathy with his fellow men and with the members of all branches of the newspaper and periodical press.



John A. Sleicher, Editor Leslie's Weekly

On December 12, Leslie's Weekly reached its fifty-seventh anniversary and the paper, very properly, gives the facts as to the progress made. The article certainly proved interesting to all readers. There were many things therein full of instruction to newspaper makers. The following given as the paper's creed, on which the success has been attained, will be found rich in suggestions as to worthy principles and a working faith, to guide every worthy publication:

We believe in the prosperity of the country and that the highest duty of a periodical is to strive to secure it for all.

We believe that the worst enemies of American prosperity are the selfish demagogue and the self-seeking muck-raker to whom everything is wrong and who will not see that anything is right.

We believe in unceasing championship of every institution which makes for the public welfare.

We believe in unflinching advocacy of every reform necessary to the advancement of human progress.

We believe that the world's merchants and manufacturers prefer editorial constructiveness to muck-raking destructiveness.

We believe that an illustrated weekly newspaper should hold the mirror up to the world's news. This has been the mission of Leslie's Weekly for more than half a century and will continue to be its mission for all time.

We believe that the men who build up, whether in humble or exalted station, are worthy of praise and that the men who pull down are deserving of censure.

We believe that a periodical that drops its responsibility after reporting an event neglects half its duty. If it tears down for the sport of seeing the dust fly, it clouds the atmosphere and ruins good work, while he who builds anew or seeks to strengthen a weak structure performs a real service.

We believe that to-day is better than yesterday and we shall try to make to-morrow better than to-day; and, finally,

We believe in our motto, "In God We Trust."

With these working principles in view, it is pleasant to read the following as to the substantial accomplishments:

The magnitude of business in the United States is the surprise of all strangers. From the humblest beginnings great corporations have arisen, one after another. This has been such a common experience in this country of wonderful growth that it no longer creates comment. Fifty-seven years ago this week Frank Leslie established Leslie's Weekly with only his brains. From a very humble beginning it has arisen to a business of great magnitude. Last year the business of the Leslie-Judge Company reached an aggregate of more than $2,000,000.

The home office is at 225 Fifth Avenue, New York, known the world over as Madison Square. Visitors who enter this office think this is large enough for one publishing house; they are much surprised when we tell them that this is only the main office and that all the twenty branch offices have to make daily reports to it.

The New York subscription department is in a separate building, opposite Madison Square Garden. Even this office makes its daily report to the main office on Fifth avenue.

In 1907 the property was completely reorganized and passed into control of its present proprietor, manager and editor, John A. Sleicher. The circulation of Leslie's then was 86,300 — to-day it is 380,000. When he took the helm, Judge could boast of only 38,300, but now it prints each week 125,000 copies.

From the very first year of its existence, Leslie's has grown and progressed. It has seen many magazines come and go; many spring up in a night and flourish for a day, but are gone by the end of the season. Leslie's has gone straight ahead, slowly, surely, sanely, until it is now the oldest illustrated weekly in the United States.

* * *

The handling of the mail is a big problem. A special messenger is sent after the mail every morning, before the office really opens; the mail clerks begin on it and have it ready to distribute a few minutes after the heads of the departments arrive. The day and hour of arrival of each business letter is recorded by a stamping machine. Years afterward we can turn to our old letters and find the very hour of the day they came into our office. It takes eight people to open and handle the mail.

A busier office would be hard to find than the editorial office. Each member of it is a specialist and an expert in his own work. So well trained and so smoothly does the machinery of this department run that the members may work for half a day at a time without speaking to each other. They are perfect cogs in a perfect machine. The members are: Managing editor, Theodore Williams;

associate editors, Charlton B. Strayer, Homer Croy, Edith Townsend Kaufmann and Daisy Dawson Hills.

Working elbow to elbow with the editorial department is the art department, equally efficient, managed by W. Martin Johnson and his assistant, Frederick P. Rohver. Hundreds of photographs are received each week from all over the world, and from these the art editor and his assistant must select the best ones and then determine the size in which they will appear in the magazine.

The Leslie-Judge organization extends from coast to coast and from Canada to Panama and into the Philippines. It has subscribers in every country in the world.

The home office from which all this emanates is at Fifth Avenue and Twenty-sixth street. It is the only publishing house in the heart of Fifth Avenue. The offices are very simple. There is no mahogany or damask curtains, nor deep rugs on the floor. Everything is simplicity and business. There is an atmosphere around the office found in too few editorial houses — a feeling of pleasantness and good-will. There is no bickering back and forth and petty tricks. It is one big family, all pulling toward a bigger and better Leslie's. "The Chief" (as the staff calls John A. Sleicher) is democratic to his bones; the office-boy has as ready a hearing as the head of the advertising department.

Leslie's has always stood for enterprise and energy. When the Civil War broke out, Leslie's sent twelve correspondents and artists to the front to cover it. Even in this day of big journalism, it is considered a startling large number. When Frank Leslie died, in 1880, Mrs. Leslie became editor and soon was famous the world around. A few weeks after she had come into power, President Garfield was assassinated. The presses were turning off the week's run when the startling word came in. To the consternation of her assistants, she ordered the presses stopped, regardless of the loss, and all the latest news rushed through. By working at a high rate of speed and doing some clever manipulating, she was out on the newsstands three days ahead of any other publication. Three issues a week were turned off during the early illness of the President. Fifty thousand dollars was made by this move.

Steadily from the very first Leslie's has gone on advancing, pleading the policy of sanity and square dealing, never running after false gods, never led astray by quacks with some remedy to cure all social ills, sticking by the old ship Conservatism. The policy has paid, and we rejoice that we have kept our readers in this country of radicals and fully believe that even greater achievements lie ahead.

* * *

TWO BOOKS FROM HARPERS

It has been stated, probably with reasonable truthfulness, the printers and editors of the present day are not great readers of books. Newspaper making and printing may surfeit the workers in these callings with matter in types, still it is a fact that no people are in more need of solid reading — reading in the form of books that give a complete view of the subjects treated.

Dailies, weeklies, magazines, trade and technical journals and reviews are necessary to the securing of up-to-date information, suggestions and views of life, of all passing events, of all that is new in the world of human endeavor and experiences, in the progressive sciences, in the industries and professions with which newspaper makers and printers must constantly deal.

However, the reading, with only the view of immediate use, of so many things, disconnected except as they are joined by passing human interest, — without the following out lines of thought, of research, of human experience, of the history of the present as compared with the past or the tracing of human incentives and passions from the beginning to their results; without taking broad, connected, logical views such as are to be found in well written books, — may tend to dissipating the faculties, weakening the memory and to the rendering of continued, consecutive thought and reasoning, in a way, neglected if not difficult or impossible.

This introduction has no particular application to the two books from Harper Brothers, Publishers, more than to others and probably not as much to them as to some.

"Your United States" by Arnold Bennett of England, is a book that possesses, besides its intrinsic merit, the farther feature of permitting us to see some of the most striking characteristics of our country, as another, outside of local influences or national prejudices, sees them.

The publishers truthfully state that:

> "Arnold Bennett was welcomed to this country with an enthusiasm such as has not been accorded to any English writer since Thackeray. All doors were opened to him. He saw more in a brief visit than most of us see in a lifetime. He is free from prejudice, gifted with unique powers of observation, and best of all, he has a sense of humor. Our daily life, our society, our sports, our theaters, our schools and colleges, East and West, all come in for their share of his sane and charming appreciation. The many beautiful illustrations by Frank Craig, the English artist who accompanied Mr. Bennett, tell their story pictorially as brilliantly as Mr. Bennett does in his text."

The makers of newspapers can never be too well informed as to their own country and all its institutions and the view taken of these by well informed, unprejudiced minds. This book affords pleasure in the reading, as well as information, through brightness of view and statement. It is filled with glimpses of scenes, characters and places that gain new interest from the fact that they possessed novelty to the writer.

It is a fact that much is missed by residents of cities, states and nations by reason of daily familiarity with the whole. There is a lack of analysis or consideration of the separate parts. The editors, who have written up the journeyings of the National Editorial Association, have frequently had their attention called to the fact that they have seen and written about things that the residents of the different cities and regions visited, had entirely overlooked and the existence of which they had ignored until they had read the editorial travel-stories.

Mr. Arnold has told, in his book, of things in New York, Washington City, Chicago and other places, of organizations, travel, hotels; of sports and theaters, education and art and of the American citizens, that have a new interest and reveal much that is unseen in the daily preoccupation of the people, where eyes seem unseeing by reason of familiarity. ("Your United States, Impressions of a First Visit" by Arnold Bennett, Harper & Brothers, Publishers.)

"The Financier" by Theodore Dreiser, is a work that reveals the pitfalls that are set in the paths of the many wealth-seekers in this land of strenuous living and of speculation and of market manipulations, where getting wealth, too often, becomes the all-absorbing incentive and is pursued with a tenacity that crowds out all thoughts of ethical responsibility or spiritual development, and engulfs the victims in selfishness and the seeking of selfish, material gratifications.

The main character, or hero, in this novel wins early success and when the crash comes, caused by the calamity of the great Chicago fire — 1871 — does that, to save his fortune, which lands him in the penitentiary of Pennsylvania. A pardon at the end of thirteen months gives him opportunity to enter again upon his career.

While the book does not name the late Yerkes of Chicago, London and New York, references that are made, lead to the impression that it is intended as an interpretation, if not a revelation, very close to the truth, of his life. While in the form of fiction, it gives a panoramic view of such a life that was given up to a lust of riches and a lust of love, while still enchanted by all material beauty in art and grandeur in nature. The logic of the events narrated is far from that of securing any substantial happiness, yet one feels a little bit of commiseration, if not admiration, for the man who, engulfed in the whirl and driven by passion of money getting, really attained to some great accomplishments in the heaping up of wealth, that brought no permanent gratification nor saved him from the miseries of domestic troubles and disgrace.

The book gives a pretty good insight as to the heated fight for gold by the frenzied, modern financier, who, having no anchor of high principles, is swept away by lust and an uncontrolled desire for self gratification. ("The Financier" by Theodore Dreiser, Harper & Brothers, Publishers.)

TOPCOL'S NEW YEAR'S GREETING 1913

On the eve of the New Year I sat pondering, when
My eyelids closed down and I dozed in my den.
I dreamed that Old Time backed the years that are ripe
And made me a 'prentice, again setting type.
Here was the candle that lighted my case,
And here the old comrades — familiar each face.
Here Bushy and Peasy, Ace, Fitchy and Dan,
And Sandy whose life term was but a brief span,
The printing ink's odor saluted my nose,
More grateful than fragrance of lilac or rose.
My ears caught the rhythmical clickety-click
Of the types as they spelled out the words in the stick.
In my eyes flashed the frisket, the twirl of the crank,
And the sheet neatly printed lying smooth on the bank.
My first pull of the devil's tail then came about,
And I woke with affright as the innards crashed out!

* * *

The vision too brief, for with passionate pain
I yearned to shake hands all around once again.
Yet I would not abide in the close-clinging past,
For an era of progress has brought betterments vast.
Prized friends crowd my life path, alway at my side
The choicest of comrades, my fifty-year bride.
Close standing beside her, companion and daughter,
And to add to our household the young man who caught her.
This Topcol quartet to all friends far and near
Sends a song of glad greeting — A Happy New Year!

A. O. BUNNELL,
Topcol, Dansville, N. Y.

A copy of the revised Desk Book of the School of Journalism of the University of Missouri, has reached this office. An extended review of the original publication was given, a year or two ago, in these pages and its value as a desk or style book was quickly recognized by newspaper men throughout the country and the demand was such as to rapidly exhaust the supply. Dean Walter Williams now informs us that provision has been made on such a scale, that a copy will be sent free to any reader of the National Printer-Journalist who makes application to him for the same. Address Walter Williams, School of Journalism, Columbia, Mo.

The December, 1912, issue of The Linotype is a very handsome, complete and useful number of thirty-two pages. It contains an index for the past year, Vol. VIII, January, 1912, to December, 1912, inclusive. One valuable feature of this issue is the "Daily Time Ticket for Linotypes," containing full explanation as to its advantageous features and use.

NEW GOLD CAMP TO RIVAL CRIPPLE CREEK AMONG THE POSSIBILITIES IN COLORADO

Denver, Colo. Nov. 27.—A quiet tip is being passed around among the mining men of the Cripple Creek district that a new field, similar in character to that locality, was located late this fall by a Cripple Creek miner six miles from Platoro, an old, abandoned mining camp of prominence some twenty-five years ago but little heard of since then. The mines are situated in the northwest corner of Conejos county and are forty-five miles from Monte Vista, Colorado, the nearest railroad station, on the Denver & Rio Grande.

A representative of the American Smelting & Refining Company and many of the larger Cripple Creek mine owners entered the field in September and remained until snow shut off all locating and development work, the altitude of the camp being 9,000 feet. A great rush of miners from Cripple Creek and other mining districts will begin as soon as the opening of spring permits.

The members of the National Press Association can go to the next convention provided with all appliances and equipments, with the hope of bringing back with them stores of the precious metal.

"THE BEST PUBLICATION OF ITS KIND IN THE COUNTRY"

Kind Words From Congressman Ashbrook

HOUSE OF REPRESENTATIVES, U. S.
Committee on Expenditures in the Post Office Department
Washington, D. C.. Dec. 16, 1912.

Hon. B. B. Herbert,
Editor, National Printer-Journalist,
Chicago, Ills.

Dear Mr. Herbert:

I have just finished reading the December issue of your most excellent magazine. When I read the splendid tributes from your friends, my conscience pricked that I had failed to do likewise. It was brought to my attention a month or more ago that you were about to reach the twenty-fifth anniversary of your publication of the National Printer-Journalist, and I intended fully at the time to write you, but the clamor of hungry job seekers have so haunted my dreams that many things have been neglected. I hope you will accept at this late day my hearty and sincere good wishes and congratulations. I have known you and read the National Printer-Journalist for over fifteen years, and you may consider me a life subscriber. I so enroll myself not alone because of its excellence, and I consider it the best publication of its kind in the country, but because of my high personal regard for you and a deep sense of debt to you. I shall never cease to appreciate your many kindnesses when I was the corresponding secretary of the dear old N. E. A. Your kindness of heart, wisdom and counsel made impressions on me that the lapse of years does not dim or efface. When I read in the Printer-Journalist each month of the success or sorrow of my old newspaper friends, my heart responds in joy or sympathy and I should regret exceedingly to be deprived of such a medium. Brother Herbert, no one could know you intimately and not love and admire you, and wish you and yours years yet of health, happiness and prosperity, and none more fully than the writer.

Very sincerely,
WILLIAM A. ASHBROOK.

"Just Drifting"

Editor Hotaling of Minnesota in the Pulpit

In our view, any man who is worthy of being an editor is entirely worthy to occupy a place in a pulpit. We believe, too, that pulpits would frequently be made more practically useful by occasionally asking the editors of home papers, who are in close touch with the people, to expound truths therefrom.

The Argus-Leader of Sioux Falls, S. D., thought so well of a sermon by Editor H. C. Hotaling of Mapleton, Minn., as to print the same in full in its issue of December 20. The sermon was delivered at the invitation of the Pastor, Rev. Arthur G. Young, in the Mapleton Congregational church. In a preface to the sermon, the Argus-Leader gave the article a four-deck heading and prefaced the sermon with the following among other remarks:

> The attendance was very large when Editor Hotaling spoke, and he took for his topic "Just Drifting."
>
> Mr. Hotaling is one of the best known editors of the state and was at one time member of the executive committee of the National Editorial Association, and his newspaper has a large circulation in this section of the state. And while he is not a church member himself, his sympathy has always been with all influences that help community life, and he always has been a supporter of religious work. For these reasons his appearance in the pulpit was an unusual event that called together people of all creeds and no creeds to hear what he had to say.

Naturally "the attendance was large" and here is where one advantage came to the church and the congregation.

Editor Hotaling took for the text for his talk:

> "Therefore we ought to give the more earnest heed to the things which we have heard, lest at any time we should let them slip," or as the revised version puts it: "lest we should let them drift." Twentieth chapter Hebrews, first verse.
>
> This epistle written by St. Paul deals with the dominion of the world given unto Christ and is a warning that has been heralded down all the ages, yet has not been heeded to the extent which might have been expected, considering its importance to humanity. In our prosperity we forget that we have obligations to those about us, that we are in reality our brother's keeper, but in the onward rush for the almighty dollar we become selfish, narrow and contracted. We are in reality in many respects like the ship without a rudder and the mariner without a compass. Whither are we drifting and why do we fail to earnestly heed the welfare of our fellowman?

The sermon was full of thoughts appropriate to all the people and emphatically so to editors and printers, who have double responsibilities to their communities. He interpreted Christianity or true religion to mean:

> To put sunlight into the homes of the poor, to bring some comfort to the eyes that weep, to give some deliverance to men who are in servitude to drudgery and toil, to give some light to the ignorant and to give some freedom and justice to government.
>
> The one creed that appeals to humanity is that of doing something to lighten the load of toil and point out the life that will yield the best returns in happiness.

The editor-preacher closed with the following words and lines:

> There is no excuse for any one going through life, drifting along like the fleecy clouds in the sky with seemingly not a care, or slip-shod like the slovenly toper who moves along the street with shoes and ambition down at the heel, for
>
> 'Tis the hand you clasp with honest grasp
> That gives you a hearty thrill.
> 'Tis the good you pour in other lives
> That comes back your own to fill.
> 'Tis the dregs you drain from another's cup
> That make your own seem sweet.
> And the hours you give to your brother man
> That makes your own life complete.
> 'Tis the burden you help another bear
> That make your own seem light;
> 'Tis the danger seen for another's feet
> That shows you the path to right;
> 'Tis the good you do each passing day
> With a heart sincere and true
> That brings best returns to you.
>
> Therefore we ought to give the more earnest heed to the things which we have heard lest at any time we should let them drift.

* * *

Matured Journalism

(The Engraver and Electrotyper, January 2, 1913)

Wisdom cometh with age say the philosophers. The tongue of the wise is health said Solomon; there were no newspapers in those days, or else he might have said that the pen of the experienced editor is the wisest.

The accompanying portraits represent an editor who has done his own editing and conducted his own periodical for a full quarter of a century. And that space of time at the pace of literary products during that period is a unique record; and more editorial life has been put into the Printer-Journalist in its twenty-five years, in order to keep its prominent place in the front of the procession, than by hardly any editor in other periods, or than many working under different conditions in the same period.

Colonel Herbert drifted into the harness of this, his life's calling. He did not seek it; but it came to him in such ways that he could no more avoid it than the preacher of Nineveh could sidestep his special calling. In response to enquiry how he picked up the yoke and got into the harness Editor Herbert says:

"The National Printer-Journalist was established through the founding of the National Editorial Association. As president of the Minnesota Editorial Association, I conceived the idea of getting different state organizations together for mutual improvement. After the National organization was formed I found out that there was no paper devoted to the newspaper organization and hence recommended in my address at the convention in Cincinnati in 1886 the founding of such a publication.

"A gentleman from St. Louis, Mo., agreed to undertake the work, but, unfortunately, died during the year and at the meeting of the Association in Denver in 1887, I was requested to undertake the enterprise for the good of the association and the newspapers of the country. The only inspiration was a desire to benefit the fraternity, as I was an enthusiastic newspaper and Association man."

Photo-Engraving had come ahead of the Printer-Journalist, and in its initial number the following ads of engravers appeared: William Shea, Chicago; C. A. Nicoli, Indianapolis; Moss Engraving Company, New York; Carl Schraubstadter, Jr., St. Louis; Crosscup & West, New York. Process has developed wonderfully in various directions since then.

A happy New Year, Colonel. May 1913 be a most prosperous year to you all.

CHICAGO, JANUARY, 1913

As indicated in our article on the "Spirit of the New Year," to our view, the two allied callings of newspaper making and printing were never in more promising condition than at present. It shall be our endeavor to aid, as far as possible, in the great advances that are being made.

While the great value of instruction in methods and ways, in cost finding, in all branches of office management, in skill and the knowing and mastery of the most perfect typography must not tbe undervalued, yet above these, and as a means of highest success, we must rank efficiency, and a high spirit of service and a live, loyal interest and pride in the work. Our endeavors will be especially to promote these. The articles presented from month to month on efficiency will be found especially and increasingly valuable.

To present matters that will be practical and convincing, a series of prizes have been offered, and the result has been that there are now in hand many of the best thoughts and methods that can be presented. Mr. Barnes, who has this department in charge, is a practical, working superintendent in a printing office, and has such an understanding of efficient management, and such close relationship with most efficient managers, as make his articles of highest intrinsic value, but he desires and asks the hearty co-operation of all who have given the matter of efficiency consideration. Let every one help him and this publication and themselves and all other progressive printers, to place the calling in the position of highly productive and superior earning power that will result in giving the craft the high position that its importance deserves. A mutual exchange of views, thoughts, theories and actual working experiences and accomplishments will help us as nothing else can help, and will bring to each the full reward.

Men prize and honor the callings of life — from the very objects, necessities and conditions through which all pursuits commend themselves — by their productiveness and earnings. Men speak well of each other when they do well for themselves, for their vocations, for those whom they employ and whom they serve, as well as for the community or general public. Efficiency injures no one — greater and better production does not decrease but does increase employment. Man's demands more than keep pace with increased and improved production. This has been wonderfully demonstrated in printing and newspaper making.

The uses and demands for printing and newspapers have increased a hundred fold, and, with all the improvements of methods and machinery, ten fold more printers and newspaper makers are employed in proportion to the population than were employed fifty years ago, and they receive greater pay, have pleasanter surroundings in their work and enjoy greater honor.

Do not let any printer imagine that efficiency will crowd out of employment any one who is worthy and desires work that will give zest to life. Improvements that have been made and all the wonderful machinery, increasing the output for each worker from four to six fold and in many cases even more than this, have only increased the demand for more work, and added to the better conditions and better pay of workers.

Printing now stands sixth among the industries, and it can be raised to the fifth place during 1913, through increased efficiency and improved output, intelligently sold at thoroughly ascertained and liberally remunerative prices.

To be a worthy, efficient, fully equipped printer or newspaper worker, is to be greater, in all that tends to usefulness and to all that helps and endures, than to serve in any public office. Nothing but the highest possible efficiency should satisfy any worker in either of these callings. Let us then be true to these high callings, and live with new spirit, new interest and new incentives.

✣ ✣ ✣

Just as we completed the above, we picked up a copy of the December number of Cottrell's Magazine, — a little house organ that is worth while and that always contains many things that are wise and inspiring. The first line that caught our eyes was "Contentment Is Laziness," that is certainly true when "contentment" means satisfaction with past attainments or listlessness and a disregard of the possibilities of greater attainments or accomplishments in our work. True contentment comes from steady, hopeful progress, and a looking to better things that are daily made possible through all that has been attained.

✣ ✣ ✣

Management, backed by brains, conscience, knowledge, regard for all and for their rights and well being; by justice, a good understanding, with a liberal mixture of zeal, and a desire for reaching the highest and best ends, is the need of the present day, and is coming to be recognized as such in all branches of the industries as well as by municipalities. One city, at least, has advertised for a manager, and every city needs one rather than a mayor or aldermen. There must be a planning, managing head, ready to take counsel, to be sure, but responsible for direction, in every newspaper and printing office.

Men should be chosen and trained for responsible positions and should fully realize their great opportunity and responsibility. A manager is not to be a "boss" in any offensive or narrow meaning of that term, but a wise counselor, who yet has in view all requirements and possibilities of the busiiness and understands all needs and conditions. Too little of real, systematic planning, of laying out of work and of directing by a workable system, have been the causes of failure or lack of proper accomplishment in most newspaper and printing offices.

Even if a man is working alone, he should plan and lay out his work in advance, should know the possibilities of accomplishment, what demands he may assume and when and how he can meet these demands. When a number of men are employed, the necessity for planning so that each may do the work for which he is best fitted, in the manner and at the most advantageous time, becomes a hundred fold more important. Planning and intelligent management mean harmony in all the work and most economic, speedy, worthy and profitable accomplishment.

✣ ✣ ✣

Editor Eugene L'Hote printed his Christmas issue of the Milford, Ill., Herald, December 12, on extra quality, machine finished, white book paper. This permitted the perfect showing of the halftone illustrations.

The border of the first cover page was artistically made up of the portraits of fifty-four Milford babies or, as the editor terms them, "Milford's brightest and best future citizens."

The center or body of the page was formed by a grouping of wonderfully attractive "snap shots" of scenes in the parks and play grounds, of the homes, the street, the drives and of the country roads; of the river, and on the farms of the surrounding region. The result was a picture mosaic, all of views, full of life and beauty, showing that Milford is unsurpassed in scenic loveliness and possessed of a joyous people, who live much out of doors and join with the young folks and children in festive occasions, wholesome plays and sports. The accomplishment seems a difficult task, but it is to be presumed that it was the result of forethought and of taking photographic views throughout the year, including many of the different outdoor celebrations and festive occasions.

It is a demonstration and proof that it pays to look ahead in newspaper making and to be unsparing in careful planning and the working for worthy accomplishment. This number of the paper is worthy of being preserved as a work of art in illustration and typography.

The ad composition is of the highest quality of excellence as is everything else connected with the paper, not excepting the exceptionally good press work. It is a home-made, home paper, and is distinctively original and unique. It reflects credit on everything pertaining to the city, the people, the homes, the beautiful tree-bordered streets, the parks, the schools and other public institutions. It ought to be an incentive and an inspiration to other home newspaper makers in the State and Nation to do like worthy work and to seek like peerless accomplishment.

✣ ✣ ✣

"The Story of Chicago in Connection with the Printing Press" from the Regan Printing House, Chicago, is one of the prized publications of the closing days of 1912. It is delightfully gotten up, and the typography, press work and finish are all that could be asked. The following lines on the title page happily indicate the book's object and character:

E're in time 'tis lost and memory fail to trail,
We'll by the printing art, ourselves on record place;
That to future ages and our children may be known,
How from small beginnings the printing art has
grown.

The work is dedicated to Mrs. Nellie Kinze Gordon, the oldest native of Chicago and her portrait furnishes the handsome and appropriate frontispiece. The illustrations are in half tone and appropriate to the text, and the most noted buildings are shown. "Chicago's Great Printing Center" receives proper attention and brief, interesting sketches are given of the "Old Job Printers." Chicago periodicals and publications are given proper notice and explanation as to character, whether news, literary, trade or professional with names of editors, publishers, etc. It will be found useful for reference as well as information.

That New Year's Spirit

The New Conditions, the Wider Opportunities

THE beginning of a New Year should give new impulse and interest to every normal human being. The year that has just passed has been filled with great advances and wonderful accomplishments, but these will avail but little unless they act as incentives to new ambitions and hopes for the year ahead. We do not live in the past and cannot live over the months that have gone, but by their lessons and achievements we can make each year more glorious.

Never in the history of printing, nor in that of newspaper and periodical publishing, have there been greater attainments.

It is a real joy and inspiration to think that a new year has opened with all the opportunities to improve by all that the past twelve months have given in the way of better methods, scientific management, accurate accounting, cost finding, and many improved ways of artistic production and in the better understanding of the principles and utilities of harmony, and in all the appliances and means necessary to effective and rapid production.

Typefounders, engravers, ink and paper makers, inventors, machinists, the manufacturers of presses, of composing machines, and of all else that pertains to the graphic arts in every branch, have worked intelligently and successfully for the meeting of all possible demands of better and greater accomplishment. Dealers, manufacturers and the general public never before have been so widely, thoroughly and intelligently informed as to the uses of printed matter, and of advertising space in publications.

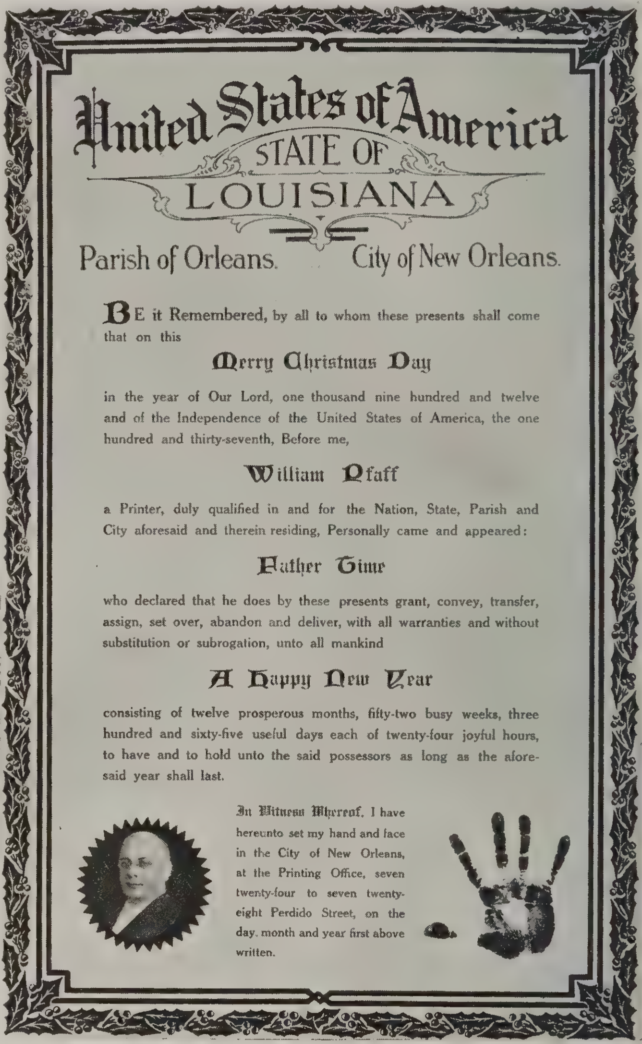
A campaign of education has been carried on that cannot fail to result in great benefit to all departments of these two crafts.

Above all else, a new, living spirit has come into these callings; there is less of hum-drum, dull routine, and working in the grooves or ruts of the past, and more of joyous, intellectual activity than at any former period.

The better directed enterprise, and wonderful activity and unsurpassed prosperity in all lines of human effort; in the arts, in all the industries and commerce as well as in the benevolences, the humanities and in the effort for better government and the securing of equal and the highest possible opportunities for each and every one, combined with the increasing desire to know and to do, have opened broader and more productive fields for printers, editors and publishers, and have brought to them — when worthy and up to the earnest, active progressive spirit of the times — higher respect and greater remuneration.

There has entered into these callings — that have so much to do with all the affairs of men — more enlightened, broader views, more useful and intelligent progress, improved practical and effective economics, and greater accomplishments, with justice, right, truth and service as the wise controlling principles.

After all, while knowledge and skill with the best appliances or means, are essential to success, it is the spirit, the intelligent, joyous zeal and understanding, that tell most for these callings, above all the requirements of most other callings.



United States of America
STATE OF
LOUISIANA

Parish of Orleans. City of New Orleans.

BE it Remembered, by all to whom these presents shall come that on this

Merry Christmas Day

in the year of Our Lord, one thousand nine hundred and twelve and of the Independence of the United States of America, the one hundred and thirty-seventh, Before me,

William Pfaff

a Printer, duly qualified in and for the Nation, State, Parish and City aforesaid and therein residing, Personally came and appeared:

Father Time

who declared that he does by these presents grant, convey, transfer, assign, set over, abandon and deliver, with all warranties and without substitution or subrogation, unto all mankind

A Happy New Year

consisting of twelve prosperous months, fifty-two busy weeks, three hundred and sixty-five useful days each of twenty-four joyful hours, to have and to hold unto the said possessors as long as the aforesaid year shall last.

In Witness Whereof, I have hereunto set my hand and face in the City of New Orleans, at the Printing Office, seven twenty-four to seven twenty-eight Perdido Street, on the day, month and year first above written.

William Pfaff's Proclamation of Useful and Joyful Hours

With an interested zeal and understanding, all available knowledge will be sought and all the necessary skill and most effective appliances will be secured. Increased interest in these callings and in every detail thereof, with clear, working, practical views of the correct systems to be followed and the ends to be reached, will bring greater joys and successes for the twelve months to come than have ever been experienced during any twelve months that have passed.

Greater service and more adequate rewards are now possible. The greater and more intelligent

A Few Holiday Greetings Selected at Random From the Editor's Mail—The Editor Reciprocates All Good Wills and Wishes Prosperity and a Joyous Year to these and All other Readers of the National Printer-Journalist.

the service the purer, the higher and the more enduring will be the pleasure in work and the greater and the more satisfying and worthy the glory, the good-will, the high esteem and gratitude of those who have been usefully served and all who may enjoy the collateral or inherited benefits of such service, which must, in the very nature of things, be immortal and ever widening in results.

President-elect Wilson is wise, just and patriotic in his declaration that only service will receive recognition in his administration. May the God who guided and protected the Fathers of the Republic in their struggles for liberty, and the establishing of a free Nation "of the people, by the people and for the people," enable President Wilson to withstand the manipulations of partizan bosses and corruptionists, who barter the offices of the people to corrupt public service and to pay their henchmen and to put or keep themselves in place and power, and enable him to keep all his good resolutions.

Government, or the administrators thereof, can do very little toward the promotion of business or increasing the welfare of the people, and there is every reason to hope that the incoming administration will be kept from doing anything to interfere with business or welfare of the people who are striving for worthy accomplishments.

Service without spirit or loyalty, without determination to give full value and all that is demanded or that is within one, is of little merit or value, and will not build up a business, or save a nation from degradation and ruin, and, certainly deserves no recognition. Mere place holders must be driven out of public life and certainly there is no place for such loafers in the newspaper or printing callings.

It is not only wise but a duty that is owed to himself, his employes, his family and his calling, for every man, at the beginning of the year to take stock of his affairs, his business methods, of his equipment and buildings, and see to it, not only how he stands as to earnings, but as to means of worthily carrying forward his work for profit to himself and the efficiency and comfort of all employed therein.

Every man should know as to all that may need replacing, of better types, machinery, or appliances, but, above all, he should know of the spirit or lack of spirit, the interest or want of interest that prevails in his establishment. He should magnify his calling and have all under him to feel an intelligent zeal and pride in the work and a desire to render the best possible service or quit the business.

The head of a business is its greatest asset and it is obligatory upon every one who has assumed the weighty responsibility of conducting a business on which the welfare of himself, his family, his employes, his patrons and even his community, largely depends, to take stock of himself at the beginning of this year and be sure that he is fully equipped for his job, with both heart and hand in the work. The interest or enthusiasm of the head of an establishment counts for very much. Interest naturally leads to the creating of interest — it is all-pervading.

It is necessary to know that the heads of departments are in harmony and then to study methods to create an esprit de corps between all departments and all workmen, loyalty to the establishment and all connected therewith and a zeal for the success of the business and a pride in the output and in the reputation of the establishment.

An article in the Saturday Evening Post of Philadelphia, issue of December 28th, contains many valuable truths along these lines under the title of "Interest — The Business Mainspring" that deserves special study. Among the methods named are "Making the Work Attractive;" "Efficiency Through Rivalry," that is, rivalry among workers which must be handled with great discretion; "The Appeal of Self Interest," mostly through the pay envelope and through the sure hope of recognition and promotion. There are other methods, as good comradeship, personal interest in each worker, organization, social occasions, banquets, library, reading room, gymnasium, entertainment and many other things that will tend to make the workers a unit. Good-will and real human regard, sympathy and real desires to benefit and improve each and all the workers are good things or manifestations with which to begin the New Year.

Starting with the right spirit, a proper equipment and a loyal, interested force, next comes the consideration of all the ways and possibilities of pleasing and rendering service to patrons or prospective patrons. Here comes in all the benefits and uses of excellence in production, both as to art and substance. Then the adaptation of all to the highest interest and benefit of customers.

In the commercial printing as well as in the modern newspaper, the opportunities of helpful service are almost unlimited. To give the news is the mission of the press, but how all embracing is the word "news." It covers everything of which the people desire to be informed for their pleasure, profit, enlightenment and well-being from day to day, but the modern newspaper does not stop at what may be strictly classed as news. All knowledge that may prove of immediate pleasure or benefit is included.

The Chicago Daily Tribune, with all its great success, is an excellent example. The Tribune of January 1st, in speaking of its circulation that is now at the highest point in sixty-five years, and of its great advertising patronage that showed a gain over the previous year of over 1657 columns, sixty-seven per cent greater than any other Chicago paper, and more than that of the leading paper of New York City, states:

> During the year 1912 The Tribune has given to its readers 11,374 pages, composed of news, features, pictures and advertising. Each issue of The Sunday Tribune alone has contained the equivalent of three standard size monthly magazines. All this has been available to Chicago people at a penny a day and five cents on Sunday.
>
> It would be idle to attempt statistics covering the nature of what has been printed in The Tribune's news, editorial and feature columns during the past year. The achievement of which we are most proud of is the increase of THE TRIBUNE'S PERSONAL SERVICE TO ITS READERS.

It would profit every newspaper maker to study The Chicago Daily Tribune, to ascertain in what and of what this "personal service" consists, and to determine just how far such service may be adaptable to his own publication. The fact is that not only are all the commercial, industrial, educational, benevolent, governmental and sanitary interests of Chicago subserved by The Tribune but private rights are guarded by a legal department; wrongs righted through a "Friend of the People" department, bodily health protected and the way to cure bodily ills given in a health department; ways to earn money and secure success in a Workers' Magazine, and women are aided toward health and beauty and all the ways of women's household work and in other accomplishments, by wise and skillful advisors. And this is not all. There can be no better or more profitable employment for editors, printers and publishers than to study during the first month of 1913 all the ways, opportunities and possibilities of helpful service for readers, patrons and advertisers.

Service is what deserves and receives recognition in newspaper making and printing and there is no nobler or grander way to success and honor.

✣ ✣ ✣

MINUTES OF THIRD CONFERENCE OF TEACHERS OF JOURNALISM

The following committees met in the rose room of Hotel Sherman at ten a. m., Saturday, November 30, 1912: Committee on Permanent Organization, Chairman, Talcott Williams, Columbia; M. W. Scott, Illinois; N. W. Barnes, De Pauw; Nominating Committee, Chairman, Merle Thorpe, Kansas; Frank L. Blanchard, New York City; Rev. J. E. Copus, Marquette; Committee on Time and Place of Next Meeting, Chairman, Charles Dillon, Kansas Agricultural College; Grant M. Hyde, Wisconsin; R. W. Neal, Massachusetts Agricultural College.

Delegates inspected the plant of the Western Newspaper Union with John B. Gairing, editor of the Publishers' Auxiliary, as guide, at noon.

The conference was called to order in the rose room of Hotel Sherman at 2:30 p .m, Saturday, November 30, by Chairman F. N. Scott, Michigan.

The Committee on a Constitution for Permanent Organization, through its Chairman, Talcott Williams, Columbia, made the following report:

Article 1. This association shall be called the American Conference of Teachers of Journalism.

Article 2. The object of this conference shall be to hold an annual conference of those interested in the teaching of journalism, where opportunity shall be offered for hearing papers on the subjects and for discussing them; and to collect statistics relating to schools, courses, and teachings in journalism.

Article 3. The officers of this conference shall be a president, a vice-president, a secretary-treasurer, and an executive committee consisting of these officers and two additional members elected at the same time.

Article 4. These officers shall be elected by ballot at the close of each annual meeting of the conference. All other business of the conference shall be conducted by the executive committee which shall have power to bring any business before the conference for its action.

On motion the constitution was adopted as reported above.

A paper on "Technical Instruction in Journalism" was read by Talcott Williams and was discussed by Charles Dillon, N. W. Barnes, F. L. Blanchard, J. W. Cunliffe, George Miller, and James Keeley.

Charles Dillon, Kansas Agricultural College, as chairman of the Committee on Time and Place of Meeting, reported the choice of the University of Wisconsin and November 28-29, 1913, as the date for the next meeting. J. W. Cunliffe, Columbia, invited the conference to meet at the Pulitzer school next year. The report of the committee was adopted as presented.

"The Candle"

"Old Comrades"

Past President A. O. Bunnell and His Printer Companions of Fifty-Two Years Ago.—See Page 40.

The Committee on Co-operation in Securing Lecturers presented a plan for the establishment of a lecture bureau through which college and universities could secure editors, writers, and publishers as special lecturers for the students in the courses in journalism. The report was approved and referred to the executive committee.

The Nominating Committee presented the following nominations and on motion seconded and carried, the secretary was instructed to cast a unanimous ballot for them as follows: president, W. G. Bleyer, Wisconsin; vice-president, J. M. Lee, New York University; secretary-treasurer, H. T. Harrington, Ohio State College; additional members of Executive Committee, Talcott Williams, Columbia, and F. W. Scott, Illinois.

At the meeting in the evening at 7:30 o'clock, F. L. Martin of Missouri, read statistics compiled by Walter Williams, Missouri, and it was voted to express to Dean Williams the appreciation of the conference for his compilation, which was referred to the Executive Committee.

Practical experience for journalism students was discussed by Merle Thorpe, J. W. Piercy, F. W. Scott, and others.

REVIEW OF JOB PRINTING

Address All Communications to Leon H. McNeil, 400 W. Washington Street, Findlay, Ohio

P. H. Lorentz, Buckhannon, W. Va.— Cover page of football banquet program would have been improved by omitting the heavy gray border in tint, thereby allowing more space for the type matter. In an attempt to carry out the squared style of composition, it was necessary to do some uneven letter-spacing, which always gives an uneven tone to a printed page. Omitting the tint border as suggested would have allowed setting the type matter at the top in a larger size; and by discarding the cross section near the center, placing the cut of football in its place, carrying the smaller type lines nearer the bottom of the form, using the inverted pyramid style for both groups, a more pleasing page would have been the result. As it now stands the border somewhat detracts from the reading matter. Stock selected for cover should have been of a color that would carry more of a suggestion of gaiety. Inside pages are well composed, and the crowded appearance of the second page would have been relieved by running one-half of this matter on first page, carrying roster to fourth page. Typographically the Knight-Errant bill heading is your best specimen. On the Glee Club folder the outside border should not have been heavier in tone than the Cheltenham face used. Inside pages are well arranged, and along somewhat original lines. Paul Smith heading is unique in design, but undue prominence is given Mr. Smith's name. Since he is a representative of Mr. and Mrs. Eldridge, as lyceum entertainers, the names of the latter and their accomplishments should be featured rather than the name of their representative, Mr. Smith. Mr. Lorentz is doing some excellent work with the Knight-Errant Company, and his more recent work shows a tendency toward simplicity in type arrangements, and the above remarks are given more in the spirit of suggestion rather than criticism.

Percy H. Krompart, Medina, N. J., states in his letter that this is his initial contribution to this department, his specimens consisting of two letterheads and an envelope card. The George E. Wood heading is arranged in the familiar panel style employed on headings of this character. The whole design is given too severe a treatment, and has the appearance of making the design fit the ornaments, rather than the ornaments fit the design. The ornaments as far as being appropriate, are well selected, and the heading would have been improved by omitting the panels and printing the ornaments in a blue tint. Envelope card, though necessarily smaller, is arranged similar to the letterhead, therefore the above comments apply to the same. Mr. Krompart's own heading would have been improved by omitting the rule at top and under firm name.

✣ ✣ ✣

Axel E. Sahlin, East Aurora, N. Y.— It must indeed be gratifying and encouraging to Mr. Sahlin in the success he has attained since his setting foot in the "land of the free and the home of the brave," coming less than three years ago from Lund, Sweden. Since entering the services of the

Roycrofters at East Aurora, Mr. Sahlin has, by his excellent work, received the highest praise in all the trade journals and has shown American typographers a "few things" in the way of winning prizes in typographical contests. Mr. Sahlin takes a keen interest in all matters pertaining to printing, and has long since solved the problems of what Americans call good typography.

✣ ✣ ✣

Ernest E. Adams, Toronto, Canada.— It has been said, "To make a piece of printing good enough to keep is no small task. Those who are able to accomplish the work are few. They are sought for and they make their own prices." Upon examining some recent specimens from Mr. Adams, it is evident that he has solved the problem referred to in the above quotation. A four page program for the Ontario Vegetable Growers' Association, printed in brown over a delicate tint, on antique stock, is indeed a specimen to be kept. Title page, shown herewith, composed in italic, is unusual, and pages following, containing a large amount of matter, that would have been the despair of a less competent designer, are in keeping with the artistic title page. W. R. Johnston announcement is another well-handled piece of work that is arranged in a style that suggests dignity and refinement, the Cheltenham caps giving same a formal and classic tone. Announcement is on buff antique stock, printing in brown over buff tint. We reproduce the two specimens for the excellent suggestions they contain for the typographer.

✣ ✣ ✣

The Altasista Printing Company, Altasista, Va., forward two letterheads for criticism and state that "We believe they are not only good specimens of work, but with original and unique features." The original and unique features referred to are possibly the printing of a map on the back of the heading, showing the field covered by the Journal, and the cut of a linotype at the bottom of the sheet. The heading is well arranged and compares very favorably with the average newspaper letterhead.

✣ ✣ ✣

J. L. Frazier, Lawrence, Kan.— Among a large collection of letterheads from Mr. Frazier, several are exceptionally well designed and printed. He is fortunate in having at his disposal a variety of type faces that are well selected. Several headings are in imitation of litho work. In arranging a theatrical letterhead, where most printers sacrifice legibility and harmony, this clever compositor keeps the design well within the bounds of good typography. We regret that the heading referred to is not well adapted to reproduction. However, we are showing herewith one of Mr. Frazier's specimens that will be of interest. A commendable feature of his letterheads is that they are free from obstructive ornaments, depending chiefly on appropriate type faces and plain rules to make his work effective.

✣ ✣ ✣

Eskew Job Print, Portsmouth, Ohio — Gray stock is used by Mr. Eskew for his business stationery and advertising matter with pleasing results, same being printed in dark green and red. The paper and ink is usually what first impresses one in examining printed matter, and a more pleasing combination than the one selected by Mr. Eskew would be difficult to obtain. Bodini is used to excellent advantage on most of the specimens. Pleasing contrast is often obtained in one color by using different sizes of the same face. Some compositors have the erroneous idea that contrast must be striking to be harmonious. In examining the work of this excellent compositor one will find designs that are artistic, pleasing and dignified, because they are of excellent conception, well worked out and tones harmoniously blended.

PRINTING

THE SCIENCE OF ALL SCIENCES
THE ART OF ALL ARTS

It has opened the fair land of opportunity to the untold millions and destroyed the cruel monopoly of the few. Since its discovery and practical application, mankind has experienced more blessings, greater enlightenment, larger happiness, truer liberty, than had come to it with the blind gropings and voiceless aspirations of the countless centuries preceding

✣ ✣ ✣

We extend an invitation to all to send specimens, regularily, for review, and this invitation is addressed especially to the younger compositors who are endeavoring to better their work. We are ready and willing to offer suggestions for the improvement of any piece of work either through the columns of the Journal or by letter.

The editor of this department realizes that were it not for the co-operation of the progressive young printers in contributing examples of their work and otherwise aiding him in conducting the department of job criticism, the success which has attended his efforts during the past year would have been impossible. I trust that the pleasant relations which have existed between the contributors and editor during 1912 will continue unabated during the year before us. And so, at this season of new resolutions, my heart goes out to you all in gratitude, and I wish you, for the year of 1913, all the happiness, success and prosperity you deserve, and this is the most generous wish I could express.

L. H. McNEIL.

✣ ✣ ✣

NEWS ITEM

We have just received word from the Executive Committee of the Ben Franklin Club of America as follows:

"The Executive Committee of the Ben Franklin Club of America hereby heartily approves of the idea of holding a National Printing, Advertising, Publishing and Allied Trades Exposition in New York during the week of April 19 to 26, 1913, not only from the standpoint of the manufacturers who will exhibit their machinery but also for the great convenience it will be to printers, publishers and their superintendents and other employes who will be given an opportunity of becoming familiar with all the latest improvements and methods."

This exposition was also endorsed by the Electrotypers' Board Trade of New York at a meeting Monday night, December 9.

✣ ✣ ✣

TO SERVE ON COMMITTEE OF VOCATIONAL GUIDANCE CONFERENCE

E. St. Elmo Lewis, advertising manager of the Burroughs Adding Machine Company, was recently elected to serve on the organization committee of the National Conference on Vocational Guidance.

The purpose of the national conference, which includes representatives of the public school, municipal and state employment bureaus, etc., is to study the question of making efficient men by determining early the kind of work they are best fitted for, and training them along that line.

The second meeting of the conference elected seven members to serve on the organization committee and gave them power to increase their number to twenty. Mr. Lewis was elected at a recent meeting of the original committee.

The work of the committee will consist of working out plans for a permanent form of organization, which they will recommend to the next National Conference on Vocational Guidance.

✣ ✣ ✣

The Eighth Annual Reunion of the employes of Arthur Capper, the Topeka publisher, was held in Topeka Saturday night, December 28. It was in the nature of a "mid-summer fete:" the Topeka city auditorium was converted into a summer garden, gaily decorated with flowers and vari-colored electric lights, and filled with all the amusement booths and paraphernalia of a summer park, including wheels of fortune, knock-the-babies-down, cane racks, a miniature electric fountain and the like.

Everyone was dressed in the lightest and gayest of summer toggery to fit the occasion.

On the big stage a vaudeville performance was given by members of the staff, opening with a black-face minstrel show and closing with fancy dancing by some fifty of the ladies of the force. During the intermission a grand march was put on, followed by general dancing.

The eight hundred employes and their families took part in the evening entertainment.

✣ ✣ ✣

"CANNOT AFFORD TO BE WITHOUT SUCH A SPLENDID JOURNAL"

Ipswich, S. Dak., Dec. 16, 1912.

Mr. B. B. Herbert,
4618 Ravenswood Park,
Chicago, Illinois.

Dear Father Herbert: I enclose you two dollars in payment for the "National Printer-Journalist" to October, 1913. While I have retired from active newspaper work, I can not afford to be without such a splendid journal as you are publishing and always have published.

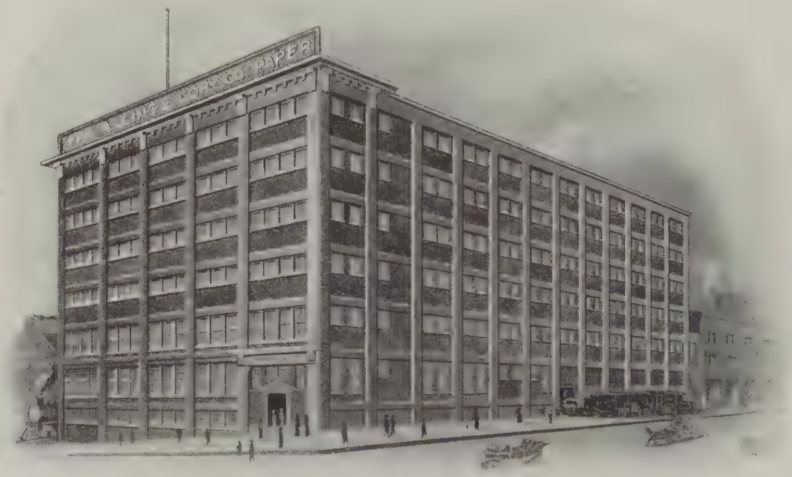
With kindest regards and compliments of the season, I am,
Yours very truly,
J. W. PARMLEY.

A Great Paper Warehouse

The new warehouse of the Alling & Cory Company, wholesale paper jobbers, Alcor street and River avenue, Pittsburgh, Pa., was opened with an informal reception to the printing trade and other friends, Saturday afternoon and evening, December 14, 1912.

Over eight hundred persons accepted the invitation to inspect the building and enjoyed the hospitality of this progressive concern.

The main offices facing the Allegheny River were decorated with Christmas greens and palms, supplemented by many elaborate floral pieces from other local paper houses and many of the paper mills. Music was furnished by an orchestra and, after an inspection of the building, the guests were formally welcomed by Mr. Joseph T. Alling, president of the company, and also entertained at 3:30 and 8 p. m. with a moving picture exhibit of the manufacture of paper by Mr. C. W. Dearden, advertising manager of the Strathmore Paper Company, who delivered a lecture, "A Trip Through a Paper Mill," which was thoroughly enjoyed by every one. Light refreshments were served in the company's dining rooms on the second floor and souvenirs were presented to each guest.



Visiting mill men were unanimous in their expression that this opening was one of the most successful of the many recent openings throughout the country.

The building, with its six floors and receiving platform, contains 132,000 square feet and is of reinforced concrete construction throughout. The foundations consist of 980 concrete piles, driven to resistance at an average depth of twenty-five feet, and calculated to support from 250 to 300 pounds to each square foot of floor space.

The building was designed for the economical handling of stock; four large elevators, ample wagon delivery space under cover, and a large receiving platform in connection with private railroad siding and many other up to date labor saving devices.

Fire protection is provided by metal doors and windows, wire glass on exposed sides and skylights, standpipe to the roof with hose on every floor, enclosed stairways and concrete floors.

The offices and packing rooms are heated with hot water and the building lighted with electricity which also operates individual motors at cutting machines and elevators. The entire plant, and especially the offices, has the advantage of daylight on three sides making a cheerful place for the handling of orders and the welfare of the employes, which has been carefully considered. A kitchen and bright dining rooms overlooking the river have been provided where noon day meals will be served at a nominal cost to all employes. Rest room for women, shower baths for men and locker rooms with individual lockers are also a part of the equipment.

To facilitate business the telephone equipment consists of private branch exchange with four trunk lines on the Bell System with nineteen private connections, and three trunks on the P. & A. System with thirteen connections to various departments and clerks.

The arrangements of floors has been with a view to speed in getting out merchandise — the space for each line having been considered and every item located before the building was completed. Envelopes and announcements are placed nearest the packing room on the first floor — bond papers, flats and ledgers, cover papers and bristols fill the second, with the more bulky lines — book, news, poster, manilas and roofing on the third floor. The surplus stock in cases will take all the fourth floor and parts of the fifth and sixth.

This is the third warehouse of the same character erected by the Alling & Cory Company within the last five years. The first, containing 130,000 square feet, was built at Rochester, N. Y., in 1907; the Buffalo division completed their building in 1910 with about the same floor space.

GOOD NEW YEAR RESOLUTION

THE NEWARK JOURNAL
Established 1901
Oscar F. Craig, Editor

Newark, Ark., Dec. 23, 1912.

National Printer-Journalist,
Chicago, Ill.

Gentlemen: It may be a little early for New Year resolutions, but we have resolved that this shop is going to do more business and better work during 1913 than it has done during 1912. In order to be better able to carry this resolution into effect. we are enclosing herewith check for $2 for a year's subscription to the National Printer-Journalist, as we believe it will be a valuable help in many ways.

With the compliments of the season, I am,

Yours very truly,
O. F. CRAIG.

Suggestions on Efficiency

By Channing Barnes

Editorial Note: This department has received several entries, but not sufficient to award prizes heretofore. Send in your ideas by February 1, and the awards will be made in the February issue. We have one excellent paper on efficiency in the country newspaper. As the ideas set forth in these articles are necessarily in outline only, the writer of the department will answer through these columns any questions sent in by National Printer-Journalist readers.

PREVIOUS articles in this series have urged the necessity of scientific management in a printing plant, and have outlined the central planning room. As a job comes to the composing room it is laid out for the machine, for make-up, for hand composition, and for lockup. This pre-supposes a typographical layout.

The Typographical Layout

The typographical layout should, in the larger plants, be made in the planning room, as the more work can be subdivided the better the supervision and the better the opportunities offered for analyzing and improving each separate operation.

The layout man may be a graduate compositor, a proofreader, or any one familiar with the office and modern typography. Preferably the proofreading and laying out should be in one department and in close proximity to the planning room, as both partake of the nature of planning and supervision, and through them the work in progress may be checked.

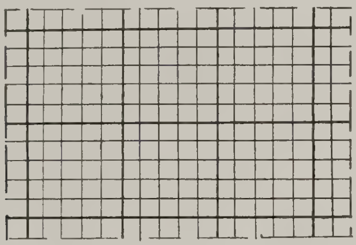

Fig. 1. Showing ruling for Layout Pads. Heavy lines represent red lines five picas apart only not ruled heavy in original. Light lines represent faint blue rulings.

Every modern office uses some form of layout sheet. Ad writers' and printers' journals have from time to time devised and published layout blanks, usually ruled in pica squares with figures in the margins to aid in counting up space. The writer uses pads of various convenient sizes, without printed figures, faint-ruled in blue pica squares, with every fifth line in red.

As the appearance of a printed page depends largely on the margin the first step in making a layout is to take a foot rule and, starting at a red-line corner, mark out the trim size in inches. Then, counting picas on the blank for margins (readily counted by fives with red lines), proceed to lay out the type page. Indicate the composition in penciled groups or masses to balance.

The principle of this layout sheet is that you use the inch standard (which is the standard used by the layman for paper and trim size), and the layout blank automatically translates this into the printer's standard of picas, there being no marginal printing to divert the eye from the finished appearance of the page.

The next possession of the layout man is the Sample Type Book of his office. This book should include a line of each face and size of job type, arranged in a series to a page, with a 6-pt. line to show exact location of alleys and cases containing the type. Composition matrices are best shown one size and face to a page, set to different measures with the various leadings. Incidentally let me mention that such a book should be in the hands of all compositors and of every one having to do with the typography of the office. It is also a salesman's handbook, and one office doing agency work has also placed it in the hands of a few of its customers.

Fig. 2. Represents a 3x5 inch time card to be used one for each operation, time being filled out with pencil. A compact form allowing for estimated time, elapsed time and efficiency balance.

The layout man now has the data to go ahead and specify type to be used, measure to set, margin for lockup, etc. The copy itself should be edited for punctuation, spelling and legibility, and typewritten if necessary. This is where the proofreader may become one of the most valuable persons in the office.

No piece of printing, no matter how small, should go into the hands of the machine or hand compositor without careful layout and editing. It is cheaper to do this work while the matter is in copy form than when in type. In many cases careful editing and planning will save half the time ordinarily taken in the execution of the work.

A combination of departments may be made in any manner most suitable to the size of the office. For instance, the layout man may be an artist-printer and have a dummy outfit, including sample sheets of stock, water colors, paste, drawing material, etc. Here he may devise sales ideas, making up dummies, covers, and color schemes and writing copy as well as laying out work in hand. Or the proofreader may do this work, or the superintendent may run the planning room and originate the ideas, while his assistants do the more routine work.

The layout being made, the job goes to the machine or the hand compositor. Here the job must enter into the time schedule of the planning room, and this schedule means a standard set for each operation in time elapsed and the sequence of work. The copy now prepared for the quickest work, the operator receives a time ticket (filled out in the planning room) with the standard time for the job placed thereon. The workman then has an equal chance with others to go ahead and do the job in the specified time or less. If he takes less than the time specified he has made so much clear profit above the normal production of the best competing plants; above the overhead charges of whatever kind. To keep this up requires that this extra profit be divided between the firm and the workman, so establishing a bonus system which will be touched upon later.

Fig. 3. A time card recently originated by M. J. Beckett of the U. T. A. Provides for time-stamping record and estimating on basis of ems set. Office form at bottom makes for quick additions for posting when cards are spread out.

The workman will at all times have two or more tasks ahead of him. Preferably a day's schedule should be ready at night for each machine and each operator in the plant for the following day.

The job being set in the time specified or less, the time ticket is balanced at once for that operation and the proof is read and corrections made. While corrections may be taken care of by one man they should be set as tasks and deducted from the original composition time. All these problems arising, the necessary routine for carrying on these functions must be devised.

The principles involved are planning each operation, checking the operation, and devising means for bettering it. To do this we will take up the blanks, time tickets and order forms to be used and their functions.

The time ticket should be a requisition for work and should be as important and valuable in the eyes of the workman and the firm as so much money. To simplify the problem, assume you are a master printer and wish to buy the composition on an ad. page. You plan your page, furnish the tools (type, slugs, rules), and hire a man to do the job. Now if you furnish the man all the materials in first-class condition, and a good place in which to work, you know in how much time your job can be done. You will say to him, "I will give you two dollars, or four hours to do the job." He will do the job perhaps in three hours and a half. You should give him the two dollars you offered, or he will quit. If you give him all the half-hour saved you are still ahead of the game because he is using space, light, heat, and perhaps power for thirty minutes less than a poorer workman. Yet by your planning and materials you enable him to accomplish this task in less than the time set so you are entitled to a third or a half of this saved time. Then you find you are being well payed to plan and provide tools as an employer, while your workman is working for himself with a fair chance to gain in skill and wages.

Fig. 4. A card originated by the writer for the purpose of giving instructions to compositors. This to be filled out by foreman and attached to copy and returned by compositor with proof and balanced at once. This provides for excuse for delay by compositor and for time chargeable to composing room but not to the job.

Treat the time ticket, then, as an order for so much work to be done in a certain length of time. Use a ticket for each man on each job. Issue it in duplicate and let the duplicate remain in the planning room. The ticket should be turned in with the proof and, when the job is read and checked for style, deductions or bonuses should be reckoned, then the ticket returned to the compositor's card rack.

Noon would appear to be the best time for the ending of the official day, and this gives a time for the workman to look over his previous day's record and enter objections or ask for explanations as well as looking ahead for further tasks. It also gives an opportunity for the time-keeper and planning room to balance the day's work by making their lunch hour commence at one o'clock instead of twelve. At this time all time cards are balanced, showing bonus or loss for the previous 24 hours, and by two o'clock they should be collected for entry on the pay record, the individual efficiency records, and the job cost records.

Do not make the antique mistake of punching in and out on a pay time card. The job time card is the only thing for which the firm cares to pay money. It is the only thing for which the workman should receive money, and on this basis makes the work record as good as money itself. Personally I would rather have a man come in at 9 a. m. and quit at 4 p. m., if he did more work, than one who worked eight or nine hours a day.

Standardizing Equipment

Nothing is so exhausting to a man as to start a job and lack material to finish it. In the layout we have provided (in skeleton form) a scheme to eliminate the giving of wrong instructions, and the misunderstanding or conflicting of orders. Now to give both the firm and the workman a fair chance we must provide the tools for the carrying out of these plans.

Since the days of Gutenberg, we have had the same old type racks, arranged in alleys. These have been built in slight variations to fit different classes of work, such as job, news, make-up or ad. composition. Still there remains the same general idea of racks with the sloping top to hold cases in use, and a large number of slides lower down containing two or three series of type faces.

This equipment comes under the head of "stores" or tool problems in the terms of scientific management. Now the average composing room is over-equipped and yet never has enough material to meet all demands. This condition you will find all through a printing office. The reasons therefor are obvious. The printer does not specialize. If he has a cylinder press he will do anything from a card to a catalogue. He will almost invariably take a bigger contract than his facilities fit him to handle. Then he haphazardly adds more material to get by on the job.

On the other hand we find two of the biggest machine shops in the country, one making gears, another condulets exclusively. Even the largest auto factories but combine several plants, each turning out its own particular product.

In the composing room the printer is constantly induced to buy new type faces to please customers, but in insufficient qualities to suit all occasions. So in the matter of equipment he is up against the same problem as the storekeeper — he must turn over his stock.

His stock is his type, borders, rules, cases, stones, chases, quoins, furniture. In a medium-sized office this amounts to a large sum in interest on the investment alone. Every bit of furniture in a form, every bit of type in a standing page, every bit of metal in a box, is so much dead capital on which you are paying interest, taxes and rent. Every font of type in a case is in the same class except that it is available for use. Yet at two cents a minute (under which no one can afford to sell chargeable time), how many minutes can you afford to have a man hunting for sorts?

To return to our stores or equipment problem we have three items to consider: First, to use as often as possible every bit of equipment, that is, do not let forms stand in the rack or dead matter on the stone, or let any material remain out of place. Second, do not buy material that will be idle most of the year, that will not pay interest, floor space, or depreciation. Third, do not give out a piece of work unless the workman has at hand every sort and space he needs to do the job. Here enters the duties of the dead-stone man, and these duties are of such supreme importance to the profit or loss on a job that they should not be left to the tender mercies of the ordinary distributor.

OLD ROMAN BOLD B B & S. THE ABBOTT PRESS

Fig. 5. Shows one page of Style Book of type face. Small numbers show alley and location of each case.

Here is where the planning room comes in. By a system of filing (described later), every cut, every line of standing matter, and every locked form may be immediately located. On the floor it should be the duty of a foreman, assistant foreman, or dead-stone man to first receive the job as it is laid out for the compositor. He will provide all extra materials to be used and will see that they are there in time for the work.

The compositor's station should have the same number as that used on his time card. He should have a stand large enough to hold a case and galley, slides or stands back of him to hold a few display or headletter cases, and also a flat top for standing matter. No cases should be placed in his alley except those in immediate use. He may, however, have three of four cases of body type, 6, 8, 10 and 12 point, if he uses them with great frequency. He should have leads, slugs, and small metal furniture in cases, and perhaps small cases of labor-saving rules. In brief, there should be tied up in his alley only such equipment as he frequently uses and no material that is to be used by others. This cuts down the equipment required by each man and does away with other workmen waiting to get a case.

All display type should be stored in compact racks as high as a man can reach, but only to be taken out and returned by the supply man. The cases should be about half the ordinary depth, as such are lighter to handle, and in these days of machine composition it is very rarely that much type of one size is set by hand on a job. Fifty pounds of type laid in two cases are more valuable than the same amount in one case as this decreases by one-half the probable chance of two men waiting for the same type.

With this arrangement cheaper help will see that the compositor has sorted cases, extra leads or slugs, cuts and material supplied to his working station before the composition is commenced. So too will extra material be removed when new material is supplied.

By a judicious arrangement of work, each man having his work planned for the day, he may do much of his day's work without change of cases. In event of shortage of any type face, it is known soon after the layout is turned into the composing room, and cases may then be sorted from the dead stone or from forms killed by the planning room before the compositor is assigned the job.

A cursory comparsion of this method with the almost universal usage of the present time will show its advantages. The most demoralizing thing for a compositor is to have to hunt for sorts, plan a job with no data, or wait in line to get at a case. By the time he has done these on one job he has lost his snap and energy for the day. How many times a day does he go down the line, disturbing every one at work, looking for a case some one else has? How many times a day is he interrupted by some one getting down in his alley to set a line?

The writer once worked in the largest office in Chicago. Arranged in one rack of two tiers was a series of Caslon Bold, perhaps the most used type in this office. To provide plenty of type there were two cases of 6 point, three each of 8, 10, and 12 point, and two or one of the larger sizes. A strict time record was kept of each job, and many good men left because they were not given time to turn out the class of work they wished to do. Yet at this rack I have seen two or four men standing in line a dozen times a day. The more ambitious would go and set a line or two of some other type and return again for a chance. Yet see the arrangement of this one stand: First were two six point cases, then three eight point and so on. One side of the rack had all the most used cases. I suggested that the series be broken by arranging a six point case at the top of each tier and so on, but it was never done. A stop watch would have shown that a separation of the various series in that department alone would have saved at least one compositor's time.

What other line of business would survive the mismanagement indulged in by the printer?

"AN EDITORIAL AND PRINTERS' CONVENTION ONCE A MONTH AT A COST OF $2.00"

THE PATRIOT
Chas. Bradshaw. Proprietor
Carrollton, Ill., Dec. 16, 1912.

Mr. B. B. Herbert,
National Printer-Journalist.

Dear Father Herbert: Let me congratulate you upon the work you have done in the past twenty-five years in making the newspaper and the printing business a better and more prosperous business; and the editor and printer more self-respecting individuals. I am not sure, but believe, that I, if not a charter member, was at least a very early subscriber to the N. P.-J., and think I have copies away back when the magazine was still in small clothes. The wonderful development of printing and illustrating that has taken place in the quarter of a century is nowhere better shown than in the files of the N. P.-J.

In recent years I have been attending an editorial and printers' convention once a month at a total membership fee of two dollars a year. My subscription expires in a month or two, but keep 'er comin'.

Yours truly,
CHARLES BRADSHAW.

* * *

"VALUABLE AND USEFUL"

THE DAILY TIMES
E. P. Adler, Publisher
Sworn Average Daily Circulation Last Month 21,975
Davenport, Iowa, Dec. 14, 1912.

Mr. B. B. Herbert,
Care National Printer-Journalist,
Chicago, Ill.

Dear Sir: I take pleasure in enclosing you herewith $2.00 for another year's subscription to the National Printer-Journalist. I, at the same time, want to congratulate you on having attained your twenty-fifth anniversary in the publication of this valuable and useful periodical.

I hope that both you and the National Printer-Journalist will live long enough to celebrate your golden wedding.

Yours truly,
E. P. ADLER.

EDITORIAL NOTES AND POINTS

The clean, bright, handsome issue of the Milton, N. D., Globe, with illustrated holiday advertisements of full pages, double and treble columns, bore pleasing evidence of the fact that the editor and owner, Ernest L. Peterson — whose kindly face is shown on another page in this issue of the National Printer-Journalist — had his full share of holiday cheer.

* * *

The Petaluma, Calif., Daily Courier has purchased the Petaluma Daily Independent, that has been ably edited by Mrs. Anna Morrison Reed for the past four years. The work of getting out a daily has been too much for Mrs. Reed in conjunction with her magazine and other literary work, and hereafter she will devote herself to the Northern Crown, and to her job printing business.

* * *

The Todd County Argus of Long Prairie, Minn., had, on December 19, for its first cover page, the reproduction in halftone of the painting of the "Angels Proclaiming to the Shepherds on the Plains of Palestine, the Glad Tidings of Great Joy." The border was of Christmas bells, Santa Claus and his reindeer, and a snow-covered village, at the bottom, with a Christian church and the homes of the people prominent. It was an effective, pleasing cover page, and none the less pleasing because used on a number of papers in different localities. We like the little, splendidly illustrated poem, gotten out this year by the American Press Association and used by this and many other papers.

* * *

The Fairport, N. Y., Mail showed, in its issue of December 19, the same stalwart, walking Santa Claus shown by our Oregon friend, mentioned in another article, and records like prosperity, which this year has extended in our glorious land and changes the advice of Horace Greeley, "Go West, Young Man" to "Come East, Young Man."

A striking illustration of "One of Fairport's Beauty Spots" is that of a beautiful rose garden which would seem more natural to Oregon than to New York. This issue of the Mail is typographically and mechanically almost perfect, and is very complete in local news and miscellany. It features Christmas incidents, one of these being the story of an old soldier, of Christmas passed in Liberty prison an old soldier, of Christmas passed in Libbey prison in 1863.

* * *

The Kilgore, Texas, Chronicle gave Santa Claus with sled and reindeer in colors, for its first cover page, December 13, and published a number of letters from the children to Santa Claus. There was an abundance of Christmas joy, song and story and advertising which showed that the merchants appreciated the liberal Christmas spirit and were ready to help serve the generous people in their desire to enjoy the unalloyed pleasure and blessings of liberal giving. A local bank occupies a full page with a "Christmas Greeting." It is something worthy of note when the heart of the careful banker manifests such broad Christmas liberality. The advertisement contained the following, with regard to its purposes as a bank, that is worth remembering:

> The purpose of banking now, as it has always been, is for mutual interest. Its main purpose as an institution is the proper distribution of capital into channels where it can benefit the greatest number of people. Its sole purpose should be that of facilitating commerce between individuals, communities and nations. The idealistic spirit of helpfulness should always prevail. The first effort to organize a bank anywhere was engendered by that spirit of helpfulness that has caused the mighty progress of civilization through the ages.
>
> None but misers will hide and hoard their savings. The broad spirited, home and country loving man will place his savings where they can be distributed with ample security and let some poor wandering beggar get a crumb of bread and enable some other man to lift a mortgage and loosen himself from the clutches of some flesh-exacting Shylock. It was the slothful servant that acted miserly and brought forth the condemnation of the great Master of men. Place your talents where they will benefit mankind as well as yourself.

* * *

The Condon, Ore., Globe showed a muscular Santa Claus in heavy boots, on foot, on the first page of its issue of December 20. They have little use for sleighs and reindeer in Oregon. The walking in the open air, also, evidently, has reduced Santa's waist measure very materially. However, there is evidence that there is no lack of prosperity and holiday joys and good-will in the "Web-footed" State, "Where rolls the Oregon."

The Globe claims the cognomen of "The Wheat City" for Condon, with a yield, in the county, for the year, of 2,357,100 bushels of this important cereal. This reminds us that in 1874, in a special issue of our Red Wing, Minn., paper, we claimed for that city the honor of being the largest primary wheat market in the world, and the county of Goodhue as the leader in this product.

But since then there have been many changes, and "The Star of Empire," in wheat, has continued its western course to the Pacific West and Northwest. The Globe is a booster and has cause for boosting and boasting. This issue contains twenty-four pages, 144 columns of reading matter, and is accurately descriptive of its county, and contains sixty half-tone illustrations. Fifteen portraits are given of "Some of the Real Builders of Gilliam County," and brief biographies of two score or more.

The illustrations give a good idea of the country and its products in grain, fruits, hogs, cattle and horses. An eleven-year-old boy, David Weimer, of this county, took the first prize on fifteen ears of corn grown in the state, offered by the Oregon Conservation Commission. This reads good and encourages us to push forward our proposed fraternal, saving and industrial order, "Citizen Conservators of America."

The advertising patronage was on a generous scale and the ads well handled and attractively displayed. One two-page advertisement, showing, in half-tone, at the top center, the interior of a mammoth store, was especially striking, forcible and convincing. It is a big store for a new city of 9,009 population, but there is a growing and wealthy county back of the city, and then they do large things in Oregon and have an enterprising press, liberally supported, as evidenced by this issue of the Globe, that help on the car of progress and every good work and worthy enterprise.

✢ ✢ ✢

"TO HELP THE BEST INTERESTS"

The spirit of the press, during the holiday season, has been that of optimism for the coming year, with a belief in increased opportunities for greater attainments, wider opportunities, and more effective service.

W. L. Jones, of the Lebanon, Ill., Journal, after nearly thirty-two years of successful publication of his paper, indicates and reflects the prevailing spirit and belief in the following words:

> The editor of the Lebanon Journal has every reason to be optimistic and hopeful for much prosperity for Lebanon in 1913 and therefore for increased business in the newspaper as well as in other lines. We are here to help the best interests of Lebanon and as long as our strength lasts and our efforts prove profitable we will be found at our old business home.
>
> A Merry Christmas and a Happy New Year.

✢ ✢ ✢

CHRISTMAS AT HOME

The Laurel, Neb., Advocate shared in the Christmas spirit and prosperity manifested by an elaborate Santa Claus cover in colors, in illustrations, in Christmas sentiments, a great wealth of illustrated Christmas advertising. We like the following on "Why Christmas Should be Spent at Home," taken from the Pictorial Magazine, as certainly should every editor of a paper that goes to the homes of the people:

> Charles Dickens, the novelist of Christmas, who did more for Christmas than any one can ever guess, had had a slight difference with Thackeray. He met him on the steps of his club one Christmas morning, hesitated, then held out his hand, which Thackeray grasped with all the warmth of his great heart. Both men returned to their family gathering at home, feeling better and happier men.
>
> Without a doubt a family gathering at this festive and joyful season knits the bonds of love and good fellowship closer than at any other time. Old slights and hurts are forgotten; hard men of business relax and soften at the sight of the children who many a time have drawn out all that is best in them after it has lain dormant for years until they have forgotten they had a tender side to their nature at all. Yes, without a doubt home is the place for Christmas.

✢ ✢ ✢

SHARING PROSPERITY

The Fairport, N. Y., Monroe County Mail took twenty-four pages, in issue of December 19, to tell of all the joys, noble sentiments, good news and business of the holiday time. There was a wealth of Christmas illustrations in both the reading matter text and in the advertising. Editor W. O. Greene gave an "Editorial View" at the head of the first column on the editorial page which tells of attainment and shows progress:

> The Mail goes to its thousands of readers, this week, in an unusually attractive form. Both in size and quality it probably exceeds any similar issue ever put out. Twenty-four pages filled with "good stuff" for every member of the family, the women and children having the larger share. and the many holiday advertisements adding no small amount to the interest. This issue shows something of the mechanical facilities of the Mail, as such an issue would be an impossibility in the ordinary country office. In a way this issue also celebrates the closing of another successful year, as the Mail begins a new volume with the beginning of the new year. The past twelve months have been a very prosperous year for Fairport in general, the splendid growth being spoken of in a special article, giving a list of the new buildings, printed on another page. In the past two years there have been built over a hundred new houses in this village with a corresponding increase in population and at no time in its history has the village enjoyed greater prosperity. In this the Mail has shared in common with the other business enterprises, and it takes this occasion to thank all its patrons for favors extended. May the year on which we shall soon enter be an equally favored one for all.

✢ ✢ ✢

DESERVED PRAISE FOR TWO EX-EDITORS

In a recent issue of the Anderson, Ind., Herald, there was a deserved boom for Sioux Falls, S. D., in which the following paragraph tells, in brief, facts as to the city's progress and of the work of two men who have been active newspaper workers and who were serviceable to and were popular with the editors during their recent tour of the state:

> Just think of it, there are sixty trains per day, arriving and departing from this hub of thrift and industry and the management of the Sioux Falls Commercial Club with Mr. George Schlosser as secretary, has been so effective

that the rates are the most favorable to be obtained anywhere in the state. The railroads have contributed much to the development of this city and last year the Chicago, Milwaukee and St. Paul, the Rock Island, Great Northern, Illinois Central, South Dakota Central and the C. St. P., Minneapolis and Omaha handled over 15,500 local cars of miscellaneous merchandise. The city has over a hundred acres in parks and a park commission is providing much for the rest, recreation and enduring comfort of the people. A fine electric line is operated having been constructed by Mr. F. M. Mills, an octogenarian, but one of the most enthusiastic, wide-awake and enterprising citizens not only of Sioux Falls, but of the entire state. There is not an enterprise undertaken which does not find in Mr. Mills an ardent and fearless supporter. At the present time he is engaged in giving the city a central heating plant the rates having been established before its construction. His street car system has been a paying venture from the very inception and the lines are extended as rapidly as growth permits. During the trip of the N. P. A. association members last summer Mr. Mills toured the state and no member of the party contributed more to the information, enjoyment and pleasure of the outing than this courtly gentleman who was indefatigable in effort and tireless in energy.

* * *

THOSE IN PRISON WELCOME CHRISTMAS DAY

Here, on our table, is the Christmas issue of the Monitor Magazine, printed and published by the inmates of the state prison at Huntsville, Texas, and it has its Christmas message of love and hope that closes with these words:

> God is Love, therefore let us enlarge our hearts by filling them with more love for Him and those about us, and we will then behold what the Christ child in Bethlehem's manger meant to the three Wise Men who journeyed from afar to see God's Christmas gift to the world. Come, let us rejoice, even though we are in prison. Christmas was born for us, too, as it was for all mankind.

And then on another page:

> Throughout the civilized world this day is held sacred. It is the day of prayer and feasting and love. And wherever His name is spoken joy and happiness abound. No life has sunken so low, no heart so cold and unfeeling, no soul so lost, but feels the contagion of Divine love, that fills the universe on this day of days. It is the one day when the spark of fellowship and universal brotherhood is kindled in every heart. The time when love and charity reign supreme in human hearts. Hatreds and enmities are forgotten, and love predominates. "Good will toward men." We all feel it on this day. It is the rainbow of love — God's sign on earth. It flows in waves through the city; it searches out the lone traveler in the desert; it finds even the exile in prison and makes his heart bloom again. This heaven-born spirit of Christmas cheer!

The Kensett, Iowa, News issued its Christmas number on December 12, in three sections of eight pages each, and the patronage given by the merchants and shown in attractive style speaks volumes for the popularity and prosperity of the paper as well as for the wisdom and enterprise of the business men.

* * *

A CONSPICUOUS SUCCESS

H. B. Hale, editor and publisher of The Gazette, East Hartford, Conn., issued a "Prosperity Edition" on December 20 that was up to its name in every respect. It was in five parts, with forty-four pages, including cover, which was of home design and printed in red. Three full columns of the paper are printed in German, that would indicate that many modern Connecticut Yankees are also Teutons. New England has for many years furnished homes for people of many lands.

The advertising is voluminous and well gotten up and excellently displayed typographically. There is an abundance of reading matter and illustration.

Editor Hale, with modest but just pride, states to his readers (and herein are some points of value to newspaper makers worth noting):

> Our annual "Prosperity Edition" makes its bow to the public this week. We leave it to our readers to judge whether many country weeklies enjoy a better advertising patronage than that accorded the Gazette. The big edition of forty-four six-column pages printed on extra heavy book stock was made necessary by the heavy pressure of holiday advertising, and shows that the merchants believe in keeping up with the spirit and demands of the time and season. The edition also represents a great deal of hard work, if in nothing more than that very important part of the business of a newspaper man in seeing that so far as possible the advertisements entering into his columns are of a class that is going to pay his patrons. We want to make the edition profitable to every firm who uses its columns. The numerous pages are replete with local news, holiday matter and articles of general interest as well as with extra advertising. It is the largest edition in the Gazette's career, and our own opinion, if we may be permitted to express it, is that it is a conspicuous success.

* * *

ENTERTAINING MUNICIPAL OFFICERS

The Daily Chronicle of Orange, N. J., recently had a house warming banquet.

> Officially it was a reception and dinner tendered by the Chronicle Publishing Company to the municipal bodies of the Oranges, and in actuality it was all of that, and besides, the first recorded assemblage of men intrusted with the guidance of the administrative work of municipal government in the four Oranges, under the auspices of a private concern, where they might mingle on a common basis and discuss their needs and aims in a neighborly fashion. The guests generously dwelt on the important role that this daily newspaper as an institution has played, and paid a lavish tribute to the able performance of that function.
>
> In some of the more serious moments of the post-prandial proceedings the question of the consolidation of the Oranges was touched upon, the topic suggesting itself to the speakers probably through the theory of the association of names and ideas, for the banquet was given to mark the occasion of the fourth anniversary of the consolidation of the old Orange Chronicle with the other scattered weekly papers of the community, and the subsequent inauguration of a daily circulation on September 17, 1908. Further there was reason for celebration and congratulation in the recently completed enlargement of the Chronicle plant, which consists of an additional story erected on the rear wing of the building. As was exceedingly fitting and proper, the main portion of the festivities were carried on in this newest acquired loft. The dining hall had "an apparel on" of patriotic bunting and floral decorations, and the immense banquet board, already removed and replaced by printing presses, type stands, imposing stones, and other equipment of a printing establishment.

The effect of the gathering of the officials and the immediate influence of the newspaper in its own town seemed felicitous, and awakened a spirit of municipal pride and loyalty, of duty and desire to work together for general betterment and good government.

The plan seems to be a practical one, that might well be adopted by other newspapers in other municipalities. It is easier to accomplish things for the good of local government by good will, co-operation and mutual friendly suggestions and joint consideration, than by criticism or fault-finding. The Daily Chronicle was highly complimented on its policy of upholding the hands of officials in the efforts, honestly and energetically, to perform their duties in the face of unmerited criticism. This reminds us that "Vinegar never catches flies," and it is very doubtful whether censoriousness ever works reforms and wins officials to the cause of good government.

"GREY MATTER MAKES A GOOD NEWSPAPER"

An Editor Given Credit for His Town's Growth and Thrift

George A. Newett of the Ishpeming, Mich., Iron Ore, has the following to say as to one of his esteemed contemporaries:

> According to his newspaper, Editor Pat O'Brien of the Iron River and Stambaugh Reporter, is getting a little grey. Pat, it's this grey matter that makes a good newspaper. The more you have of it the better. The Reporter shows the result of mature deliberation and wise direction. It's a corking good newspaper and its editor has been running it for just a quarter of a century. He went to Iron River when it was only a hamlet. There were only a few buildings and its mines were discredited. The town has grown and prospered. There is now every evidence of thrift, numerous fine residences and business blocks, and the place has come into its own mineralogically. It has been found that under the low grade, non-bessemers, ores of fine quality exist, and these are now being mined. New mines are being added steadily and Iron River is a fine town with a big future. Pat O'Brien deserves much of the credit, too, because he has everlastingly advertised the place, attracted people to it, and established the fact of its stability of ores and soils. It was his striking characteristic that helped to make Iron River known. We wish our editorial neighbor more grey hairs and more quarter-century successes.

Other Michigan papers united in paying high tribute to Mr. O'Brien, who is president of the Northern Michigan Press Association, and the Crystal Falls Diamond Drill publishes the following contributed poem, that shows an intimate understanding of the trials and victories of the editorman:

Twenty-five years a journalist,
  And pushing the same old pen
For the same old weekly quarto,
  For the good of the world. Amen.

'Tis a record for Iron County,
  A knock-out blow, forsooth;
No wonder the silver tinges your hair,
  Though you came in the bloom of youth.

Tho' you came with ambition written
  Upon thy smooth, fair brow;
Tho' you came the world to conquer,
  And you conquered, God knows how.

Your fight has been hard, dear Paddy,
  An uphill fight, 'tis true,
But you dared to do or die, Pat,
  And you've always been true blue.

We've bandied words with you, Paddy,
  Through many a column's space;
We've quarreled, and fought, and scratched,
    and bit,
  But you've always been an ace.

You ever came back one better,
  And you never cried "Enough!"
Though we handed you many a bitter pill
  And many a "pie" that was tough.

So now that you have endured us
  For this score of years and five,
We're thankful to say it, Paddy,
  We're glad that you're still alive.

May the useful years before you
  Hold better things still in store,
And "God be with you," Paddy,
  Till we meet in the lists once more.

TO PRESERVE PAPERS

The Brooklyn, N. Y., Daily Eagle, to which we have taken occasion to call attention from time to time, a model home paper, has a new method of preserving newspaper files.

The following from a recent issue of the Eagle will be read with interest and profit by newspaper publishers:

> A discussion of proposed methods of preserving newspaper files for future generations was held yesterday afternoon at the Montague branch of the Brooklyn public library, and participated in by Dr. Frank P. Hill, chief librarian of the Brooklyn public library; John Norris, chairman of the committee on paper of the American Newspaper association; F. D. Carruthers of the New York World, Herbert F. Gunnison of the Brooklyn Daily Eagle, and Mr. Holden representing the Publishers Weekly.
>
> The conference and discussion were the result of a report of Dr. Hill concerning the condition of the newspaper files in the Brooklyn public library, made to the American Library association, which was as follows: "In many instances papers published within the last forty years had begun to discolor and crumble to such an extent that it would hardly pay to bind those which had been folded for any length of time. Further investigation showed that practically all of these newspapers were printed on cheap wood pulp paper, which carries with it the seeds of early decay, and that the life of a periodical printed on this inferior stock is not likely to be more than fifty years."
>
> In an interesting and comprehensive report, Mr. Norris, for the Newspaper Publishers, suggested three methods by which improvements may be obtained: First, by using a printing paper that will endure indefinitely. Second, by binding with materials that do not attract minute organisms. Third, by storing under condition, (a) that do not deprive the paper of all its moisture, (b) or subject it to excessive dampness, (c) or subject it to chemical action produced by sunshine, or gas, or artificial heat, or similar agencies of deterioration, (d) or propagate insects or other growth.
>
> Mr. Norris gave a list of some of the live promoters of paper deterioration, which comprise the following: White ants, roaches, bedbugs, beetles spring tails and silver fish, centipedes and scorpions; but the report assures us that these "bookworms" frequent the warmer latitudes, and in the northern latitudes their damage is negligible.
>
> **The Eagle to Supply Copies for Filing Printed on Linen Paper**
>
> Announcement was made that the Brooklyn Eagle, beginning January 1, 1913, would be able to supply libraries with copies of its paper printed on linen paper suitable for filing.
>
> The report also dealt with the efforts of the United States government to secure a permanent printing paper to be used on important historical documents of the government, its original scientific contributions, and the publication of the statutes at large. A paper was finally secured by the government for this purpose which consisted of 75 per cent rag and the remainder of bleached chemical wood, free from unbleached or ground wood pulp. The methods used by the Congressional Library at Washington, in caring for its newspaper files of the

eighteenth century, also the system of caring for the files in use in the public libraries in Brooklyn, New York and Philadelphia, were described in detail.

It was conceded that there would be no profit to the publishers in printing a small number of copies daily upon special paper. However, Mr. Gunnison stated the Brooklyn Eagle would be willing to undertake the plan for the purpose of making permanent the record of the news of the day, and he thought such a plan could be put into effect on January 1, 1913.

Dr. Hill read an extract from the report of the proceedings of the American Library association, held in Ottawa Can., last July, which recommended: "As is well known the Eagle is one of the best newspapers in the United States, so that if anyone is particularly interested in securing for filing purposes a paper which will last for 100 years or more, he should subscribe to the Eagle."

It is with some satisfaction that we are able to state that the Daily Republican of Red Wing, Minn., under the management of Jens K. Grondahl, has, for several years past, printed fifteen extra copies each day, on superior quality of rag paper for its own files and for libraries. It was the only paper found in the investigation made that had taken this precaution and the only paper mentioned in the report in that regard. To Editor Grondahl belongs all the honor, but our gratification is in the fact that it is our old paper which we established in 1885.

"NEWSPAPER MAKING IS A PROFESSION FOR A HAPPY LIFE"

Fun as Well as Service in Newspaper Work—The Bible the Best Text Book

Editor William Southern, Jr., of the Jackson Examiner, Independence, Mo., in a recent address before the students of the School of Journalism of the Missouri State University, spoke very highly of newspaper work in the smaller cities, where the editor can be owner of his own paper and be independent. He said, among other things:

I had my choice between country and city work twenty-five years ago and have not regretted my selection. However, we make our own places, whether in the city or country. Only a few of us are masters, and if we work too long for someone elese we lose the power to make decisions for ourselves.

Opportunity for Service

The man who goes into country newspaper work should do so with an idea to help the community, not simply to make money. The running of a country newspaper gives a man power for good and for evil as well. The newspaper is the vehicle of public opinion of the community; it is an index to the community's ethics and moral tone. You may not grow rich, but you will get lots of satisfaction and lots of fun — if you're capable of seeing a joke, and if you can't see one you'd better not go into the business.

You may be prejudiced when you look over the exchanges of Missouri country newspapers — I don't wonder that you are. The trouble with too many editors is that they're simply working at a trade. They fail to regard their work as a profession. They make their living so easily that they become lazy and don't try to get out and get up a good newspaper. Too often the paper is only the vehicle of partisan politics — not of the public good. Too often the editor is of no real use to the community. He supports unfit men for office simply because they belong to his party.

Bible as a Text-Book

The Bible is the best text-book for journalism and all other professions. We are approaching the same condition today that is told of in the Bible regarding the downfall of the Jewish peoples, the same condition that brought the downfall of Rome and the French Revolution. The wealth of the country is becoming concentrated in the hands of a few people — this is one of the evils. It is to be averted by the press and the schools. This is the responsibility that the country newspaper man of the future has to face.

It is time to abandon thoughts of running a partisan newspaper — a paper that violates ethics and loses power by measuring issues from party standpoints and not by a standard of right.

Can't Serve Two Masters

If you have any idea of running for office drop your newspaper work. The two don't go well together. Newspaper making is a profession for a happy life, one in which feelings come to you of its worth and in which you receive the approval of your own conscience.

Charles Dickens, the novelist of Christmas, who did more for Christmas than any one can ever guess, had had a slight difference with Thackeray. He met him on the steps of his club on Christmas morning, hesitated, then held out his hand, which Thackeray grasped with all the warmth of his great heart. . Both men returned to their family gathering at home, feeling better and happier men.

Without a doubt a family gathering at this festive and joyful season knits the bond of love and good fellowship closer than at any other time. Old slights and hurts are forgotten; hard men of business relax and soften at the sight of the children who many a time have drawn out all that is best in them after it has lain dormant for years until they have forgotten they had a tender side to their nature at all. Yes,, without a doubt home is the place for Christmas.

God is Love, therefore let us enlarge our hearts by filling them with more love for Him and those about us and we will then behold what the Christ child in Bethlehem's manger meant to the three Wise Men who journeyed from afar to see God's Christmas gift to the world. Come let us rejoice even though we are in prison, Christmas was born for us, too, as it was for all mankind.

Throughout the civilized world this day is held sacred. It is the day of prayer and feasting of love. And wherever His name is spoken joy and happiness abound. No life has sunken so low, no heart so cold and unfeeling, no soul so lost but feels the contagion of Divine love, that fills the Universe on this Day of Days. It is the one day when the spark of fellowship, and universal brotherhood is kindled in every heart. The time when love and charity reign supreme in human hearts. Hatreds and enmities are forgotten, and love predominates. "Good will toward men." We all feel it on this day. It is the rainbow of love: God's sign on earth. It flows in waves through the city; it searches out the lone traveller in the desert: it finds even the exile in prison and makes his heart bloom again. This heaven-born spirit of Christmas cheer.

A YEAR'S PROGRESS SHOWN BY AN OREGON CITY

A Chronology of Local Events — The Value of Good Roads

The Eugene, Ore., Daily Guard issued, on January 1, a special edition of eighty-eight pages, telling the story of a year's progress, and it was well worth the telling. A chronology of local events, by months, for the year, is made very complete and is a feature that every newspaper will find worthy of imitation. It is convenient for reference and will prove valuable to readers who wisely preserve the copy of the paper containing the same, and in the office, both for the editors and reporters, as well as for members of the community who may want to look up the leading facts of important events. Such a record is often found useful in the courts and in tracing occurrences not only in the history of the community but in the history of families.

The text and the illustrations of this issue make a wonderful showing of attainment and progress. There is an illustration of a grocery store, for instance, containing fifteen thousand feet of floor space, that speaks volumes for the extent of the home trade. Views of exhibits of an eastern Oregon land show afford most impressive lessons as to the wonderful products of the region; and an illustration of a macadamized road improvement, made during the year, tells of the great progress made in good road construction that adds so much to the pleasure of rural life, increases the value of lands and is a great economy for the marketing of farm products.

These are only three of scores of illustrations, and not the most striking, that show development, resources and improvements along all lines.

Among the many subjects handled are: Manufacturers, Railroad Development, Fruit, Merchanfactures, Railroad Development, Fruit, Merchandizing, "School Children's Stories," being incidents of school life told by the children with the idea of revealing the real child and helping in his improvement and aspirations; Street Car Lines, of which there are nearly fourteen miles in the city; Property Transfers; The Building Record, showing the expenditure of $591,973 during the year; Road Construction and Maintenance; the poultry, sheep, fruit, hay, cattle and other agricultural industries, and so on.

This much of an enumeration of the topics covered is given as a suggestion to other newspaper makers. Of course, civic, church, fraternal, financial and other organizations are given proper consideration. The record is one of a great year's wonderful production and progress.

In connection with "Road Building" a very striking and interesting estimate is presented as to the result of increased land values were the like road improvements extended over the whole country, as follows:

> Since the condition of the roads enter so largely into the cost of transportation and transportation charges increase so greatly the cost of living, good roads will add to the cash value of the farms served by them much more than the roads cost. They are not an expense, but an investment. No investment is so sure of substantial returns as that invested in good public roads. It is estimated that a good road is worth to good farm lands $2 per acre per mile from town for a distance of twenty miles.
>
> Assuming the total area of all farm lands in the United States at 850,000,000 acres and the increased value of farm lands due to improved roads estimated by the United States office of public roads $2 to $10 per acre, the estimated increase in value to the United States of improved roads would be 850,000,000 acres at $5 per acre, equals $4,250,000,000.

Why should not all newspapers work constantly and enthusiastically for good roads and good streets? They are means to wealth, health and pleasure. What a splendid opportunity every newspaper has to inspire and to help on, in every way, to new progress and greater attainments by telling of the encouraging achievements in all lines of human interests and efforts!

"LINOTYPE" A REGISTERED TRADE MARK

MERGENTHALER LINOTYPE COMPANY
Tribune Building
New York, Dec. 20, 1912.

National Printer-Journalist,
4618 Ravenswood Park,
Chicago, Ill.

Dear Sirs:

The word "Linotype" is the registered trade mark of the Mergenthaler Linotype Company, and is our exclusive property. No one else, therefore, can manufacture and sell composing machines under the name "Linotype."

Should any of your correspondents use the words "Linotype Company" as part of the business title of any concern using Linotypes, they should be informed that the word "Linotype" is registered in the patent office as our trade mark and that no one has a right to use it in connection with any other machines than those built by this company, or in the title of any commercial establishment.

Trade composition plants do not make or deal in linotype machines, but do linotype composition. A title conveying the latter idea, we would of course, have no objection to, as for instance "Syracuse Linotype Composing Company," or "Charlotte Linotype Printing Company," or "Denver Linotyping Company." They will no doubt appreciate that this suggestion is made in our mutual interests.

We are calling your attention to the above at this time so as to avoid any future complications.

Trusting you will accept this letter in the spirit in which it is written, and wishing you the compliments of the season, we beg to remain,

Yours very truly,
MERGENTHALER LINOTYPE COMPANY,
L. A. HORNSTEIN, Manager Publicity Dept.

* * *

"FOUND THE ADVERTISEMENTS VALUABLE"

F. T. WIMBLE & CO., LTD.
87 and 89 Clarence Street
Sydney, Australia, Dec. 14, 1912.

The Manager,
National Printer-Journalist,
4618 Ravenswood Park, Chicago.

Dear Sir: We take this opportunity of congratulating you on your twenty-fifth anniversary. We cannot allow this opportunity to pass without expressing the benefit that our company has derived by the perusing of your journal. Much of the reading matter is of a most interesting character, and we also found the advertisements most valuable to us, as it enables this company to get into touch with many of the leading manufacturers of printing machinery and printers' requisites in America. We shall be glad if you will continue to forward us your journal until further notice, and upon receipt of your subscription account a remittance will be forwarded.

Again congratulating your journal on its silver anniversary,
Yours truly,
E. PRISEMAN, Manager.
For and in behalf of F. T. Wimble & Co., Ltd.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

CHANGES IN PRINTING INDUSTRY EFFECTED BY MERGENTHALER LINOTYPE

In looking through "Linotyped Periodicals and Magazines" most printers will be reminded of the time when the linotype was first introduced as a straight-matter composing machine — about the same time, by the way, that the National Printer-Journalist made its first appearance. Inventors had been attempting to perfect a typesetting machine for so many years, and with such invariable lack of success, that no one really expected to see a successful composing machine put on the market until one was devised that could think for itself, or at least "think" as effectively as some of the hand "comps" of the time. Of course, it was only a matter of a few months until the linotype was universally recognized to be not only a success, but the only efficient way to set a daily newspaper.

From this time began a great change in the printing business — the change from hand to machine composition on the daily newspapers. After it was found that a linotype could turn out the work of five or six hand compositors, it was merely a matter of how fast the machines could be turned out of the factory.

At first the linotype was considered adaptable to newspaper work only. Gradually, however, a few printers of high grade books and publications discovered that linotype faces were being cut which matched the type faces they were using, both in form and quality of print. In a short time the place of the machine in the book and publication field was assured.

For a time, the idea of the one-machine linotype plant was considered with some misgivings by printers and publishers in the smaller towns. The machine was complicated, and many thought a machinist would be just as essential as an operator. However, after a few had taken the initiative and proved that the one-machine plant was both practicable and profitable, the demand for linotypes from such offices was as large as from the great newspaper and book plants.

Later the publishers of country weeklies began to buy linotypes, and they found them profitable. Even in very small offices where the machine could not displace enough compositors to pay for itself, it was found profitable, because it increased the circulation of the paper by enabling its owner to print more local news, and the machine likewise attracted new advertising and job business to an extent that made it a very profitable investment.

Of late years the tendency has been to set as much as possible of job and advertising work on machines. This has been made practicable to an increasing extent by the introduction of improved and more versatile models of the linotype, and by rapid production of matrix faces suitable for such work, as well as for "straight" book and newspaper composition. The new multiple magazine linotypes are the latest and most versatile models. The Model 8 three magazine machine gives an operator command of three different sizes of type, from six to nine distinct faces, without leaving his chair. An operator seated at the Model 9 four magazine linotype, can set any of four different sizes, from eight to twelve distinct faces, without leaving his keyboard. Complete changes of face, body and measure are made in less than a minute — as quickly and easily as a hand compositor can change his stick, push in the case of type he has been using, and pull out another.

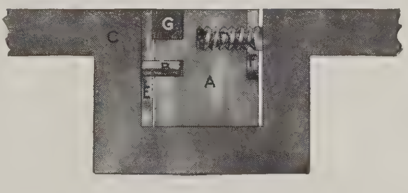
The remarkable popularity of these new machines, although they have been on the market but a little over one year, seems to indicate that they are about to make still further changes in the printing industry almost as extensive as the changes made by the earlier models within the past twenty-five years.

✣ ✣ ✣

Hamilton's All-Steel Patent Cutting Stick

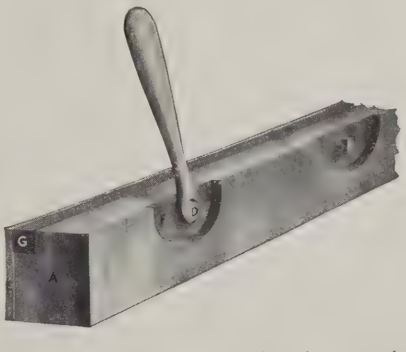
The Hamilton Mfg. Company have just obtained letters patent covering an Improved All-Steel Patent Cutting Stick which overcomes all the objectionable features found in connection with their old style Wooden Patent Cutting Stick with which printers throughout the world are familiar. We show here illustrations of the new Stick. There are no wooden parts to break. There is no turned steel on the end to interfere with full length cut.

It is not necessary to remove the body piece from the groove in the machine bed when renewing the auxiliary cutting strip.



A close fit of the main body piece in the groove in the machine bed is not necessary. A series of bolts, the heads of which when turned outward, engaging with the walls of the machine bed groove, clamp the body piece on the grooves as well as firmly securing the auxiliary cutting strip "G" in the main body piece at one operation.

If the main body piece is not exactly the correct size to fit the groove in the bed and is a little smaller, sheets of rubber or soft paper can be used to raise it to the level of the machine bed and this packing is a positive advantage, acting as a cushion in the cutting operation.



The new Stick is perfectly simple and perfectly practical and is giving great satisfaction wherever installed.

An innovation in connection with the use of the All-Steel Patent Stick is an All-Metal Auxiliary Cutting Strip which the Hamilton Company are just putting on the market. This does away with wood entirely in connection with the cutting machine. The metal strips last longer than wood and give a cleaner and sharper cut to the bottom sheets. Prices for these auxiliary cutting strips in the soft white metal can be obtained from the Hamilton Company or from any dealer in printers' supplies. They will fit any patent cutting stick ever made by the Hamilton Mfg. Company and it will only be necessary to give the length required. It is presumed that the introduction of this new All-Steel Cutting Stick and Metal Auxiliary Strip will revolutionize the cutting of paper on machines as far as the wood auxiliary parts are concerned.

NEW ERA PRESS SUIT AGAINST CASIMIR VON PHILP COMPANY SETTLED OUT OF COURT

The suit in which the New Era Machinery Company, The Machine Sales Company and The Regina Company were complainants and the Casimer von Philp Company and Casimir von Philp were the defendants has been amicably settled out of court. Under the terms of the agreement The Regina Company becomes the sole licensee under the combined patents owned by The New Era Machinery Company, the Casimir von Philp Company, Casimir von Philp and Bertil von Philp, and will as such sole licensee manufacture and sell the press. The Casimir von Philp Company, Casimir von Philp and Bertil von Philp agree to retire from the printing press business leaving the field to The Regina Company alone. Under this arrangement The Regina Company will manufacture the multi-color presses together with the various additional attachments for performing special operations which both of these presses contain. This press and the devices are covered by numerous patents besides additional applications pending on various improvements.

Barnhart Brothers & Spindler report a good business for their steel composing room furniture, with orders ahead for several months. The two (2) large orders recently placed were for Stovel & Company, of Winnipeg, and the Winnipeg Free Press. These enterprising concerns will have the finest composing room equipments in Canada.

* * *

For the convenience of the growing Yellowstone Park and Pacific Northwest travel, arrangements have been made by the Denver & Rio Grande with the Oregon Short Line to interchange passengers passing through Colorado and Utah at Salt Lake City without extra charge. The Ogden interchange will also continue as heretofore. This new arrangement becomes effective February 1, 1913.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . .

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

WANTED—Master printer, experienced in selling, estimating and managing, with $3,000 to invest in medium sized plant doing a profitable periodical, book and catalogue business in Ohio city. Address M, care National Printer-Journalist.

SOME OPINIONS BY WELL KNOWN PRINTERS

Baltimore, August 26th, 1912.

In reference to the Miller Incline Truck which we bought of you some time ago, beg to advise that same has proven satisfactory to us in every respect. Our only regret in the matter is that we did not know of it sooner, and thereby saved the cost of the four wheel trucks which we formerly used for the work. Yours very truly, The American Label Mfg. Co.

Milwaukee, August 23rd, 1912.

We are more than pleased with the truck, and our only regret is that we did not install same sooner. The many advantages gained by using your truck certainly offsets the extra cost in comparison with flat trucks, and we take pleasure in recommending them to brother printers.

Yours very truly, B. J. Cannon.

Niles, Mich., Sept. 12th, 1912.

We are pleased to state that your Incline Truck which we have been using for about a year, has proven eminently satisfactory. As a time and space saver, we count it as one of our best assets.

Yours very truly, National Printing and Engraving Co.

The Big National Exposition

of Printing, Lithographing, Bookbinding Machinery, Office Equipment, Advertising, Publishing and All Allied Lines

New Grand Central Palace, New York City
April 19th to 26th, 1913

Will reflect the progress that has been made throughout these affiliated industries in the last twenty years.

This Exposition has been OFFICIALLY ENDORSED by the

PRINTERS' LEAGUE OF AMERICA
NEW YORK MASTER PRINTERS' ASSOCIATION
BEN FRANKLIN CLUBS OF AMERICA
ELECTROTYPERS BOARD OF TRADE OF NEW YORK

and they are all co-operating to help make this Show the greatest of its kind that has ever been held in the world.

The Exposition is held coincident with the CONVENTIONS of the American Newspaper Publishers' Association, Associated Press and Printers' League of America and all their members are being supplied with tickets of admission that will admit them any time during the Show.

The various Importers and Exporters, Consuls and Foreign Chambers of Commerce are also co-operating with us and distributing our literature throughout the world, so as to interest the foreign dealers to attend, and the fact is being impressed on these people that this particular event presents to them the greatest opportunity they have ever had to view under one roof all the up-to-date machinery, processes, systems and methods NECESSARY to people in the above lines of business. The Bureau of Foreign and Domestic Commerce of the Department of Commerce and Labor at Washington are printing our articles and invitations in their Daily Consular Reports.

The Mergenthaler Linotype Co. are sending out in conjunction with their January Bulletin, 50,000 tickets to printers throughout the United States and Canada, and an article in the Bulletin will advise all printers and publishers to arrange their trips to New York, so as to be here in April, during the Show.

The Lanston Monotype Machine Co. have arranged to send out 60,000 tickets to the trade — the Dexter Folder Co., 30,000 and other exhibitors (see list on page opposite) many more thousands, covering their mailing lists.

150,000 TICKETS will be judiciously distributed by us through the different business houses, so that the buying public can view the great progress that has been made in the above industries during the last decade.

MANUFACTURERS AND SUPPLY MEN

To those of you who haven't arranged for your spaces, the question is, WHAT ARE YOU GOING TO DO ABOUT THIS? Are you going to be represented in this Great International Gathering, or are you going to be "penny-wise" and "pound-foolish" and let the cost of a space stand between you and a large volume of new business? ARE YOU GOING TO EXERCISE FORESIGHT OR HINDSIGHT?

The spaces on the main floor of the Palace are selling rapidly and will soon all be gone. We have arranged for the SECOND FLOOR, but if you act NOW, you can secure a choice location on the first one.

If you get in touch with me right away I will be glad to give you many more sound reasons why you should be represented here. Apply to

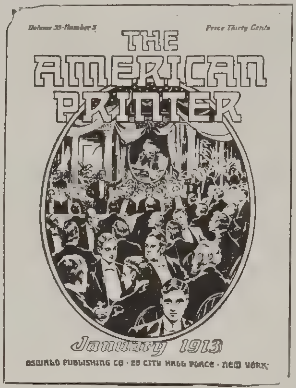
The Wise Printer Subscribes for Several Trade Magazines



Have YOU subscribed for

The
American Printer

The January number (just out) is an average number, but the average is high. The American Printer is a magazine of the printing industry. Its more than twenty departments are made up of short readable articles of a timely and interesting character. There is a general tone of uplift: better work, better prices, better conditions. Several hours with THE AMERICAN PRINTER each month will not only keep the reader up-to-date, but will make him better informed generally and a more valuable member of the printing business. Another contest, something "different," will be announced next month. Watch for it.

American Printer readers get matter prepared exclusively for them

Send thirty cents for a sample copy of the January number now, or three dollars for a year's subscription

OFFER No. 2

National Printer-Journalist (monthly $2)
Printing Art Suggestion Book (monthly $1) **$2.50**

The Printing Trade News

The Printing Trade News, 64 pages, is published weekly and has a very comprehensive business news service from all sections of the country. It deals entirely with the affairs of the business office and the executives. It collects weekly beside printing house news, that of the binders and rulers, the electrotypers, engravers, trade composition houses, the supply trade paper houses, lithographers, etc., has a business fiction story each week, patents of interest to printers, and editorially reviews important doings of printers and publishers during the week.

The Printing Art Suggestion Book

This is a monthly publication issued by the University Press, Cambridge, Mass., containing examples of typographic and other designs intended to assist the printer and those who are printing in the choice of color schemes, inks, and papers. It contains samples of standard papers, as well as novelties which are brought out from time to time by the various mills. It is full of ideas and suggestions for typographic design, display, and color schemes.

ESTABLISHED 1844

The Firm of Practical Men

The C. I. Johnson Mfg. Co. is the only firm of practical men in the Northwest handling printing machinery. By the term Practical Men, is meant the ability to take down and erect and rebuild any machine or machinery used in the printing business. That is what three out of four of the members of this firm can do.

When the owners, the men at the head of the business, are practical men in their line, does it not seem reasonable that they will see that machines are right before delivering them, when these men know from their own knowledge whether a machine is properly rebuilt, not having to rely on some other party's word or opinion?

Are not practical men apt to know what is needed to fill your requirements and to deliver what you want and what you expect? Are not practical men likely to be careful when they buy machines and buy only those which they know from their own knowledge can be rebuilt properly?

The personnel of the C. I. Johnson Mfg. Co. is composed of practical men, and when they say that a machine is ready to be shipped and to do the work as it ever did, in the hands of competent workmen, the purchaser knows that he is getting what he bought.

Send for latest "Big List of Johnsonized Machinery," giving descriptions and prices on fifty-five rebuilt cylinder preses and ninety-nine rebuilt miscellaneous machines, most of them now in stock.

The Goal

has changed since the chariot-driver contested for Royal favor.

Yet the qualities which enabled the driver of those days to win are the qualities we are using today to win business. The race is no less spectacular because it employs brains instead of chariots.

The best that his horses and equipment could do under the most favorable circumstances—that was all the driver could ask.

This is the standard which BARNES-CROSBY COMPANY sets for itself—*the making of illustrations and printing plates which will give you the greatest service in the race against competion.* To do this we operate our Chicago plant day and night—employ a staff of over a hundred artists, and have extended our organization until it touches almost every great commercial center. These are the facilities we place at your command.

The Babcock Optimus

The Babcock Optimus

A line half an inch wide across the press where the cylinder engages the form is the impression. The reciprocating bed and revolving cylinder must pass impression smoothly at equal speed and under heavy strain that will not yield. Every element of the problem is important, unyielding rigidity to strain the principal one. Inflexibility under impressional stress is needed by heavy work; the best now is heavy. Weakness limits good service to light forms.

Press rigidity depends primarily upon the supports under the bed, a powerful cylinder and its lifting mechanism. The Optimus adds the strength of its heavy side-frames as a direct force at impression, an important source of power poorly used if at all in other presses, as shown by their sliding cylinder boxes.

That the Optimus possesses greatest impressional strength is quickly proved by reference to those operating it with other presses. Ask such and you will be told that heavy forms are taken from every other press and put on the Optimus to get better product. Features adding nothing to strength in other machines contribute to Optimus rigidity.

Talking on this subject with a pressroom superintendent, we were told, "I have eight — and seven — presses, and constantly feel the need of Optimus machines for our heaviest work. I could save time as well as do it better. If all were Babcocks the firm would be a considerable gainer."

Last winter in New York, on very heavy catalogue work divided among a number of pressrooms, the Optimus printed its forms readily without bother to its operator or injury to itself, and after 300,000 impressions left the plates in good condition. Other big machines broke under the same work; some new ones bought especially for the job, printed it, but were practically ruined, and some were forced to cut forms in two and print half sheets.

Almost regardless of other qualities the press with greatest strength is the best press. If to this superlative quality be added a smooth and perfect driving motion; ample distribution; assured register; a time-saving delivery that needs no change whatever for sheet sizes or thicknesses; high speed and splendid endurance, we have the Optimus as it is. The originality of these features and their effectiveness in the Optimus make them particularly interesting. The comprehending admirer of high class, well-balanced and efficient machinery must approve them. He will like details; and a brief description of those features that make the Optimus better we shall give here later.

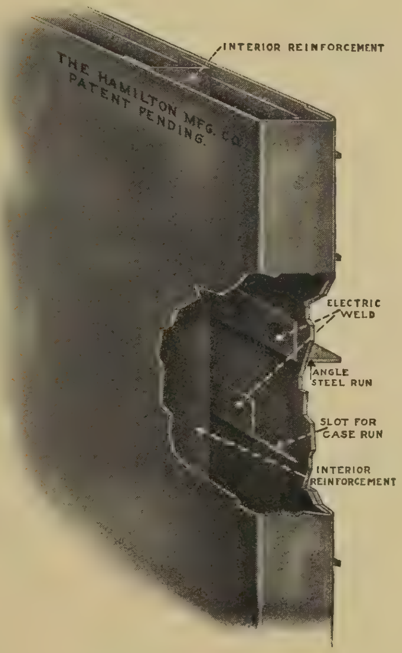
Hamilton Steel Furniture

Look Behind the Finish

ONE of the most important features of Steel Goods is in the backbone; be sure you don't draw a wish-bone instead.

The illustration shows a section of the double walls of a **HAMILTON** Steel Cabinet. Note carefully the construction — it means permanence. It means when you buy a **HAMILTON** Steel Cabinet, you're thru buying unless later you need greater capacity. Then you can add more like them. You'll insist on Hamilton Quality then because you'll know its real value.

But now before you buy — Look! Note the heavy walls of steel reinforced with channels, which not only strenghten the Cabinet but support the runs as well. The runs are of formed steel angle, 14 gauge. They are strong enough to hold the weight of three men alone but are even stronger when placed thru the slotted steel side of the Cabinet, with the inner legs electric welded to the side. Better still, they are accurately spaced by reason of the slots which are cut within a few thousanths of an inch. This means you can have the maximum number of cases in a Cabinet with everyone working smoothly and right.



Our cabinet ends are constructed of two sheets of steel spaced 1⅛ inches apart, with two steel channels running from top to bottom of ends. The sheets are riveted to the channels, forming a solid, compact, double end. The legs of the steel runs are placed thru slots in the inside sheet and the inside legs of the angle are electric welded to the sheet. The channels running from top to bottom of the ends between the two sheets of steel would be sufficient to hold the steel slides in place without any other support, but in order to produce the best possible construction, we electric weld the runs to the sheet. This gives greater strength to the whole Cabinet and to the runs as well.

Next month we will show other details of Hamilton Quality construction, convincing arguments why you should specify **HAMILTON** Furniture — the furniture with thirty years experience behind it.

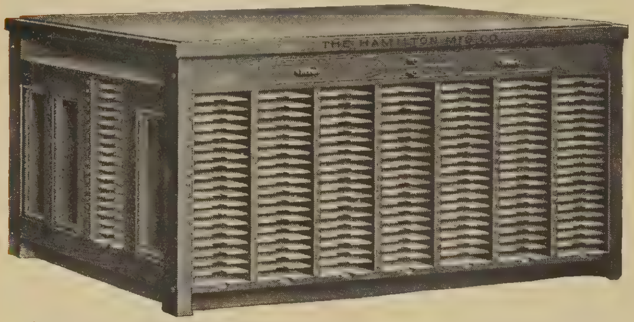
Hamilton Wood Furniture

HAMILTON QUALITY in Composing Room Furniture is a well recognized quantity the world over wherever the printing press has been the means of illuminating and dispelling the myths and prejudices, hoary with age. In this connection, touching the power of the press, the fact comes to mind that the great Government printing-plant at The Hague in Holland is equipped with Hamilton Composing Room Furniture. Thus in a humble way Hamilton Printing Office Furniture will be a link in the tangible chain of circumstances working to the overthrow of the last great legacy of the Dark Ages, "The God of War." In far off Tasmania, in New Zealand, Australia and the Straits Settlements, in India, thruout Africa, in France, England and Belgium, this trade mark on Hamilton's Composing Room Furniture is almost as familiar an object to the eye of the workman as it is in North and South America, where it is the recognized emblem of standard quality in sixty thousand printing plants. It is obvious that the reason of this supremacy in reputation is the quality behind the goods.

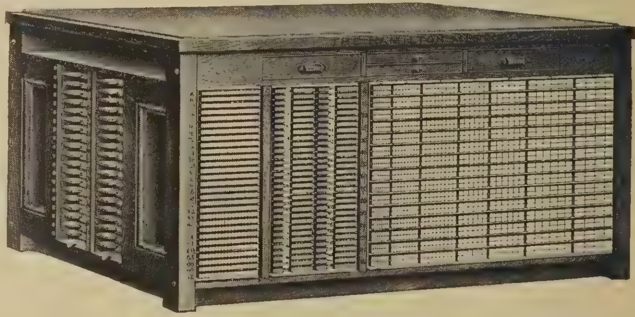


Showing One Side of the American Imposing Table with Book and Job Galley Shelves

Improvement in Connection With Imposing Tables

There has been a wide development recently in connection with Imposing Tables. The newer types would now seem to be the acme of perfection, with the material compactly arranged and in most convenient position for the workman, with a view of economy in the use of materials and the saving of time at rush moments, when seconds rather than minutes or hours count.

The American is one of the latest Imposing Tables offered printers. One side is equipped with galley shelves to accommodate book and job pages on galvanized iron or pressed steel one-piece storage galleys of our manufacture, size 8¾ x 13 inches. All galley shelves are consecutively numbered.



Showing One Side of the American Imposing Table with Labor Saving Furniture and Reglet Racks

On opposite side of the American Imposing table are racks filled with labor-saving reglet and furniture in practical lengths, also a central rack for steel furniture. In the ends of the American Table are additional galley shelves for book pages. This Table has recessed ends and dustless base, metal furniture drawers in the upper rail and all other modern features. *Complete descriptive circular showing this and other up-to-date imposing tables sent on request.*

WOOD TYPE—Our line of Wood Type and Wood Borders is shown in the special catalog which will be supplied to all printers interested in this material. We have patterns for thousands of faces all made in any size desired. Wood Type is most effective in poster work. It is light in weight and cheaper than metal type in large sizes. Our wood type is guaranteed of correct and uniform height. Made of end-grain rock maple, the heaviest, hardest and toughest of native woods.

Ask for a copy of "COMPOSING-ROOM ECONOMY," showing floor plans of thirty-two modernized composing-rooms in some of the leading printing-plants in the United States.

Efficiency, With Comments and Three Prize Articles

Suggestions on Efficiency

By Channing Barnes

"EFFICIENCY," illustrated in the picture taken from the issue of January 21, of "Life," make a laughable anti-climax to the suggestions in these articles. Yet it points a truth that must not be overlooked in scientific management.

The real danger point that any system must pass before it is useful is that in which the human element is left out or overlooked.

The real basis of scientific management must be the study, training and selection of the man for the job. Nothing can be solved in this world without the personal equation.

This is where we first hear the cry, "You are making machines of men and you are taking all the individuality from them."

Right here we will consider this problem. Previous articles have taken up the arrangement of materials, the planning of work. When these have been organized we have merely prepared to get results.

Efficiency and the Individual

Studies in working gangs have proved the fact that where a group of men are working together the constant tendency is for the whole group to slow down to the speed of the slowest man. The natural attitude for a man to say, "If that guy can hold his job, I don't see why I should break my neck." Or a naturally good workman (having his work planned and materials supplied) is pulled down by the feeling that he is making up for the deficiencies of the slower men who cannot or will not make good.

To remedy this we have provided the task — a carefully proportioned time for each operation. Then to give the workman a fair show we should provide him a place on his time card for "cause of delay." Now we must take pains to train each operator in the best possible way, to select the man best adapted to each class of work and, after giving him every chance, to pay him on his individual record of work accomplished.

To avoid all favoritism the foreman of a department should be a supervisor — a teacher. He should be the most skilled man available for the operations carried on under him. He should have the patience and ability to impart his knowledge, studying out the one best way to do a thing and showing his men that way.

Efficiency Crank—Young man, are you aware that you employed fifteen unnecessary motions in delivering that kiss?

(Reproduced from *Life*, New York)

Take the composing room foreman. He is now required to drive the work, to give out hasty instructions, to be a judge of human nature, to oversee a thousand and one details of operation, and finally to possess some art feeling in his line. No two or three men can be found with the attributes or training to do these things and do them well. Hence we constantly see the hiring and firing of foremen. No employer gets a man good in some points without a total lack in others. If he be an inspirer of effort, a skilled leader in the work, he is lacking in detail, or if he is an artist printer, he is perhaps overlooking the mechanical imperfections in composition.

Having already provided for the layout and routing of work in the planning room we can develop a type of foreman who can do his work well and be a definite help to the men under him. He can inspect the tasks laid out and can immediately take up with that department any mistakes in layout or typesetting. He will oversee materials and discipline. He will inspect forms for justification. But most of all he will study and aid his men in best methods of production.

Don't shy at the fear of not developing taste or originality. I have worked with many men of many minds, and in that time I have found compositors who were lightning men on make-up and yet neither wanted to nor could do delicate job work; others who were capable of laying out jobs were slow at composition or, with their minds on the appearance of the job, failed to justify two lines alike — and many other misfits.

* * *

HOW THE MANAGER MAY DEVELOP 100 PER CENT EFFICIENCY

By Walter Jack, Hillsdale, Mich.

"I wish we had a good, live man here running our paper," a banker once told the writer. The editor in the small town was 100 per cent minus in efficiency, and the remark evidenced that not alone among the craft but among all classes of men who are brought in contact with the printer there are those who demand of him the highest point of efficiency.

My views are from the viewpoint of the manager and editor of the small weekly paper. Such a paper, if properly and efficiently conducted, will do more for its community than any large daily paper could possibly do in its proportionate field.

People demand a right paper and the right man at its head. It all depends on the man, and every turn he makes must be for popular good and must accomplish results. He must have his business carefully systematized, and have equipment that will produce results with the least outlay of time and material.

In the country office, the greatest enemy to efficiency is putting off until tomorrow what can be done, and what should be done, today. The country newspaper editor takes it easy Friday and Saturday, makes Monday a light day, and about Tuesday afternoon he gets down to business to get ads and copy for the Thursday afternoon run. He promises to do better next week, but he does not do it. The same old remedy that I advise has been prescribed for decades.

Go after news, don't wait for it to come to the office. In the first place, tell the readers through the columns of the paper to call the office, and notify you of personal or local items. In my own experience this has brought three columns of personal news in each issue, and more than doubled the local columns. Tips of big stories from all parts of the county would come in, and the gathering of news came to be almost automatic, when the suggestion was kept continually before the readers to phone — expense the office — important items. When this is done, publish the contributors' names, and offer a word of commendation.

Don't delay present work to visit. If the editor is doing his own reportorial work, he should make the rounds of the town every morning before the salespeople get busy handling customers. After a few weeks they will save items for him. They will expect him to come and frequently will have a written story ready. There are always people in the small towns who can scent a wedding a year away, and who know family history for forty years back, and always keep a guest book in their heads. These can be relied on to give good news, but it must be handled with care.

It is a fact that the greater number of names to the square inch on the printed page, the more successful the paper. Get names of everybody that may be interested in the paper, or names that may interest people in the paper. Keep getting them every week.

Keep track of everything doing. It's dead easy if you know the system. Get the system habit, and stick it out until it becomes second nature. To do this have a desk with flat top and absolutely no pigeon holes to lose material in it. The desk will do more than the best reporter you can hire if it is one of the right kind. Get one with two stacks; each stack should be composed of a deep drawer for filing at the bottom, and two shallow ones above it, and a drawer between the stacks for pencils, clips, etc. On the right side of the desk, the top shallow drawer should be divided for a card index system, and make up the mailing list on these cards. They will then be accessible for instant reference. The next lower shallow drawer should be for work to be done, and the one below, which is deep, should be for vertical filing of samples of printing, and specimens of stock used most frequently.

On the left-hand side, use the top drawer for stationery and envelopes and the next drawer below for matter for publications, and the lower deep drawer for a letter file.

The typewriter must have a place. This should be at the left hand of the desk, either on an auxiliary stand, or, better yet, on a swing shelf, so it can be brought about for instant use. Have a blotter tacked down at the further end, and a memorandum pad fastened to the edge of the blotter with a large paper clip. The telephone should be at the right side of the desk and mounted on a telephone arm. A folder in which the work of the office should be outlined should always be at the right hand. This can be made of press-board, four leaves size 10 x 14 inches, and inside the first opening work for immediate attention should be placed, the work for the following day in the second opening, and work for future consideration in the remaining two openings. A desk tickler should also be kept in a small compartment in the top drawer, separating it from the other cards, or in a special card box on the surface of the desk. This should contain alphabetical, month and day of the month guide cards, and in this should be filed anticipated events, notices of club programs, and business notations, so they will come up in time for publication, and by all means keep up the tickler. It is used in business houses where the details handled are nothing compared with those in the country printing office. Keep everything clear of the desk. A business man who absolutely kept his desk clean declared that it was like the deck of a battleship, continually cleared for action.

In working, unfinished duties should be placed at the right side of the desk, and when completed crowded to the opposite side. When a letter is to be filed, do it immediately. These are not original ideas on desk system, but they have been worked out by business men shouldering heavy loads, and have panned out. After trying every possible plan to handle my work effectively, I adopted and adapted this desk system, and it made good.

Keep the exchange table clean and systematic.

Work every minute. Do not get excited, be slow, but be accurate, and do not make two movements about the desk where one will answer the same purpose. An office manager with whom I am acquainted, I declared once was slow. I knew him better two years later, and I find he does more work with less ostentation than any man I ever met, and he has spare time besides.

Hundreds of country newspaper men spend one-quarter of their time reading incoming dailies and exchange papers. Cut this down to thirty minutes at the outside — that is enough — and have a certain period during the day to do it.

Don't get the visiting habit. Another quarter of the country editor's day is killed by visiting with patrons who want to discuss weather, politics and hobbies. The business man who accepted the management of an office in a small city was beset with visitors the first month. He kept track of the time he lost, and the first month billed his callers at the rate of $1 an hour for the time they had killed during business hours. He gave them a jar, and if the editor could spring the same thing, it might save him many late hours. Always be busy, and let your visitors see that you are busy. But do not be too busy to be courteous.

When you come to the office, go at once to the tickler and the desk folder, and know just what is to be done that day. Keep your work up to date. If a wedding occurs Friday night, see that the report comes in the following day, even though the paper does not appear until the next week. Keep news up in the weekly as though it were a daily, and keep at it. Do not start a system, and then drop it. Burn all bridges behind, and go in with the one purpose, to make it work, and it will work.

Keep sufficient copy ahead to bury the machine. That is safer than to keep the operator shouting continually for more stuff. Get the people in the habit of sending in their news, stories of their social events, weddings, obituaries, historical articles, farm news, and the editor will find they will do more than half his work.

Don't lay around stores visiting with business men, or hang around the cigar stand or pool room. I know an editor whose efficiency is reduced from 100 to 30 per cent, because he will spend part of his time in daily visits about town. Another editor sacrificed 1,500 from his list in the face of competition because he spent half his afternoons at the commercial club playing cards or pool with some of the boys.

When closing time is due, be the first man out. Lock the door, and forget the office. Forget your business cares and troubles, but when it is time to open again, be the first man there. After work, rest, don't worry. Twice the work can be done the next day. There are times when overtime is necessary, but do not make it such frequent practice that it becomes habitual.

Pay yourself a salary. Pay a good one. Be the best paid man on the job, and see that the paper meets its pay roll, pays interest on investment, improvements, and all bills as well as to create a fund with which to do promotion work.

Don't be a grouch. Do the work with a happy spirit. Talk up the town, and after business hours do your mingling, your extra reading, or enjoy society, but while at work let one thing be first and that should be business, and business only.

Above all, read the journals devoted to the business. They are correspondence schools in the interests of the work. Organize, and work with the fellow editors of your county or district.

Try to do more today with less effort than yesterday, and think, and you will become more efficient daily.

[Editor's Note: The foregoing paper is indeed refreshing, and rings especially true to my ears. These points so forcefully put, have set me back many dollars when running a country newspaper office.

Mr. Jack is an experienced newspaper man formerly connected with the Hillsdale Leader, but now field representative of the Rural New Yorker. It is with great pleasure that the judges award him the first prize on efficiency.]

* * *

THE CARE OF LEADS AND SLUGS

By Olin H. Chase, Newport, N. H.

Perhaps one of the most wasteful methods in large composing rooms is the lack of oversight in the sorting of leads and slugs. This work is usually done by apprentice boys, and about all the attention they receive is an occasional "bawling out" from the foreman.

The method generally followed is for each compositor or man breaking forms to dump leads in an ever-accumulating pile on a dead stone or bank. Then the lads are expected to pitch in and scrabble over the pile, get them onto galleys and sort them in cases or rack.

Leads and slugs should never be placed in a pile, should never be dropped on the floor and should never be allowed to accumulate in any place except on galleys. As each compositor finishes a job he should place his extra slugs and rules on edge on a small galley, ready to sort. It takes him but a little more time to do this than to pick them up and throw them at something. These galleys should then be regularly picked up by apprentices and replaced by clean galleys.

The filled galleys should be placed on a rack near a sorting station and apprentices required to sort their share of the day's accumulation, followed by an inspection of their work. In breaking forms, also, all material should be put at once on galleys for cleaning and sorting. The reason for wood galleys is that a few can be made for this purpose and they will never be pre-empted for type matter. Furthermore, a piece of rule or a lead is never perfect after being scraped on a steel galley.

One can understand how a pressman will smash up a few leads working up in a form in a desperate, though ill-advised, attempt to prevent his press standing idle, yet there is no understanding the cussing the composing room gives the press room about bent leads when such practices are allowed in the sorting of this same material.

[Editor's Note: The above paper calls attention to one of the many little leaks in printing economy. The sorting of leads and slugs comes under the stores problem in scientific management, in which there is more potential possibilities of invisible loss of both time and material than in any time checks on constructive work on jobs.

Mr. Chase is the editor and proprietor of The Republican Champion, of Newport, N. H., an active booster of his home town, and recently elected as a Representative to the General Court in his state.]

APPRENTICE EFFICIENCY — THEN AND NOW

By Harry Klock

In this article we will speak of some of the experiences of the printer's apprentice, or "devil" as he was formerly called, along the lines of his training toward efficiency.

We will first cite a few of our own experiences in those days when we thought the shop would close if we weren't there, when to our sorrow the "boss" would come flying out of his sanctum, with a real, straight-from-the-heart chastisement for the poor "devil" because we had not delivered someone's letterheads that he told us about yesterday. Then after that order he had remarked that about twenty bundles of print paper must be opened; wood split, enough to last all day tomorrow, as we would all be too busy to do it then; after which, the walks must be cleaned; shop cleaned out; about twenty galleys of bourgeois proofed up for reading that night. Then someone would want some cases cleaned out, and in the excitement we would forget that legal cases were shorter than regular news cases and in sliding one off the rack — Bing! — one is dumped in a heap on the floor, and, of course, always the best case. Who then was the first to appear on the scene of the trouble, but our dear "boss"? Then it was we would be told that we were not worth a half of that $1.50 a week we were receiving, so to avoid losing our much prized chance to learn to be a printer the six-point was cleaned up and put in a heavy paper and after it was dark that night the "awful pi" and the empty case were tugged home. Here it was placed on the kitchen table and each little letter was put where it belonged.

Our dear old Grandma sat by and watched with interest our youthful toil, till at last the case was filled. The night following our midnight labors we tugged our prize back to the office, and when we were asked about that case, it was a proud boy who showed the "boss" the sorted case. But he only vouchsafed a noncommittal grunt and returned to his desk. But the little "devil" was sure he had learned something.

There are few of us who have forgotten our first chance to learn to set type, and after the proof was taken we thought we had advanced sufficiently to be taken into the firm, but when our proof was returned, it was then that our efficiency was again criticised and we were talked to like this: "What do you suppose those 48-point letters were put in the different letter boxes for, just to look at?" We did not answer, but right away were informed it was for our education and that unless we would do better, we were in danger of losing our first step toward being another Carnegie. Then we braced up again.

Those were the "good old days," when we had to sweep out the shop; clean sidewalks; build fires at 6 a. m.; wait on the comps.; carry mail from and to the post office, take the papers to the postoffice, with a chance to feed press perhaps once a week, and once in a great while learn to set type, but still we were learning to become more and more efficient each day.

At last a new boy showed up and we then were put through the mill in all branches of the business, and we had to dig to keep up with the fellow just ahead.

Finally one bright day years after (it seemed ages), we started out into the big, cold world to our first real test, but in a couple of weeks the new "boss" calls us onto the "carpet," pats us on the back with these words: "Stick to the business, son, you are going to make an efficient man for me some day; don't lose interest; buck up with the rest of the men, and you are here to stay." How different those words sounded to our ears, compared to our former employer's.

We have gone on in the business as job compositor, till we are at last asked to take an apprentice boy (not "printer's devil" now — they just abound in the country print shop, and do everything) under our wing and try to teach him the fine points of setting type, from straight matter to the finest example of the "art preservative."

Everything is progressing finely when the bell rings twice, my apprentice is sent down town, returns two or three hours later, tired and indisposed (to work). Result: I finish the job he had started to do, then after he once leaves his job, it's a case of several strong talks to get him back to work, but all the time, in his mind he is an efficient job comp., and hollers for more money as soon as he can set his own name in type.

Pretty soon the foreman shows up, the comp. gets a "bawling out" because the kid is not kept busy and made to work. I would that all apprentices learning their trade today in the city print shops had to spend at least six months in the country newspaper office, then we would have more good, efficient printers than we are turning out of city shops today.

The apprentices today are abused, kicked around, and not allowed to learn according to their notion, but we, that were taught in the good old way, looking at these boys, feel sorry for them because they don't have more to do to keep them busy and thinking, but we're sorry to say we can't make the present day apprentice realize the difference.

I would that each office had a few fixed rules and laws governing the apprentice's education in the trade he has chosen, then we would see real efficiency, and better printers.

[Editorial Note — Mr. Klock has set forth in a humorous manner one of the crying evils of the apprentice problem. He is an all around country-bred printer, learning his trade in several small towns in central New York and is now employed at The Abbott Press, Chicago, as head job man.]

"THE PRINT OF LONG AGO"

Before his case of "brevier,"
The old time printer stands;
A man of little speech, is he
With swiftly moving hands.

His nimble fingers, flying fast
Now drop with pleasant click,
The types and spaces one by one
Into the shining stick.

Across his brows, his eye-shade rests,
Much worn and soiled by age
While from the wall a bracket lamp
Illumes his copy page.

Swift back and forth his fingers fly —
He knows he must not fail
To get his copy up in time
To catch the evening mail!

See, now he's done. He takes a proof
And finds his work "o. k."
Then hastens to the stone, and locks
The forms without delay.

The planer and the mallet, then
He plies with "tattoo" sound —
Then off to press, and soon we see
The wheels go moving 'round.

Thus, memory presents to view
Those scenes we used to know —
The country shop, our 'prentice days
And the "print" of long ago.

— ROSCOE E. HAYNES,
Fairport, N. Y.

Criticism of American Newspaper Ideals and the Lack Thereof—Responsibility and Breadth of Service

IT is foolish in this age for any one to imagine that any business can be worthily conducted or can be permanently successful on the mere idea of buying and selling, a disregard of all thought as to the interests or well being of those with whom one deals. One's own prosperity depends upon the substantial prosperity of those with whom one deals and this is especially true in the newspaper calling.

It is important to know what is news and how to present the news in the most pleasing and entertaining manner, yet the effects of that news on the readers and the manner of its interpretation and application, through editorial comment, for the benefit of the patrons of the paper, are little if any less important.

There are some grounds for the criticism of American papers made by R. A. Scott-Jones, an English journalist — cited in the January issue of the Michigan "Bulletin," the official paper of the Michigan Press Association — who says, speaking largely of the sensational metropolitan press: "The average daily does not exist to propagate ideas."

> Papers are the commodity in which they deal — an elastic commodity which on occasion may subserve other business interests. It is their belief that the general public — the majority for which they cater — demands constant sensation of the crudest kind; that it demands variety; that it detests continuity; that it prefers the language of slang to the English language. They cater, in fact, for every one who can read, for every one who has come under the spell of elementary education. They refuse to ignore the tastes of the most ignorant or even the most brutalized of readers, and they persuade themselves that these are the majority. Let me not be misunderstood. I am not attempting to disparage the motives of the American newspaper owner. His motives are just as good as those of the Englishman who is in the same position of power. The desire to win a title is certainly not nobler than the desire to increase a fortune. The commercial system of exploiting the coarsest tastes of the community is not one whit inferior to the system devised in England for exploiting the sentimentalism and the faddism of the public. I would rather see the frank exploitation of the depravity of New York than to witness the insincere exploitation of what passes for "conscience" in England.

The criticisms, however, are not true as to many of the metropolitan papers. It is certainly not true of such papers as the New York Times or Post, or Brooklyn Eagle, or of the Chicago Tribune, Inter-Ocean, Herald or News, or as to scores of other papers, where the highest standards are maintained and the patriotic service of city and the state, and helpfulness to all readers are placed as the leading motives.

Further on, Mr. Scott-Jones calls attention to the condition that we have so often mentioned — that of the universal general news and telegraph service that has made all newspapers largely "local papers" in the matter of breadth of circulation.

There is, however, no reason why home papers in their fields "that prevents them being national" should not deal fully with all national matters, for all their readers are citizens of the whole republic, interested in and, in a wide sense, responsible for its welfare. They are the sovereigns and this fact should never be lost sight of by the newspaper maker, even of the smallest municipality. There is in some cases an apparent tendency to leave national matters to the consideration of the dailies of the great cities, forgetting that these, today, are largely local, confined to the great municipalities where published.

We remember, at one time, when talking with Mr. Adolph Ochs, publisher of the New York Times, we mentioned the great admiration for his paper that had been expressed by a Chicago subscriber and asked if he made any effort to secure such outside subscribers. He replied in the negative and asked why he should make any such effort when there were millions of people, more than he could possibly serve, within a radius of a few miles. But were there not local papers able to furnish the news, so that there was a large and active demand, the papers in the great centers would plan to meet such demand, for it would be urgent and profitable.

Still Mr. Scott-Jones says that "the localization of American newspapers, the present impossibility of their being national papers accounts for so many of their obvious defects."

> It partly accounts for their commercialism. It partly accounts for their inaccessibility to ideas. How little space is devoted even to politics, excepting at particularly exciting moments when Mr. Roosevelt may be on the warpath! How great a space is devoted to business and corporations! The "leading article" or editorial is a feature which no English morning paper has dared to neglect; but the corresponding editorial page in America is generally beneath contempt. Usually it is the part that is worst written, and it is entirely lacking in authority.

Now this criticism, as to lack of editorials, is not generally true of our most truly representative newspapers and one of the most redeeming features of some of the sensational papers is editorial departments. There are few lengthy editorial leaders, to be sure, but vital questions and current events are intelligently and pointedly, if concisely, discussed. There is no doubt about there being much room for improvement as to the editorials in very many of our newspapers.

The tendency has been to place the giving of the news as the one great consideration. The editorial department should be that which gives personality, power and influence to the newspaper and commands highest regard, loyalty and continued confidence.

The more general view or, at the least, the prevailing opinion among the publishers of the best and most highly respected and most worthily and permanently successful newspapers of America, both in the larger and smaller cities as to responsibility in politics, has been recently well supported by A. C. Hotchkiss, of the Dallas County, Iowa, News, in part as follows:

> The field of the newspaper in politics is a very important one. The newspaper in politics should be honest, and it should preach honesty in politics. As self-government calls for political activity upon the part of the people, the newspaper as an exponent of public thought ought to seek to promote moral and intellectual betterment among the people.
>
> Both a newspaper and a politician without moral principles are dangerous elements in our political life. The editor who by editorial utterance and upright living elevates the moral tone of no matter how large or how small a constituency has done a noble work.

Truth and Co-operation

The Associated Advertising Clubs Doing Splendid Work Along These Lines

The Associated Advertising Clubs of America have adopted a new emblem emblazoned with the word for which the organization has stood from the beginning. The design is in the form of a circle, on the rim of which is embossed the name, and in the center is the globe showing the western hemisphere, or rather the two Americas; across the center of the sphere is the word, "Truth," for which the A. A. C. of A. absolutely stands in all advertising. There is nothing against the dressing of facts in attractive style, but the truth must pervade all. The next convention is to be held in Baltimore in June, and propaganda as to the convention and work is coupled with the exaltation of the cardinal principles of absolute candor or truthfulness that must underlie all successful co-operation.

W. R. Enery, of Chicago, President of the Central Division of the A. A. C. of A., in a recent communication appearing in the January issue of Associated Advertising, says:

> No detail of a business is more important than its advertising department. The business man will encourage his sales manager to affiliate with the organization of sales managers; he will gladly authorize and in every way encourage conferences of his own salesmen; he will give every aid that promises to add to their efficiency. Likewise, he will aid and encourage his buyer and his credit man to mingle with others of his class, that he may be broadened and bettered, well knowing that the business will reap the benefit.

Truthfulness is necessary to all successful co-operation and the two are the basis of all the modern ideals of worthy, permanent success, no less in advertising than in all other departments of business. This old world has been a long time in getting away from the thought that advancement, acquirement and all personal or national advancement must come through contest, and deceit or misleading "diplomacy."

The old way used to be thought heartless competition, the putting down and despoiling of others, hoarding one's own knowledge and downing all rivals. Diplomacy was synonymous with deceit, but now the highest diplomacy is the most direct truthfulness, founded on justice and backed by the determination to give and demand both truthfulness and justice.

The more general has been the practice of these principles the greater has been the accomplishment. Men and nations no longer expect to live by or for themselves but through the advance of all, through the interchange of knowledge and effort to advance together to those higher conditions and accomplishments that otherwise would be impossible.

Co-operation means the very opposite of monopoly, though many politicians and some business men, trained in the precedents, the traditions, the practices, the struggles of the past, seem slow to recognize these facts. The A. A. C. of A. as an organization is doing a splendid educative work.

Co-operation in Ascertaining Cost of Machine Production

Proposal to Make the Same a Feature of the National Printing and Advertising Exposition at New York City

A VALUABLE suggestion has been made by O. P. Hatton, Advertising Manager of F. Wesel Manufacturing Company, as to one means of making the National Printing and Advertising Exposition more practically educative.

Mr. Hatton's suggestions are made in a letter to Mr. Harry Cochrane, President, and are as follows:

> I recall to you my suggestion made the other night at your dinner that you introduce, as a serious feature of your Exposition, a system of eliciting and recording whatever records are obtainable of machine production costs.
>
> This would, of course, be of primary importance to your exhibitors but its value to the trade generally and prospective buyers of equipment in particular is readily apparent.
>
> As a means of carrying out this idea I suggest that you incorporate in your advertising, and that all exhibitors incorporate in their advertising, requests to visitors to ascertain production costs on various classes of machines between now and the exposition (if they have not already done so) and that the exhibitors arrange to award a prize to the visitor bringing the lowest record of production cost on machines made by the exhibitor.
>
> I further suggest that you have an official booth for the recording of such data and that this booth be placed in charge of cost experts provided by cost organizations in the printing and allied trades, such officials to receive, record and compare data submitted by visitors and to make awards of the prizes offered by the exhibitors.
>
> The data obtained to be made public after, or during, the Exposition and to be used by the various cost organizations in whatever way they see fit.
>
> So far as I know, cost congresses and committees have never attempted to carry their investigations into the value of different machines from the production cost standpoint. For example: Press feeding is divided into "hand" and "mechanical" and takes no account of the fact that there are several different types of feeding machines operating upon different principles.

Automobile meets and expositions are characterized by actual competition records or by the publication of past performances. You have the opportunity of signalizing your Exposition by an absolutely new and thoroughly practical feature that will create a widespread interest.

Won't you lay my rough suggestion before the various cost organizations and get their co-operation in perfecting it? Sincerely (Signed) O. P. HATTON.

The suggestions are wise. The data gathered will be valuable for comparison. The keeping, recording and constantly examining and comparing of such facts as to machine production are of immense value in every office. An account should be kept with every machine as much as with every operator or workman. This is not a new idea in other callings. Even the advanced, up-to-date farmer keeps such a record as to the products or earnings of not only the machines but of the different fields, cereals, grasses, vegetables and animals of his farm. Agricultural expositions are rendered ten-fold more valuable by the opportunity of comparison of the products and the manner and cost of production of different farms and different breeds of stock and different grains or vegetables, or of the same kinds under different treatment.

The farmer learns by such records what changes to make in cultivation; what animals to dispose of as unprofitable and to replace with other and more improved breeds and so on.

Printers should be alike wise and be all the time striving for greater efficiency, for greater and better and more economic production.

The adoption of the system of hour cost finding as an aid to the making of profitable prices thus made the greater efficiency possible and rendered the same absolutely necessary to the staying in the business.

Where prices are based on the hour cost the inefficient printing plants, in competition with those that are efficient, must unmistakably lose business and eventually fail, while the efficient plants will grow in business, increase in wealth and improved facilities. The old haphazard way of estimating was the only salvation of the inefficient and then it was only a matter of chance.

ST. ELMO LEWIS GIVES ADVERTISING TALKS

E. St. Elmo Lewis, advertising manager of the Burroughs Adding Machine Company, delivered an address before the meeting of the St. Louis Advertising Men's League, January 22, on the subject "The New Dispensation in Advertising." He also talked before the Retail Hardware Dealers' Association in the same city on the subject, "Getting the Money and Keeping the Trade."

In New York, January 27, Mr. Lewis again delivered his address on "The New Dispensation in Advertising" before the advertising forum at the Y. M. C. A. At the meeting of the first national convention of the Association of Corporation Schools, Mr. Lewis talked on the subject, "Increasing Efficiency Through Educational Methods."

Co-operation Among Newspapers

WE are told by a wise philosopher of a time when "Among men supreme great, no one will be for party and all will be for the State." We cannot pretend, just now, to be absolutely certain as to the lines nor as to the author, but the wisdom of the thought is just as great, and is by no means applicable alone to government.

The thought is, that among those who are supremely great, the general good comes first or is the result to be sought, while all else are merely instruments to the great, all-embracing and all benefiting end. The general good is the good of each, and co-operation for this purpose is the perfection of wisdom in business as well as in true statesmanship.

In a paper presented at a recent meeting of the Buckeye Press Association, by Guy E. Newark of Columbus, Ohio, and later printed in the Buckeye Printerdom, plans were given whereby local newspapers could wisely co-operate to the benefit of the communities served, and for their own greater good.

Anything and everything that helps toward better conditions or the upbuilding of worthy institutions, of trade or the productive industries, helps the newspapers. Everything that tends to greater confidence in the press and to a higher respect and appreciation thereof, aids directly every worthy newspaper.

Mr. Newark suggested among other things, after asking, "Who ever heard of a newspaper man who watched for something commendable in the columns of his contemporary and then joined, heart and soul, in boosting:"

Can you imagine this? Yet, can it be denied that co-operation of this sort would be of great benefit to both newspapers and communities?

However, it is not necessary that co-operation be expressed by such cut-and-dried procedure. Of course, co-operation cannot exist without collusion between two or more; but it may take the form of refrain from deprecatory comment, and be fully as forceful, in many instances, as would be direct espousal of the other proposition. Nor is it necessary that newspapers be published in the same town to give greatest effect to co-operation. The simple reprinting of a sensible thing, with proper credit, and with possibly some illuminating editorial comment adapting it to local conditions, is the very best sort of co-operation.

The primary idea of every publisher is to make his business financially successful; and he would much rather achieve this by issuing a paper which enlists the support of the best moral sense of his community, than by catering to interests which are distasteful to a large portion of the public. Indeed, the fullest measure of success can be realized only when the majority commends the course of the publisher. This is true whether there be only one or two or three newspapers published in the same town. So it would seem self-evident that, to gain best success in the most agreeable manner, newspapers must co-operate in fostering the growth of good impulse, good commercial activity, and good social conditions among the public at large.

All this is glittering generality. Its application, however, is entirely practicable, and it need not in the least interfere with the spirited maintenance by each participant of whatever of political nature he may choose to champion.

Let's see if suggestion cannot be made of concrete situations in which co-operation can have a direct beneficial bearing upon the question of success. Suppose the Free Lance, with a circulation of 900, finds that ten cents per inch for display advertising on contract for 1,000 inches per year, two cents per line for reading matter on contract for 500 lines, or five cents per line for transient reading notices running one month or less, is the lowest rate yielding a profit upon his labor and plant-investment. Suppose the Expositor has a circulation of 1,500, carries about the same volume of advertising, but incurs expense for publication, above that of the Free Lance, of only the cost of white paper, a half hour more of press work, and a few cents more of postage. There's a chance for co-operation, and the result would be of benefit to everybody concerned. The Expositor can unquestionably get along on the same advertising rate as can the Free Lance, and can, if it choose, make things mighty uncomfortable for its contemporary by inciting patrons to discontent with the rate in the smaller circulation as compared with the same rate in its own larger field. But is it good sense to do so? Would that action tend to awaken the respect for space in the mind of the advertiser? Would it impress upon the buyer of space the fact that circulation is the thing for which he pays? Of course it wouldn't.

But let the Expositor concede that the Free Lance has named a fair rate; use that as a base for fixing its own rate sixty-five per cent higher; and then let the Free Lance frankly make its campaign upon the proposition that its space is worth pro rata; there is at once established a co-operation which works injustice to no one, but benefit to all. Unquestionably each publisher profits; and, also, unquestionably, the advertiser is trained to acknowledge the same relations in values of circulation that he concedes to two different quantities of his own commodities.

If, perchance, the Free Lance should overtake the Expositor in circulation, let the latter accept the situation and second its competitor's efforts to raise rates. That would be but exact justice, and it would still further demonstrate to the advertiser that he must pay more for increased service, just as he exacts more for ten yards of calico than he would for less.

There's nothing incongruous in this, and nothing at which any publisher should balk. Let co-operation exist to the extent that each knows a base rate that is fair, and observes his neighbor's rights. For surely a fair rate is but right, to all concerned; and any attempt to disturb it can result in but one thing — injustice to all.

Co-operation is not confined to commercial relations between publishers. The source of all material good to the publisher is the community itself; and to this community, the beneficiary is bound to extend his sincerest co-operation, in all that the word implies.

But, specifically, how? Well, let's see.

Of course, the publisher must attractively chronicle all happenings of local interest. He must eschew all expression of malicious character, refrain from embarrassing personalities, insure to his paper a creditable appearance, issue it promptly and neatly, and observe the dozen or more other amenities of his calling. These things he must do, however, as much in self-interest as from a sense of duty.

But there's another avenue in which he can, in most valuable manner, co-operate with his clientele. They may not at once know it, but none the less it will be effectual and will finally be recognized.

Wherever a paper is published there is greater or less commercial life, and this commercial life has very direct bearing upon the welfare of those who live outside the town. Every store, harness shop, cobbler's bench, or slaughter house, in a small village or larger town, adds directly to the value of all contiguous farms; adds to the comfort of urban and suburban inhabitants. The stores afford supplies fully up to the standards required for the greater majority of all in the community.

These conditions afford a text upon which the publisher can frequently enlarge. His readers can be reminded that without the stores there would be no town, nor any of the advantages which now insure so greatly to the physical value of the surrounding country. And the shoe can be put upon the other foot. The merchant may with propriety be occasionally told of the loyalty and progressiveness of the community from which he draws his trade. So, on one hand, that loyalty can be stimulated; and, by inciting the merchant to carry the best stocks possible under his scale of prices, reward will be insured his patrons.

That's co-operation of the most effective type. There is no one in position to practice it so successfully as the publisher, and it brings to him success.

Now, here's another chance. Of recent years there has been a great migration of young folks from the farm to the city. It's not a good condition, and the quicker some way to stop it is found, the better for everybody. But it won't do much good to appeal to the youngster's sense of filial duty — picture the loneliness of the old folks — nor resort to any other sentimental raphsodies; because his action generally is not the lack of filial affection, nor from any indifference to his parents' surroundings; but it generally arises from a perfectly natural desire to better his condition; and, in his inexperience, he turns to the larger centers of population, confident in the belief either that they need him there or that he must succeed where there is so much activity.

The publisher can do no co-operative act of more value to his community than the simple recital of the conditions actually met by about ninety-five per cent of the town and city dwellers. The newcomer is simply one more added to an army of consumers; he has no opportunity to produce, but must live by his wits, in competition with the multitude of individuals each as smart as he, and many of them trained, by desperate circumstances, to total disregard of all rights, human or divine. If the new recruit be lucky enough to get a permanent job, he finds that the wage which from a distance was so alluring, barely suffices to supply his needs; he is deprived of all comfort of home surroundings, association with acquaintances, and loses the desire to establish a home of his own. From sheer loneliness, he too frequently seeks or endures companionship of questionable character, and is gradually transformed from a normal being to either a reckless rounder or misanthropic failure — rarely to a self-respecting, successful business man.

The publisher can draw the reverse of this picture, in colors, which will at least challenge the attention of a considerable number; and for every one dissuaded from exchanging a position of independence for one of dependence, there will be saved, for the future prosperity of the community, a valuable citizen. This is a mighty practical form of co-operation, and it is owed to the town which supports the publisher.

The live publisher has often splendid opportunity to formulate opinions, which, unconsciously to the public, result in good. Let him learn how much weight a 1400-pound horse can draw over a good road, and then suggest to his farmer readers that good roads are worth as much as good acres. Let him cite the action of the Romans some centuries since, in the building of highways all over England. True, their object was to get around quick and kill as many people as possible in a short space of time. But when the Romans finally retired, they left their roads behind. And the people of England found them such a help to civilization that they extended the work, and have maintained it, so that at this present day a single horse can haul, over every rod of highway, loads that on the average American road, would stall a team.

Impress upon the farmer the advantage of being able to reach his market when his produce commands the highest price. At those periods, now, if the farmer tries to reach town, he is usually stuck in the mud. If our rural friend can be induced to see the force of this, be assured every other tax payer will also see it. And the result will be the willing building of roads which will add dollars to the value of every acre, house, horse, cow, sheep and swine in the vicinity.

That will be co-operation.

CHICAGO TYPOTHETAE BANQUET

More than three hundred members of the Chicago Typothetae and guests celebrated the two hundred and seventh anniversary of the birth of Benjamin Franklin at a banquet at the Chicago Athletic Association on the evening of Friday, January 10.

Mr. William A. Grant opened the meeting with the following talk:

"As has been our custom for many years, we are here to celebrate the birth of Benjamin Franklin, and we hope that all with us will be well repaid for lending their presence this evening.

"As a slight resume of the year's work, I would say that the Typothetae has achieved more success than in any previous year's work in the history of the organization.

"We have had active, hard-working committees, who have given liberally of their time to the support of the work.

"One of the problems confronting us has been the getting together of all of the printing organizations so that they might work as one body for the greatest possible good.

"This we believe has been made possible as only yesterday the joint committees met and unanimously recommended for your consideration the amalgamation of the United Typothetae and Franklin Clubs of America.

"The United Typothetae Executive Council today recommended unanimously the adoption of the joint committee's report.

"This you will hear of more minutely in the very near future from your respective organizations."

Mr. John U. Higinbotham was toastmaster. Alfred M. Glossbrenner, National President, Judge Charles S. Cutting and Prof. Percy H. Boynton, spoke.

Clare A. Briggs, cartoonist, gave a chalk talk.

Among the guests were: F. M. Kimbark, Toronto; W. A. Desbarat, Montreal; John Stovel, Winnipeg; Thomas J. Moore, Quebec; John M. Imrie, Toronto; Travis A. Tod, Montreal; C. H. Tice, Montreal; Mathew Esdale, Ottawa, Ont.; George M. Courts, Galveston, Tex.; A. E. Southworth, Edw. A. Stone, Roanoke, Va.; C. D. Traphagan, Lincoln, Neb.; A. F. Findlay, Boston; Charles F. Warde, Pittsburgh; W. J. Hartman, Chicago; Charles Francis, New York; R. T. Deacon, St. Louis; Stuart Scott, St. Louis; H. C. Wedekemper, Louisville, Ky.; H. C. Travis, Minneapolis; Gerald B. Franks, Peoria, Ill.; A. M. Glossbrenner, Indianapolis; Franklin W. Heath, H. W. Flagg, Chicago; H. W. J. Meyer, Milwaukee; J. A. Morgan, Chicago; Benjamin P. Moulton, Providence, R. I.; Eugene Saenger, Sioux Falls, S. D.; Harry P. Pears, Pittsburgh; E. U. Kimbark, Chicago.

TAKING HIS OWN MEDICINE

It is strange that more publishers do not use their own medicine — advertising space.

The average newspaper publisher devotes much time and attention to the production of his paper and endeavoring by means of premiums, special offers, etc., to increase his subscription list, but seldom uses his display columns to exploit his own wares — subscriptions, job printing and advertising.

Some time ago, the writer decided that what would benefit the retail merchant or manufacturer, would also help the publisher of the local paper and a steady advertising campaign has been the result, with various forms and methods but all with the same end in view — greater publicity for the newspaper and its job department.

A fair-sized space was used each week and filled with truthful stories and reports of patrons who had expressed themselves pleased with results of the advertising news service or the products of the job department.

These display ads. were followed by a series of short stories showing how entertaining the paper might become to a home-sick person, a traveler or members of a family which had moved away from the city.

Then came a few re-printed articles from the trade magazines, showing the general rise in the price of printed products, each article ending with a note calling attention to the fact that the local printer had not as yet increased his prices and advising his patrons to order stock in advance to avoid paying the higher price which must surely come later.

Other plans were later developed, such as the clubbing rates with magazines and periodicals, Christmas gifts, etc., and the effort is proving well worth the trouble, as returns can be traced daily to the effect of these advertisements.

In addition to the advantages accruing from the use of the advertising itself, the publisher is also indirectly benefited in another way, as he is now in a position to point to his own advertising when soliciting patronage of this nature, showing prospective customers that he himself is practicing what he preaches and taking his own medicine.

ROSCOE E. HAYNES,
Fairport, N. Y.

NATIONAL EXPOSITION CO.

200 Fifth Avenue, New York City

The International Association of Manufacturing Photo-Engravers at their meeting the other night, by a majority vote, endorsed the National Printing, Publishing, Advertising and Allied Trades Exposition and have called on their members to do all in their power to help make it a success.

The exposition has also been endorsed by the Employing Stereotypers' and Electrotypers' Association of New York.

MORE WORK THROUGH PUBLICITY

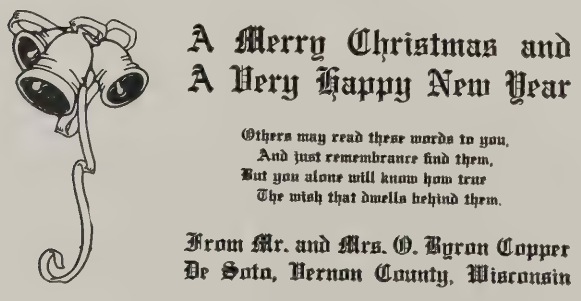
Address all samples and communications for this Dept. to Harry Albro' Woodworth, 352 Wyoming Ave., Scranton, Pa.

IN the Acadian land, on the shores of the Basin of Minas" — but on the opposite side of the bay to that of which Longfellow sang—I am spending a Christmas and New Year's vacation, and the trunk containing the very large number of specimens submitted by N. P. J. readers since my resumption of this department is somewhere along the lines of six railroads between here and Scranton. Or else the customs folk have become so interested in the up-to-1913 specimens of persuasive typography that they are holding it somewhere — just where, frantic correspondence has not as yet revealed. But I expect that the stray samples will reach me soon, so that a considerable number of them will be mentioned in the March issue.

Since coming here Uncle Sam has kindly forwarded me some much appreciated holiday messages from old N. P. J. friends, and doubtless there are many more in the post office at Scranton, awaiting the requested receipt of stamps of the republic. Those that have reached me at this writing are as follows:

"A Holiday Greeting" — Mr. and Mrs. A. Byron Copper"

This card (No. 1) was enclosed in an envelope which had the same cluster of bells, and the words, "A Holiday Greeting," prettily displayed in 10-point Engraver's Old English. On both envelope and card the inner part of the bells (except the tongues) are in a rose lake; the remainder in green.



A Merry Christmas and
A Very Happy New Year

Others may read these words to you,
And just remembrance find them,
But you alone will know how true
The wish that dwells behind them.

From Mr. and Mrs. O. Byron Copper
De Soto, Vernon County, Wisconsin

No. 1

Now I feel certain that our friend whose clever common-sense writing has been so appreciated by other writers used this very ornament in connection with other talismanic typography at Christmas-and-New-Yeartide. And he also used the same color-plan, and the message was set entirely in Engraver's Old English, so suggestive of Copperplate. The Copper individuality is therefore retained in such a way as to be unmistakable.

But — and here's the rub — though these messages are sent at yearly intervals in a typographic age in which something new is looked for year by year, each design has a freshness and an-up-to-the-year motif that charms at the same time the individuality appeals with the spirit of "the old friends, the true friends." With a wide margin, this card, so simply and harmoniously composed, may well prove suggestive for work that will be accounted modern, years hence. Mr. Copper and I in the past had some friendly disagreements in regard to that potent factor, Individuality, and I am pleased to see that his work is such a good exponent of an attribute dear to the advertising man's heart.

This holiday season I have seen several printed cards with the same kind of kind wishes, specially printed for married couples, "the wusser half" of which are not printers. In these days when such societies as the S. P. U. G. are seeking to do away with one of the factors in the High Cost of Living, while in no way seeking to limit the expression of friendship and good will at certain seasons, such cards are indeed a happy idea. And now we have duly considered the sentiment thereof, pardon will doubtless be granted for the suggestion that here is a custom whose possibilities of More Work for the printer should indeed be large for many years to come. Do you remember, years and years ago, how often the expression, "the picture-postal craze," was used, and how prophesies were made that it would speedily go the way of epheremal fads and fancies? But the printers who asked this department for advice on this matter twelve years ago, or thereabouts, and took it, have made and are still making good money out of the picture postals, when they had the proper equipment for producing them, because the cards filled a real want.

I have not yet seen any advertisement by a printer of such cards as the one that I will keep for years — if the N. P. J. will kindly send it back when they have made the reproduction — as a remembrance of a kind thought for other friends and myself of Mr. and Mrs. O. Byron Copper.

S. P. U. G. is, as you know if you have read the advertisements of the sellers of utilitarian articles, the short for "Society for the Prevention of Useless Giving." Much "useless giving" is, of late years, indulged in at Easter as well as at Christmas. Easter is not so very far away — so why not at once consider the advertising of such cards as these, with appropriate envelopes? It is not too early to start to prepare samples of such work, which should appeal to many if properly brought to their attention. Put yourself in the place not only of the prospective customer, but also of the final recipients of such wishes. Surely a card with the name and address of the donor or donors printed thereon has a more pleasing touch of personality than a card, however elaborate, that was printed for anybody who might want to buy it to send to a friend.

Encourage such of your patrons who have a gift for writing to make such a message even more personal by giving you the text. You might suggest changes of wording that would make it allude to the place in which the customer lives, so that the apparent originality of the whole scheme may properly appeal to each recipient.

There may be some possible customer who is in business in your town, but who is not an advertiser. If you can induce him to get some of this social printing, in which his name appears, it may be that the satisfaction of seeing that name in print on such an individuality product as a good-wishes card may have a considerable effect on the possibility of making him an advertiser at some future date. Some theories that certain books on the psychology of business give us may be rather indefinite, and just why folks "act so-and-so" may be hard for even a psychologist to explain, but the liking to see one's name in print is a liking easily acquired, and once acquired becomes a habit.

"Sincere Good Wishes" — From Cook Printing Co.

It is a long while since I have received any specimens from those original-without-being-freakish printers, Cook Printing Co., of Los Angeles, Calif. But they remembered me at the 1912-13 especial season of good will. It was in a plain cream laid envelope — and it is really good to see a deckle-edge on such an enclosure as No. 2, at a time when the deckle-edge is not used to excess, as it once was. Here is another Old English job, such as is ever up-to-date, especially when printed in two colors and a shade by such inkologists as the Cook Printing Co. The initial is a red like that of the cheek of "My Little Sister," about whom there was a story in the December and January McClure's — "a fiery rose," and the contrast of this initial with the sober gray of the rest of the text is marked. The row of tubbed trees is light green that does not stand out so strongly as the gray. I don't think it would have hurt the job to have had the other two trees likewise in the green.

This Christmas-
tide, we extend
to you sincere good
wishes May the
year 1913 yield you
happiness and pros-
perity in abundance

Cook Printing Co.

No. 2

"A New Year's Greeting"— From Humorist Hood

An envelope in the well-known chirography of J. Albert Hood, bearing the address, "Rev. Harry Altho' Woodworth." Altho' I once had "a Christmas sermon" in a December issue of the N. P.-J. I am not what a parodist of Tennyson calls a "cold

Some say it is old fashioned sending greetings New Year's Day; but some of us cling fondly to the good old fashioned way. Accept old fashioned wishes for the sake of auld lang syne: A glad New Year, and good luck to thee and thine.

J. A. Hood

First Day of January
Nineteen Hundred and Thirteen

No. 3

reverend.” The folder enclosed has an ingenious flap-arrangement of the beautiful white wove stock. On the diagonally-cut flap are the words, “ A New Year’s Greeting,” in gold, and in the corner of the page below the flap are the words, “ From J. Albert Hood, Asbury Park, N. J.” in brown. The message (No. 3) is on cream linen-finish stock. The rule-work is red, the text brown, and the signature is made with a pen. This gives an idea for such customers as I was talking about in connection with Mr. and Mrs. Copper’s card. On this job Mr. Hood has his name printed on the outside; this shows that the printed message is the sender’s very own, and the autograph gives a personal touch that a mere reproduction of the signature would not do. The idea of printing poetry in prose form antedated Walt Mason considerably, and where the rhyme and rhythm are so easy to catch as in Mr. Hood’s poem, it is an agreeable way of printing it, even though it is not “ phat.”

“ Season’s Greetings to You and Yours ” — From La Presse

Another pleasing job, in which the message is in Old English, printed in green and brown on rich white stock, is that sent me by the management and advertising staff of La Presse, a great French newspaper published at Montreal, Canada. The wishes are in English — though no doubt there was an even larger French edition of the sentiments therein expressed. The names of the directorate and advertising men are printed in Gothic on one of the pages. The advertising staff not only has an “ advertising manager ” — H. A. Robert, but another properly connected “ live wire ” in Charles C. Fee, whose mission is described as “ Promotion of Advertising.” The very artistic folder would be reproduced, were it not for the fact that the register is “ ’way off ” on the particular specimen I received — which is a pity.

Sharp Work for Dull Seasons

The suggestion I made as to Easter may be useful if it does nothing else than bring to mind the fact that when this issue of the N. P. J. is printed, it will be not too early to look forward to Easter. February is sometimes counted a dull month in printing and advertising — but as to advertising in connection with festivals dear to the heart of the public, St. Valentine’s Day has taken a very prominent place, although of course considerably behind St. Nicholas. It is time now, too, to consider the festival of another saint, “ St. Patrick’s Day in the morning’ ” — and in the evenin’ as well — has possibilities for the job printer, advertising writer and artist and newspaper publisher who realizes in good time that it is comin’ as sure as Christmas. Dull seasons can be made bright if due attention is given and preparation made as regards season-opportunities that come before many seasons that modern custom has made so beneficial to business. Even February is a good time to put your resolutions to take time by the forelock into practice.

Give your advertising the time and attention it deserves, and it will amply pay you for the time, attention and money it costs.

Don’t expect advertising to run itself without careful oversight and a plentitude of thought.

Waste is not on speaking terms with Profit.

Individuality in advertising should never be sacrificed to variety. On the other hand it should never be allowed to degenerate into monotony.

The advertisement that brings you a customer is worth whatever the customer is worth to you.

It may be that the world owes every man a living, but it takes some of us all the time to collect the debt.

Have you given any thought as to how you may benefit through parcels post in your business and your advertising?

If you can make your customers feel that you are looking after their interests as well as your own, you’ll find it easy to retain their patronage.

Never put off advertising today what you want to sell tomorrow.

Tact and taste are two true talismans for the printer who would be a prince among business men.

It has been said that “ there is no friendship in trade,” but very few have got rich solely by selling to their enemies.

Folk who have naught to say are often those who talk the most. This applies to advertising as well as to conversation.

* * *

The seniors in the School of Journalism of the University of Missouri visited St. Louis January 10 and 11, inspecting the newspaper offices, paper houses, typefounders and engraving plants. The senior class this year numbers twenty — four young women and sixteen men — from seven states and one foreign country. In St. Louis the party visited the offices of the Republic, Times, Star, Post-Dispatch and Globe-Democrat, the Sanders Engraving Company, the Western Newspaper Union and the American Typefounders Company. At the Republic office the young women wrote signed stories, giving their impressions of the visit which were published next morning. The party entertained the editors of the St. Louis newspapers at dinner at the Marquette Hotel Saturday evening. Speeches were made congratulating the School of Journalism — the first in the United States — upon its growth. More than 150 students are now taking work in the School. In the party that visited St. Louis were: Dean Walter Williams, Prof. Frank L. Martin, J. B. Powell, Prof. J. S. Ankeney, of the faculty of the School of Journalism; Miss Carrie R. Quinn, secretary to the Dean; Misses Amy V. Armstrong, Sara A. Lockwood, Clarissa E. Spencer, Hazel S. Thornburg, and Mary E. Foley; Leo Wolfsohn, Frank W. Rucker, Sanford A. Howard, George W. Turner, Ellis Birdsong, Maurice Hicklin, Howard J. Lanade, Siegel Mayer, Robert S. Mann and Hugh McKay.

Stamping Out Fake and Encouraging Legitimate Newspaper Advertising

Advertising clubs throughout the United States and Canada are doing a wonderful amount of valuable service in many directions and especially in promoting honest, effective, legitimate advertising. Here is a report from far away Edmonton, Alberta, Canada, that contains facts and suggestions of value to all publishers:

Edmonton, Alta., Dec. 31 — Edmonton Ad Club was formally organized with a membership of thirty representative business men at a meeting the night of November 28 for the purpose of stamping out all forms of "fake" advertising. The officers for the coming year are:

President, F. G. McDermid, president McDermid Engraving Company.

Vice-president, P. C. Byron, president Byron-May Engraving Company.

Secretary, F. V. Holland, advertising manager Johnstone-Walker Company.

Treasurer, A. L. Salisbury, advertising manager Hudson's Bay Company.

Executive Committee: August Wolf, secretary, Citizens' League; F. G. McDermid, P. C. Byron, F. V. Holland and A. S. Salisbury.

The club will meet at a mid-day luncheon once a week to discuss matters of interest to the advertising profession, and it is expected to enroll two hundred active members before the close of the year.

"The plan is to give support and encouragement to legitimate publications," Mr. McDermid said, "and to discourage promoters of schemes, designed principally to take money from advertisers without giving adequate returns. We shall have a board of censors, composed of experienced advertising men, whose duty it will be to pass upon the merits of every proposition submitted to space-buyers.

"It is not the purpose of this club to designate the mediums to be used by its members. That is the business of the advertising managers, but we expect to exercise our best efforts to protect space-buyers against grafters and solicitors for mediums, which are not recognized by publishers or members of the profession.

"We have adopted the best ideas of the active advertising clubs throughout the United States and Canada and worked in some of our own to advantage in making our constitution and by-laws say what we mean, and we firmly believe that every member will abide by the rulings of the board of censors."

The club will also use its efforts to secure legislation from the city council and the legislature giving the municipality and the province powers to regulate certain methods and forms of advertising.

Mr. McDermid will appoint several standing committees at the next meeting of the club. One of these will have full charge of the entertainment features during the coming year, when it is expected to have prominent publishers and advertising men from various parts of the United States and Canada as guests of the organization.

Newspaper men should identify themselves and co-operate with the advertising clubs of their respective cities. Where no such club exists, it is up to the newspaper men to see to it that such a club is organized and that it becomes affiliated with the Associated Advertising Clubs of America. There is no other organization that has done and that can do so much for placing advertising, on which all newspapers so largely depend, in a position where its value will be fully appreciated and understood, and its efficiency be increased, through such appreciation and understanding.

Thousands and even millions of dollars have been wasted through the patronizing of fake or ineffective schemes and by methods that result in waste and only have the one appealing and inducing feature — that of seeming to furnish means of direct appeal while in reality not even attention, much less good will is secured. A good deal of so called advertising is little short of being simply a hold-up, a securing of the advertiser's money through a fear of ill-will or at the least a dread of offending some society or organization.

People go to the newspapers and periodicals for news or information, and advertising is, or should be, news or information as to the articles offered for sale, and, as this organization has so persistently taught, should be absolutely true, honest and reliable.

* * *

HARMONY AND ONE GREAT PRINTERS' ORGANIZATION

On Friday, January 10, Mr. William A. Grant as president of the Chicago Typothetae gave a special luncheon at the Union League Club to their out-of-town guests which included the Executive Council of the United Typothetae, the Joint Committee on Amalgamation of the United Typothetae and Franklin Clubs of America, the Open Shop Division Committee, the Canadian Delegation and others in the city for the Chicago Typothetae Annual Banquet.

Short speeches were made by President Glossbrenner for the United Typothetae of America, W. J. Hartman for the Franklin Clubs, Wm. A. Desbarats of the Canadian Typothetae Commission, Charles Francis for the Printers' League of New York and others of those present.

Harmony and one great organization was the sole thought in the minds of all.

* * *

OBITUARY

Alden Spooner Huling, who passed away in Topeka, Kan., December 12, was the oldest son of the late Edmund J. Huling, long Associated Press representative in Saratoga Springs, N. Y., and a grandson of the late Col. Alden Spooner, a pioneer editor of Brooklyn, N. Y. Mr. Huling grew up in the newspaper business, learning the printing trade in his father's office. He was for several years connected with the Albany (N. Y.) Argus, serving under the late Daniel Manning, then managing editor, as city editor and court and legislative reporter. This latter duty brought him into daily association with Grover Cleveland, then governor of the state, and other prominent persons. Mr. Huling went to Kansas about thirty years ago and has since been connected with the Topeka Capital and other publishing industries. He left a widow and several children and is survived by two brothers and three sisters, J. B. Huling, and Mrs. George Oberne, Mrs. Calvin Dickey and Miss Caroline A. Huling, of Chicago, and Edmund J. Huling of Denver, Colo.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

ALTHOUGH by the time this installment of Newspaper Criticisms is laid before the reader, most folks will have ceased to think about the incident entirely, yet as I write, it was only the other evening that I read of the incarceration of those three men connected with the publication of the Boise, Idaho, Capital News, to serve ten-day sentences in the county jail, imposed upon them as a penalty for contempt of court, of which they were held guilty for having published a criticism of the court by Theodore Roosevelt.

This news item interested me particularly because I happen to have been personally acquainted with one of the imprisoned trio, namely, the managing editor, Mr. C. O. Broxon, who was formerly publisher of the Pocatello (Idaho) Advance and my employer.

As anyone of sense might have forseen, the jailing of these three newspaper men partook far more of the nature of a veritable triumph for them, than of a punishment; and, if the judge who sentenced them, hoped to humiliate his offenders, when the roses begun to arrive at the cells and the money begun to pour in for the liquidation of the $500 fines imposed, the feelings of that court must have been anything but triumphant. But that is neither here nor there; what I wanted to say is this:

It looks to me as though it were high time that these American czars whom we call judges should be gently removed from their high pedestals of infallibility which they have so long occupied. They have pastured about long enough on the free range of absolute authority. It is time that they were roped and branded and made used to the bit and bridle of right and justice — those two peerlees jewels which they are supposed to represent.

To my way of thinking, judges are but human beings, after all, and the many raw exposures of recent times, I believe will justify me in saying that even their cloaks of ermine do not entirely free all of them from the human weaknesses that beset other men; and so, when a court errs, or fails in its sacred business of handing out a pure brand of justice, why should not the people's press — that brave guardian of the public weal — have the same privileges of criticism as custom gives it regarding the acts of congressmen and senators, or of governors and even presidents?

Can it be that those men who interpret the laws are so much above the men who make them, and the men who execute them, that the rest of us poor devils who must abide by their interpretation, durst not say so much as "boo" when they make a rotten decision?

✢ ✢ ✢

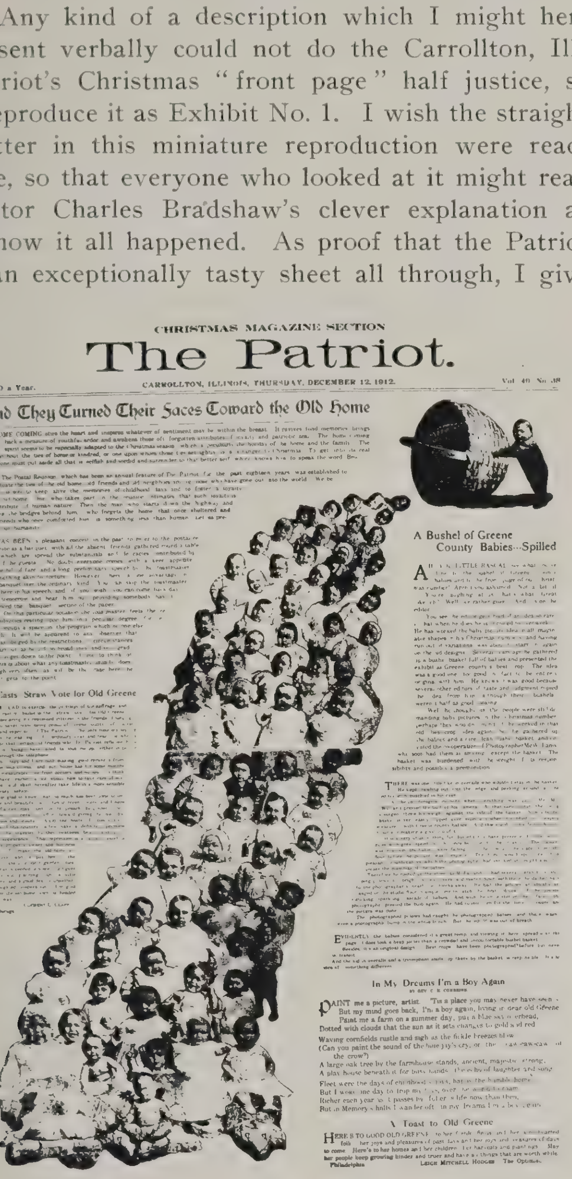
This is the time of Christmas editions with me — and I am grateful for the receipt of many — so many, in fact, that it will be necessary to be somewhat brief in giving them notice.

The first that I will mention is that of the Herald-Progress of Sumner, Miss., consisting of a double quarto edition enclosed in a pretty lithographed cover, the design on the front of which represents the old Dutch patron saint of children in the act of hanging a new dolly on a Christmas tree, on which may be seen the gay candles, ornaments and berries. Some special matter, of course, had to be used to fill so many pages, but most of the special straight stuff was "ready-made" plate material. There is a lot of advertising, nicely displayed, and, as usual with this sheet, the editorial department is its finest feature. As a writer, Editor Carlton M. Brosius has a delightful style. He possesses that rare talent of raising common things to the height of the uncommon and of injecting interest into things that ordinarily pass as commonplace. His Christmas editorial in this number of the Herald-Progress is worthy of preservation.

The Pierce County Tribune of Rugby, North Dakota, worked a rather pretty stunt in its issue of December 19, last. This was the running of a border of Christmas bells and holly in green around each pages of the edition. This border was great enough to reduce the pages of the sheet to regular five-column size. Christmasy things a-plenty appeared in these pages, including an abundance of live, attractive advertisements.

The Bucklin Banner, that bright sheet from Bucklin, Kan., issued the week of December 12 on pink stock, as a means of showing its participation in the world's celebration of the great Christian holiday. It wasn't a bad edition, replete with the regular news-features supplemented with a lot of generous-spaced advertisements, in which the grade of composition and design was of a high standard.

Any kind of a description which I might here present verbally could not do the Carrollton, Ill., Patriot's Christmas "front page" half justice, so I reproduce it as Exhibit No. 1. I wish the straight matter in this miniature reproduction were readable, so that everyone who looked at it might read Editor Charles Bradshaw's clever explanation as to how it all happened. As proof that the Patriot is an exceptionally tasty sheet all through, I give the privilege of a look at the first page proper, Exhibit No. 2. I very much like the head styles and makeup of this publication — fact is, I like most everything about this Patriot, except the title — I do wish Brother Bradshaw would change that to a face more harmonious with the rest of the paper's modest beauty. Before I can finish with this contribution I must show an attractive ad which also appeared in its pages, Exhibit 3. Technically, I could consistently object to some of the superfluous features in this specimen, such as the light-face double rules at top and bottom of the two panels, the Jensen ormanents, and the indention of the second line in the closing couplet, but, since in spite of these defects, the ad is pleasing and attractive, complaint seems useless.



CHRISTMAS MAGAZINE SECTION

"Persons with artistic taste are invited to pay especial attention to the typography of the advertisements in our 'Santa Claus' special supplement today. They are not only neat and show the work of real ad-artists, but practically every line in all these ads is set in new type.

"This is a part of the recent shipment of new material added to the C.-D.'s already well equipped plant, but we were so busy opening it up and overhauling the office at the time that we barely mentioned its arrival. The type required to set these advertisements alone would be regarded as a splendid type equipment in the majority of county-seat newspaper offices.

Sacrifice Sale

For 15 Days Only

On account of the late arrival of winter, which has caused slow sales in all winter goods, we find our shelves greatly overstocked in most lines. In order to reduce the stock and turn the goods into needed cash, we will offer great reductions in all lines for the next fifteen days.

Winter has just arrived, and you must have these goods. Our misfortune will prove your gain. Our stock is full and complete in every department. Come early and get some of these bargains while you can have your pick of the entire line. Our stock is too varied to mention separately or quote prices, but you will find great reductions on everything in

Dry Goods. Ladies' Ready-to-Wear Goods. Ladies Cloaks. Boys' Suit. Shoes. Underwear, Etc.

Our line of Shoes is not excelled in Pope County. We handle the Walk-Over, Freeman-Shelby, Cahill, in fact a full line of Specialty Shoes. These cannot be surpassed in quality nor equaled in price. These goods must go. These are worth full value to you today, but they will be worth full value to us next season. Therefore we would rather cut the price now and convert them into money, than to hold them over till next season and then have to cut the price because they were out of date.

Come to see us and get acquainted with our goods and our methods of doing business.

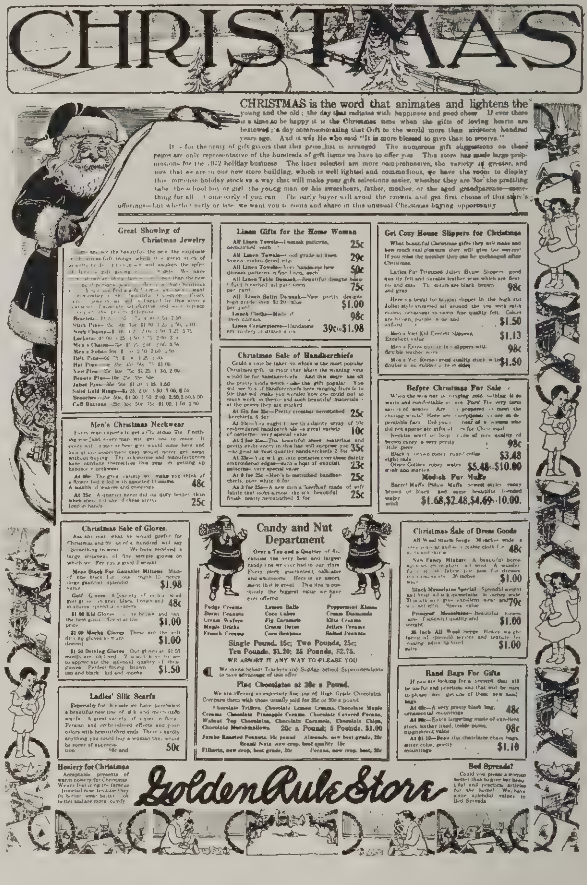
"But as to the type itself: Don't you think it neat and attractive? It is the 'Clearface' and 'Clearface Italic' series, and is one of the latest productions of the American Type Founders Company.

"But new type is not all. Finding ourselves in need of new material to meet the demands of a growing business, and already crowded for room, we also added an equipment of modern, dust-proof type cabinets that are great space-savers, and after installing all our new material we now have more room in the office than before. The average layman knows but little of print-shop equipment, but any printer will tell you that the C.-D. office is not equalled in any of the smaller cities in the state, and in the larger city offices it is only surpassed by magnitude.



CHRISTMAS

CHRISTMAS is the word that animates and lightens the young and the old; the day that radiates with happiness and good cheer. If ever there is a time to be happy it is the Christmas time when the gifts of loving hearts are bestowed; a day commemorating that Gift to the world more than nineteen hundred years ago. And it was He who said "It is more blessed to give than to receive."

It is for the army of gift givers that this price list is arranged. The numerous gift suggestions on these pages are only representative of the hundreds of gift items we have to offer you. This store has made large preparations for the 1912 holiday business. The lines selected are more comprehensive, the variety is greater, and now that we are in our new store building, which is well lighted and commodious, we have the room to display this immense holiday stock in a way that will make your gift selections easier, whether they are for the prattling babe, the school boy or girl, the young man or his sweetheart, father, mother, or the aged grandparents—something for all. Come early if you can. The early buyer will avoid the crowds and get first choice of this store's offerings—but whether early or late, we want you to come and share in this unusual Christmas buying opportunity.

No. 7

"This new equipment and the better paper it will enable us to publish, was the Courier-Democrat's 'Christmas gift' to its friends and patrons, and we take pleasure in announcing it in our special Christmas edition."

I also received a copy of the fine Christmas number gotten out by the Index, of Robinson, Kan., and in point of general excellence I guess it wasn't beaten this year. It was enclosed in the Western Newspaper Union's copyrighted cover — with its brilliant picture of Santa Claus in an old-fashioned swell-box cutter and six-in-hand, drawing such a load of toys as would tax the imagination of the most imaginative child in the world to beat. The other three pages of this cover are filled with ads of the most excellent typography and impression, but it is the interior paper that excels. Every page of this Index is an embodiment of my ideal of what a home weekly should be, and words fail me in doing it justice, so I prefer to reproduce several of those pages, so that others can fully appreciate the things in a country newspaper for which this department has so long been contending.

No. 8

Exhibit No. 6 is the first page proper. It is worthy of reproduction because of its symmetrical balance, tasteful heads and correct makeup. Numbers 7 and 8 are full-page ads, almost faultless to my hurried inspection. Numbers 9 and 10 show some excellent ad-work, but more particularly illustrate the only right way to make up a newspaper page, especially as regards the arrangement of advertising matter. I must congratulate Brother Harry M. Leslie on the excellence of his sheet, and, with more enthusiasm than I feel that I have been able to instill into this paragraph, I hold these specimens up as models for other members of the calling.

Editor D. B. Coates got out his paper, the Kilgore, Tex., Chronicle, on December 13 in galaday attire, too — the gala dress consisting of that popular Western Newspaper Union cover mentioned as also gracing the Robinson Index. In general, the contents of this publication are creditable. It has a good department of editorials and for this Christmas issue printed a long list of letters from the children to Santa Claus. The news features were well gotten up, and in every way the edition is a credit to the shop from which it emanates. It cannot be compared, of course, with that fine big sheet, the review of which immediately precedes this paragraph, especially not in typography or mechanical makeup; but that the ad-man succeeds at times in a highly commendable manner is evinced by the reproduction of this half-page, Exhibit No. 11. An examination of this specimen gives me the opinion that its creator knows his business. About the only suggestion I could make toward improving this example would be to have centered all three of the lines which appear immediately above the central panel. I must congratulate the makers of this sheet upon the good print they secure on its pages, and hope to see other copies for comment in these columns in the future.

Brother Ralph Cochran's sheet is one of the "smaller fry." It is a five-column creation, entitled The Vici Beacon, and published at Vici, Okla. "Vici Kid" would have been an excellent title for this little paper, because in this special Christmas number I learn that it is just entering upon its second year of existence. I would judge that this is a small-town paper and doubtless its makers have their troubles, notwithstanding which their Christmas special is a creditable achievement. I mean that the fact that they issued a special edition at all is creditable, because it shows a spirit of push

explaining just how this is a fact, nor is it wholly necessary that I should. If interested in making the Beacon better typographically and mechanically, its creators can easily compare its displayed columns with those of some of the papers mentioned herein which have been praised as excellent, and thereupon proceed to imitate the styles and methods exploited through reproductions from the latter.

Last, but not least, I must mention that great weekly, famed for its numerous country correspondents, the Enterprise, of Alma, Kan. The Enterprise made its own holiday edition cover, consisting of embordered half-tones of the city of Alma, the high school building, court house, Lutheran church and local mill dam, all of which furnished an interesting study. As usual, the contents of this edition were excellent, the editorial page still offering the same good old standard of wit and wisdom which I have sincerely commended on past occasions. The Enterprise always gets a good print on its generous seven-columned pages, and, while the ad-man is not one of the artist type, nevertheless he has a high regard for deep margins of white, and this very feature renders his work tasteful and attractive. The names of Sage & Little are yet at the column-top in this publication as editors and proprietors, and here's wishing them many more prosperous years in the business.

By way of allaying all fears of those who have sent contributions to this department for review, I beg to add in conclusion that I have on hand a very high stack of papers which I have as yet been unable to get to, but in the course of human events I hope to come to them and give each its proper share of attention in these columns.

"INFLUENCE . . . WIDE AND DEEP"

Alma, Mich., Nov. 19, 1912.

National Printer-Journalist, 4618 Ravenswood Park, Chicago, Ill.

In the rounding out of twenty-five years in the continuous publication of The National Printer-Journalist we wish to congratulate you.

Its pages reflect the character of its publisher. Young men may well make a study of both. Its influence on present day journalism is wide and deep.

We are for you, and your ideals,

MILLER SAW TRIMMER CO.

By E. A. Holmes, Sales Manager, of Michigan.

✢ ✢ ✢

"Essentials in Journalism" covers all the routine of newspaper work, following its natural evolution from the tasks of the beginner to those of the most experienced man. Its principles have been tested by three years of actual class work. The authors are Professor H. F. Harrington, of the Ohio State University, and Mr. T. T. Frankenberg, of the staff of the Ohio State Journal. In their treatment of every department and phase of newspaper management they have emphasized the code of journalistic ethics, which alone can raise the standards of journalism. At the same time the book is practical, not theoretical, showing the student the why of everything he does and keeping to the standards of the average newspaper office. The appended series of assignments, stories, articles, and other exercises gives opportunity to put the theories into practice.

HOW PUBLISHERS CAN GET RICH USING THEIR OWN SPACE

Suggestions by a Mail Order Man

Most publishers of newspapers are "land poor" with grants they do not cultivate. In America the fourth estate is the greatest by far of all estates. It is first and tremendous in political power; the social prestige it confers is the greatest that can be conferred; and it has unbounded commercial opportunities in its advertising. To the commonplace man these things would mean wealth and pleasure, but the finer newspaper man lives in comparative poverty.

This is because of a temperament which he has no power to change. Uusually he is so diffident that his money-getting activities are confined to what necessity compels him along the blind route, in which he collects but a trifling fraction of what is made out of his columns by none too intelligent or able small tradesmen.

Though he be no merchant, the folly of the task of many a publisher ought to be apparent to him, that of trying to realize a minimum on their advertising space through the weak and crude efforts of advertising mummies, hayseeds, lobs, boobs, and nincompoops. How much better ought an intelligent man himself to do than the ignorant and slovenly gang he often depends on, frequently to his sorrow!

The postal laws now forbid the premium business on a general scale, but a certain amount is permitted, as we may note in some of our large newspapers. The enthusiasm with which they handle syndicate stuff suggests there is good money in it, and we can guess that, very likely, there is more for the syndicate than for the newspaper. Yet the newspaper man ought to be capable of doing his own promoting and writing his own ads, and taking all the profits, and using them. The newspaper has immense influence with its readers, and with a little experimenting given the problem and the right advertising offers, the publisher can get more for his space in the sale of noyelties than others will give him.

In fact it is known that most of the men running the big mail-order papers are so expert that their advertisements of ten-cent premium novelties pay them more for the space than advertisers do. As is well known, all the expenses of the Youth's Companion are paid by its premium business, leaving its subscription and advertising money "velvet." The million-dollar fortunes of Vickery, Hill, Allen, Gannett and others were made out of premiums, not subscriptions or advertising.

By exchanging space with other papers an enormous business can be done without using a bit of your own space for yourself. This is the method of the principal successful mail-order monthlies of today, a method which is enabling them to give excellent magazines, with high-salaried contributors, for twenty-five cents a year, and still make money.

This is a matter that has become of immense interest in view of the coming into effect on January 1, 1913, of the Parcel Post Act, by which postage rates on merchandise will be revolutionized. The rates on small packages for ordinary distances will be a tenth to a half what they are now, and this will bring into the mail-order field a great number of new articles. The articles best suited are those refused by the regular jobbing and retailing trade because the is "no call" for them; that need introducing, are meritorious, and have high profit. These can be advertised without interfering with the business of regular advertising patrons.

Another change wrought by the parcel post is that by zoning the country an advantage is given to houses nearest their customer, instead of enabling large houses in one city to supply the whole nation at equal rates of postage. The difference in rates will permit of the opening of mail-order houses in different parts of the country, and give them an advantage over distant ones.

The new rates of postage apply to merchandise under eleven pounds in weight, and fractions of a pound are counted a pound, as in England, so that at long distances the present third-class rate will still be cheaper for printed matter. The rates figure out as follows:

Miles	50	150	300	600	1000	1400	1800	More
1 lb.	.05	.06	.07	.08	.09	.10	.11	.12
2 lbs.	.08	.10	.12	.14	.16	.19	.21	.24
3 lbs.	.11	.14	.17	.20	.23	.28	.31	.36
4 lbs.	.14	.18	.22	.26	.30	.37	.41	.48
5 lbs.	.17	.22	.27	.32	.37	.46	.51	.60
6 lbs.	.20	.26	.32	.38	.44	.55	.61	.72
7 lbs.	.23	.30	.37	.44	.51	.64	.71	.84
8 lbs.	.26	.34	.42	.50	.58	.73	.81	.96
9 lbs.	.29	.38	.47	.56	.65	.82	.91	1.08
10 lbs.	.32	.42	.52	.62	.72	.91	1.01	1.20
11 lbs.	.35	.46	.57	.68	.79	1.00	1.11	1.32

Home town packages will be charged 5 cents for the first pound and one cent for each extra pound up to eleven. This includes delivery by carrier or rural wagon and, with the fifty-mile rate, will be a great boon for delivering job work. On small parcels it will cost less than carfare. The postmaster general has authority to initiate a C. O. D. and insurance scheme in connection.

* * *

ORGANIZATION, SYSTEM, COST AND SERVICE

On September 14th last, President W. M. Castle of the Green Bay Typothetae delivered an address, which is published in the January U. T. A. Bulletin. The address is filled with statements that ought to be received as axioms among, and give the force they deserve. We reprint the following from the address, arranged in brief axiomatic paragraphs:

You can't live alone in this world, neither can you do business alone, and do it right.

* * *

You can't go about telling people that your competitor doesn't know anything about the printing business, that he is your enemy, without casting odium and discredit on the business and yourself.

* * *

A printer with a cheerful greeting for his fellow is a finer man than the one who crosses the street to avoid meeting another printer.

* * *

Association, co-operation, good-will among shop owners, are the means to an end. The end is an uplifted industry in place of a neglected, profitless drudgery.

* * *

A clean, up-to-date system shop is a better advertisement than a shop filled with old junk and confusion.

* * *

The cost system does its work with mathematical precision. It is inexorable and unerring. It is cold-blooded arithmetic. Unlike a human, it is the same in its operation today and tomorrow and the day after. In this lies its value. It doesn't change, it never guesses. Unlike a man, it is not afraid of the truth.

* * *

An estimate of the cost of commercial printing embraces the cost of paper and ink, plus brains. Now let us substitute for the word brains the world ability — ability to make the work effective for the purpose it is intended to serve. This purpose is generally to make the printing a selling force. This is the real purpose of job printing anyway — to sell things. A good job printer is a potential salesman in the last analysis.

Honored for Efficiency Service—The Ben Franklin Club of Chicago Elects Officers

There is an old saying about some men being born great, others acquiring greatness, and others having greatness thrust upon them. The thrusting of greatness upon anyone in this age is of infrequent occurrence, but occasionally those vitally concerned in the well-being of an organization, of a municipality, of a state, or even of the nation, do wake up to a realization of duty and power and thrust upon some well tried and trusted individual duties and position that the faithful servitor would gladly have avoided.

This was what took place at the annual meeting of the Chicago Ben Franklin Club, when Mr. Hartman, who had served the organization so faithfully as president that after allowing a year's surcease from the troubles and responsibilities that this position would necessarily require, there was a unanimous demand for his reinstatement, and he was re-elected against his earnest protests. The Ben Franklin Monthly gives the account of this and other annual elections, as follows:

ANNUAL MEETING OF THE CHICAGO BEN FRANKLIN CLUB

Mr. Hartman asked that his name be not considered for the office. He thought they would agree with him that he had done his share in the past, and should not be asked again to fill the position of president.

All the objections of Mr. Hartman were overruled. His nomination was seconded in several places, and in order to prevent him from saying more in opposition to his nomination, it was moved, seconded and carried, that all nominations close.

The vote was then taken and the tellers later reported that Mr. Hartman had received an overwhelming majority, announcement of which was received by loud applause.

On being called upon by President Miller, Mr. Hartman said he thought he ought to have their hearty sympathy, instead of their congratulations upon his election to the office of president. He hoped that now the members had elected him everyone would put his shoulder to the wheel and try to make the work of the club a great success. He would look to them for earnest co-operation and he believed he would have no cause for disappointment. [Applause.]

Vice-President J. W. Hastie, amid cheers, was declared unanimously re-elected vice-president; and in acknowledging the compliment assured President Hartman that he would always be prepared to answer when called upon, and promised to do all in his power to make his duties as agreeable and as light as possible.

Julius C. Kirchner was again chosen for the position of treasurer and besides promising President Hartman his best assistance, pleaded that the members would promptly pay their dues. He also mentioned that recently blanks had been distributed among the members for information with regard to their equipment. This was because many cylinder presses had been added and they wanted to have their records accurate and complete. He trusted the blanks would be returned promptly, also that information would be given as to what the mechanical pay-roll was because it was advocated by some that their dues should be based on the pay-roll.

The election of the board of directors resulted in the following being chosen: J. I. Oswald, T. W. Walton, George Seton Thompson, Daniel Boyle, J. J. Miller, E. W. Kirchner, M. H. Kendig, J. A. Singler and E. F. Hamm.

Each one of the directors was called upon and expressed their appreciation of the confidence placed in them by the members.

E. W. Kirchner hoped they would be able to arouse more interest in outlying districts. If the secretary could find time to hold meetings in those sections, it would benefit the club in the central district.

Mr. Hamm felt there was much before the club the coming year and hoped more enthusiasm would be created and all would aid in advancing the cause.

Reports of the president and committees were read before the election.

In the course of President Miller's report he told of the work accomplished during the year. About eighteen complete cost systems had been installed and a great deal of aid given in other cases. This was all done free. The industry was sure to be elevated if the work were continued. He read letters from several who had installed cost systems in which they dwelt on the benefit they had received. He expressed his appreciation of the support he had received and offered his good wishes to the incoming officers.

Secretary Chandler then read the report of Chairman Boyle, of the Estimating Committee. Two meetings were put under its charge during the year. The attendance was so gratifying they felt repaid for the necessary effort. At the first meeting it was found to be a great disadvantage in not having time to estimate. So for the second meeting jobs were given out in advance through a third party and each estimator supposed he might get the work he was bidding on. Much good was accomplished through these meetings, and he suggested more of them be held. They have resulted in getting better prices for the printer.

The report of Chairman Welsh, of the Cost Committee, told of advancement. Statistics were obtained and educational work followed. A cost card was sent to every printer whose name was in the telephone directory and bindery and cylinder cards were now ready. It had been intended to get up an estimating blank, and it was hoped this would be done during the coming year. Joseph A. Singler, chairman of the committee in 1911, had greatly aided in the past year.

Vice-President Hastie spoke of the activity of the state factory inspectors and the discovery that uniformity was lacking in their requirements. A committee was appointed to find out just what was required. The workmen's compensation act becoming effective brought diversity of opinions on safeguards necessary for machinery. As a result of the committee's efforts a suspension of orders was agreed upon until some standard could be made. The general line of safeguards in the Henry O. Shepard plant was later accepted and used as a guide for others. Many have now safeguarded their machinery, minimizing the danger, and this will finally reduce the rates for insurance.

Secretary J. C. Adderly of the Ben Franklin Mutual Casualty Company gave an address, showing the progress made by that institution since its formation.

The meeting was a very enthusiastic one, and everything points to a year's work crowned with great success.

Move for One United Organization of Employing Printers

There is scarcely anything in modern civilization more encouraging and inspiring than the great development of voluntary organizations among men and the members of different callings for mutual improvement and the advancement of the industries and professions, and for the general good. These associations have, during recent years, accomplished wonders. Among printers the organizations that have proved of immense benefit, during the past few years, have been the Typothetae and the Ben Franklin Clubs, united, respectively, in separate international bodies, as the United Typothetae and Ben Franklin Club of America.

Each has proved a spur to the other in efforts for larger and more practical accomplishments. Of late, however, they have worked along similar lines to the same ends, in placing the printing business on a sound basis through establishing systems of cost finding and of efficiency, of co-operation, for insurance, and the securing of helpful, and the preventing of hurtful legislation, and last, but not least, in placing the calling on the high planes of full and adequate remuneration, business solvency and credit, honesty, recognition and respect.

The work has progressed so far and assumed such a system and permanency that it is believed that a union of the two organizations into one great body, with all the branches in the different cities united, will result in economy, greater working ability, and in the command of wider and more potent influence. The supporting of two separate organizations working for the same worthy ends, in the same fields, by like methods, is looked upon as, to a large extent, a waste of funds, of energy and effort.

The wisdom of the age, founded on the destructive experiences of the past, is all for mutual understanding and this movement for the consolidation of the printer organizations is a practical manifestation of the higher business wisdom, good sense and good will.

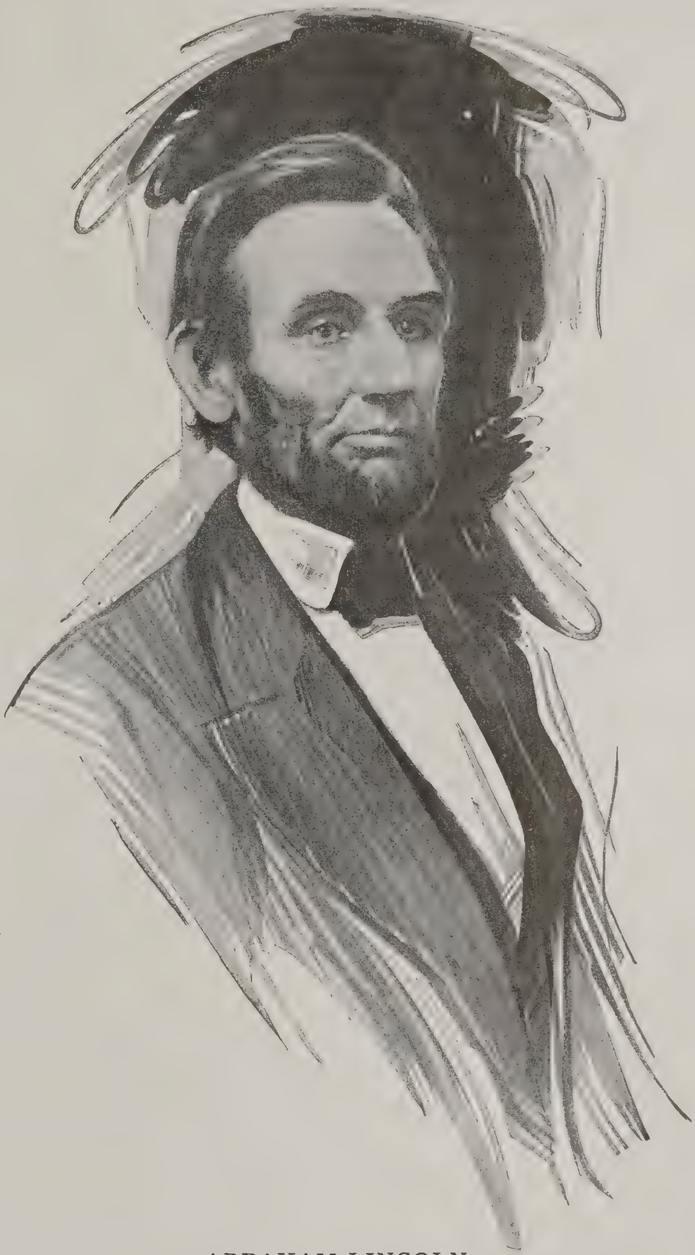
Committees of the two international bodies, as is well known to the readers of the National Printer-Journalist, have been working out plans for the prospective union ever since the Cleveland Convention of the Ben Franklin Club of America last year. On January 9, just passed, the joint committees on amalgamation met at the Sherman House in Chicago and after full consideration and discussion, agreed unanimously upon the following plan of union, subject to a referendum vote of the members of the two organizations:

First. That the name of the organization shall be The United Typothetae and Franklin Clubs of America.

Second. That present existing Ben Franklin Clubs and all other printers' organizations be admitted without initiation fee.

Third. That the basis of computing dues, as provided for in the constitution of the United Typothetae of America, be adopted as the basis upon which the Ben Franklin Clubs and other organizations applying for membership shall pay their dues, the same to date from July 1, 1913.

Fourth. That the present officers of the United Typothetae of America with the assistance of the officers of the Ben Franklin Clubs of America shall continue to conduct the affairs of the organizations until the next convention.



ABRAHAM LINCOLN

Drawing and Metzograph Engraving by The Eclipse Electrotyping & Engraving Co., Cleveland O.

Fifth. That the amalgamation plan as agreed upon by the joint committee shall be sent out for a referendum of both organizations at as early a date as possible, provided it received the approval of the executive committees of both bodies.

The following members of the two committees were present and participated in the discussions and in the action taken: President A. M. Glossbrenner, First Vice-President George M. Courts, Treasurer A. E. Southworth, W. A. Grant, H. C. Travis, and H. C. Wedekemper of the United Typothetae of America, and President W. J. Hartman, First Vice-President Charles Francis, Treasurer R. T. Deacon, G. H. Gardner, Stewart Scott and Ford Wallick of the Ben Franklin Club of America. George H. Gardner of Cleveland was elected chairman, and Henry Allen and Franklin W. Heath acted as secretaries.

* * *

MUTUAL CASUALTY INSURANCE

The Ben Franklin Mutual Casualty Insurance Company has more than justified its existence. At the last meeting of the Ben Franklin Club of Chicago, Secretary J. C. Adderly gave an address, in the course of which he pointed out that during the three months of active operation the total cost to the insured for accidents had been just over $150. When it is taken into consideration that the company takes care of shops with an annual pay roll of nearly $8,000,000 the figures are astounding.

The articles of association and the company's charter provide for the holding of the annual meeting of the company on the date above given. This meeting will be of great importance and it is sincerely trusted members will make every effort to be present.

The record of the company since the time it has been doing business has not been surpassed by any other similar organization in existence. The results which have been achieved in this short period of time confirm the statistics furnished by the German Printers' Mutual Casualty Association and demonstrates the increasing value which this organization will continue to be to the members of the printing trades in this country.

Additional legislation is now being contemplated by many of the states which will vitally affect the interests of the employer. These matters can only be taken up by such an organization as the Ben Franklin Mutual Casualty Company, by making sufficient preparation in advance rather than by attempting half-heartedly to meet the issue after the damage has been done.

The question of workmen's compensation in the case of accident is growing more important every day. It is interesting to note that in all but seventeen states of the United States legislatures are studying the matter.

The Ohio State Board of Liability reports that it has a surplus on hand on business done between March and November 15, of $98,489.08.

The board has collected in that time in premiums from employers who have joined the compensation plan to insure their workers for injuries which may be sustained while pursuing their vocations the sum of $108,656.85. Only $10,167.76 has been paid out in the way of compensations to injured employees or their dependents.

It is this large surplus that leads the members of the board to believe that its rates are too high, and as a result they are being reduced materially.

Reductions of from 15 to 65 per cent have been announced, and as these cuts are made with only eight months' experience it is believed even more favorable terms will be given employers of all classes.

Such reports as these only go to bear out the assertions made at the time of the foundation of the Ben Franklin Mutual Casualty Company that mutual insurance was by far a cheaper and more satisfactory manner of taking care of casualty risks, especially in the printing business where the risks are light, compared with the more dangerous trades.

The new laws which provide for the compensation of workmen operate well towards the ends sought, one of the strongest points in its favor being that it tends to the prevention of accidents. Dangerous occupations are becoming less so because with the experts watching every line of work, the employees are fast being taught to eliminate the possibility of danger.— The Ben Franklin Monthly of Chicago.

BEN FRANKLIN CLUB OF CHICAGO SECRETARY INTRODUCED

At the January 23 luncheon and meeting of the Ben Franklin Club of Chicago, Mr. Frank R. Brines, former secretary of the Electrotyper's Board of Trade of Philadelphia, newspaper man and experienced organization man, — having been connected with the printers' organizations in Philadelphia and New York — was introduced by Mr. W. J. Hartman, president of the Ben Franklin Club of Chicago, as the new secretary.

Mr. Brines acknowledged the introduction in a few well-chosen words, stating he had come West for the purpose of assisting the members of the Ben Franklin Club, not only as a club, but to assist each and every one directly and it was his purpose, if possible, to increase the membership of the Chicago Ben Franklin Club, and was positive he could readily do so if given the co-operation of the members. He stated that no secretary of any organization could expect to make good unless the members co-operated with him. Mr. Brines, having had the experience in the East of organization work and understanding the needs and desires of the printing craft, should be of great benefit to the local organization. The members of the club were not slow in expressing their approval of the Board of Directors' selection of the new secretary, and after the adjournment free expressions were given as to their personal opinion concerning plans for the coming year.

* * *

AMALGAMATION

The weekly noon-day luncheon and meeting notice of the Ben Franklin Club of Chicago for January 23, with its headline, "Important to You," and the message that "The All Important Subject and Plan of Amalgamation to Be Taken Up and Thoroughly Discussed" was the means of bringing out one of the largest gatherings that the Ben Franklin Club had been favored with at their noon luncheons.

Mr. W. J. Hartman, the newly elected president, briefly outlined his idea of amalgamation and, among the many other things, stated the benefits that would result along lines of co-operation for the preventing of unjust national and state enactments unfair to printers and publishers.

Several of the most active members of the Typothetae had been invited to this luncheon and were called upon to express their views. Remarks were made by Mr. A. E. Southworth, Mr. W. A. Grant, Mr. J. A. Morgan, all favorable to the uniting in one organization.

Ex-President J. J. Miller spoke of previous work that had been carried forward for the bringing about the union.

Mr. W. B. Prescott gave a straight-from-the-shoulder talk as to what he considered the printers of this country should do for their own benefit in the matter of co-operation and the getting together, in which Mr. W. H. Sleepeck coincided.

Mr. G. H. Benedict was called upon to express his opinion regarding the admission of supply men to the plan of amalgamation, and spoke in favor of the one organization idea on plans that would result in concerted action through unity of plans.

Mr. F. I. Ellick, the former secretary of the Ben Franklin Club of Chicago, who happened to be in the city on business and attended the luncheon, was also called upon to express his views, and stated among other things that he was of the opinion that amalgamation or the getting together of all printers was the only proper method to proceed for the benefit of the craft.

He gave the Ben Franklin Clubs the credit for the new activity and life that had been infused into the movement, but now that "Old Dobbin" was going full speed, it was time for all to get into the one van, for progress.

By unanimous vote, favorable to uniting the Chicago Typothetae and the Ben Franklin Club of Chicago, the president was authorized to appoint a committee of conference.

Wise Business Principles From a House Publication

"The Never Sleep Gazette"

A NEW house publication of the Regan Printing House, Chicago, has pith and point and in name and contents is true to the traditions of the great printing establishment, one of the oldest and largest in the city from which it emanates.

Willis C. Stone is managing editor and Messrs. Charles Lehan, Graeme L. Smith, William H. Hughes and M. H. Madder, associate editors. The publication is handsomely gotten up and the matter reflects honor upon the editors. There is a good deal of business wisdom, in numerous paragraphs, besides interesting information in articles on the "First Printing Done in America"; "The First Newspaper in New York"; "Installation of the Parcels Post," besides discussions as to postal matter under the caption "Putting the Rollers Under Public Functionaries and Why."

From the different paragraphs, we select the following golden nuggets, so to speak, of wise business principles that cannot be enforced too frequently and the value of which can never be over estimated:

Money is regarded generally as all-powerful, but it is not. Under existing conditions possibly it is the most convenient commodity that is floating around, but handy as it is, there is one thing that money will not buy nor will it restore the damage we sustain when we are the losers of the priceless portion of our lives. Money will not buy character when we destroy the fabric, neither will it repair the injury to our blighted standing before our fellows. It follows then that the institution which possesses character has an asset that is more appealing than the capital it has invested in business and it stands on a foundation that is unassailable.

The best aid in securing trade is an honest intention to render service, in holding it after you get it, to give the patron more for his money than he had heretofore received, and then make it plain that you are his partner in gaining success for the undertaking that he is engaged in promoting.

There was never an instance where anyone knew too much to be able to turn out a job of good printing. Added to the endowment of bright faculties we must have experience, a whole lot of up-to-date tools and the opportunity to put these combinations into action.

Service is the oxygen that, injected into the circulation, enables the racer to not only cover the distance and get his number chalked up on the board, but it gives the power to the patron when you render service to him that he can go out and make money with which to pay for the product.

Life is one continuous going to school and we should at least endeavor to know more each day we occupy a place in this breathing world of ours. By so doing we gradually advance in development and become better mariners on the sea of effort.

Temptations are many and trials are numerous, but there is much more joy and satisfaction in adding to the business of a patron by turning out a high-grade piece of work than dwelling in the midst of the professional uplifters.

There is a mutuality of interest between the patron and the one who produces an article, which is a very valuable asset. In fact they are partners with all that the term implies.

Team work is what counts in the field of production, and that is why an old and well organized institution with its thoroughly drilled force has the advantage over the raw recruits. Do you catch on?

Opportunity knocks many, many times at our thresholds and bids us awake and go forth to win the prize. Boneheaditis is the affliction that causes us to snooze, halt and hesitate.

Time is the most important element that we have in the world, and money is simply a certificate of time. We should always be on our guard that we waste neither our own time nor the other fellow's time, and we should restrict our wants so that we can live within our income, however modest that may be.

CONGRATULATIONS ON HIGH STANDARD MAINTAINED

THE UNIVERSITY OF WISCONSIN

Madison, Jan. 17, 1913.

Mr. B. B. Herbert, 4618 West Ravenswood Park, Chicago.

Dear Mr. Herbert: Enclosed are two dollars in payment of my subscription to the National Printer-Journalist. In renewing my subscription for another year, I want to congratulate you on the standard you maintain for your publication and especially on the twenty-fifth anniversary number. You certainly deserve richly all the good things your many friends said about you in that issue.

Yours very truly,
WILLARD G. BLEYER.

✣ ✣ ✣

THE BURNETTSVILLE NEWS

Burnettsville, Ind., Dec. 14, 1912.

National Printer-Journalist,
Chicago, Ill.

Dear Sirs: Find enclosed check for $2.00 for subscription for another year. Every issue of the National Printer is a help and inspiration to an editor. It is filled with good things from cover to cover, and I wish you a happy and prosperous Christmas and New Year.

Yours very truly,
J. ROLLAND DOAN.

Method of Interviewing

By W. B. Jones, Formerly with the Buffalo, N. Y., Express

WHEN the writer went first into newspaper work he felt sure he could never do any reporting, owing to a great lack of temerity, inability to form acquaintances quickly, an almost morose disposition and tongue-tied instinct. I made no great achievement in reporting, and in some lines, as police, I did nothing. Yet other lines I did do, and did with some success.

There were men regarded as reporters of note on the staff with me, yet it was a great surprise to me to find how little skill or science these men, old in experience, put into interviews. And when I read the work of highly paid men on the great papers and magazines, it surprises me still more that in none of those interviews which reveal the method of questioning have I seen any evidence of the methods I devised and successfully used, or anything like them.

Knowing myself under a handicap, and believing that handicap to be greater than it was, I planned out my interviews (the line I was most successful at) beforehand. The first point I looked out for was never to ask a leading question, especially one that might embarrass or require study to answer at once. I planned my first question to be easy and simple, one that it would give my man pleasure to answer, if possible, one that he would answer with avidity. I followed this up with similar questions, perhaps of no importance, but giving me a chance by keen perception to catch his position and sentiments. My answers and talk were such as to make him feel that I understood his position and had his point of view. I would talk in a quasi-confidential manner, as a friend, to make him feel he could unbosom himself to me and have me put it down just as he wanted it. In my early questioning I would tell him how I was going to put things down and ask his approval. Of course, whenever a man fell in with my plan, I never abused his confidence. I not only regarded it a sacred honor to leave out anything he had told and wanted left out, no matter how much the paper might lose, but I also made the stuff as much to his credit as could be. I wrote as his representative, with intelligent restraint, of course. If a man rather opposed me, the case was different. I wrote what I deemed most clever or entertaining to the newspaper's readers.

In seeking information I avoided flunkies and clerks. These fellows are not only conservative and afraid to open their mouths one way or the other, but their information is often away off when you do get it, they being poor thinkers. I went as near the top as I could, preferring men whose names the papers had made familiar to me, knowing that such much be friends of the newspapers to have their names so familiar. It takes a man of considerable intelligence and ability to have confidence for talking offhand for publication. Unlike some of the other reporters, I did not quickly assume everyone who talked freely was looking for advertising and form dislikes for those in whom the desire was patent. Such fellows found a serviceable friend in me. My realization of the ignorance and incompetence of those who pretended to be conservative made me partial to those who were of opposed character and a help to my business; and I admired the ability which gave self-confidence for standing in the limelight.

I made the calculation that the men I interviewed all understood the value of publicity and that, if it could be done through some bosom friend just as they wanted, all would like to use the paper's power. I knew if I could make a man feel that he could make me his confidant and trust implicitly in me, I could get lots of news from him.

When I had a question that was likely to be refused an answer, my favorite ruse was to devise a fake question, assuming something a little horrible that my man would have to deny, and usually such that in denying it he would see the advantage of giving the true facts. Thus, in the case of an elopement, I asked the father of the bride if it were true that the automobile in which the couple had departed had been taken without leave. He was prompt in defending the character of the groom, which defense involved an explanation of the whole case. An immense deal can be accomplished with fake questions where information is difficult to obtain.

⁂

FRANKLIN W. HEATH RETURNS TO PHILADELPHIA

The extended and long continued work of Franklin W. Heath in connection with the United Typothetae of America and local printers' organizations and his frequent addresses on organization and other matters connected with his work, and his able contributions to the printing trade press, have made him a national character, widely known and highly respected.

For over four years Mr. Heath has filled the office of Secretary of the United Typothetae and under his supervision the main office of the organization was moved from Philadelphia to Chicago.

Mr. Heath has now resigned his position as Secretary of the national body to accept the office of manager of the Printers' Board of Trade of Philadelphia. Mr. Heath succeeded Mr. John MacIntire at the Detroit convention of the U. T. A. and since that time, and during all of Mr. Heath's administration as Secretary, there has been great growth and expansion in the activities of the organization and Mr. Heath has visited every state in the union in the course of his duties and made many friends in all parts of the country.

The Philadelphia Printers' Board of Trade has been fortunate in securing the services of a man of such broad knowledge, observation and activity.

Mr. Chadwick P. Cummings, whom Mr. Health now succeeds, resigned his office to accept a place with a prominent printing house in Toronto, Canada.

⁂

"WESTWARD THE STAR OF EMPIRE"

Settlers never have reached a far point in the West or the great Northwest but they found the newspaper in their midst to help in the upbuilding of the new land.

W. C. Pratt, an experienced newspaper man, will begin the publication of the News at Grande Prairie City, Alta., the latter part of February. The News will be a pioneer in the Grande Prairie distrist, Northwestern Alberta. Mr. Pratt has already shipped the printing machinery and office fixtures to Edson, 130 miles west of Edmonton, from which point the equipment was taken to Grande Prairie City by freighting outfits, the overland journey consuming a week. Paper and other materials will be sent into the district by similar methods.

"The field is new in every sense," Mr. Pratt said, "but I feel confident that the News will be received with favor by the settlers in the district. The country is filling up rapidly with experienced farmers, and there is every indication that we will have a settlement of importance in this Western country. Grande Prairie City has a bright future, and we are going into the country with a firm determination to make good."

Mechanics of the Print Shop

By Alfred R. Gardner, 665 Cornelia Avenue, Chicago

DO PRINTERS generally realize the importance of mechanics in the economical production of good printing? With the advent of so many cost systems and their unquestioned benefit to the trade, I sometimes think that the mechanical side of the business is being overlooked, or, at any rate, neglected, and my attention has been quite forcibly called to this subject by observations made in several shops during past years. A few instances will suffice to illustrate this point. Some months ago I visited and became well acquainted with a shop doing publication work where the output was practically uniform throughout the year. This shop had a very elaborate cost system, which, considering the class of work done, was, to say the least, of doubtful utility, yet the composing and press rooms were actually typographical museums. The composing room was just such as you would have found in any large country town twenty years ago, and the pressroom contained a specimen of almost every type of flat-bed press that has been built during the last fifteen years, all of different sizes. Here was a pressroom with eight cylinder presses and a full force of employees, working from ten to fourteen hours per day, six days a week, on cheap magazine work, to turn out what should have been but ninety thousand printed sheets had the presses been of the proper size. The composing room was too ancient to merit description. This was a clear case of ignorance regarding the mechanics of a printing office, yet it was very hard to convince these people that they did not already have a thoroughly up-to-date plant, and it may be adding insult to injury to say that practically every item in the outfit had been purchased within the last three years.

Another instance was that of a shop having nine or ten cylinder presses of the best make, with a very modern composing room, both linotype and monotype machines, a first-class bindery, etc.; in fact, a shop that if rightly handled was capable of doing work the equal of any, yet they were grinding out the cheapest of cheap novel and hand-bill work. This shop possessed a most elaborate cost system, which was clearly needed. They were capable of telling within a fraction of a cent just what every job cost. Yet the plant was lacking in that it had no mechanical ability at the head. Had the management possessed a knowledge of the mechanics of printing equal to their knowledge of cost systems, the output and wear on equipment could have been reduced one-half and the income doubled or trebled; or if they wished to turn out the same grade of work, the same capital invested in machinery made especially for this purpose would have enabled them to double their output, with a greatly increased percentage of profit.

But these are extremes, and we should look at them as such; however, my observations led me to believe that there are very few printing offices where there is not some chance to improve mechanically. In the first-class composing room a thorough knowledge of mechanics as applied to the trade is just as essential as type or copy. If the compositor is to lay out his own work he must not only know how to set up the job in proper style, he must also be able to choose the materials best suited mechanically to the work in hand. Some work may be more economically set on the linotype than monotype, yet be defective mechanically, or vice versa. The same rule applies to hand composition of foundry type. Each is best in its proper place and no substitute can be used if good results are to be obtained, yet this requires a knowledge of the mechanical perfections and defects of the various systems.

Makeup also requires attention, for in this work there is abundant opportunity for the display of pure mechanical ability. A few bits of paper or strips of cardboard may cover up a multitude of evils or form part of a defective equipment, but they cannot conceal mechanical defects.

Locking up the forms is much more important in modern print shops than in the days when short runs were almost universal, and the material which our predecessors thought suitable for furniture we cannot use for the better grades of work where mechanical accuracy is a necessity. I could never see the economy of spending thousands of dollars for type and type machines, that are almost the acme of mechanical perfection and using them in conjunction with wood furniture and reglet, which cannot be made accurate and is impossible to keep so, under the conditions in which it is used, if it were mechanically possible to make it. And a word regarding steel furniture: some printers object to it because it will not "give." This is one of its best features. To secure first-class work with a minimum wear, the type, cuts, furniture, everything in the form, must be absolutely accurate and unyielding.

In connection with locking up is the subject of patent blocks. Where the average runs are short, convenience or ease of handling should receive more than passing attention, but with long, heavy runs absolute accuracy and rigidity and their maintenance must be the first consideration. Thus, bases which might answer all purposes in some shops would be wholly unsuited for others because mechanically defective for the class of work done.

The subject of electros, whether copper, nickel or iron, requires a good knowledge of print-shop mechanics if the best results are to be obtained. Their economy for many kinds of color work and for long runs can scarcely be questioned, yet I know of shops that do not use them, many times where they should; and others who use them on almost every occasion, often at a loss. The use of pattern plates and the repair of damaged electros is a part of the mechanics of printing not nearly so well understood as it should be. I have known of perfectly good electros containing original half-tones being replaced with new plates simply because the solder joining the two plates failed to hold, the press standing during the meantime. This fault, which has been found very difficult to guard against in the foundry, is not such as to warrant the making of new plates, for the defect can be very readily remedied by resoldering the parts if they are not worn or otherwise damaged. And the repair takes but a few moments. Damaged letters in electros can also be corrected by having the foundry solder in type in their stead.

The successful use and correction of pattern plates is a somewhat difficult proposition for the ordinary printer, but the economy of their use for many classes of work if properly handled, is such that no printer can afford to overlook them. Several years ago I became acquainted with a shop that had undertaken to print a revision of a work of something over 3,000 pages, and had acquired the pattern plates of the previous edition. About twenty-five per cent of the copy was new, but fully sixty per cent of the plates should have been saved, yet as the work was handled, entirely new pattern plates had to be made for practically the entire job. This loss could be attributed partly to poor mechanical equipment, but more to a lack of the proper knowledge of the subject.

CHICAGO, FEBRUARY, 1913

The National Printer does not seek to be a newspaper, but to be a helpful instructor, a teacher of better and more effective ways and to inspire to higher efforts. News is incidental and at times helpful, but the end in view is betterment and improvement.

* * *

Newspaper makers should not be forgetful to remind advertisers of the forgetfulness of all humans and of the constant charges in a city and a community. Men come and men may go, but advertising, to be permanently remunerative, must go on forever and all the time.

* * *

The early years of this country will be celebrated in history as the era of the introduction of system in the printing industry, that, as a calling, has ever been recognized as the greatest influence for advancement in all other branches of industry and business, as well as in the progress of the world.

System means orderly accomplishment with greater efficiency and surer and more worthy results. It is an insurance against errors or failure and means more work with less worry, and brings confidence and commands respect. It results in larger rewards for the exertions actually required and put forth.

System is properly defined as "a natural combination or organization of part to part, as due to the nature of the objects connected" or, in a broader sense, to persons working together for the accomplishment of the objects had in view, a "plan or method of operation." It lies at the foundation of harmony among all workers, and in all government. It binds men together in concerted, harmonious action, in co-ordination of effort, and causes full mutual understanding and good will.

The study of Greek, as establishing the habit and instilling lessons of the necessity of absolute accuracy, is proposed by the University Missourian, the daily issued at the School of Journalism, as one means to full preparation for the profession of journalism. Any one who has ever wrestled with Green verbs or studied the importance of every little dot and mark, "some slanting one way and some the other," the inflectional forms, breathing marks and accents, will appreciate the suggestion. Certainly the necessity and the duty of accuracy in newspaper making cannot be exaggerated, and if the study of Greek will make newspaper writers, reporters, editors and readers more habitually and conscientiously accurate, then let them all study the grand, old language in which Socrates taught, Homer sung and Demosthenes orated.

The Greek language, too, is euphonious and symphonious; has the grandeur of the mighty, surging ocean, is symmetrical, scientific, harmonious, logical, systematic and allows no violation of rules. It is, withall, inspiring to grandeur of thought and is marvelous in facility for word formations, while its study is highly disciplinary and educative.

Our editor friend of the University School of Journalism urges that

"As every little dot or mark in Greek script is important and proper in its place, but useless and wrong when out of place, so there are in journalism points of extreme importance. Improper usage brings trouble. The eye of the city editor and the copy reader must be as quick to see mistakes in copy and to find the little dangers that may be hidden there, as the Greek student is to observe the mistakes in his prose composition. The reporter, too, must be as careful in the gathering of news and in writing his story, using only facts, as the Greek student is in arranging the phrases in their correct order and observing the proper use of tenses.

"The mastery of Greek demands the same thing as success in journalism — accuracy, **accuracy, ACCURACY.**"

* * *

Eugene, Oregon, is a beautiful place, noted for its location, its refined people, its elegant homes, splendid churches and schools, all of which were given added fame in a special issue of the Eugene Daily Guard on January 1.

Nearby towns were not forgotten in this great issue of eighty-four pages, splendidly written, illustrated and printed, nor was the great State of Oregon slighted and the striking events in politics, disasters and sports of the whole United States for

1912 were succinctly and ably set forth in able, contributed articles.

It was a most complete and satisfactory edition in every way, clean, bright, wholesome and informing. One illustration — that of the "Children's Fair at Creswell"— joined to that of a "Cornfield Near Creswell," especially attracted our attention. The little folks are not neglected in Oregon; with the best school instruction they are taught how to do things like and better than the grown-ups; how to conserve and make the most of resources and to order their lives for highest usefulness and success.

Theirs is a land of great possibilities and it is a glorious work to prepare them to use and improve these opportunities in a way to leave a still richer heritage to their children. When the children are prepared to make this earth a heaven like to that above, of which we have all been taught, and have done their work for their own and future generations, they will be well fitted to receive the benediction for fruitful faithfulness and to enter into the pearly gates to receive the reward for those who have well done and who have been good servitors of mankind to their fellows, children of the Great All Father, the giving of a drink of cold water to one of whom, it is said, not to be without remembrance and reward.

* * *

Editor H. C. Hotaling issued a special "Robert Burns Day Edition" of his Blue Earth County Enterprise on January 25, printed on orange colored paper and filled with matters pertaining to the day and to the local celebration in honor of the Scotch poet.

Burns seems almost to be the patron saint of Mapleton, Minn., where the paper is published, and each year his birthday is celebrated with enthusiasm. The sports, bagpipe music and songs and the dances of old Scotland are all revived. There is a great banquet with oratory and the reciting of Burns' poems. Guests gather from all over the state. A club of curlers is maintained with a membership of 110, and an even dozen teams of curlers started in at the "Heather Rink" on the Wednesday before and kept up the sport for three days, contesting for prizes.

A German mayor welcomed the Scots this year and argued that he was in harmony with the sentiment of Burns, who had been quoted, by the Scotch mayor the year before, in the lines:

"It's coming yet for a' that
"That man to man the world o'er
"Shall brithers be for a' that."

Portraits were given in the Enterprise of the officers of the Maples River Burns Club and of all others prominent in the festivities and sports.

Judge Andrew J. Bruce, of Bismarck, N. D., delivered a magnificent address on "The Gospel of Robert Burns," enriched with quotations from the "plough boys' poet." The address told of an improvement in England and Scotland, through landlordism and the game preserves, so that fifteen per cent of the people are paupers, and then made application to the struggles that were to come in this new land, saying:

> "And, ladies and gentlemen, the battle has just begun. The bloodless battle of peace which often requires more courage than even that of war. Back of us is a magnificent past. It is builded on democracy. There is only one ideal, and that is the ideal of the great Teacher of man, that the meek shall inherit the earth, and that of Burns that man to man the world o'er should brothers be, and a' that. We, Scotchmen, must, in America, as we have in the old world, help to bring the kingdom of God upon earth. We must show that we in truth believe in the Fatherhood of God, and in the brotherhood of man. We must show that we really believe that all men were born free and equal. We can live in America as well as in Scotland the gospel of Robert Burns.
>
> "There is need that we should do it. Never before was the pressure of existence greater. Never the demand for loyalty in business and in civic life more keen. We must resolve politics and reforms into terms of human life. We must look upon government and office as avenues for service and not for gain. We must cease to be snobs. It was snobbery which killed Robert Burns. It is snobbery which has caused all of the wars, and all of the cruelties of mankind. Do you think that the ruling classes of England would have driven the tenantry from the soil and made two hundred and fifty offenses punishable by death if they had had any regard for that tenantry?
>
> "Do you think that they ever would have provided that a boy should be hung for shooting a rabbit? Do you think that the lords of Scotland would have ever devastated the Highlands and driven the sons of the poor to wander over the face of the earth if they had had any regard for those people? If they had not had the snobbish idea that somehow or other they were better and of a different mold than their fellows? I say that even in America if we would save the common man we must cease to be snobbish and begin to believe in him."

Such a celebration is wholesome for any community, serving to revive a broader, deeper love for liberty and to inspire hearts with the feeling of human sympathy and brotherhood.

* * *

There can be no real content without an abiding, active faith in a more glorious future. We have frequently noticed that those who are at a lazy standstill and are constantly claiming that they are satisfied and contented with their positions and conditions, are everlastingly finding fault with those who have attained. Their fault finding shows that there is a perfect hell of discontent and envy in their souls, that can only be satisfied with criticising and complaining about others who have done things. The man who is doing his best every day and striving for better things, has no time for this viciousness. His soul is full of peace, good-will and joy. There is something still to be achieved and no time for miserable brooding.

WONDERS OF TWENTY YEARS OF PROGRESS

Twenty years ago Mr. E. E. Cox estabished the Evening News of Hartford City, Ind. On January 28, he signalized the twentieth anniversary with an article giving briefly an account of the progress made, which is so indicative of the rapid changes and development of printing and newspaper-making in the smaller cities of this country, ranging in population from 6,000 to 20,000, that the following extract will be found especially informing, pleasing, interesting and inspiring:

> It was of Mr. Timmonds that the present owner purchased the plant in April, 1891, which at that time was located in a dingy upstairs room on the east side of the square. Two years later, in January, 1893, the daily edition, the Evening News, was launched.
>
> In those days the publication of a newspaper was more strenuous. The equipment was rude, compared with the up-to-the-minute machinery and materials of the present day. An old Washington hand-press, inked and propelled by hand, was utilized, and it was an all-day's job to run off the edition. Later, the first cylinder press ever brought to this county was installed. This press was considered a marvelous invention and improvement, and people came for miles to see it in operation. It was turned by a crank, the motive power being supplied by an old negro. Two years later the colored man was displaced by the installation of steam power.
>
> As new inventions were made in the printing trade they were added to the office equipment of the News and Telegram. When the linotype came into vogue this office was the first in the county and one of the first outside the big metropolitan papers to realize its advantages and install a machine. Now practically every up-to-date country newspaper office has a linotype machine, the old method of setting straight composition by hand having been relegated to the scrap heap of old and musty methods.
>
> In the meantime the News and Telegram had outgrown its old quarters and the plant was moved to its present commodious home, where it has continued to grow and prosper each year of its existence. Even its new two-story brick home soon became too small, and a few years ago the floor space of the plant was doubled. In the place of the old Washington hand-press, there are now seven modern cylinder presses engaged day and night in printing. Two of the presses are two-color presses, and a third is equipped with an automatic feeder that is even more dextrous than a human. Instead of the hand power that propelled the old newspaper press half a century ago, each of the presses and every other piece of machinery, including the linotype, paper cutter, book binder, stereotyper, router, etc., are equipped with separate motors, propelled by electricity. Every labor-saving device known to the trade is utilized in the printing of an enormous amount of job wok and the publication of a daily and weekly newspaper. The office, without a doubt, is one of the most complete of its kind in the country, and few towns of this size can boast of one that will compare with it.

Never before have better opportunities been offered for the right kind of men than in the printing and newspaper business in the smaller cities during the past dozen years. Indiana has been especially noted for the great development of the newspapers and job printing offices.

Editor Cox is the right kind of a man. He is one of the sons of the National Press Association and married a daughter of the association, Miss Tozier, of Portland, Ore. This organization has not only been a promoter of successful newspaper-making, but of several happy marriages, the result of pleasant association at the conventions and during the many delightful excursions. Both kinds of promotion have resulted in the upbuilding of the members directly concerned therein.

The Evening News is in every way a creditable newspaper for a city of six thousand population and receives liberal advertising patronage, and is rated with a credit above normal and a capital between $15,000 and $20,000.

The office combines, as is the case with most cities with a population ranging between 5,000 and 20,000, the newspaper, job printing and bindery in the one business under one ownership and management.

Aside from the location and development of large manufacturing establishments and the natural increase in merchandizing, the newspapers in the smaller cities have been greatly helped by the free rural route service.

✣ ✣ ✣

No apology is deemed necessary for devoting large space to the subject of advertising in its different features and methods. Long observation has convinced us that many newspaper men, who deal in advertising, are the least appreciative of its great possibilities and real values. A proper study will convince any man of broad observation among business men, that the proper kind of advertising, truthful and informing and inspiring, induces to action, is creative of business and is business-winning. It is today the greatest known agency of improvement and progress. There are many different viewpoints presented in this issue of the National Printer-Journalist, and all that is presented will repay careful reading and thoughtful consideration.

Advertising is not only the first step but it is the continued journey to all permanent and worthy success.

All men, all causes and all institutions advance through advertising, or proper, effective publicity, and, certainly, those who deal in such an essential commodity should understand fully the quality demanded and the most effective ways of its use. Newspapers and printing offices, that furnish this commodity, should be liberal users thereof, and in that use should be examples of and patterns for their customers or prospective customers.

Advertising should not only be pleasing, winning, educative, helpful, to both sellers and buyers; direct, clear and impressive, but should be clean, free from frivolity, coarseness, impurity or vulgarity. While advertising should be attention-commanding and entertaining, it should be free from exaggeration. The advertiser should always be able to make good any and all claims made.

The widest knowledge possible of the subjects to be treated upon in the advertising news or stories, is indispensable, and the highest ability and art of the trained writer and the skilled typographers are necessary to the giving the highest values through the securing of adequate results to the advertising customers.

Advertising has come to be one of the greatest sciences of the age, concerned with all the demands or needs of mankind and with all industries, commerce, political progress, upbuilding and reform, founded upon mental science or psychology and having to do with all the trend of human thoughts, desires, inclinations, prejudices, preconceived notions and ambitions.

Nothing that is human should be foreign to the most expert advertiser.

Those who deal in advertising should know how to suggest and direct in all these, always able to properly judge as to effective advertising and ready to point out the weak points in ineffective advertising, and, upin occasion, be able to construct such ads as will bring desired results.

Advertisers expect returns, and if those who deal in advertising or in advertising space, permit the use, through ignorance, of matter that will not yield results, they and not the matter used will receive the blame and will suffer the loss of both confidence and business.

The seller of advertising may not always be expected to know all that is to be known about the articles or business advertised, but should know what kind of advertising will yield best results in the medium that he furnishes.

If the owner of a field recommends and rents the same for planting of such grain therein as he knows will bring no crops, no profitable products or increase, he has no reason to complain if he loses his tenant and his field lies idle and non-productive.

All advertising is based on service or serviceableness, and no newspaper or periodical publisher should take pay for advertisements which he knows, from the character and circulation of his publication, will be of no profit to the advertiser, no more than he should admit to his columns such advertising as will throw discredit on his publication and render less valuable, or entirely valueless, advertising space therein.

USEFUL THINGS FOR NEWSPAPER MAKERS

Suggested by the Williamsport Sun and News

In a city of about thirty-two thousand population, the Williamsport Sun and News has a circulation of 16,520. Copies of this combined paper, of January 24, 25 and 27, furnish proof that this circulation is fully deserved. The circulation for each previous day, to that of issue, is given on the first page in bold figures, at the left of the paper's title and to the right, inclosed in rules, is given, each day, arguments for want ads. The tablet for January 24th reads:

> **The SUN and NEWS Want Ads. will determine who will secure nine out of ten of the best positions filled in this city today.**

The reading on January 25th is:

> **The SUN and NEWS Want Ads. will find work today for workers to whom a longer period of idleness would be a serious matter.**

On January 27th, the following is the form:

> **SUN AND NEWS Want Ads. will find tenants for property that could have been rented some time ago—but for the delay in advertising it!**

These are given because we believe, in form and substance, they would prove valuable to other newspapers and, more especially, for the reason that they show careful attention every day to this very important advertising branch of the newspaper. Attention to advertising and attention to the circulation are two important matters. Frequently these and other matters, that are essential to keeping up the business and winning success, are neglected by the newspaper makers.

These illustrate only the general practice and system of the management. At the bottom of the fourth page each day, neatly enclosed in a light border, is a talk, in from four to six paragraphs, furnished and copyrighted by J. P. Fallon, for the enlightenment of both advertisers and buyers.

The topics of these talks for the three issues that are before us are, respectively: "Do You Know Advertising Benefits You?"; "Do You Buy Through Knowledge"; "Think of Talking to 50,000,000 People."

We are tempted to give, with full credit, these several effective little talks, but they are copyrighted and Mr. Fallon is entitled to the full protection for the creations of his brains. Doubtless any publisher wishing to secure like service can get in touch with Mr. Fallon by writing to the Sun and News.

There is nothing to prohibit any one getting wise through this plan of appealing to patrons, and using his own ability in daily enlightening his readers, both advertisers and non-advertisers, in this vital subject. There is great need for constant education along these lines, and of "keeping everlastingly at it."

As may be naturally inferred, this newspaper is careful as to a proper and scientific make-up of its pages and a proper display and arrangement of the headings. Four deck headings are used on the first, third, fifth and seventh columns of the first page, while two decks are used on the other three columns and, of course, there are no advertisements on the front page.

The difference between this manner of headings and the running of headings of the same length or number of decks side by side is strikingly apparent at a glance and the effectiveness in catching the eye and holding attention is great, to say nothing of the greater beauty with pleasing variety secured by the arrangement.

Naturally in such a publication the advertising is well displayed.

No department is neglected. The editorials are not especially numerous but are on live topics, brief and pointed. A department of "Editorial Reviews" is to be commended. It is made up of short editorials for other leading newspapers.

There is one thing that most newspapers neglect, that may be made instructive and interesting, and tend much to the popularizing of the paper. All people are much more interested in the affairs of their own state, and of the cities thereof, than in those of distant states or cities.

Liberal quotations from the newspapers of the state under some such heading as "Views of the State Press," if proper care or discretion is used, will create a good feeling toward the paper among the editors all over the state and will bring rich returns of good will and kind words, both for the paper and for the city where it is published, and will awaken a spirit of rivalry and a desire for more worthy things. The editor who is quoted away from home becomes more and more popular and more helpful and will be on the watch for the opportunity to write something that will be more worthy, more generally useful, interesting and popular. Do not neglect but make the most of, and cultivate intelligently and persistently the papers of your own state.

✣ ✣ ✣

STUDY LAWS RELATING TO NEWSPAPERS

Students in Course in Journalism of the University of Wisconsin Get Instruction on Legal Aspects

Provisions of the law that affect directly newspaper publication, form the subject of a special course of study for the students in journalism at the University of Wisconsin. The law of libel, copyright, literary property, privileged publications, recent legislation on privacy, and various restrictions of second-class mail matter, are fully discussed by Prof. A. R. Hall, who is in charge of the course in "The Law of the Press."

Newspaper Lessons from Muscatine, Iowa, Journal's Annual Edition.

THE year is still new, and annual editions of the progressive newspapers, filled with loyalty and service for their respective cities, are still in mind, though it has been impossible to mention all. Last year we gave an extended review of the then annual edition of the Muscatine, Iowa, Journal. With the year just closed the Journal fully maintained its high reputation in a great sixty-four-page number, filled with all that pertains to the city's future advancement and well being.

The publisher, E. D. Throop, and the managing editor, L. P. Loomis, had great cause for satisfaction and gratification over the showing made. Muscatine had experienced troubles and the editor states that:

> A year which has been largely one of reconstruction and recovery following a disastrous period of strife and bitterness does not lend itself over-happily to the purpose of such an edition as office custom has decreed these "annuals" should be. That there has been prosperity, progress and advancement the following pages will show. Yet many of the phases of the present situation in Muscatine which constitute a foundation for the most optimistic view of the future, are too intangible to be measured by rule or described in printed words.
>
> That the new spirit is here is most apparent. It promises much for the future. The immediate past and the present are by no means unpleasant, but it is in the future that our true interest lies today. It is therefore more with the future and what it should bring to Muscatine that we have dealt in this edition, than with the year now nearing its close and what it has brought. For above all other good gifts of the year 1912 have been both an ending and a beginning, and ending of retrogression, and a beginning of progress. It is not nearly so important what the beginning has been as that there has been a beginning.

Herein is manifested the true spirit and the constructive mind of the true modern editor, who finds no time to mourn over past difficulties, but is ever looking forward to higher attainments and pointing to the influences and means by which these are to be reached.

The Journal has not relied wholly upon its own editorial and reportorial force but, as is wise and politic, has enlisted the co-operation of leading and worthy citizens, especially informed and fitted to write upon subjects assigned them so that, as it set forth editorially with acknowledgments for the splendid aid rendered: "The edition contains a number of notable articles dealing with subjects of vital interest affecting the future of Muscatine, by local contributors."

One of the features of this edition is an article relating to the great power plant at Keokuk, Iowa, that is not only a great piece of construction and a wonderful engineering feat, but as is claimed, "is destined to prove one of the greatest factors in the future development of the Mississippi towns from St. Louis at least as far north as Davenport and Clinton," and the Journal does the part of a good, loyal home newspaper in pointing the way to securing more than a share in the general consequent prosperity for Muscatine, through presenting all the advantages to be secured by Keokuk and urging to like construction at Muscatine.

Here is just what we have so frequently urged, that the home paper should study all the progress and improvements of other cities in its State and in the Nation, and in the whole world for that matter, and adapt the same local life and apply to its own city all that may be found applicable and beneficial. The most useful, home-interest editorials and home news, for that matter, may be founded entirely on something that has been accomplished in some other city, county, or state, that would be especially valuable to the newspaper's own city.

One pleasing feature of the editorial page of this issue is a splendid two-column portrait of the grand old gentleman, John Mahin, who was for a half a century the editor and publisher of the Journal, and is now a resident of Evanston, Ill., and whose son — raised in the service of his father's newspaper — conducts the great advertising agency in Chicago.

It is impossible even to enumerate here all the topics covered by this issue of the Journal, but one of the most instructive, by way of suggestion, to newspaper-makers, is entitled, " Planning for Muscatine's Future and Factors of its Development."

Every newspaper should always be looking after plans for its city's development, betterment and more worthy, satisfactory and prosperous future. The modern newspaper that is not a constant force for the upbuilding of its community, city, county, and state, with all the worthy individuals, industries and institutions thereof, fails in its highest opportunity, is recreant to its supporters and its own sacred duty.

One article in this annual edition of the Journal, entitled, " Future of Mississippi, Vital Question for River Cities," should be studied, and might, wisely, be republished in the newspapers of every city that is situated on the great Father of Waters; indeed, the matters set forth therein are of instructive interest and value to every dweller in the great Mississippi Valley, and especially to all living in the great states of Minnesota, Wisconsin, Iowa, Illinois, Missouri, Kentucky, Arkansas and Tennessee.

A pictorial section of this issue contains over two hundred separate, individual portraits of leading citizens, including city officials, bankers, educators, manufacturers, business and professional men.

Aside from the points valuable to newspaper-makers, that have already been mentioned, there are these to be noted: Keep in closest possible touch and sympathy with all the representative, active, earnest men in all worthy lines of endeavor in your city; cultivate their good will, seek their co-operation, and, second, utilize as far as possible all local talent, for the upbuilding.

These are men of especial information, experts in their way, in every department of government, education, finance, the industries, including agriculture, and the arts; sanitation, engineering, public improvements, road or street construction, forestry, landscape gardening, fire protection and all else that concerns the welfare of the people to be found in nearly every modern city, all with special knowledge or a general information that may be made available for the newspaper.

Some may be modest, unused to composition and diffident about appearing in the public print, but, with proper effort, nearly all who have anything worth while to impart can be induced, in the interests of the community and the general good, in some way, to contribute, either through interviews or through written communications to be carefully edited and submitted.

The editor should ever be ready to give, not ostentatiously nor in the way of ill-natured criticism, but kindly, through well-considered suggestions, all that is within him, but often a more ready heed can be secured and more can be accomplished by having the facts and suggestions to come from or through others who have the confidence and good will of the community. An editor, in order to accomplish great results, must not assume either an over-wise or over-knowing attitude and must avoid all appearance of trying to dictate.

Let the paper be the voice, as far as possible, of all the worthy, best informed and most public-spirited among the trusted fellow citizens.

George S. Johns, of the St. Louis Post-Dispatch, was right when he declared in his address before the students of the School of Journalism of Columbia University, New York:

" Newspaper power is mind power — the original power which creates and governs the universe. It is the supreme power in human society. It simplifies matters to keep in mind that as newspaper men we deal wholly with thought; we influence thought, inform, change, crystallize and energize it into action."

But it influences mind through giving of the news. All facts that the people do not know that they should know in daily life, constitute news. But the news must be reliable, must command attention and win credence, hence in order to influence, to be a power, the news must come from reliable sources, from sources or men that command the confidence of the people, and the more clear and weighty the evidence, the more reliable and the better informed and the more generally believed and trusted the men back of facts that are presented, and the greater the number of such witnesses to the facts, the more readily received and the more effective in their influence are the facts that are narrated.

REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 440 S. Dearborn Street, Chicago.

IT IS a great pleasure, I can assure you, to again take my typewriter in hand and write a message to the energetic type artists who read this department. I have, since last heard from, thrown off some of the duties and responsibilities which were occupying nearly every hour of the day, and I hope to be able to devote considerably more time and thought to the preparation of this department. I might state, also, that I shall be glad to enter into personal correspondence with any of our friends on matters which cannot be handled through the pages of the magazine, giving information, etc., on matters pertaining to the trade. I want to broaden the scope and usefulness of the department just as much as possible, and am willing to put in my best effort to do so. Let me have your co-operation. Send in your specimens for review, ask questions, make suggestions. Let us all work together.

There is much joy at this desk, I can assure you, when a bunch of work comes in which shows a decided improvement over former specimens from the same contributors. It is a pleasure to see the energetic printers who form this little brotherhood, developing in the art which they have chosen to master. The satisfaction is like unto that which I feel when I see my boys in school advancing in their studies and acquiring new powers of accomplishment from day to day.

If I remember correctly, I never have found anything to severely criticise in the work of J. L. Frazier, of Lawrence, Kan., but I am sure the present lot, both in individual specimens and taken as a group, is of a considerably higher grade than anything he has sent me heretofore.

Most of the present work is done in tasteful combinations of Caslon Old Style. The letterhead for Mr. Frazier's own firm, while simple in design and printed in a plain black and white, is one of the best of the lot, although the presswork does not have quite the rare finish of some of the other specimens. The single line of Italic upper and lower, thrown in among the Roman capitals, removes the head from the commonplace and serves to add to the dignity of the main line. Some critics might object that "The World Company, Publishers," was unduly subordinated, but I do not think so. In the case of a daily newspaper the name of the paper is the thing — the name of the company is of but secondary importance in the public mind. The note-head for the High School Budget, composed entirely in Italic, is another notable specimen, although I do not care for the ornament. A lighter ornament — possibly a conventionalized open book, or something of that sort — would have suited me better, although the head would have been just as satisfactory with none at all. At any rate, the present ornament is slightly out of center.

I shall try to show, also, two pages of a four-page program for the Kansas Bankers' Association. This is on Warren's sepia cameo paper, the rule work and border printed in an olive green tint, and the type in brown.

I think I shall also show, among others, the recital program cover, though a reproduction will give one a distorted notion of it. The ornament is in orange, although it will show black in the reproduction, thus making it appear to overbalance the rest of the page.

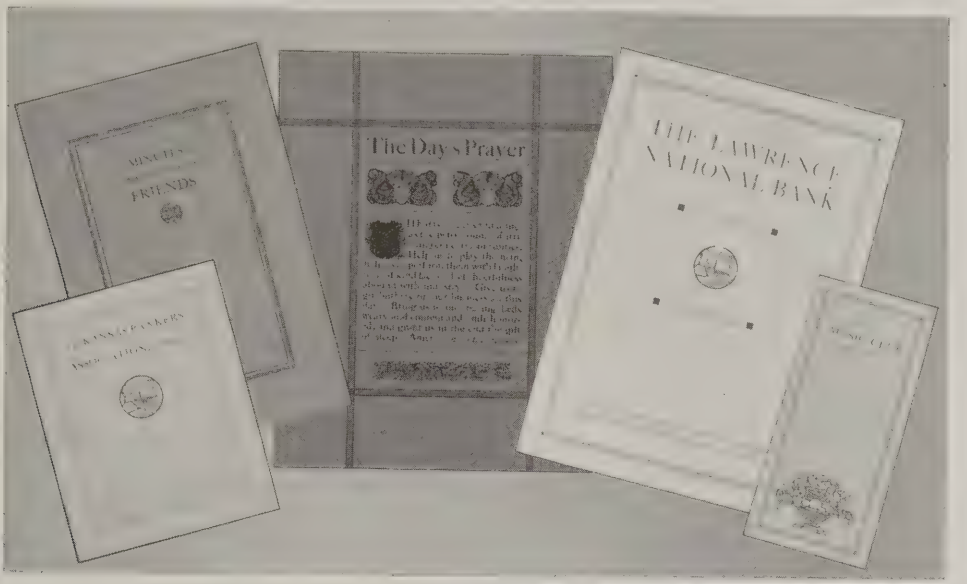
"Modern Borders and Ornaments" is the title of a valuable piece of printing recently received from Barnhart Brothers & Spindler. I shall keep it on hand to refer to occasionally, and would suggest its value to all printers. It will help you to get away from some of the old-timers which you have used so often that you are disgusted with them.

✣ ✣ ✣

The booklets sent in by N. W. Hopwood, Frederick, Md., are characterized by faultless presswork, with handsome two- and three-color combinations on sepia cameo stock. The composition is also well laid out, though the selection of type faces does not please me in every case. On the souvenir for the First Baptist Church I think a far too liberal use has been made of text. Then, too, the text does not harmonize well with the extended face in which the body of the program is set. The latter answers the purpose very well, but if the text is to be used with it at all, it should be somewhat heavier.

The insurance booklet is commendable, barring only the fact that the two-color heads are scarcely strong enough. A slightly darker tint should have been used. There is a lack of harmony between the cover of the poultry booklet and the first inside page which is strikingly noticeable when one opens it for the first time.

The six-page folder of Ye Coloniale Shoppe, sent in by W. Arthur Cole, with the William F. Fell Company, Philadelphia, is well executed in every particular. The type is well chosen, and so is the brown stock, the India tint plate on which the cuts are printed and set on, and the sepia tone in which the cuts are printed. The engraver, too, has given intelligent and expert co-operation, turning out some plates worthy of the rest of the job.



No. 2

✣ ✣ ✣

A number of printers whose work has come to my attention are featuring the prompt delivery of goods at the promised time. This is a good point to advertise, considering the prevailing notion of the general unreliability of printers; but it is absolutely necessary for such an one to make good, otherwise his advertising will serve merely to emphasize the alleged rule in the minds of the general public. The man who gets his work out on time has certain advantages over his fellows; he is sometimes taken advantage of, however, by being given the rush jobs, which tend to disorganize a shop, and in which there is often little profit, while other printers get the work which can go through in the ordinary routine. I have written time and again about endeavoring to avoid the rush job as much as possible, and I believe most shops would be justified in charging a higher rate for such work. A laundry will often charge an increased price for "hurry" work, and there is no reason why the printer should not do the same; for there are few people who can do such jobs as

(Continued on page 126)

A Model Newspaper and Printing Office Building

DOUBLE cause for rejoicing was given to the Wakefield, Mass., Daily Item in its issue of January 16. The first, which the paper patriotically gave precedence and largest space, was the dedication of a new State Armory for the Richardson Light Guards, a crack military company, in which the city takes great pride, and the second was the occupancy, on the same day, of an elegant new home erected for the paper itself. The pen was not behind the sword in its victory.

The newspaper building is on a prominent corner in the center of the town and, as shown by the illustration, presented therewith, is of architectural beauty and the arrangement of the interior for convenience and comfort is model. Other papers contemplating building will do well to write to the Daily Item, as may be inferred and understood by the following description:

> It will be noted that the building is no skyscraper, but the foundation is heavy enough and the walls are constructed with the idea that some day additional stories may be built without disturbing the present ceiling or roof. The building is on the south side of Albion street, corner of Foster street, on the site known for twenty years as Grand Army lot. It is in the center of the town and all electric cars, except the Lakeside cars, pass the building.
>
> The office is on the entire Albion street front, while the composing section is on the Foster Street side, with the job cabinets on the south side. The stock room is in the southwest corner and the job presses are near the center, directly beneath a large skylight. The entire plant is practically unobstructed by partition walls, except glass partition, thus providing ample light. Twelve large plate glass windows, with working transoms and several smaller windows and skylights make the entire plant light and airy. About the center of the room are the large stones and frames, tables, wire stitcher, paper cutter, etc.
>
> The basement is cemented, and painted on sides and ceiling with white water paint. Recessed construction on the main floor near the windows on the north and east provide ample light in the basement, making artificial light unnecessary during the day. Beneath the book and newspaper presses foundations of cement and stone, four feet thick, have been laid, enabling presses to be run at high speed without jarring the building or injuring the presses.
>
> A lift is provided for the heavy forms and besides the wide stairway on the southeast corner, there is an iron spiral staircase near the northwest corner. There is ample room in the basement for more presses, when the time comes. Newsboys counters, filing sections for printing "jackets" and newspaper files, a paper baling machine and store rooms are in the basement. The steam heater is in the southwest corner.
>
> The presses are provided with individual electric motors and power is obtained from the Wakefield Municipal Light Plant. The service is very satisfactory and the power bills have proved to be within our estimated cost. Combination gas and electric lights together with six large Humphrey inverted arc gas lamps provide ample light.
>
> A convenient feature of the office is a large cut rack containing over 1,000 half-tones of Wakefield people and local views. These cuts are all numbered and catalogued. Racks for bound files of the Item, filing cabinets and ample drawer space, counters, etc., afford facilities for handling the business.
>
> The building is constructed of brick with cast stone trimmings. Bulletin boards are displayed on the Albion Street front, although the plate glass windows seem to give fully as good satisfaction in displaying ball scores, election returns, etc. All of the roof water is carried in pipes through the center of the building to the basement and thence into a drain, thus doing away with gutters and conductors. The open spaces between Grand Army building on the south and Atherton's grocery store on the west have been graded and concreted, and new concrete sidewalks have been made about the building.

In this building are found the essentials as to central location, attractiveness, convenience of arrangement for facility and expedition in forwarding of work, neatness, cleanliness, healthfulness, light and comfort, which we have heretofore frequently set forth and emphasized in these pages, for a model newspaper and printing office. Such a building not only helps to greater and better accomplishment, but secures confidence and respect and brings more business.

It may be profitable to add here that the other event, that of the dedication of the new armory, is handled in a most satisfactory manner, giving an account of the victories of the company in marksmanship, of the armory itself and of the banquet, omitting no worthy item of interest and illustrated with a splendid halftone cut of the building and equally excellent portraits of the offices of the company and of the regiment in which it is Company A, of the governor of the state and of the speakers on the part of the company and on behalf of the city, and last, but not least, of three surviving charter members of the organization, which was formed October 11, 1851. The ages of these veterans, respectively, are given as 89, 86 and 85 years, and as shown by the portraits they are still hale and hearty.

The oldest, Lieutenant Benj. F. Barnard, was the first man to report in uniform at the old armory, on President Lincoln's first call for volunteers, in 1861, and he served during the war as did also his younger compatriot, now aged 85 years.

The excellence with which these half tone illustrations and portraits are printed is worthy of note. Our thoughts in looking through the pages of this issue of the Wakefield Daily Item were as to how much of great interest there is to be found in every town or city for telling in a wide-awake newspaper, and how wide and profitable it is to spare no effort or care in the presentation of all affairs and institutions connected with the home city. Carelessness and scimpiness often ruin the effect of the narrative or portrayal of the most important event, but doing the very best possible gives interest, dignity and all else that commands approval and good will and that tends to ennoble or inspire.

COST SYSTEM MORE EFFECTIVE THAN AN EXPERT

If there were to enter your shop in quest of a chance to work for you a man who had the ability to comprehend, the ability of knowing how to make your working hours, each of them as they come round in the day's work, carry the load of all your charges for doing business, the cost per hour for rent, heat, light, insurance, taxes, bad debts, etc., and at the same time pay you a clean profit each hour over and above it all, would you think you were fortunate in getting such a man to work for you? Wouldn't you consider the possession of such a man in your employ the best thing you ever invested a good salary in? Wouldn't you keep him and say to him that if you couldn't get another like him, he could stay with you for life at the best salary he could get anywhere? I would.

Now the value to your business of such a person is just the value to you of this cost system which we are all talking so much about. It is the thing that not only does all these, but it also puts system in the shop, orderliness and efficiency in place of confusion, disorder and inefficiency.

* * * * * When you adopt it as a part of your working equipment, you will grow to look at things in the light of its teachings and you will be unafraid to charge the right price be it ever so much higher than you have been charging. * * * *

The real value which makes a piece of printing worth anything is put into it by mental processes mechanically demonstrated, and this ability is not less than that employed by professional experts. It is ability of the highest order, and as such it must be paid for accordingly. If printers do not charge for this higher value in their work they lower the people's estimate of the value of printing. And this is what has happened. The value of printing has been lowered by the printers themselves, beaten down by the estimate makers.

The question comes in here. What are you going to do about it? There is only one thing to do. Get together. The local conditions in the business here in your city, as it is understood by the printers in the state, is that cutthroat competition is widespread. There is no co-operation. The attitude of shop owners toward one another is destructive of confidence, upon which all things depend. You cannot do a thing to improve the situation here unless you first restore confidence. You must tolerate one another, associate with one another, respect one another and do these things honestly. The printer who in his community promotes respect among printers, is doing a real work not only for the printing business here but for the whole city. Do these things and the city and state and country will be benefited, its printers will be benefited, raised to the position of a dignified class in the business life here—President W. M. Castle, Green Bay, Wisconsin.

FIFTY-EIGHT YEARS

The Seneca Falls, N. Y., Reveille completed its fifty-eighth year of publication on December 13, and what is still more to be noted is the fact that, with that issue, Henry Stowell completed his fifty-fourth year as editor of the paper. He seems to think the event of little moment to the average reader. He rightly says, however:

> It is a long period of time in the life of a newspaper and, seemingly, in the continuous service of man in any calling or profession. These years in our course of life have been years of solicitude, anxiety, trial and care, but not without their compensating pleasures, enjoyments and triumphs. Among all the newspaper editors of the state of which we have any knowledge, only two exceed this length of unbroken service. The closing year finds the "Reveille" in a prosperous condition, and its editor in unusually good health. What more could we ask?

The paper is splendidly printed, good book stock is used and every line comes out clear, round, full and beautiful. In editorials and in locals, that are abundant in quantity and above the average in quality, for crispness and brevity, the publication could well be taken as a model by very many younger newspaper editors and publishers.

The matter throughout is of high character. The old style of four large-sized, eight-column pages, twenty-five inches in length, is preserved, but then, when a paper has continued in this form for so many years, there is some excuse for continuing in the same way. It would be like putting an old friend in disguise to many readers, who have come to know and love the old family visitor just as it is and just as it has been for three score years.

THINKING MAKES THE PRINTER

Setting type isn't the only function of a printer. Feeding sheets into a press isn't the end of his business. Both these things are incidental in the sense that they are common to every printing establishment. It is thinking that makes the printer.

Thinking makes your business successful. Right thinking is just as vital to this old Art Preservative of Arts as it is in the management of a transcontinental railway system or the development of wireless telegraphy.

You can't eat your breakfast, sit down in your revolving chair and increase your profits by looking out of the window: YOU'VE GOT TO THINK, AND THINK RIGHT.

This applies to the printing business just as much as to any other business. The reason why some printers don't arrive is because they think they don't need to think.

Equally impossible to expect every order to be completely laid out for us, with every detail specified, every type size indicated, every page plotted like an architect's blueprint.

We are the architects, as well as the contractor. Thought comes first. Action follows when we know just how the plan is to work out. Call it Thought, or call it Initiative—it matters little. Every order we take gives us a chance to use something new—new ideas, new combinations of old ideas, fresh thought, and always the best workmanship.—Warde's Words.

* * *

We have frequently had occasion to quote the favorite passage of Scripture of Benjamin Franklin: "Seest thou a man diligent in his business? He shall stand before kings; he shall not stand before mean men." Diligence means life, health, growth, acquirement, accomplishment and all good. There is certainly more contentment to be found in standing before and among kingly men, than in standing before and among mean men, who are the only kind of men who will associate with or listen to the idle, vicious, foolish vaporings and fault-findings of the idly contented individual, who is dead to all true or noble aspirations.

economically as when given a reasonable amount of time in which to execute them.

* * *

I do not seem to have the name of the one who sent in some specimens from the office of The News Publishing Company, Middlebourne, W. Va. From the bunch I have selected the office letterhead as being especially commendable, and am showing it here. It is in two colors, the rules in green, and the type in brown.

The arrow has come to be a prominent — not to say overworked — factor in all classes of advertising. This little circular I am showing to illustrate a wrong and inefficient use of the arrow. The matter with it is that the tail is entirely too prominent, dividing attention with the point, and distracting it from the thing which it is hoped to emphasize. This could be improved by making the tail shorter, taking the feather end farther from the point, and allowing the latter to stand out conspicuously.

Here is a delightful piece of work which has the imprint and watermark of the Roycrofters, though I do not know the name of the individual workman who sent it in. It is in red and black and was sent out as a holiday greeting to the bank's patrons, this serving to explain the wreaths at top. This, by the way, is a most attractive utilization of the wreath ornament.

We are passing through the season of banquets, bringing with it some handsome pieces of the printer's art. Three which I have before me are the souvenirs of the annual banquet of the Chicago Typothetae, the monthly dinner of the Philadelphia Club of Printing House Craftsmen, and the banquet of a Ben Franklin Club which is without identification as to time or place.

The first of these is done in white deckle-edge Strathmore — rough for the cover and smooth for the inside pages — with mottled end papers. The cover has a "collar" turned down from the top, with a cameo of Franklin embossed upon it. The printing is in subdued sizes of Caslon Old Style, with red initials and rule border in gold.

The feature of the Philadelphia product is the fact that an embossed bronze plate is inserted in the paper at front and back. A hole is cut in the paper for this plate to show through, the plate carrying a flange by which it is pasted to the back of the sheet. The sheet is printed only on one side, and uncut, so that the back of the plate is concealed, except from the curious.

The third folder is less elaborate than the others, but is up to the top notch of neatness and taste.

H. Emmet Green sends from El Dorado, Kan., a bunch of printing which leads me to believe that he has had a wide experience in various parts of the country. A number of cities are represented in the specimens shown, including New York, Brooklyn, Philadelphia, Pittsburgh, Chicago, Omaha, and Denver. I refuse to believe that these cities are going to a small Kansas town for their printing — although I am free to say that there are a host of printers in these metropolitan shops who could learn much to their benefit from Mr. Green; so I suppose the fact of the matter is that Mr. Green has adopted the continental plan of rounding out his technical education by periods of work in some of the best shops of the country. That he has profited by his education is evident at first glance. The dignity and refinement of his work, the accomplishment of unusual effects by the simplest means, all mark him as a printer of unusual genius and skill. Take for instance the Johnson & Morrison letterhead. It is a simple black and white; the type faces are commonplaces in almost any office; and yet such balance is preserved, such harmony is achieved, that it is restful to the eye just to look at it.

The Johnson & Smith card is another instance of the refinement of balance and harmony. Note particularly how the heavy ornament balances the lines of text at the top, so that there is no suspicion of the card being top-heavy. Note also that the word "Printers," in italic on the right half of the card, and the names of the firm in the lower left-hand corner, balance each other and at the same time save the card from being coldly symmetrical like a geometric design. In this respect it is superior to the card of the Argus Printing Company,

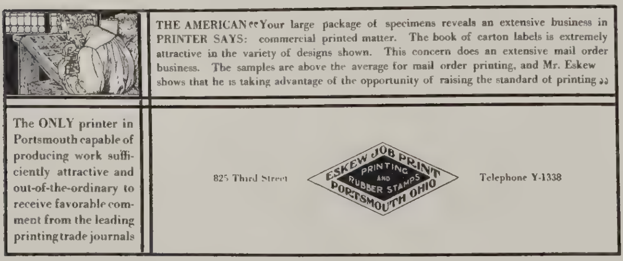
The comments on samples of printing given by the trade journals are frequently used in the publicity matter of the printers whose work is mentioned. Here is the way Eskew does it, at Portsmouth, Ohio:



THE AMERICAN PRINTER SAYS: "Your large package of specimens reveals an extensive business in commercial printed matter. The book of carton labels is extremely attractive in the variety of designs shown. This concern does an extensive mail order business. The samples are above the average for mail order printing, and Mr. Eskew shows that he is taking advantage of the opportunity of raising the standard of printing"

The ONLY printer in Portsmouth capable of producing work sufficiently attractive and out-of-the-ordinary to receive favorable comment from the leading printing trade journals

BUCKEYE PRESS ASSOCIATION

The Buckeye Press Association, a consolidation of Ohio Editorial Association, organized 1852; Hocking and Ohio Valley Editorial Association, organized 1885; Buckeye Press Association, organized 1896, and the Ohio Publishers' Association, will hold the seventeenth annual mid-winter meeting at Chillicothe, Ohio, Thursday and Friday, February 27 and 28, 1913.

Thursday afternoon will be devoted to addresses relating to the costs in the printing office, under auspices of the Fifth District Division, Ohio Printers' Federation (Cost Congress).

Thursday evening a complimentary banquet and ball will be tendered to the Association by the Chamber of Commerce of Chillicothe. The banquet and ball will be held in the handsome new assembly hall of the Order of Elks, where the business meetings of the association will also be held. Governor James M. Cox, one of Ohio's successful newspaper publishers, will be one of the speakers at the banquet.

Friday morning will be devoted to a visit to the various local business and industrial enterprises of the city. Chillicothe was Ohio's first state capital, and there are many places of historic interest in and about the city. No more interesting place for the meeting of the newspaper publishers and printers could be found in the state than this beautiful city, located among the picturesque hills of the Scioto Valley.

The Chamber of Commerce and local publishers and printers are exerting every effort to give all visitors a royal welcome and extend generous hospitality.

Friday afternoon and evening will be devoted to papers, addresses and discussions of subjects of interest to publishers.

Senior Students in the School of Journalism of the University of Missouri, with members of the Faculty, visit St. Louis newspaper offices.

EFFICIENCY

Let me give you a definition in four words. Efficiency is a higher percentage of net results. It is not more hustling and more hurrying and more driving and more frenzied business. It's how to work with less energy — not more; with less effort — not more!

The capitalist puts first his capital — his dividends. The trade union puts first the working men and the wages. But the first thing in importance is the job. And neither the capitalist nor worker can have as high dividends or as high wages as they ought to have, until they put an end to their senseless fighting and begin to think of the job!

Think of the job, and you will raise dividends, and wages, and salaries.—Herbert M. Casson.

WHAT THE COST SYSTEM DOES

S. A. Kyser, Before the Southeastern Cost Congress.

"Briefly, it replaces the existing rate of efficiency by a higher rate. It gives an absolute check on every employe. It gives an absolute record of every machine. It gives absolute knowledge as to the costs in every department. The result is that the whole mental attitude of the proprietor is gradually transformed. He now has a backbone instead of a wishbone.

"It informs you that you need additional equipment. When you look over your time sheet and find that it took John Jones two hours to set a letterhead that should have been set in one hour, you naturally mention the matter to John, very politely, of course. When he comes back at you with the statement that he spent an hour ransacking your old plant looking for missing letters and picking three or four live forms in the operation, you have your answer. Result: You buy ten dollars' worth of new type and next week two letterheads grow where only one grew before. An increase at that particular point of 100 per cent in efficiency.

My Father Has the Cost System

"The cost system gives you this same invaluable information in each and every department.

"It gives you exact knowledge as to the cost of each individual job, and knowledge is power in this as in everything else.

"Knowing your cost beyond peradventure, you are in a position to either get more money for a present unprofitable job or else throw it out the door; and you will do it.

"The value of a cost system is indicated by the fact that no shop ever giving it a good, fair trial has ever dispensed with it.

"Cost system users are unanimous in declaring that when a cost system comes in the door various unfortunate conditions fly out of the window."

Robert S. Denham, Cleveland, Ohio,
The Man Who Installs Cost Systems

ESSENTIALS IN JOURNALISM

By Harry Franklin Harrington, Director of Courses in Journalism, Ohio State University, and Theodore T. Frankenberg, Ohio State Journal

8vo, cloth, 300 pages, illustrated, $1.75

A TEXTBOOK for all young people desiring to prepare for practical newspaper work, written by men with years of experience in actual reportorial and editorial work. Its principles have been further tested through years of class work, with gratifying success. Designed primarily for the first and second years in colleges, it is suitable for all who have a high school education or its equivalent.

The book aims to combine the practice and the philosophy of all routine newspaper work and takes up in turn each phase of editorial activity. For the benefit of the teacher in English who may not have had actual newspaper experience there are appended a series of assignments, stories to be written out, articles to be put in approved newspaper form, and other practical exercises calculated to differentiate newspaper writing from other literary activities.

In plan the book follows the natural evolution in newspaper work and the development of the student's mind. From the simple work accorded a beginner it progresses steadily to the forms assigned only to tried and trusted men. Throughout the work the student is shown, not only the thing to do, but the why of it, and the standards set are those of the average newspaper office, the one in which ninety per cent of all students will have to do the work for which they are preparing themselves. The mechanical side of the newspaper has not been forgotten, and the book is more profusely illustrated than any work that has yet appeared on the same subject. The illustrations are an essential part of the text.

NATIONAL ADVERTISERS CAN PROFITABLY USE NEWSPAPER SPACE

The value of the work done in advertising in the School of Journalism of the University of Missouri is recognized in the leading editorial published in the current number of Newspaperdom, of New York. The editorial, in part, says:

"Out in Columbia, Mo., they have just put over a stunt — and newspapers everywhere can use the same idea and rake in bushels of ready money. I am pleased to record that the School of Journalism of the University of Missouri is responsible for a splendid success. Perhaps I had better give the credit to Mr. J. B. Powell, instructor in advertising, who worked out the entire plan.

Why Business Increased

"The little town of Columbia boasts of 15,000 inhabitants besides the establishment of the Victor Barth Clothing Company, a concern which has done a retail business in the same spot for forty-five years. But it seems that in that long period it has never done the smashing business that has been transacted during the past Christmas season, and the increase is attributed to the alertness of the manufacturing clothes-makers in scenting a good thing.

"Back in November, the Barth Clothing Company, under the direction of Mr. Powell, sent a letter to the clothing manufacturers from which it buys.

"In the University Missourian and the Columbia Statesman, which were the papers that carried the ads (and, by the way, both papers are well printed), I find that space was taken and paid for, over the Barth signature, as follows:

"Fitform Clothes, full page; Black Cat Hosiery, quarter page; Bull Dog Suspenders, quarter page; Eclipse Shirts, quarter page; Penn Overalls, quarter page; Stein-Bloch, two half pages; Crown Trousers, quarter page; Marx Made, half page; Holeproof Hosiery, quarter page; Heidelberg Overcoats, quarter page; Peck Clothing, two-thirds page; Cadet Blouses, quarter page; Sophomore Perfect Clothes, full page.

Newspapers and Hand Bills

"Now, let's analyze what this means. The combined circulation of the two papers is 5,000, for which Bull Dog Suspenders paid a few bucks more than 5,000 hand bills would have cost, and hand bills are thrown on front stoops, and hand bills are not entirely surrounded by pure reading matter — news matter. Then again, hand bills do not bring dealer co-operation. Can you imagine the instructions given to the clerks in the Barth store to get behind the advertised products and push them for all they were worth?

"All told, forty letters were sent out, over half of them to national advertisers — many to exclusive magazine advertisers. Mr. Powell reports that favorable replies were received from thirty houses, seventeen having arranged to advertise in the local newspapers over the dealer's name this winter, the balance giving absolute promises of advertising co-operation in the spring.

A Big Sales-Plan

"There is a tremendous value in this kind of merchandising to all clothing and men's-wear manufacturers, and if I could organize the fifteen hundred smaller daily newspapers in the United States and place myself in charge as advertising manager of the bunch, I would direct each unit to get after local clothiers and department stores with this same idea, not only for a Christmas season, but with a spring and summer and fall and winter plan; and what's more, a Saturday and labor day and wash day — any day — sales-plan."

✣ ✣ ✣

CAUSE OF POSTAL DEFICIT

Frank! Not the low postal rate that magazines and newspapers receive, but the abuse of the franking privilege is the real cause of the postal deficit. Political campaign material was responsible for the difference between a postal surplus and a postal deficit for the fiscal year ending June 30, 1912. If all the matter which went free through the mails last year had paid postage at the usual rate it would have netted the government $20,000,000. About $3,250,000 of this amount should be placed to the credit of campaign material, read into the Congressional Record for no other purpose than free distribution. Why has nothing been done to correct this abuse? Because practically "everybody's doing it." The legitimate use of the franking privilege for public documents need not be interfered with, but its abuse in the sending of heavy printed matter, for purely political purposes, as first-class mail should be stopped. There would then be no postal deficit to be laid at the doors of the magazines and newspapers.—Leslie's Weekly.

✣ ✣ ✣

COURSES IN ADVERTISING AND AGRICULTURAL JOURNALISM

A course in retail and agricultural advertising will be given to students of the state college, South Dakota, next semester, under the direction of Prof. George A. Starring. It is expected that this course will help the embryonic business man to figure on advertising expenditures, to determine what mediums to employ, and to construct his advertisements. The importance of advertising in local weekly and daily papers and farm journals will be enlarged upon, with practical demonstrations in securing paying results.

During the first half year the Department of Commerce offered a special course in Agriculture and Industrial Journalism. This course is intended to teach students how to prepare industrial articles for publication in farm papers as well as daily and weekly papers. During the course numerous articles written by students have been published in reputable journals.

✣ ✣ ✣

UNIVERSITY OF WISCONSIN HAS LARGEST COURSE IN JOURNALISM

Given First Place for Number of Students in Report Compiled by Registrar Tombo of Columbia University

That the University of Wisconsin has the largest enrollment in its course in journalism of any American university is shown by statistics just compiled by Rudolf Tombo, Jr., registrar of Columbia University, New York, and recently published in Science.

The University of Wisconsin ranks first in the number of journalism students with ninety-five thus far this year; the new Pulitzer school at Columbia is second, with seventy-two students; the University of Indiana is third in size, with seventy students, and the University of Missouri is fourth, with fifty-five.

The total number of regular and special students in classes in journalism at Wisconsin this year will reach 160, the largest number since the course was established eight years ago.

Johnson's Ghost

Earl H. Emmons

EVERYONE admitted that Johnson was "queer." From the time he came to work on the News until the time when his position was left vacant, no one heard him speak so much as three words at one and the same time, two being about the limit, and there were always long rests between such conversational outbursts.

Where Johnson came from, who he was outside of just Johnson, what his past might have been or his future aim could be was but a matter of conjecture. He had come among us very quietly, very quietly placed his name on the call board, showed up every night, if not signed up, quietly departed to — somewhere, or if he was marked to work, very quietly sat down and turned out the longest string of any operator in the office.

By degrees Johnson worked to the head of the list and then came the opening on the "lobster" shift. Johnson took the "sit" and went on the job of setting "dead horse" and dope between twelve and seven, and waiting for the always expected and unexpected "scoop" which might materialize after the night force went off duty.

A "lobster" on the Star usually held the job down from one month to three, depending upon how badly he needed the money and how long his nerves would stand the lonesome grind. Johnson was on the machine eight months and then one morning in mid-winter the day bunch showed up and after turning off the gas on his "mill" they pulled the end of the hose from Johnson's mouth and the organization buried him.

FRANK W. HEATH (See Page 114)

For a time after this incident the Star necessarily worried along without a "lobster" for the very good reason that all the available men on the board simultaneously decided on a different location and pulled their slips.

It was not until Blake went on the "lobster" trick, however, that "things" began to happen. Blake — a tobacco-eating, booze-fighting, dirty-shirted, all-around "bo," who made a specialty of sleeping in graveyards in the summer and wasn't afraid of the devil himself (the regular one, not the print-shop variety).

When the day operator on the "lobster" mill started his machine one morning he was grieved and peeved when an assortment of some eighty mats plunked down en masse, beautifully decorating the front channels and causing him fifteen minutes of cuss-punctuated delay.

When the same thing occurred the next morning the day key-puncher called the machinist; the morning after that he called the foreman, who in turn called Blake. The foreman, however, was considerate.

"Blake," he said, "there have been some kicks on the way you leave the mill in the morning. Now, if you have a personal scrap with the day operator, that's not my business, but let's not have any more work like that."

Blake grinned. "Say, what you tryin' to hand me?" he asked. "If it's a kid, I bite; what's the answer?"

"You don't know?"

"As innocent as a new-born babe; that's me."

"Well, in plain words," replied the boss, "the day man claims 'someone' runs the keys on him. It's happened three mornings straight."

"He says I do it?" demanded Blake. "Why, say, I don't know the boob except by sight; what'd I want to — I'll knock his block off."

"All I know about it," said the foreman, "is what he has told me, and I saw it myself this morning."

"Then it's on the level?"

"Certainly is."

"Well," replied the "lobster," "I don't know whether I'm loose in the attic or he is, but I'll watch and if I catch myself doing sleep-walks you can get me a guardian."

The next morning Blake purposely waited until the day force came on to work. He stood by No. 4, the "lobster" machine, when Dunn, the day man, started up. There was a slight grinding, a tightening of belts and a flood of mats rattled down.

"I'll be damned," exclaimed Blake, and walked disgustedly away.

"What do you think about it now?" asked the foreman, who had noted the performance.

Blake looked puzzled. "All I've got to say," he said, "is that I'm either drunk or crazy. As far back as I can remember distinctly I never touched the mill after I knocked off at seven."

It was Dunn who here entered the conversation. "For my part," he said, "I don't believe Blake had anything to do with this, because he wouldn't have any reasons. I can't imagine who — or — say, I don't want you fellows to think me nutty, but you know — well, are you superstitious?"

"Superstitious?" laughed the foreman, "why what the — good heavens, man, do you think he —— ?"

"I don't know," replied Dunn. "It's a mighty peculiar business, and you know he was sort of 'queer.'"

"Aw, you guys make me sick," growled Blake. "Now I'll tell you what I'm goin' to do. When I finish the grind tomorrow morning, I'm goin' to sit right down and keep my eyes on that mill from seven till you get here, and any hokus-pokus stuff that gets by me will have to travel some considerable."

It was an uncommonly dark, dreary night when Blake came to work. He had been a few minutes late in getting down and the night force had left to the last man.

A sort of half rain, half snow was falling outside, accompanied now and then by gusts of wind that whipped and howled around the building and crept in around the doors and windows. Blake was feeling grouchy.

"Devil of a night to drag a guy out of his hay," he growled at the machine. "This job is gettin' my goat."

From the start No. 4 worked badly. Time after time the distributer stopped, the metal squirted and everything went decidedly wrong. He could have worked on another machine, but Blake was going to "see it through." After the metal got to squirting systematically and regular, he turned the gas down to cool it off. It ran better then and Blake pounded the keys for several minutes steadily, forgetful of the low gas pressure until the noisy breakaway told him he had left the fire down too low and the pot was now frozen up.

Cursing heartily he arose and found the hose. As he attached it to the cock on his machine he happened to think — the hose dropped to the floor and Blake was surprised to see his hands tremble.

The next instant he laughed and recovered the tube. "Hell, I guess I've got 'em tonight," he said. "Just because a boob used this bicycle tire to cash himself in is no reason why it ain't a perfectly good hose to heat up with. H-m, to think that a guy —— "

A large rat scampered across the floor and Blake jumped.

"Zowie!" he exclaimed, "I'm gettin' as nervous as a old woman on crutches. I guess I'll feed while she's heatin' up."

He procured his lunch, which he carried since the nearby restaurant had closed its doors, and sitting down at the machine proceeded to enjoy it. He felt better after that and presently forgot about the "queer" operator and his sudden taking off.

He remembered after he had finished his stretch, however, and determined to see if anything unusual occurred, turned off the machine lights and went over to the copy desk, where he could command a view of No. 4.

There was a great story on the front page of the evening paper which was lying on the desk. Scare heads told how a prominent man had committed suicide the day before, going the gas route. Blake was deeply interested, when suddenly he sat up straight and listened.

A series of faint clicks were coming from the direction of No. 4; such a sound as a person would make running his fingers over the keys of a dead machine. Blake's heart almost stopped as he strained his eyes to see the keyboard of the "lobster." All was dark in that corner, but with an effort Blake forced himself to his feet and started toward the machine. As he did so there came a soft thud, he dimly saw the swivel chair rock back and forth as if someone had just risen from it. Gritting his teeth he strode to the machine and switched on the power. A shower of mats dropped. The next moment Blake was on his way down stairs.

"Hm," said the foreman, when he saw the wild-eyed "lobster" a little later, "that's the first time I ever heard of a ghost monkeying around at seven o'clock in the morning."

"Yes, but it's always dark up there," said Blake. "Darn a dump anyway with windows on only one side. You know it's always dark back there where the machines are. Maybe he — ah — can't tell when morning comes."

The foreman consulted with some other members of the force, with the result that Blake was coaxed to work the coming night and, several of the fellows promised to be on hand early the next morning to see the strange things.

"You needn't be nervous, Blake," said the boss. "Nothing seems to happen until after you quit, and we'll be around by that time."

"All right, I'll take the chance," replied the operator, somewhat reassured. "I guess 'he' won't try to work while I'm on the job. But say, you guys better be here on time, 'cause I don't calculate to hang around after I get through."

* * * * * * * * * * *

"Anything happened?" asked the foreman, when he and three of the day force showed up two hours early.

"Not yet," replied Blake. "She's been goin' good all night, but you know 'he' don't start in until I quit."

"Well, you can stop now," answered the boss, "and we'll see if 'he' shows up. But it's a darn fool ghost that don't know enough to get back into bed at daylight."

After shutting down the power Blake carefully switched off all the electrics and the early morning light showing faintly in the east was scarcely noticeable in the machine end of the big dark room.

The men grouped themselves around the copy desk, where the could obtain an unobstructed view of the haunted machine. The foreman was seated a little in front of the others and in hand held a pocket electric flash-light.

Several minutes they waited, scarcely breathing, every nerve strained to the utmost to catch the first sound.

"I tell you it's not the right time to be ghosting," whispered the foreman to the others.

Then, as if to give the lie to his words, there came a faint click, click from No. 4. The men all heard it and started in the direction of the machine. It went on for some moments, and then the foreman leaned forward, slowly raised his hand and pointed the flash-light. The next instant the bright streak shot out, held for the fraction of a second and went out as the foreman fell back in his chair convulsed with laughter.

"Blake," he exclaimed, "I've laid your ghost. Did you see it?"

The others had not.

"Come here," said the foreman, "and I will show you something."

Crossing to No. 4 he threw on the power switch and was greeted by the usual collection of mats.

Switching on the lights the boss carefully examined the keyboard, then turned to Blake.

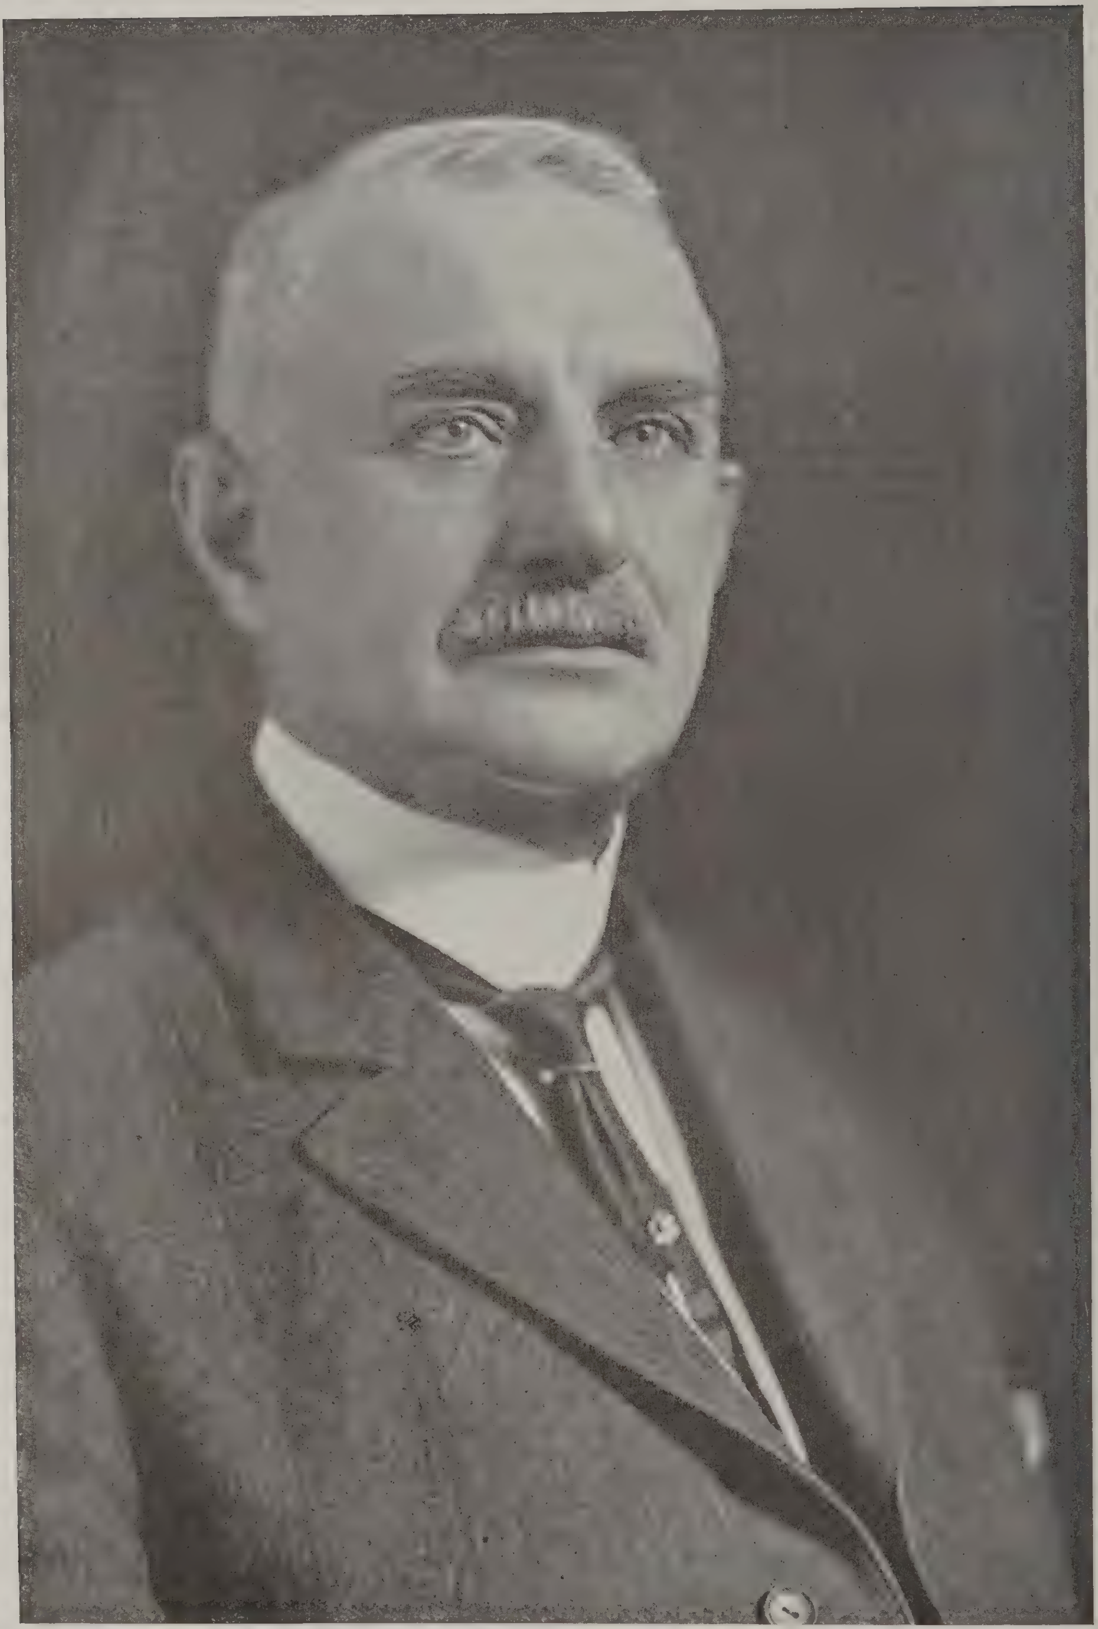
"Since when did you start carrying your lunch?"

"Why, I don't know. "I've been carrying it a week or so, I guess. Every since the hashiery across the street closed up. There isn't any other feed joint near here."

The foreman chuckled. "And you eat it right here on the job, don't you?"

"Usually," answered Blake. "Most of the time I don't stop at all, but eat while I'm working. But, say, is this a cross-exam. or what? I don't see —— "

"No," cut in the other, as he looked Blake over carefully. "No, and I don't see, either, taking into consideration that yawning gap in your physiogomy, I say I can't see how it is possible, but the fact still remains that with all your expanse of feed trap you do miss it occasionally and drop some few crumbs which shower the keyboard. After you are through work, the "spirit" of Johnson, which seems to have gone into a certain wise rodent of the place, comes forth in search of a hand-out, jumps upon your chair, and from there to the keyboard, where he is sure of picking up a square meal. Now, if you move your chair back away from the machine or hang a bucket under your chin to catch what you don't eat, you won't be troubled by 'ghosts.' Come on, boys, let's all go have a drink — on Blake."



WILLIAM THOMSON

Printers' Machinery Co , Fisher Building, Chicago.

WILLIAM THOMSON PRINTERS MACHINERY COMPANY

Fisher Building, Chicago

An "Open Letter"

After a business experience of thirty years in New York, and being about to transfer my business activities to Chicago, the more Western metropolis, I feel that, as a reminder to old friends, and as an introduction to new ones, a brief outline of my business career will not be out of place.

For about twenty-five years I have been actively and intimately engaged in the business of the manufacture and sale of printing presses and other presses and machinery connected with the printing trade, first as a member of the partnership, doing business under the name of John Thomson, and next, since 1891, as a director and general business manager of the corporation, which succeeded said partnership, known as the John Thomson Press Company of New York.

Of that corporation, I have also been its secretary or treasurer, and secretary and treasurer, since its organization, and am now a director and secretary of the company.

My experience in connection with this company, and more particularly, my success in selling the presses of the company, manufactured first by the Colt's Armory Company, of Hartford, but later at the company's own factory, made me intimately acquainted with the printing and kindred trades, doing business with our New York office, and I confidently refer to the many patrons and customers of the Press Company with whom it has been my pleasure to have had dealings.

For about twenty years past the John Thomson Press Company has had a branch office in the Fisher Building, Chicago, for the sale of its presses, a fact well known to its many patrons and the trade generally. A corporation has recently been formed in the state of Illinois under the name of the "William Thomson Printers Machinery Company," which will continue the business of that branch and will add to that business, dealing in all machinery incident to printing and kindred trades, and will be under my immediate and personal supervision.

Kindy observe that, in writing the foregoing for publication, and in so far taking its readers into my confidence, I have in view this object, to-wit: to give assurance that in transferring my operations from New York to become a part of the energetic activity of the more western metropolis, which promises soon to be the center of the printing business of the United States, I propose to give the full measure of my experience and undivided personal attention to the business; and I bespeak with confidence the continued patronage of former friends, and the assurance of a ready access to, and a kindly welcome from, a host of new acquaintances.

We are pleased to state that arrangements have been made with Mr. Frank J. Shead, who is at present manager of the John Thomson Press Company's Chicago office, to continue his services with the new company, and I am sure this will be highly pleasing and satisfactory to the trade, for, while he has not been connected with the printing press business very long, he has certainly made a very favorable impression on all with whom he has come in contact, either in person or through correspondence, and I vouchsafe the longer he remains in the business, the better will he "take" and many new, satisfied patrons will be added to his present long list.

Presses and all parts thereof, manufactured by the John Thomson Press Company, or known as Colt's Armory Presses, will be constantly kept in stock, ready for immediate delivery, and we will be prepared to make repairs and answer all inquiries with reference thereto, from our office at the "old stand," Fisher Building, Chicago, where we will be pleased to see our old friends, and make the acquaintance of new ones.

Yours very truly,
WILLIAM THOMSON.

✢ ✢ ✢

THE MULTIPLE MACHINE ENDORSED

The Merganthaler Linotype Company has issued from its New York office under the title, "A Striking Endorsement of the Multiple Linotype Machine Idea," a booklet of twenty pages that contains, as the title indicates, endorsements of the quick change Model 8, three magazine Linotype. These letters are all addressed to Messrs. Crittenden & Hulse, experts in printing office equipment, in response to a general letter sent out to the users of the machine last Spring, when they were called upon in their capacity of efficiency engineers and expert counsellors in printing for a large publication in New York, to give directions as to machinery as well as to methods.

They recommended the multiple machine and to fortify themselves with requisite, reliable information, they turned to the users of the machine. The responses were immediate and were enthusiastic in extolling its merits. The Merganthaler Linotype management sought and secured permission to publish these letters, and the fact that they were entirely voluntary and written in a friendly and accommodating spirit, to give reliable information to a firm entirely independent of and having no connection with the Linotype Company, in order that this firm could rightly inform their clients, greatly enhances their value as disinterested opinions and brings an unqualified endorsement to the multiple machine idea.

These letters are interesting in themselves and also by reason of the wide territory they cover and the variety of offices that they represent. The requests were, as to how the machine worked in each plant, to what extent used on ads and for a few samples of ad work. Many of the letters not only stated the facts as to how the machine worked but gave the reasons why. As an illustration, Mr. C. H. Frost, manager of Courier News Pub. Co., Plainfield, N. J., wrote, "You are perfectly safe in recommending the No. 8 Linotype for ad and job composition. It is especially good in ad composition. The reason for this is in the universal ejector blade and the universal knife block. This knife block enables a 24 point figure to be cast on a 12-point slug, and is useful in ad composition by giving these large figures at the ends of lines, such as are commonly used in the set-up of department store ads." Other points were made by other letters and all were highly complimentary.

✢ ✢ ✢

PUBLISHES NEW DEPARTMENT MAGAZINE

The Advertising Department of the Burroughs Adding Machine Company has issued to the salesmen and sales managers of the company a new department magazine, "The Clear Signal."

The magazine is in the nature of a "Sales Bulletin," but is more particularly devoted to getting the salesman to co-operate with the advertising department along the line of getting him to follow up more efficiently the prospects developed by the efforts of the Advertising Department.

It combines all the features usually found in magazines of this kind and at least one feature that is entirely new. This consists of small quarter page advertisements written to "sell" the salesman on different projects of the Advertising Department.

C. C. Casey, Assistant Advertising Manager, is editor of the first number. The magazine announces itself as "occasional" and does not claim to be as "periodical" as it is live.

TWENTY-TWO STATES IN THIRTY DAYS

Miller Saw-Trimmer equipments shipped into twenty-two states within a period of thirty days speaks emphatically of the high esteem in which America's printers hold this versatile composing-room machine. Many of these were trial orders, yet not one out of the lot was returned. These are the firms who have "Millerized" their plants within the above period:

Canada — Pinhey & Co., Ottawa; Herald Printing Co., Hamilton.

Connecticut — Bulletin Co., Norwich.

Washington, D. C. — Carnahan Press.

Georgia — Appeal Publishing Co., Atlanta.

Illinois — Charles J. Anderson, Rockford; W. J. Anderson Printing Co., Chicago; John Anderson Publishing Co., Chicago.

Indiana — Courier Publishing Co., Evansville; Terre Haute Publishing Co., Terre Haute; Indianapolis Typesetting Co., Indianapolis.

Iowa — Telegraph-Herald, Dubuque.

Louisiana — Sendker Printing Works, New Orleans.

Massachusetts — Telegram, Holyoke; Courier-Citizen Co., Lowell; Haverhill Gazette, Haverhill.

Michigan — Evening Press, Lansing; Evening News, Saginaw.

Minnesota — Jones & Kroeger, Winona.

Nebraska — Nebraska Printing Co., Lincoln.

New York — Southern Tier Publishing Co., Binghampton; Mergenthaler Factory, Brooklyn; Buffalo Enquirer (second), Buffalo; Brockway Co., Watertown; George B. Miller, Rochester.

North Dakota — Times-Herald Publishing Co., Grand Forks.

Ohio — Leader Publishing Co., Alliance; Raisbeck & Co., Cincinnati; Braunwart & Brockhoff, Cincinnati:

Oregon — Register Publishing Co., Eugene.

Pennsylvania — Evening Bulletin (second), Philadelphia; Dispatch, Shamokin; News Publishing Co., Wilkesbarre; Times-Leader, Wilkesbarre; Gilbert S. Jones, Reading; Grit Publishing Co., Williamsport.

South Carolina — News & Courier, Charleston.

Tennessee — Commercial Appeal, Memphis; Brandon Printing Co., Nashville; News Publishing Co., Chattanooga.

Texas — Rein & Sons Co., Houston; E. L. Steck, Austin; Times-Herald Printing Co., Dallas; Enterprise Publishing Co., Texarkana; Blaylock Publishing Co., Dallas; Valliant Publishing Co., Texarkana; Herald Publishing Co., El Paso.

Virginia — Lynchburg Progress, Lynchburg.

Washington — E. E. Beard, Vancouver.

Wisconsin — Post Publishing Co., Appleton; State Journal Printing Co., Madison.

STEEL FURNITURE

We present this week, pages 81 and 82, the first of a series of four presentations, on inserts, to run in our issues of February, March, April and May, of Hamilton Steel Furniture and Hamilton Wood Furniture. The reading matter of these inserts pertain principally to details of the construction of the Hamilton Steel Furniture and will constitute the first publication of any such information.

This matter will prove intensely interesting and informing to all printers and especially to those who are seeking for the improvement of their plants by the addition of steel furniture. The study of all methods for the bettering the means of carrying on the work in the mechanical department is always profitable and to know of the methods of construction is to understand, the better, all points as to durability, accuracy and the working qualities as to smoothness, adaptability, economy of space and all other matter as to working methods and the why.

The study of construction is pleasing and satisfying. A thorough knowledge of construction is in every way helpful and too little understanding of the same leads to carelessness in buying and neglect in using. The facts given this month prove how carefully every detail has been planned and carried out in order to secure strength, durability, accuracy and the working of every part, every case in a cabinet, smoothly and right to the thousandths of an inch.

PHILADELPHIA CLUB OF PRINTING HOUSE CRAFTSMEN

The Philadelphia Club of Printing House Craftsmen held its regular monthly meeting and dinner on January 9, 1913, at the Continental Hotel. A most sumptuous dinner was served, of which nearly a hundred members partook.

As this was election night, the club did not secure one certain speaker, but instead Mr. Stinson, the retiring president, called some of the acknowledged authorities in the various crafts, who are members of the club. Among the members called upon was Mr. John R. Bevan, who gave an interesting talk on "The Relation of the Engraver to the Printer." His talk was interspersed with many remarks of wit and caused many laughs. He brought to the attention of the pressman the necessity of him knowing more about plates and their makeup.

Another called upon was Mr. Ralph Ezekiel of the Feister-Peven Press, who spoke on "The Relative Value of Speed and Efficiency." Some of the other speakers were Mr. Harry Wigo of the Curtis Publishing Co. and Mr. Samuel Shearer of the Beck Engraving Co.

The secretary's report for the year showed that the club was in a most healthy condition, both financially and numerically. The officers elected for the ensuing year were: President, Halver T. Sorensen; vice-president, Harry Wigo; treasurer, Harrie A. Sackett; secretary, Norman E. Hopkins. The board of governors were Samuel R. Carter, Adam M. Joyce, John R. Bevan, A. D. Lake, George S. Dunkelberger and Wayne S. Shantz.

Mr. Sorensen took the chair and gave a short outline of the work of the coming year, saying, "It is my expressed belief that a greater good can be done this year than ever before as there is a closer feeling of harmony and good comradeship throughout the club and that if we had more evenings devoted to the discussion of the difficulties arising, by men who could give their practical solution, as was done this evening, a greater good for all concerned would result."

The meeting was then turned over to the entertainment committee who had prepared a most elaborate program, one of the talent being a singer from the Metropolitan Opera Company.

N. E. HOPKINS, Secretary.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

Printing Art Suggestion Book (monthly, $1) } **$3.50**

OFFER No. 2

National Printer-Journalist (monthly $2)
Printing Art Suggestion Book (monthly $1) } **$2.50**

The Printing Trade News

The Printing Trade News, 64 pages, is published weekly and has a very comprehensive business news service from all sections of the country. It deals entirely with the affairs of the business office and the executives. It collects weekly beside printing house news, that of the binders and rulers, the electrotypers, engravers, trade composition houses, the supply trade paper houses, lithographers, etc., has a business fiction story each week, patents of interest to printers, and editorially reviews important doings of printers and publishers during the week.

The Printing Art Suggestion Book

This is a monthly publication issued by the University Press, Cambridge, Mass., containing examples of typographic and other designs intended to assist the printer and those who are printing in the choice of color schemes, inks, and papers. It contains samples of standard papers, as well as novelties which are brought out from time to time by the various mills. It is full of ideas and suggestions for typographic design, display, and color schemes.

READ THIS EDITORIAL FROM THE *PRINTING TRADE NEWS*, ISSUE OF DECEMBER 17, 1912, IT CONCERNS YOU

A GREAT NATIONAL PRINTING EXPOSITION

The opportunity to co-operate in an effort which will dignify the printing industry is offered in the great exposition to be held in New York in April under the title of the National Printing Machinery, Publishing, Advertising and Allied Trades Exposition.

The plans and arrangements for the exhibition are in charge of Harry Cochrane, a trained manager of expositions, who is accustomed to do things of this sort on comprehensive lines, and who has taken up the work of showing the industry in all its ramifications in a very thorough and broad manner.

A favorable opinion of any industry is largely formed by the progress it can show at such national expositions, and it means much to the trade of this country that this exposition is truly representative of our methods and the advancement of our manufactures.

Invitations to attend this exposition have been sent to foreign countries, and especially to the Latin-American Republics of South and Central America. But it is in our own country, where so much printing is done, that the greatest interest should be aroused. Judging from the support being extended by printers' organizations, the exposition promises to be a grand rally of printers, newspaper owners and advertising men.

The American Newspaper Publishers' Association and the Associated Press will be in session in New York during the period of this exhibition, and the National Printers' League will hold a convention to further its labor-dealing plans. The New York Master Printers' Association is actively working for it, and the New York Typothetae Board of Trade has given assurance of support. The United Typothetae of America, the National Ben Franklin Club, the International Association of Electrotypers and the National Employing Engravers and National Lithographers' organizations should all give their heartiest support to the exposition, as it will undoubtedly prove one of the most educative efforts in the history of the industry. All these national associations might well arrange some sort of rally in connection with it.

The manufacturers who will have exhibits at the Grand Central Palace (and every responsible one should have) on their part must do their utmost to assist in getting the knowledge of the breadth of this exposition to the trade.

The individual printer, publisher, electrotyper, engraver, advertising man (and others allied with the industry) should all plan to make New York and the exposition their Mecca in April, 1913. Business men engaged in any of the lines who might never otherwise visit the metropolis of the continent would do well to plan to visit the National Printing Exposition next year, for they will find opportunity there to inspect the greatest exposition of printing machinery and results of printing the world has ever seen.

For space prices and other particulars apply to

HARRY A. COCHRANE, President

Phone Gramercy 724

200 Fifth Avenue, New York

Printing Advertising and Publishing Allied Trades EXPOSITION

Including all kinds of Printing - Lithographing - Bookbinding Machinery & Supplies - Office Equipment-Advertising & Circulation Methods

Officially endorsed by the **Printers' League of America,** Ben Franklin Club of America, New York Master Printers' Association, Electrotypers' Board of Trade of New York, the Sample Card Manufacturers' Association, and the Employing Electrotypers and Stereotypers' Association of New York. Held coincident with the conventions of the American Newspaper Publishers' Association, Associated Press. and Printers' League of America, and with the co-operation of the various advertising clubs and leagues.

A B Cartwright

New Grand Central Palace, New York City
April 19th to 26th, 1913

will reflect the progress that has been made throughout these affiliated industries in the last twenty years.

They are all co-operating to help make this show the greatest of its kind that has ever been held in the world.

The various importers and exporters, consuls and foreign chambers of commerce are also co-operating with us and distributing our literature throughout the world so as to interest the foreign dealers to attend, and it is being impressed on these people that this particular event presents the greatest opportunity they have ever had to view under one roof all the up-to-date machinery, processes, systems and methods NECESSARY to people in the above lines of business.

The Bureau of Foreign and Domestic Commerce of the Department of Commerce and Labor, at Washington, are printing our articles and invitations in their Daily Consular Reports.

The Mergenthaler Linotype Company are sending out, in conjunction with their January Bulletin, 50,000 tickets to printers throughout the United States and Canada, and an article in the Bulletin will advise all printers and publishers to arrange their trips to New York so as to be here in April, during the show.

The Lanston Monotype Machine Company have arranged to send out 60,000 tickets to the trade, the Dexter Folder Company 30,000, and other exhibitors many more thousands, covering their mailing lists.

One hundred and fifty thousand tickets will be judiciously distributed by us through the different business houses, so that the buying public can view the great progress that has been made in the above industries during the last decade.

MANUFACTURERS AND SUPPLY MEN

To those of you who haven't arranged for your spaces, the question is, WHAT ARE YOU GOING TO DO ABOUT THIS? Are you going to be represented in this great international gathering, or are you going to be "penny-wise" and "pound-foolish" and let the cost of space stand between you and a large volume of new business? ARE YOU GOING TO EXERCISE FORESIGHT OR HINDSIGHT?

The spaces on the main floor of the Palace are selling rapidly and will soon all be gone. We have arranged for the SECOND FLOOR, but if you act NOW you can secure a choice location on the first one.

If you get in touch with me right away I will be glad to give you many more sound reasons why you should be represented here. Apply to

The Sun Never Sets on Our 40 Cent Ink. It is used all over the world. It has the best value for the price of any black ink on the market. It is a 75c ink trimmed down to meet popular demands. All its value is there and the printer gets it. Our 25c magazine black is built on the same lines, has the same fine working qualities. We have cover inks that cover. White that is white. Specify 1061 Red for the finest brilliant red ink made. Black Diamond News, cleanest news on the market.

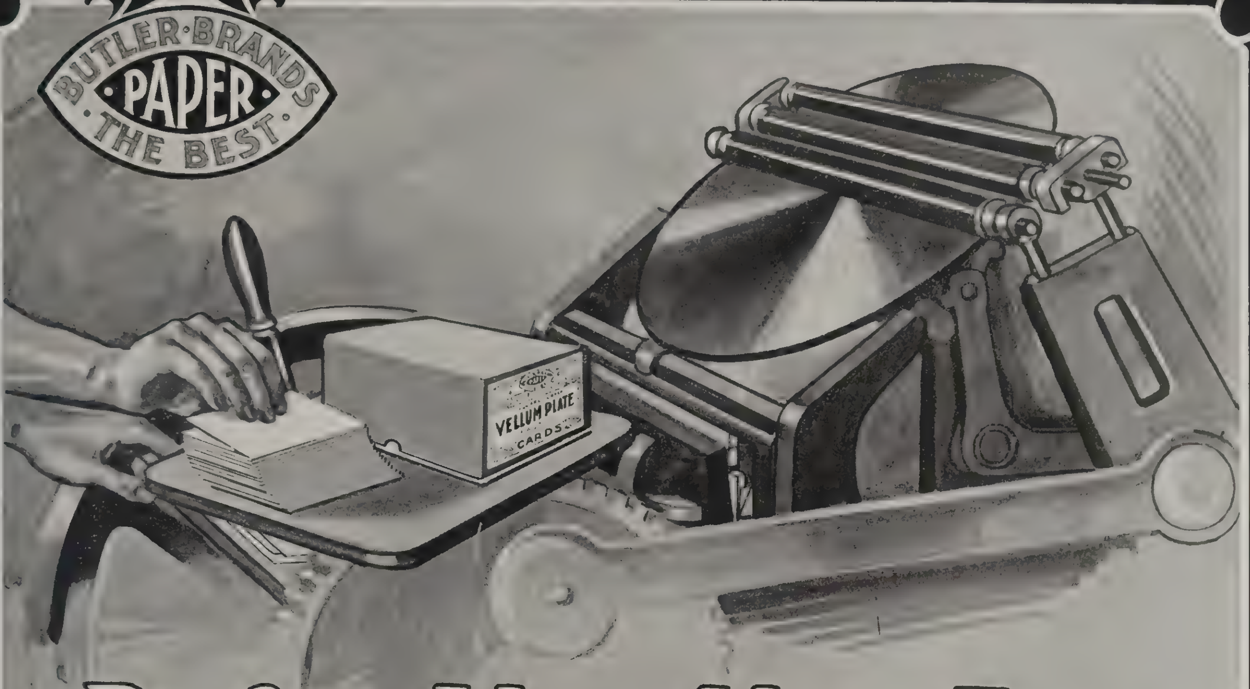
·THE BEST·



Before Your Very Eyes

CARDS of dependable quality, perfectly cut and attractively packed in handsome, strong boxes, are certainly worth more than the ordinary kind. We have made a study of the cut card business from the printer's standpoint and have been able to present a strong line which has been recognized for its superiority from the very first.

¶ If you could see the loads and loads of Bristols in large sheets being cut every day into cards—square and round corner, all plies, colors and sizes—and witness the expert packers and labelers, busy as bees, all helping to meet the demand for

"Butler Brands" of Cut Cards

you would doubtless marvel at the size of our business on this class of goods alone. You would understand, too, why we can put so much value into our cards at prices usually charged for indifferent goods.

With a box of our cards before you to inspect you will say we have the Cut Card business down to a science.

The Goal

has changed since the chariot-driver contested for Royal favor.

Yet the qualities which enabled the driver of those days to win are the qualities we are using today to win business. The race is no less spectacular because it employs brains instead of chariots.

The best that his horses and equipment could do under the most favorable circumstances—that was all the driver could ask.

This is the standard which BARNES-CROSBY COMPANY sets for itself—*the making of illustrations and printing plates which will give you the greatest service in the race against competion.* To do this we operate our Chicago plant day and night—employ a staff of over a hundred artists, and have extended our organization until it touches almost every great commercial center. These are the facilities we place at your command.

The Babcock Optimus
The Babcock Optimus

The Optimus does not gutter on heavy forms. It meets them without this or any symptom of weakness; it is the only one that does. Held by lugs cast on the side-frames, and bolted to them, the strongest impression girt in use supports six patented tracks. Construction details render girt and tracks supremely strong, and give a bed support without equal in rigidity. Pony sizes do not need as many tracks.

Beyond impression line more than two tracks are useless. Two of the six tracks under Optimus' impression are full length, with one short track under each bearer and two between the long tracks. We have proved decisively that for strength and endurance, for the easy maintenance of long continued high efficiency, this disposition of tracks is better than any other form.

The usual practice is four tracks each as long as the bed travel. The inside tracks wear most; there is no quick or reliable way to correct the resultant inequality. A true bearing for the bed across four tracks of uneven surfaces is impossible; impression becomes uneven, make-ready excessive, forms wear, and the press is no longer highly efficient.

Successful Optimus' strain resistance accompanies an equally enviable safeguard against wear. Each short track has three five-inch wheels, each wheel quickly adjusted to produce absolute uniformity of impression throughout the life of the press. The two long tracks are more quickly and effectively corrected than if they were a part of a four-track device. Equality of bed bearing is readily maintained at any age or use, a feature unknown in any other press.

The wheel tracks have three times the wearing surface of a straight track of same length. Each equals four feet of straight track. In this form it is possible to concentrate this four-foot track, or an aggregate of sixteen feet of track, under the point of intense strain. Its advantages are increased surface, greater durability, added rigidity, easier drive. Each wheel has a bearing pivoted at one end, with a coil spring under the other. Adjustment of each is quickly made by loosening the clamps; the spring forces wheel above its correct position; the bed is moved over it, the depression compelling accurate contact with bed bottom; bolts are tightened, and the wheel held positively without variation or deflection. It is a superb point in press construction.

A new style slider that annuls friction holds the rollers in the long tracks. A spiral mechanism is easily adjusted to change point of reversal so that guttering of the tracks is impossible no matter how long the press has been used.

Steel Cabinet K-625
Back or Working Side

Steel Cabinet K-850
Back or Working Side

WE SHOW hereon a few pieces selected from our extensive line of Steel Composing Room Furniture, every one of which embodies the latest and most modern ideas of efficiency in design and construction. We do not try to sell the same pieces for every plant we equip, for we realize that the requirements of no two printing plants are identical. Our line has therefore been designed with the idea of giving to each the **exact equipment** in design and arrangement needed to handle the work in that particular plant to the best advantage.

This necessitates a corps of real efficiency experts—men who can go into any newspaper or other printing plant, acquaint themselves with the character and volume of work done there, and design the individual equipment needed to facilitate its most economical handling and produce maximum results. We have such experts in our employ and offer their services to any employer aiming to bring his plant to its maximum efficiency.

We have rendered this service in many cases and can furnish ample proof of what we have done for others. A letter addressed to any of our houses will bring an immediate reply. If you are really progressive and desirous of maintaining a leading position in the printing world write us to-day.

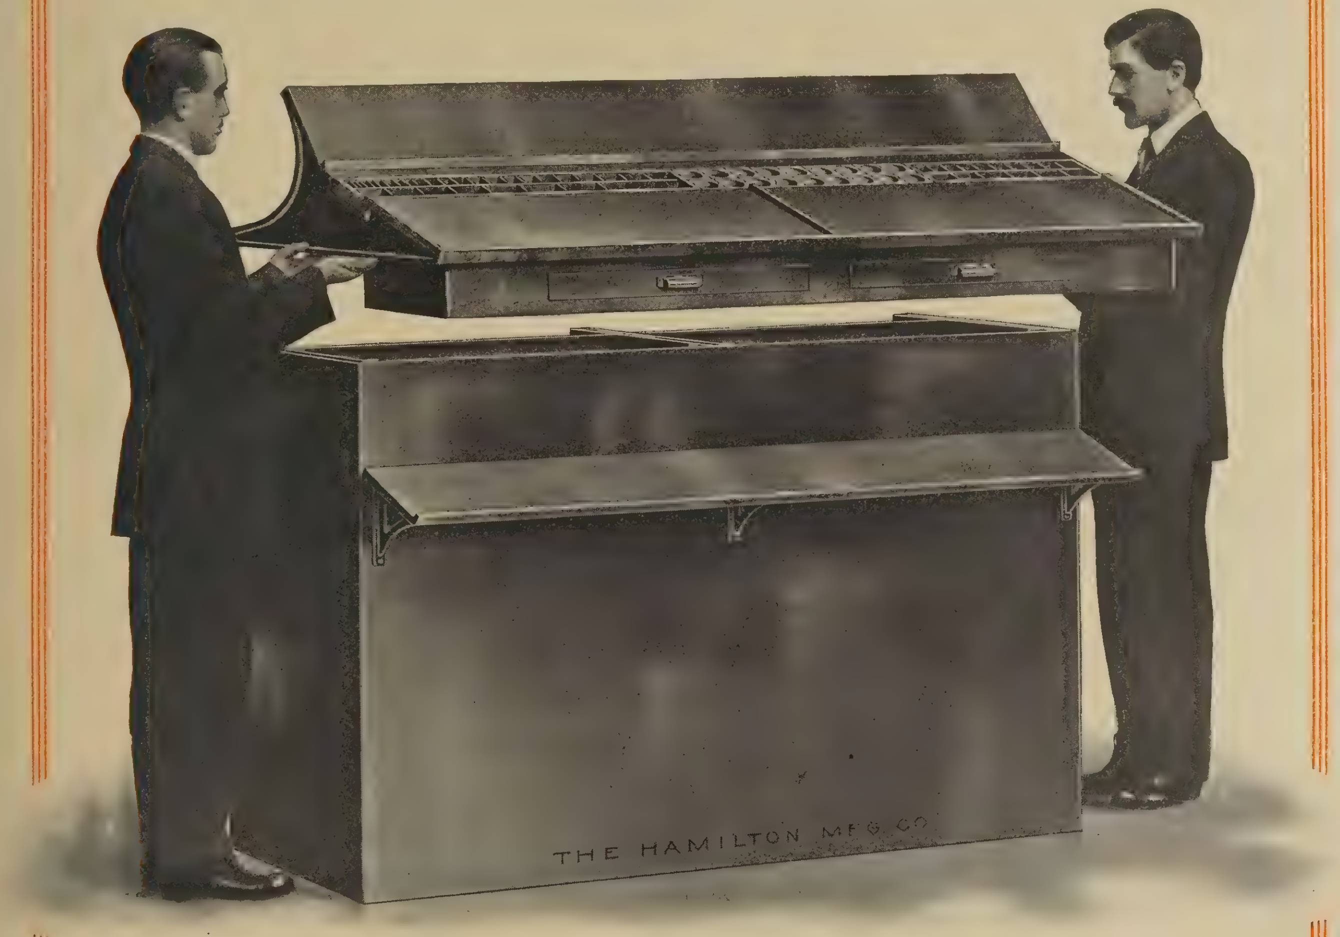
Hamilton Steel Furniture

CONTINUOUS utility is a feature of Hamilton Steel Cabinets. Realizing the great number of years service our Steel Cabinets are destined to perform and desiring to make them permanently efficient during that period, we have constructed them so the tops may be changed at any time to meet new conditions. Every printer who has watched the development of Composing Room Furniture knows that most changes in the past have been in the cabinet top. For this reason we make our cabinet tops removable as shown in the illustration, thus making it possible to change to any style made necessary by changed conditions in the Composing Room at some future date.



This is only one of the many features of Hamilton Cabinets that have been worked out with great care to protect the interests of our customers. Ask your dealer to show you the **HAMILTON STEEL CABINET.** You can tell it by the trade mark on every piece. When you buy, insist on furniture with our trade mark. Its your guarantee of satisfaction backed up by our unqualified guarantee of materials, workmanship, etc., etc.

THE HAMILTON MANUFACTURING CO.

HAMILTON GOODS CARRIED IN STOCK BY ALL TYPE FOUNDRIES AND DEALERS

A VALUABLE LINE GUAGE, graduated by picas and nonpareils, mailed free to every inquiring printer.

Hamilton's

MODERNIZED COMPOSING-ROOM FURNITURE

NOW AVAILABLE IN WOOD OR STEEL

Reduce the occupied floor space in your composing room from 25 to 50%.
Decrease the labor expense from 10 to 25%.
Decrease the wear and tear on material from 10 to 25%.
Increase the volume of product fully 25%.

That is an attractive proposition on its face, bordering apparently on the impossible, but hundreds of printers are now testifying that these results have been accomplished in their composing rooms after installing modernized furniture made in the Hamilton factories.

These progressive printing concerns will dictate the cost of printing. They are pioneers and progressives. They are solving the problem of cost finding and cost reduction by getting at the root of things.

The Cost of Printing Lies Largely in the Composing Room

Here is food for reflection. Let the efficiency engineer demonstrate what can be done. It is a simple proposition. A floor plan showing location of each piece of furniture; a set of drawings showing new equipment; an estimate of the cost. The signature of the printer on the order sheet is all that is required. The saving in cost production will pay for the new outfit in one year. Every printer should ask himself this question: "Shall I wake up now or wait until my competitor sounds the alarm with lower prices?"

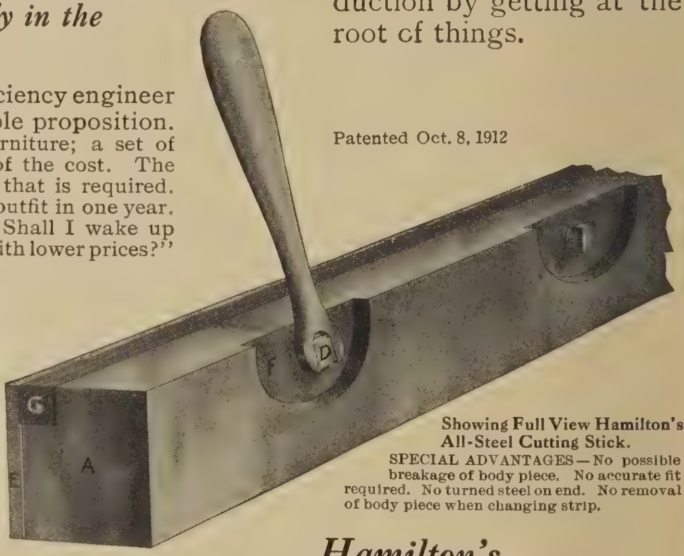
THE RUMFORD PRESS
CONCORD, N. H.

HAMILTON MFG. CO.
TWO RIVERS, WIS.

GENTLEMEN:—

The installation of the new furniture in our composing room has been very satisfactory. The result has been a great saving in floor space and a proportionate saving in the time of our workmen in handling the work. We have practically doubled our output of work and this would have been impossible to have handled only for the readjustment thru your suggestions. Had we attempted to continue with our old material, we should have had to either refuse the work we have handled this winter or doubled our rental expenses by taking extra floor space. All the furniture we have found to have been everything that it was recommended in material and workmanship and we are very well satisfied with the investment.

Very truly yours,
J. V. BRIDGE, Manager.



Patented Oct. 8, 1912

Showing Full View Hamilton's All-Steel Cutting Stick.
SPECIAL ADVANTAGES—No possible breakage of body piece. No accurate fit required. No turned steel on end. No removal of body piece when changing strip.

Hamilton's Improved All-Steel Patent Cutting Stick

Hamilton's Patent Cutting Stick has saved thousands of printers from 50 to 75% in their cutting stick bills.

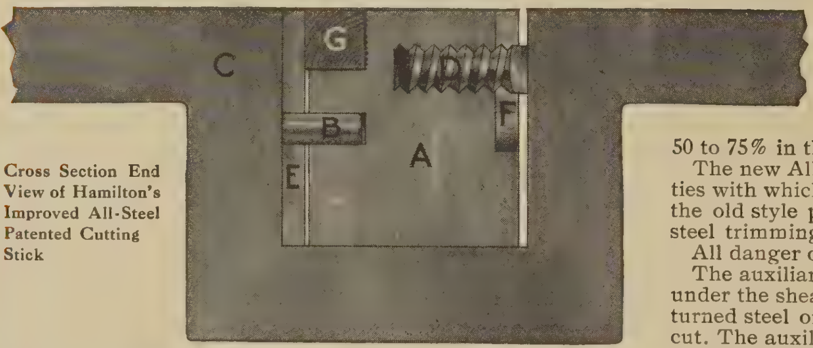
The new All-Steel Stick overcomes all the difficulties with which printers have contended in the use of the old style patent stick, partly made of wood with steel trimmings.

All danger of breakage is overcome.

The auxiliary cutting strip is firmly held in place under the shear of the knife without resorting to the turned steel on the end, thus providing a full length cut. The auxiliary cutting strip can be removed from the main body piece, and renewed or reversed *without taking the body piece from the machine bed.*

The main body piece is locked in the depression in the machine bed and the auxiliary cutting strip is secured in the body piece *at one operation*, by means of the screw bolts shown in the operation.

The Improved All-Steel Patent Cutting Stick can be supplied in any size desired to fit any paper cutter.



Cross Section End View of Hamilton's Improved All-Steel Patented Cutting Stick

Repeat Orders
Are the Final Test of a Machine's Efficiency

¶ During the past twenty months nearly a thousand three- and four-magazine Linotypes were installed.

¶ Fully ten per cent of these were REPEAT ORDERS.

¶ One firm tested the multiple Linotype idea by installing two machines. Later they put in **eleven more.**

¶ One firm started with five. Within ten months they added eight more of the same model.

¶ Forty-five other job and newspaper offices have used multiple magazine Linotypes for a time and expressed appreciation of their advantages by ordering from one to eight more of them.

THE MULTIPLE LINOTYPE WAY IS THE MODERN WAY

ALL two letter Linotypes are covered by patents having a number of years to run. No Linotype having two-letter matrices, multiple magazines, or the other improvements which place the present machine far ahead of the earlier models can be used without the consent of this Company.

Any person or persons counterfeiting or imitating our machinery, or using such goods, will be held strictly accountable in the courts.

MERGENTHALER LINOTYPE COMPANY.

SPEEDLIMIT BLACK INK

Speedlimit Black Ink
Means all the name implies.

It makes friends. The printer likes it and continues to use it after a trial. It has peculiar working qualities and real merit. Sets almost instantly, has good color and finish. Permits of printing, turning, printing and binding all the same day.

A good ink for most any job of high class work, and is escential when important to do good work—P. D. Q.

Concerning Chocolate Eclair Backbones

THE manufacturer who says, “Go get someone else in my line — and then come to me,” will NEVER loom
affairs of his trade because he doesn't **do his own thinking.** Being afraid to take the center of the stage, he is
for life “to sing in the chorus.” The big rewards in merchandising have always fallen to the PIONEER
man who dares — the foot that makes its own tracks, instead of **following** in another's. We suppose that when
blows his trumpet members of the Timid Brotherhood will huddle together, sheeplike, and wait until SOMEBOD
the way UP or DOWN. Let us hope that no practical joker starts a stampede in the wrong direction.

THE SHOW deserves your support; yes, we mean you, because it will strengthen, broaden and dignify a grea
try. But, it is not on sentimental grounds that we seek exhibitors. The SHOW was planned to make money for
for YOU, and it WILL. ONLY a few hundred dollars is asked for an unusual amount of concentrated publicit
attention of 25,000 interested Printers, Publishers and Advertising Men — that you cannot obtain by ANY C
METHOD AT ANY PRICE. We expected prejudice. We foresaw opposition. We looked for distrust from the
inhabitant” and the “veteran war-horse” who think that every NEW thing is a BAD thing, just because it doesn't
to their ideas.

BUT — you cannot advance one SOUND reason, one valid argument, why YOU as a manufacturer, or sellin
will not be benefited by displaying and demonstrating your line to 25,000 PRINTERS, PUBLISHERS AND ADV
ING MEN THAT HAVE COME HERE EXPRESSLY TO INVESTIGATE AND BUY. Think it over — talk it
sleep it over. We are confident of your decision.

The Size of Space and the Sighs for Space

WHETHER your SHOW space is large or small doesn't count a tenth as much as whether you are represe
some way. The SHOW lasts a full week. EVERY person attending will see EVERY exhibit. They ca
seeing YOUR display, any more than they can miss seeing the Palace itself. They will be so fascinated
magnificence of the building, its decorations, booths and exhibits, that they will LINGER LONG, while they ar
If you cannot see your way clear to engage a large space, ENGAGE SOME SPACE. Be where the buyer will
where your competitor will be. Be in the Atmosphere of ORDERS. **Fish where the fish gather.**

Will the Printer, Publisher, Advertising and Business Man Atte

HE WILL, because 50,000 have already applied for or received tickets to the SHOW by mail. Thousands m
be supplied with tickets by exhibiting houses. Is it conceivable that anyone interested, coming to New Yo
neglect to visit the Palace when he can obtain a ticket WITHOUT COST, either by writing us for it or from
he deals with? Would he use a theater ticket if you gave it to him? And, if he would attend a mere play for amus
sake, how much more likely is he to attend the NATIONAL PRINTERS, PUBLISHERS, ADVERTISING ME
ALLIED TRADES' SHOW, teeming with DOLLARS AND CENTS interest to him, and bristling with ideas, n
and helps, **applicable to his own business?** Never fear — THE PEOPLE YOU WANT WILL BE THERE, but tha
do you any good, unless YOU'RE THERE WITH YOUR LINE.

To the Man in the Office Marked “Private”

YOU deal with most customers at long range. Many of them you've never met. You know them only by **let**
ledger. Why not **meet** and **greet** them face to face at the SHOW? You will profit by knowing them per
THEY will profit by knowing you personally. A friendly hand-clasp will clasp your trade CLOSER and TIG
A tactful word, a cheery smile, a good-humored grip, will make them feel that you value their accounts ABO
mere dollars and cents consideration of self-interest. Get to know your CUSTOMERS — every mother's son of
and let them know YOU. The SHOW is the place to see new faces, old faces, big customers, little customers, an
CUSTOMERS.

Can't Keep Up With My Orders

THAT may be an **excuse** for not exhibiting at the SHOW, but it is no **explanation.** Are you in business just f
DAY? What about TOMORROW? Do you suppose that the manufacturers of “Sapolio,” “Kodaks,” “
Razors,” “Uneeda Biscuits” and a dozen other famed commodities in far wider demand than yours are not
behind in filling orders? But — they are building, building, building FOR THE FUTURE. They are constructi
wreck-proof ships of trade that will weather the waves of an industrial storm, **should it break.** AN OUNCE O
AHEAD IS WORTH A TON OF CATCH-UP any day.

For Space, Etc., W

FIFTH AVENUE BUILDING, NEW

tising and Allied Trades Exposition
, April 19th to 26th, 1913, Inclusive

People Will Look Me Up Anyway

H, THEY will, will they? Do you keep your salesroom open at night? No, of course not. The SHOW is open every night and until midnight. So, while you are confidently expecting Mr. Customer to call at your salesroom Tuesday morning, he is at the SHOW Monday night, looking at the displays of your competitors. Bad business, it. Poor judgment, that. Many "Closer-than-a-Brother" accounts are going to be separated from houses, who cannot won't see the folly of giving rivals a "look-in." The Prospective Buyer will come to the SHOW first. If you are not ere, your smiling competitor will be. Why let the price of a space stand in the way of keeping the trade you've got and tting a slice of the other fellow's?

You Don't Pay for This

SIDE from the dozens of **new accounts** that you will gain through the NATIONAL PRINTING, PUBLISHING, ADVERTISING AND ALLIED TRADES' EXPOSITION at the New Grand Central Palace, the fact that you **are** an exhibitor will give you hundreds of dollars' worth of **free** advertising. All the trade magazines give you minent mention on account of your being an exhibitor. We serve the exhibitor well. We supply him with invaluable lps. We **list him by name** in all our Show literature. We **identify** him constantly and conspicuously with the show.

Cut Your Selling Cost

UST three things contribute to the cost of modern production — the expense of **raw materials**, the expense of **manufacturing**, and the expense of SELLING. You cannot reduce the cost of raw materials because you have no hand in fixing the price. You cannot reduce the cost of manufacturing, because under-paid work-people MUST produce der-quality goods, and the quality is what you want and your customers demand. But — you CAN reduce the cost of ling, by displaying and demonstrating at the PRINTING, PUBLISHING, ADVERTISING AND ALLIED TRADES' XPOSITION, which brings the customer to you without salesmen's commissions, salaries, traveling or hotel bills.

Act at Once

RACTICALLY less than four months remain for you to arrange for YOUR display at the SHOW. Don't put off! Don't sow a crop of regrets. Don't be among the members of the "Wish-I-Did Club," who will wander dispiritedly up and down the aisles of the Palace, in it, but not **of** it, with the courage that came too late and hindsight that should ve been foresight. What excuse except false economy can you give for not supporting a merchandising project so rthy, so modern, so **unifying** in its effects upon all branches of a great industry?

The Watchers on the Fence

OU who intend to wait and see how the SHOW turns out and let the other fellow spend his money first, are openly confessing **weakness** and lack of **initiative**. You look carefully to the originality of your line. Why not the originality of your SELLING METHODS? Thousands of Printers and Publishers regard the Exposition at the Palace THEIR OWN SHOW. Some of them have written us, that whenever practical they will confine their purchases to the IOW EXHIBITORS. Then, where do you come in? With your alert competitor and his salesmen "on the spot." hat chance is there of this man getting to your salesroom, past the solid phalanx of exhibits at the SHOW, and past the my of hands eager to welcome him and to have his order? On the night of the first day of the SHOW many comnies will be CLAMORING for space. Save regrets and ACT NOW.

Accurate Cost Finding

By Edward U. Roper
250 W. 12th St., New York City.

[This series of articles on management, system and cost accounting is the outcome of many personal talks with the author extending through a period of nearly twenty years, and we feel as though a personal introduction and a bit of history of the writer would not come amiss.

Mr. Roper celebrated his fortieth anniversary in the printing business last June (1912), and is today standing on his feet doing a day's work at the stone, always capable and willing to do anything in the shape of work that is necessary.

His first years were spent in learning the different branches of the trade: composition, book and job, pressman, book binding, ruling and, in later life he has worked in or had charge of electrotyping, steel and copper plate printing, lithographing and process plate making, and while keeping in touch with the practical end of the work, has had a large experience with the selling and managing departments.

The knowledge thus gained has been carefully collated and thoroughly assimilated. A comparison of his personal experience with men in the same line, and a study of the work of the pioneers in other lines, has made him more than ordinarily capable and in some cases startlingly original.

Mr. Roper is now making a specialty of efficiency engineering and accountancy in the printing business, and with his usual push and energy, is studying the way others are doing in the offices in the East.

One of his ideas that we consider original and sound sense from start to finish is "that an efficiency and cost system in an office is no better than the man who has charge of it. You must have a man who wants a system, and wants it bad enough to sit up nights and work; a man who will convince the employer that he (the employer) wants it; and convince everybody in the shop that it is to their interest to have it; then give that man a system, and give him charge of the shop, and the system, and he will show you things that you never dreamed of." — Editor.]

TO THOROUGHLY understand a new theory it is necessary that a fair comprehension of the difficulties or inaccuracies of the old should be in one's mind.

The present standing of civilization and its trend cannot be intelligently understood or comprehended without a fair knowledge of the world's past history.

The present trend of printing and the dilatoriness of the employer in adapting himself to changes from the so-called art to a manufacturing standpoint cannot be understood without going into the past and studying the conditions and men at the time of the invention of printing, and also studying how the mere matter of printing or publishing separated and gave off the advertising end, and how the child has grown into the larger man; and how this child's management as a business proposition has become the one absorbing problem to the employer.

The condition of the earlier printer, scribe or author is so well known in a general way by everyone that it will not take many words to tell all that is necessary for an understanding of present conditions.

He was a poor sort of man among the fighting men, or the men who were striving for mere money, place and power, and attempting to advance themselves personally at no matter whose or what expense. Men who thought only of the future as it related to the place they might occupy, and who would not go into a venture except as they could see profit or benefit for themselves.

The men who invented printing were the students — philosophers — men who wrote of what the others had done and were doing; men who, in their humble quarters and work, were retainers of the fighting and money-grasping men, and who, in writing of the successes of one set of men, must see the failures and downfall of the many. Must see how short and fleeting was the success of the few, and how in the years that elapsed, the men who wrote and told of the things that were done came to be venerated among the students and literate more than the men who did the things. Now the lessons to be drawn from the study of their writings grew greater with the passing centuries until the writer and the lesson were all that was left. Homer is greater than the Iliad. The only question today is about the writer; the figures in the poem are mere puppets in the play for his manipulation.

Up to the discovery of printing the philosopher, poet and artist could go hungry and naked; go without a place to sleep, except such as he might earn by his songs or stories, so long as he were allowed to muse and write.

With the invention or discovery of printing all this was changed. To get his writings printed? Here enters the material. He must have a place to house his goods, his men and himself; he must have money or something to exchange for material on which to print his enormous edition. Never in the world's history has there been such a stride, such a jump in the amount of a product as at that time. Just think of it: From the production of a single copy to a full and complete hundred. We of today are not very much astounded to hear that a book has sold one hundred thousand, or that in special cases some books are being published in five thousand editions; but what would be your first thought if someone said that a certain book had sold ten million copies, or a certain publishing house had placed an order for five hundred thousand copies as a first edition. Yet this would not have as great effect on the paper world of today as that first order for one hundred copies at that time.

This demand for the material in his life; this absolute necessity for an exchangeable commodity, in this student, recluse, philosopher, with his high ideals, his love for his fellow men, his absolute abnegation of self, did not make him a warrior or a thief; did not send him out with an army to conquer his neighbor, it simply made him a beggar; a man trying to advance the interests and aims of his fellow man, but a beggar nevertheless.

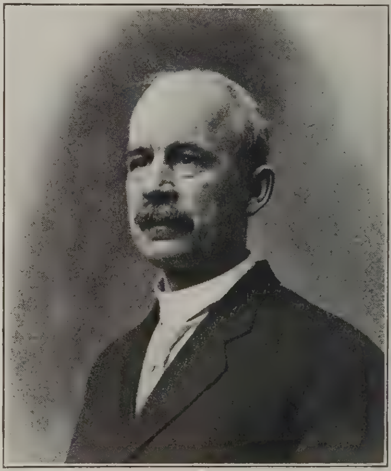
The first conditions, murder and theft, he could not adopt. What was the alternative? He simply must convince the king, lord, baron, pope or priest that it was the right thing, the only thing to do. Get out this book. If Homer (?) had made such a great and lasting fame getting out one book, what would he not do by being the sponsor, the father of a hundred. And as time went on how they cited precedent after precedent of the ones in this city or that who had become famous. How the story is told of the men who furnished the money, not of the men who did the work.

Can it be necessary to go further to show the origin of the spirit and the parallel between the conditions and the men of the then and the now?

With the origin of advertising as a department of printing and its enormous growth the conditions were made worse. The printer of today retains in a measure the ideals of his predecessor, while the manufacturer or business man is a combination of the fighting man and the money lender. The ferocity and strength of the one, combined with the trickery and shrewdness of the other.

See the printer (employer, solicitor and mechanic) putting all this energy to work to discover some new idea or some new way to state an old one, some new or old way in which to produce it; the intelligence and art to illustrate and make attractive, and then when the whole is complete how he will go and plead, coax, beg, to get one of the warriors of old to let him print it for his (the warrior's) benefit and glory; how he will agree to a certain stipulated price for the beautiful child of his imagination, and then go to his doggery, and make it better and better for the glory there is in it. And then: The world has not changed: The same ages old remark: Wasn't Baron Von Valkenstein kind and generous to help old Guttenberg with his new book? Didn't Field, Stone and River get out a beautiful booklet for their spring opening? Alas! The poor printer!

Go to a meeting of the printers today and listen to the beautiful words. Art-preservative; enlighteners of the world, advancers of civilization, promoters of the world's greatest enterprises; originators of the greatest thoughts; people's preachers. All the beautiful, and still the idea of what belongs to them has not yet entered. So full of words are they that they lose all connection with the parent idea, and they become, in a sense, self-intoxicated with the importance or grandeur of their mission. And while in this self-elated state the buyer plans the contract with a large percentage of the price to be paid in the "glory" coming to the printer.



Edward U Roper

Visit an advertising manager for one of the large enterprises; one that owes its great renown, and its success, to the printer, and what do you find. A man who has not risen to any idea of his true use or worth, but a man who is valued and values himself by the low price at which he can get his work done; or the amount he can get out of the printer for nothing. Never realizing that he can not climb high by digging a hole deep; never realizing that the smaller and more insignificant he makes the goods he produces, the smaller and more insignificant is he.

It is not the supply man, nor the paper man, that has made the poor printer. It is the lack of the man-idea, the commercial, the money-idea, in the printer that has traduced the whole fraternity, and brought the printer from his high estate (mental, for he never had a high material) to his present low condition.*

Renown is not success. It is necessary to impress this on your memory. The difference between these two words represents the difference between the printer and the manufacturer. Renown is the goal of each, but with the printer it seems to be first; with the manufacturer it is only wanted because of the additional profit he may charge to his commodity. The amount the manufacturer will pay for his fame is a definite and fixed quantity in proportion to what he thinks he can get out of it.

Before entering the field for manufacturing a line of goods, he makes a very careful estimate of the possible consumption; then makes reductions to bring this to a probability; on the basis of this consumption or amount to be produced in a year he figures the cost of manufacture; makes a liberal addition to this cost to cover any possible oversight. Goes into the market and finds the retail price on the nearest thing like his that he can, and then figures how much advertising he can afford to do to reach the end desired, and does about one-half of it.

How many printers go through a process like this before entering the manufacturing field? How many even in small towns ever stop to think of how much there is to do, and how many to do it? Are they going to create a demand for more by new ways and new ideas, or are they just going to fight for part of what is not enough for those already in the field?

How many employing printers go through a like line of thinking in regard to the possibilities of their own shop, and know the out-put of the plant if it were working to its limit; and in that condition what would be the manufacturing cost per labor hour and machine hour; and on this basis what can he afford to have for an office force: Manager, superintendent, salesmen,, and what can he afford to pay them? What is his wages roll under these conditions, and what is his fixed charge when idle?

I do not want to say there are none, but I have never met one who would entertain the idea of such information being useful. Much less the idea of having it, or knowing how to use it if he had. But this gives him just what he loses for every idle factory hour, and is a readily findable charge for each machine or man "idle hour."

I am trying to point out the things that are necessary to know, and of their relation to the cost of manufacture. The salary of the owner is so fixed, and more arbitrarily so, than that of his employee, for he may pay what he pleases from his own pocket as long as his money lasts; but he cannot go into his customer's pocket, and he must not add an unnecessary burden to his factory. If he does not do any more than a bookkeeper, he should not draw any more than one.

That this point is not grasped by one employer in a hundred is shown by the statement made frequently in meeting "That whatever an employer draws should be charged as cost against the manufacturing end."

How many ever have a rental, insurance, and interest charge against stock? How many have reduced this to a bulk basis and charged it against a piece of work that might be sixty or ninety days in the house? Even when they have an idea of making this charge the work one day in the house pays as much as that which is in six months, bulk for bulk.

How many ever charge for a standing lot of matter and the working material in it, and even those that do, do you think they ever make up the time pulling sorts and putting them back?

One could mention many such instances; they are only mentioned here in their relation to cost.

One more. Every time a piece of work comes in that was done in the office before, or what we call a "Home-re-print," the salesman looks up the former charge, reduces the price because of this condition, marks it "Follow copy," and wonders why it takes nearly three times as long to set it as it did before. You see the relation to standing matter.

Where does this cost go and who pays for it?

The cost of work in the factory must be carried against a job no matter what the selling price — and must be credited to the factory — or department, at its cost if you wish your books to balance.

Never specify absolute style or allow your customer to do so, if you can possibly avoid it, unless you are prepared to buy new material and charge it up as such.

In the finding of the burden charge it is necessary that each employee's time, direct and indirect, should be kept separate, so that the exact amount dollars and cents that goes into burden may be known. If it is only known that so many hours are direct and indirect, and the average put into the burden, you carry a much larger amount into the burden than is warranted. The most of the indirect time is from the low priced men, and by this average you make it appear that each man has had the same amount.

---

* The census of the United States as well as Great Britain shows that the printer occupies a lower place in intelligence, so far as can be judged by his reading or patronage of the trade papers, than any other class of mechanics or business men.

This is the reverse from figuring the wages and adding the burden — in finding the price to charge. In this part of the burden I am only speaking of what is lost by indirect labor, and on the basis that each man is to be charged to the work at his actual wages.

How far has the manufacturing spirit entered the printing business? All the power, wear and tear, and a large percentage of the ink are charged in the pressroom to the presses by the hour, direct time. In the large majority of pressrooms, makeready is fully 25 per cent of the direct time, and in many it is fully 50 per cent. How much of either of these items is expended on a press standing still? Should not the total for a year of this expense be divided by the running time? This may not seem much in dollars and cents, but it is inaccurate. There should be charged to a piece of work in the pressroom: the actual wages paid the men, plus the burden as found per hour; the price of the press for makeready time per hour, and another price per hour running time. These three items can be figured as constants, and when the charge ticket is made up showing who worked on the makeready, it is only a matter of looking at the payroll to put down the price per hour, and the amount for the press in each class. The extra work is little more than in the present way, and it is more accurate.

The adding of all indirect expense and the pay roll together and dividing by the direct hours is wrong. If the same conditions were to repeat themselves next year, it would be right, but it makes the cheap labor carry the larger portion of the burden. This will be shown more fully later on, and the way to avoid it explained, but if you take any hourly cost you may wish and take the man's wages away, you will see at once the difference in the burden. Also, it must be seen that unless the conditions were exactly the same you would not get your burden paid.

As a preliminary to a full understanding take a small example. Your men have worked 100 hours, and the wages and all burden amounts to $1.25 per hour. This we will consider one week's work for three men of forty-eight hours each; 144 hours. of which 44 are non-chargeable; 1 at $24, 1 at $22.50, 1 at $17, a total of $63.50 for wages, and $61.50 for burden, on the basis that each had worked the same number of hours, and were always going to do so, the answer would be the same. That, of course, is impossible, but even so it has the objection that the high priced man is not carrying his share of the burden as it is distributed in rotation, 75c, 78c, 86½c. Each having worked 32 hours you get your $125.00 back, but the minute that is changed, for every hour over the 32 your high priced man works, you lose 7 2-3c, and the chances are that he will be the one to work on the average. This is the only showing that can be made in favor of this system. Every other condition, and all the conditions of actual work are against it.

By keeping the man and the machine time you have the knowledge whereby to charge the right penalty to a customer who holds a press, or to the job when held for any reason. If the pressman or feeder is working on some other job his time is charged to that; and the value of a press standing idle is not so great that there is liable to be a great kick.

The law of average may have to govern on large work, but on the small work, stationery, blanks, circulars, cards, and any job that is of necessity executed by one or two men it is possible to specify who shall do it, and in nearly all offices it is done by the foreman anyway. By having the men in the office understand the system by which you are working they will be perfectly willing to help. Especially the foreman. Let them know what the work is taken for, and your idea of who is to do it, and the reason. This course will remedy one of the greater evils: An ignorant mechanic (ignorant of the business end of the work) starting for himself.

The education of the mechanic is the one feature most essential to the elevation of the trade in a business sense, as it will be seen that it is the proprietor who has come from the factory, and not the one who has come from the selling force, who is responsible for price cutting.

✣ ✣ ✣

RIGHTS AFTER EXPIRATION OF COPYRIGHT

Some light is thrown on a publisher's rights after the expiration of copyright or patent protection by the findings in the case of G. and C. Merriam Co. vs. Saalfield (198 F, 369 U. S. C. C. A.) Here it is set forth that though the specific protection afforded by the Federal law no longer obtains, if the manufacturer or publisher has used a name of "apt description" so long and exclusively that it has become generally indicative of his product, he has the right to continue the use of such name and to be protected against unfair competition. But "the right to protection against unfair competition is incidental only to an existing business, and there can be no violation of such right except as there is injury to the business and good will through loss of sales or damage to the reputation of the goods."

Profits can be recovered by the complainant in such a case, says the court, only on the ground of the loss of sales. "But it may be presumed that the simulation was one of the causes that induced defendant's sale and prevented complainant's." The court goes further and declares that in case it is impossible to determine definitely that the alleged simulation did actually result in sales, nevertheless an accounting of profits may be required. From Printers' Ink, January 10, 1913.

In the case referred to an accounting was required and settlement was made.

An Improved Cost Summary Sheet

By Edward Gorman, Secretary Buffalo Master Printers Association

ON the day of its devising, form 9H was doubtless quite an achievement. At that time printers' cost systems were a new thing and most of the forms in use were crude and more or less incomplete. In the past four years, so many progressive printers have been studying cost systems, and so much has been learned about the keeping of costs, that one cannot help wondering why form 9H still continues in such general use without improvement.

The summary sheet is the most important form in the cost system. All other forms are used merely to get the data for the summary. During the past two years, I have often looked at our old friend 9H and wondered if certain of its evident deficiencies were ever going to be corrected.

I have seen some excellent summary sheets in use in certain plants, but each was devised for its own particular plant and was not well adapted for general use.

At last I got tired waiting for someone else to improve 9H and decided to do it myself. The result is shown on another page. The entire form is not reproduced, but enough to show the plan and arrangement. The sheet is made in two sizes — one in loose-leaf form, 9½x14, with space for eight departments, for small and medium sized shops and the other, with space for nineteen departments, in bound books covering three years, for large plants.

I call this the Buffalo Summary Sheet (form K1 and K2), as it was gotten out especially for use in the systems installed by the Buffalo Master Printers Association.

The sheet is not copyrighted. Any printer, or any person doing cost system work for printers, is at liberty to use it. If it is of any help in the efforts now being made for more and better cost systems, I shall be well satisfied. Since it will be cheaper to buy them in small quantities than to rule and print them for one's self, the Buffalo Master Printers Association will sell either the loose-leaf sheets or the bound books. If there is any profit, it will go into the cost system work of the Association and may help us to introduce other improvements in cost finding.

Investment Expense: Interest on Plant Investment		
Insurance		
Taxes on Plant		
TOTAL NOTE:—Interest on investment is figured at ½ of 1% per mo., and insurance and taxes at one-twelfth of total for year.		
Replacement Allowance: Figured separately for each department. See inside of front cover.		
General Supervision:		
TOTAL		
Department Supervision: When one foreman or Ass't Superintendent has charge of two or more departments, write name under this head and divide salary between the departments affected in proportion to time devoted to each, or to the chargeable hours in each.		
Department Pay Roll: Must include wages of all persons engaged in productive labor in the department and also any other help employed wholly in department, as proof readers, copy holders, helpers, distributors, janitors, errand boys, etc. Department supervision may be included here, if there is no division of labor between departments.		
Department Expense: All expenses incurred for departments and not included under heads above. See inside of front cover for partial list of items.		

Commercial Expense and Shrinkage: *Interest on commercial investment		
Stationery and Supplies		
Postage, Telephone and Telegraph		
Packing, Shipping, Delivery, Messengers, Car Fares, etc. (when not charged to individual jobs or stock).		
Donations and Charity		
Federal and Corporation Taxes		
Organization Dues		
Spoiled Work		
Salesmen's Salaries		
Commissions		
Traveling Expenses		
Advertising		
Other Selling Expenses		
Discounts and Deductions to Customers		
Bad Accounts (not less than 1%)		
Office Column Total		
Any Commercial Expense not included above		
TOTAL		
*Commercial Investment as used above, includes the following items: Cash and Bank Balances		
Accounts Receivable		
Value of work in Process		
Stock carried in excess of undue accounts for same		
TOTAL		
Interest on above total at ½ of 1%		
The items here included under Commercial Expense are often divided into two or more groups and distributed differently, but (except in special cases) there is nothing gained by so doing. Except Spoiled Work, all expenses in this group are for the same purpose:—To make possible or promote the commercial operation of the plant, and to turn its product into cash at a profit. Spoiled Work really belongs in Department Expense, and should be charged to the department where it occurs. But, since there is always some spoilage which cannot be easily cared for in that way, a moderate allowance, (say 1 or 2% of the month's sales) should be charged to Commercial Expense, and any especially heavy items to their departments, in addition. Estimates on spoiled work are usually far too low. Some plants report an average as low as ½ of 1%, but that is very unusual. The average in the ordinary shop is probably over 2%

Handling cost, per cent. , per cwt.		

No doubt this new form can be criticised in several particulars. I do not consider it at all perfect; but it seems to cover the ground and proves very satisfactory in use. It is as easily kept as 9H in any small office; for the parts of it one does not need are left blank just as with the latter. In fact, it is much more easily kept, since one has something to go by in compiling department and miscellaneous expenses. It has certain advantages over 9H for a shop of any size, and under any conditions where 9H could be used at all. It can be used too, without difficulty, in many plants where peculiar conditions must be provided for and where 9H would be wholly inadequate.

Perhaps someone will ask, "what is the matter with 9H?". It would take too much space to go into details. I will just ask the reader to take up 9H and look at the list of expense items, numbers 1 to 14. In how many systems, not kept by trained bookkeepers or accountants, do you suppose all operating expenses are entered under these fourteen heads? It can be done, yes. But I will venture to say that in thirty-five per cent of the shops using 9H all expenses are not entered each month, as they should be to get a correct cost.

The Cost Commission says, the printer should figure interest on his investment at six per cent per annum. But he does not do it when he uses 9H. He gets interest only on his department investment — on his plant. What about the hundreds of dollars he has invested in labor and stock on unfinished jobs, and what about the hundreds more in accounts receivable?

The printer pays for his labor in cash every week and it is usually some time before he gets this cash back in the payment for the job. Form 9H ignores all money tied up in this way and makes no provision for any return for its use. Why should one have interest for money invested in type or a press and not for that invested in wages and paper?

I will not, at this time, enter into discussion of the question of distributing what is commonly called general or overhead expense. It will be noticed that I do not use the Standard Uniform plan, neither do I use the "Denhamethods" plan; but so far as the new sheet is concerned, either the standard uniform plan or the "average hour-cost plan" can be used instead of the "sold-value-of-hours" (extended values) plan, if desired. I prefer the latter; but this sheet will permit one to use his own choice of methods and will adapt itself to almost any plant, large or small.

The second form shown ("Read This Before Making Your Summary") is a sort of instruction sheet which is pasted on the inside front cover of book containing summary sheets. We have not

READ THIS BEFORE MAKING YOUR SUMMARY

REPLACEMENT ALLOWANCE

This is more than just an allowance for actual wear of equipment. It should cover all cost of maintaining the plant at a fixed (or increasing) degree of availability for the requirements of its owner. The demands of one's business are constantly changing. From time to time, if the profit-earning value is to be maintained, it becomes necessary to make changes in the equipment. All this must be covered by the Replacement Allowance. When new capital is invested, it should be only for the actual enlargement of the earning capacity of the plant. Otherwise, the printer is consuming his capital and calling it profit.

The American Printers' Cost Commission, after careful investigation, have fixed upon certain rates of depreciation, which they tell us are as low as can be allowed with safety.

It does not follow that the full replacement allowance should be charged off from the inventory value of each machine or article. To do so, would unduly reduce the inventory value of machines which there may be no occasion to replace till worn out. The amount charged off the inventory, for wear and depreciation each year, should be figured independently of the replacement allowance.

The purpose of the Replacement Allowance (commonly termed depreciation) is to provide gradually for future contingencies, which are pretty sure to come in time, as well as cover loss by wear, etc. The purpose of depreciation charged off from the inventory is to cover loss of operative value which has already occurred. When the printer finds it necessary to discard a partially worn out machine, or sells it at a sacrifice, because of a change in the requirements of his business, the extra loss comes out of his inventory in a lump; but has been gradually provided for by the replacement allowance on his entire plant.

The rates agreed upon by the Cost Commission are as follows: Type, 25 per cent. per year on its original purchase price; stands, cases, stones, etc., 10 per cent; standard machines, like the well-tested makes of regular job and cylinder presses, cutters, etc., 10 per cent.

It is evident that the rate of 10 per cent. on standard machinery is rather low, when we consider how often nowadays a change of business requirements necesitates a change in equipment before machines are worn out.

The report of the Cost Commission was made several years ago, and fixes no rate on the many newer machines designed for high speeds or for complicated operations. There can be no question but that the rate for such machines should be considerably higher than for the old standard presses, etc., 20 per cent. would seem to be a fair rate for machines of this class, which are well past the experimental stage.

New machines, which have not been fully tested under actual shop conditions, are apt to prove unsatisfactory and be discarded in a few years; in which case they may have very little saleable value. It is well, on all very new machines, to allow 25 per cent. or more for replacement, until their value is established.

As a means of arriving at an approximately correct Replacement Allowance in each department, without tedious calculations, it will usually be safe to figure 1⅔ per cent. per month on the composing room equipment as a whole; and 1 per cent. per month on all other departments, if there are no high speed, complicated, short-lived or untried machines. Where such machines are found, allow 1¼ per cent. or more, per month, according to conditions.

DEPARTMENT EXPENSE

All shop expenses should be charged direct to their departments, so far as practical. It is manifestly impossible to enumerate all the items which may occur, from time to time, in the expense of the several departments. The following lists are for convenience only, and must not be regarded as complete:

HAND COMPOSITION

Proof Paper
Twine
Benzine
Lye
Ink
Rollers
Repairs
Brushes and Rags

MACHINE COMPOSITION

Gas
Supplies
Repairs
Metal Waste (3% of weight of matter set)
Paper and Water (Monotype)
Oil, etc.

FOLDING MACHINES, ETC.

Repairs
Supplies
Oil, etc.

A small allowance should be made in every department for miscellaneous materials and supplies of which no record can be obtained. All spoiled work of any considerable value should be charged to department expense, in the department where it occurs.

To make sure of getting all expenses into your monthly summary, a book of some sort should be kept, in which all expenses are entered and distributed by columns to the several expense groups and shop departments. This may be incorporated in the regular set of books, or may be an extra book kept for this purpose.

tried to make it complete, but have just touched a few points which are often not understood.

The Buffalo Master Printers Association has several other improved cost system forms. They were devised merely for our own use, but copies will be mailed to those interested, upon request.

EDW. GORMAN,
Secretary Buffalo Master Printers Association.

When I Was a Reporter

By a Civil Engineer

Breaking into the newspaper business was, in my case, synonymous with being "broke," and constituted the most panicky period of my life. Never shall I forget those cub days, when it took a real financial genius to keep enough unpunched holes on the meal ticket. I had left college with world-changing ideas, which seem to accompany every sheepskin handed out from the domain of "high brows," and in the college journal had written prolifically of the higher pulsations of life. Armed with a bundle of these I applied to various city editors in a city which supported eight newspapers. Those who did me the courtesy to read them — I think there was one — said that they were too sophomoric, and a few other disagreeable things, but offered no other encouragement. I saw them all in rotation; and in the meanwhile my father at home was giving illustrated lectures to my younger brothers and sisters on the follies of a college education.

In utter despair I went to a newspaper man, who was one of the most eminent in the town, and poured out my woes. He listened kindly, then picked out a few sheets of copy paper and began to write. These he handed me, telling me to follow him. He introduced me to the city editor and said, "Give the kid a chance." Then he took me aside and told me the notes were to the various city editors of the various papers and to get busy and see them all.

This particular city editor, a rather kindly man, told me to report to all of them daily, and that I would get an assignment before long. It happened, however, that it was an exceedingly sluggish period in the newspaper world, and for thirty days I made the rounds. If persistence wins I should have won; but success was not camping on my trail as closely as I might have wished.

Finally on the thirty-first day the city editor whom I had first interviewed called me over, gave me a little slip and told me to cover the story. My heart and head began to gyrate and I inwardly whispered "at last!"

It turned out to be a ministerial meeting, dry in the superlative. I went back to the office and wrote a rather lengthy affair, thinking it of some importance, but it was boiled down to two sticks. It looked to me like "breaking into literature," however, and I read it over a hundred times or more.

But things were lining up in my favor, for during the following night two desperadoes, under sentence of death, broke jail, taking the warden's wife with them. Getting next to this in the morning, I went to the city editor who paid the best price and reported for work. He really was glad to see me and handed me the name of a minister who was connected with the case by having offered refuge to the girls of the desperadoes after their imprisonment.

I sought out the party and with a kindly smile he told me that he knew absolutely nothing. I went back to the city editor and reported that he said nothing. Then he told me to write about three sticks on it.

Writing three sticks on nothing looked rather hard to me and I tore up several sheets of copy before I dared hand one in. It went through and was printed in the "extra."

Well, they did not capture those fellows for three weeks, and I kept busy working on both the afternoon and morning papers.

It was in this city that my knowledge of Latin stood me in good stead in a peculiar way. A high prelate of the Catholic church came to the city on an official visit, and an interview with him was much desired by the city editor. It happened, however, that the church dignitary was not on speaking terms with the English language, and none of the reporters knew the prelate's native tongue, so that the outlook for an interview of any length or moment seemed exceedingly slim.

When I was sent to college, however, my parents had fond hopes of my entering the priesthood, and my education for a time was directed along that line. I therefore had more than the usual amount of Latin, and acquired considerable proficiency in conversing in the dead language. And so I jumped into the breach and went and interviewed the churchman, carrying on the interview entirely in Latin, much to the surprise of the interviewee.

Another dull period soon set in and I was in the depths of despair, when an editor pointed out to me an opening on a small weekly paper as reporter, and the chance of a steady job won me over. The pay was so small that I kept in touch with one of the city papers which had been very good to me, and handed in a little on the side. This small place was an industrial town, where every workingman worked for one concern, and afforded little in the way of news. An ice cream social was an event, and an arrest by the police force of one man, was an epoch. I hate to relate how I padded and invented, but with the assistance of some boiler plate I managed to fill the four-page sheet. Just think of the leading article under a four-line scare head, "Ice Cream Social on Prosser's Lawn," and the story giving the minutest details as to the fair and delicate hands of the damsels engaged in the labor of serving the repast. To cut a long story short, I lasted there three months. It was in the last month that I landed my first scoop for my city friend. Going through the town about dusk I met the village doctor, who informed me that they were going to sell a new town a few miles above at midnight. I waited to hear no more, but dashing to a 'phone I called up the city paper and told of my find. I was told to hop right in. Getting out my bicycle and borrowing the dark lantern from the chief and only police officer, I started.

I found many people on the ground who actually believed that the sale of lots would start at midnight, proclaimed by the boom of a cannon. Some were camping right on the stakes on particularly choice lots. My training in details down to the manufacture of ice cream and fancy cake bore fruit that night, for I let loose every metaphor I knew in describing the midnight birth of the new town, down to the details of clothes worn.

When I made my first report to the city editor, he told me to get on a wire which he had hired and telegraph the story. At 2 a. m. he told me that they would hold forms for more if necessary.

I did not sleep that night, but haunted the station for the first papers. There was my story, in the first two columns of the first page, with a continuation on the inside. I don't know how often I read it over.

My next adventure was in the West in a town of about 20,000. Through misadventure my funds had melted to twenty-five cents. It was a mining country and I thought seriously of getting work in the mines, but seeing the sign of a local sheet I thought I would give it a trial. I went in and introduced myself as an erstwhile pencil pusher, and was told that one of the men was sick and that they would be glad to give me a chance.

The other reporter on the paper had a mere bowing acquaintance with the English language, and the four stories and fake which I wrote made a hit. The editor was an eastern college man and we became friends, and through his influence I later obtained a very desirable position on the staff of a mining journal. One day he asked me if I could write up a musical story, telling me confidentially that his lady friend, whose father had made several millions in the mines, was returning from Europe, where she had been French and German polished in music, and was about to make her debut as a singer at the local "opery" house. I told him I could, and that I would do my very best. I obtained a description of the gown to be worn, kind of flowers, and the musical program. I wrote that story about three days ahead of time, but thought I had better go to the concert so as to get a little more atmosphere. I went, but had no reason to change my story. The catch phrases in the story were, "In its enthusiasm the audience fairly hurled its applause" and "She sang as if she thought the words rather than as if produced by human sound." Naturally I introduced some more effective properties describing the castanet in a little Spanish ditty.

That story launched me in society. I was requested to lecture before the young ladies' seminary, wrote the leading article for a new magazine just starting, received a personal visit from the debutante and her brother, was wined and dined, and one week later danced at the swellest society function. I believe had I remained in that place I would have married an heiress.

Speaking of matrimony reminds me of the time I worked on a middle western paper, my connection with it coming to an end very unhappily, as I shall relate. As is usual, there was a woman in the case. I had been in the town long enough to get well acquainted in a certain social set, and especially with one particular young lady. Gradually I got to spending more and more time at her home. The engagements there and on my reportorial work sometimes conflicted, but I managed to get out satisfactorily until this last occasion.

I was scheduled to report an address before the local branch of the W. C. T. U. on this particular evening; but as the attraction in the other direction was especially enticing, I sought out the lecturer in the afternoon and got a look at the manuscript of the address. Making a synopsis, with liberal extracts, freely interspersed with "applause" and other expressions of enthusiastic approval, I considered my duty done and sought the society of my fair charmer.

A heavy storm arose, however, and made it necessary to postpone the W. C. T. U. meeting. Unfortunately I did not take the trouble to find out if the affair went off according to schedule, but turned in my copy.

And next morning I enjoyed for a short time the delusion that I had made a "scoop," as none of the other papers had anything about the lecture. The true situation was soon forced upon my attention, however, and it became my painful duty to bid farewell to the young lady who had been the indirect cause of my decline in usefulness in the newspaper circles of the town.

My next adventure was in a southern city. It was during hard times and my own business not very prosperous. My front was not as immaculate as it should have been, but I thought of the Bohemianism of newspaper men and took a chance. There was an absence of that electric throb and action which marks the sanctums of northern papers. The city editors spoke with a drawl and did not need anyone. I asked for a chance but was refused. I next inquired if they would take a story if I brought one in. They told me they would see. From a friend of mine, who shared my misery, and incidentally was employed as a waiter, I learned that five university graduates were working in similar capacities in the same place. I saw a story and wrote it, weaving in my own dreary experiences in the course which I was taking in the university of hardknocks. That story was printed and secured a job for me. And I am happy to relate that it was my last period of extreme financial depression.

✣ ✣ ✣

"Greatest Asset, Love of Your Work; Greatest Achievement, Service"

"Go into debt if necessary, young man, in order to start in business — especially if that business is a country newspaper. Your greatest asset is love of your work; your greatest achievement, service." So said H. E. Childers to the students of the School of Journalism of the University of Missouri. And Mr. Childers should know, for he himself established a paper with $78 in cash and a debt of $650; and he made good. He has been editor and owner of the Troy (Mo.) Free Press for more than thirty years, and has recently moved to Columbia with his son to take charge of the Columbia Herald. He is ex-president of the Missouri Press Association and one of the half-dozen most powerful country newspaper men in the state. His son was the first student to be enrolled in the School of Journalism.

"The greatest ambition a man can have," said Mr. Childers," is to gather about him the largest possible number of real friends, and then to do as much as he can for them. When I call a man my friend, I pay him the highest compliment I know. I feel some pride in saying that after thirty years of newspaper work among them, of the 18,000 people in my county, there are only three who won't speak to me.

"'The highest service for the public good' is the motto Dean Mumford chose for the farmers at their banquet last week. That is the aim I have always had before me. A teacher may reach his own small classes, or the minister his congregation once a week, but even the country newspaper reaches an audience of five thousand day after day. Every public movement depends for its success upon publicity in the press."

"Simply a cog in the great wheels that turn out the paper" is the way Mr. Childers described a man's work on a large paper. "If he drops out, the next edition comes out just the same; he is missed no more than one of the innumerable cogs — not as much, for if even one of them is broken, the machinery must be stopped to repair it. Can any one of you tell me the names of the heads of the departments on any of our metropolitan dailies? No matter how high the position to which he rises on his paper, the fact remains that he is still only a cog in the wheels.

"For the opportunity for real service and for material success as well, no field of activity compares with the country newspaper. To work among friends, knowing each one personally, sharing their sorrows and their pleasure, is to do something worth while. No other profession offers such opportunitty for genuine service, the greatest and best thing in life."

Newspaper Students in Actual Newspaper Work

EUGENE, Oregon, is a beautiful city, situated on the Willamette River at the head of steamboat navigation. It is the county seat of Lane County and the seat of the University of Oregon. The population is about ten thousand but the copies of its morning paper, the "Register," which have reached this office, would do honor to any city of a hundred thousand population or more.

The issue of February second was gotton out by the students of the School of Journalism of the State University and consisted of twenty-four pages of the full seven column size. It certainly did honor to the school, and had there been no information to the contrary, we do not believe that any outsider would have thought other than that the issue was gotten up by the regular newspaper force. Of course, the students had the advantage of the regular mail and telegraph news service of the paper.

The amount of advertising carried for a paper in a city of the size of Eugene is remarkably large. The other daily of the city, The Daily Guard, has consented to turn its plant over to the students on some day during the second semester of the school year, and, certainly, can do this with perfect confidence.

This opportunity to come right up against actual newspaper work is a good thing for the students, and judging by this students' number is equally good for the publication. One thing is noticeable in this issue,—the schools receive large attention and this is a good feature of any newspaper, for all the people are directly interested in the schools and in their proper conduct and progress and especially in the equipment for life given to the students and the characters formed therein. The impetus that the schools give toward all progress counts very much for the well-being of the city and state.

All worthy newspaper makers, who look forward to such improvement in the profession of journalism as will bring all possible efficiency, influence, respect, usefulness and success, will be interested in the following statement of the students after four and a half months of instruction:

> The Morning Register today is edited entirely by college men and women from the University School of Journalism. All local news has been gathered by students, and the entire make up of the paper in all its departments is a practical application of four and one-half months' training in college journalism. Four and one-half months is a short apprenticeship for the newspaper profession, and with only this training it is a compliment to the university department to have its students placed in entire charge of a newspaper plant of the scope of the Register. This is the first attempt on the part of most of the students in practical newspaper work, and it comes as a final examination closing a semester study of the principles and intricacies of newspaperdom.
>
> The staff has been selected from the sixty students enrolled in the department, more with the idea of organizing and facilitating the work than to confer any special honor or to recognize individual importance. Perfection is aimed at but not expected. We realize we still have a great deal to learn, but if this edition should present no glaring contrast of inferiority to the regular issues, the university department of journalism and each student enrolled, will experience a feeling of complete satisfaction.
>
> We expect criticism and we intend to profit by it. To the readers of the Register we submit our best work fearlessly, and with the inward assurance that your criticism will be fair and reasonable. You are our examiners. As student editors of this issue we seek to confirm the trust in the practicability of a college newspaper training, and in doing so we express our most sincere thanks to the Register for our first opportunity.

The work before the journalism students which will follow later in the college year, includes more actual newspaper experience of a nature similar to this. During the second semester the Daily Guard has also kindly consented to turn its plant over to the college journalists, who will be given charge of an edition of the evening paper.

A Statement by Instructor Allen to Newspapermen

It should go without saying that this issue of the Register is intended in no sense as a model of what a newspaper should be. From first page to last it is the work of immature students who have completed only four months of a course that is planned to cover three years. Students selected the material, wrote the "heads" and "covered" the local news. This they did, not under the supervision of the university department of journalism nor of the regular staff of the Register, but directed by their own organization, itself composed of students.

This issue is intended as a frank exhibition of what these young people are able to do in a field in which they have had virtually no practical experience. It constitutes their "examination paper" for their first semester's work, and is therefore a record of both success and failure. Some will have demonstrated their unfitness to pursue further their studies in the department of journalism; some may show indications of an ability worthy of further development.

The newspapermen of Oregon are invited to examine this issue with a view to comparing it with future student editions which it is hoped will mark successive stages of improvement. This is only the starting point. The Eugene papers have been most generous in furnishing the university with the use of their plants as a "journalistic laboratory." Next semester's examination will be a special edition of the Daily Guard, the evening paper, the use of whose plant is generously offered by Messrs. Fisher and Finneran, the proprietors.

Examination papers are usually withheld from public inspection, with a view to shielding the failures of the unsuccessful from unkindly comment. In preparing students for the great profession of publicity it seemed appropriate, however, to adopt the opposite course. It seemed well, also to take the newspapermen of Oregon into partnership in this enterprise so that they can clearly mark the progress of the work from year to year. Critics are only asked to bear in mind the youth and inexperience of the "editors" and "reporters." Helpful and constructive criticism is invited.

The gratitude of the University of Oregon's department of Journalism is due to the generous kindness of the proprietors of the Register and of the Guard, and of the hundreds of editors throughout the state who are aiding in this new work.

ERIC W. ALLEN,
Instructor.

✣ ✣ ✣

ADVERTISING YOUR COST SYSTEM

There is a printer up in Ohio who has a cost system and advertises it, instead of hiding it. He is using it as an instrument to get business as well as make money, with telling effect. A while back he ran a full-page ad. in the country paper he publishes, part of which is so good we recopy it:

"The .... Printing Company wants all of your business it can get, and take at a profit. So on every job it figures its material and time costs and you are charged accordingly. If you want estimates, we give them, and the estimates contain all the contingencies — don't forget that. When we can't make a little money on a job — we'd rather lose it, for the reason that we'd rather owe money to a bank than owe it to every Tom, Dick and Harry who would give us a line of credit for ink, paper, machinery, rollers, or what not. Wouldn't you?

"The printing business is slowly but surely growing away from the 'good old days' of the clan.

"Then there were two formulas, one for the 'close buyer' and the other for the 'friend of the house.' The formula for the first was 'Get that job,' and for the second, 'Soak him, Louie.' In the end — the printer either made a little money — he couldn't say where — or the sheriff distributed the type. It was either a feast or a famine — according as the Fates ordained — for the printer was but the child of Chance.

"But today — many printing offices are run on a business basis. Ours is among them. You can hardly have a more exhaustive or complete cost system than we do. This cost system isn't cumbersome — it's almost automatic now. Some are paying us more for their printing than they did a year ago — some less — but everyone pays what his work is worth to us."

We predict that chap will make real money and hold his customers by the open stand he takes. Isn't there a lesson in this country printer's advertisement for some of us fellows in the big cities? — Ben Franklin Monthly, Cincinnati.

✣ ✣ ✣

HOW EDITORS GET RICH

After a great deal of worry and study we have at last figured out how so many country editors get rich. Here is the secret of their success. There is a child born in the neighborhood. The attending physician gets $10. The editor gives the loud-lunged youngster a great send-off and gets $0. It is christened, and the minister gets $5,and the editor gets $00. It grows and marries. The editor publishes another long-winded flowery article and tells a dozen lies about "the beautiful and accomplished bride." The minister gets $10 and a piece of cake. The editor gets $000 and a request to carry the groom's subscription account another year. In the course of time she dies. The doctor gets from $5 to $100, the minister gets from $5 to $100, the editor publishes a notice of death and an obituary two columns long, lodge resolutions, a lot of poetry and a card of thanks and gets $0,000. No wonder so many country editors get rich.— Exchange.

The Daily Newspaper

By Louis Wiley, Business Manager New York Times — An Address at New York University

I HAVE been asked to speak of the daily newspaper. The principal function of a newspaper is to bring the whole world in communcation and to make men know one another. In this country, made up of so many elements, the newspaper's duty is to give the truth about all these elements, so that there may be a common understanding and better knowledge.

The efforts in many quarters to codify the rules and principles by which journals are made and journalists are guided are deserving of high praise. The ultimate tendency of such efforts will be the development of journalism on a higher plane. Given the desire to embark on a journalistic career, the art of navigating the bark so as to steer it according to fixed principles, is one of extreme importance and one which will, in due course, commend itself to the best intellects in our universities.

The progress of the country depends upon our knowledge of the conditions that surround us, and this information is principally supplied by the daily press. It is a common habit to deride the newspapers for their inaccuracy and carelessness, and yet, careless and inaccurate as they sometimes are, they form the principal dependence of men and women for their daily conversations. The newspaper is an intimate and indispensable part of our lives and it seems amazing, taking into account the haste with which newspapers are prepared, that there are not greater faults. A large part of the errors in newspapers is due not so much to carelessness and want of judgement in newspaper offices as to the carelessness and want of judgement of informants, who are frequently the representative men in the community.

An important function of the newspaper is to put us in touch with the rest of the world. Rivers and mountains do not divide peoples today as they did formerly. There is no place on earth where men are making a fight for truth and justice that we do not know of it through the newspaper. If tyranny strikes down the weak we hear of it, and we pass judgment upon the tyrant. The newspaper is the interpreter of the peoples of the earth, and it makes for mutual understanding between men. One of the dangers that attend the making of a modern newspaper has its source in human nature itself. It is the craving for sensationalism. People love to hear of things extraordinary and startling — they like to be thrilled. Newspapers often fall into the habit of giving the people what they want — of thrilling them. Things that really are not of much importance receive a great deal of space with flaming headlines.

On the following day the reckless newspaper denies what it printed the day before, and that makes another sensation.

The newspaper that wins a permanent place is the newspaper that prints the best and important things on the first page and leaves the inconsequential and frivolous for its other pages or omits them altogether. The best newspaper is that which makes the most effort to verify reports.

Newspapers which cultivate the spirit of hatred impair their influence. Newspapers sometimes show too much animosity. This frequently creeps into the discussion of political questions. It is a spirit to be deprecated. The newspapers of the country are in a better position today than at any other time. They are less dominated by speculative and political interests, and they strive to enlighten their readers rather than mislead them.

Napoleon, who was a great admirer of the press, issued a code in which he gave a list of things about which they might tell the truth. It is a great factor in our present civilization that newspapers usually tell the truth about everything. It is because they do this that they are harshly criticised. Much of the condemnation of the press is from well-meaning persons who think that newspapers are imperfect because they report crimes, divorce cases and similar scandals.

Society does not condemn the destroyers of homes of other men until the fact gets into the newspapers. Publication in such cases is a salutary check and conveys a moral lesson.

The Future of the Newspaper

The future of the newspaper as an engine of popular instruction and usefulness is full of promise. In every school throughout the country children will be taught that it is the best exponent of modern history, and thereby editors will have cast upon them a responsibility the gravity of which they will not be slow to appreciate. No man of decent impulse sets out to undermine the intelligence of the young, to misdirect the dawning intellect, to turn the child's thoughts in wrong directions. The educational effect to newspapers will be enhanced, multiplied a million-fold when every boy and girl will study some newspaper in company with the grammar, the arithmetic, and the standard reader.

Waldo F. Warren thus describes the ideal newspaper: "It is the home newspaper. It is a paper which is so filled with good thoughts for every member of the family that it finds a warm welcome wherever it goes. It is free from crime and scandal and unwholesome things. It takes more pride in the quality of its circulation than in the mere quantity. It is not boastful nor too much given to finding fault. It wins the confidence of the people by its simplicity, honesty, purity, and progressiveness. It handles the news of today in a manner which appeals to the better class of people and to the better nature of all people. It emphasizes the hopeful features of the news rather than the distortant ones. It has a permanent location for its special features. It is an authority on whatever it undertakes to exploit. It has a reputation for correctness. It regulates its advertising pages by reasonable requirements regarding display and illustrations, so that the page represents a pleasing whole."

Henry Ward Beecher once said, "We are growing; and it is not a matter merely for pride. It is certainly a matter of congratulation and boasting that we are becoming so strong in riches and so vast in territory and so mighty in population. But there are dangers which come with these increments. We must keep open, therefore, every channel of intelligence. An ignorant man is a dangerous man. It is in the dark or unswept or unwashed places that vermin breed. Where the broom and the sun come there come no vermin."

How essential, therefore is it that nothing that checks the opportunity for the dissemination of intelligence should be encouraged. There is too much impatient criticism of the press. The daily newspapers have many blemishes, but on the whole they are the most powerful agency for public good.

There has always been a fascination about journalistic work that has recompensed many a beginner for the struggle, disappointment and heartburning which have ever accompanied the development of the newspaper man. Whether the fault has been with the stern and unrelenting editor or with the literary aspirant will never be decided. But journalism has never been a close corporation, and the various schools, notably the one in your own university, flourishing today, are calculated to open its doors still wider.

It is certain that young men, eager to enter the newspaper field, will come the better equipped for the education and training given by skilled experts.

What makes a newspaper great and in the highest sense successful? The foundation is plainly the confidence of its readers, the respect of the community to which it appeals. It comes of many renunciations, of withstanding the allurement of immediate advantage, of principles clearly formulated and unswervingly adhered to, of ideals religiously cherished and never abandoned. When a newspaper conforms to such principles, when it is guided by such ideals, when conviction goes every day into its making, and when to all these, illuminating and vitalizing all these, brains are added, the newspaper that is the fruit of this blending will inevitably enjoy the confidence, the respect, and the patronage of the community it serves.

AMONG THE ASSOCIATIONS

IN UNITY IS STRENGTH

ACTIVITY among editorial and printers' organizations will be in evidence during the coming months, and arrangements should be made for proper attendance on the National Press Association at Colorado Springs, June 17 to 19, inclusive. It will be a great occasion and all press organizations should be represented.

* * *

D. W. Norris, Jr., of the Marshalltown Times-Republican, is the new president, and W. G. Young, of the Cedar Rapids Gazette, secretary and treasurer of the Iowa Associated Dailies, that recently met at Des Moines, Iowa.

Free notices as related to baseball games, theaters and automobiles were discussed.

Mr. Keely of the Chicago Tribune claimed that his paper did not allow a line of free notices to advertisers in his paper, and stated that all that was given to theaters and baseball games was given as news for the people, in full recognition of the fact that in the field covered by the paper one hundred thousand people attend baseball games and fifty thousand the theaters daily, and that these are all interested in the news connected with the theaters and ball games, including stories as to the actors and ball players.

Libel laws were considered and it was stated that Iowa, next to Texas, has the worst libel laws of any state in the nation. However, owing to a prejudice against newspapers among many politicians, it was not thought wise to ask legislation for newspapers as a class. The danger was that legislators, thinking that they had a grievance against the press, would take advantage of any new legislation introduced favorable to the press, to add amendments that would result in enactments more injurious to the press than are existing laws. The matter of legislation was left to a committee, with power to act.

Other questions considered were enactments as to compensation for injuries to employes, union labor matters, and the effect of partisan politics on subscription lists.

Entertainments tendered by the Des Moines papers were such as not to interfere with business. The next meeting will be held in Cedar Rapids.

* * *

KANSAS EDITORS

Unabated interest, activity and growth were in evidence at the twenty-first annual convention of the Kansas Editorial Association in Topeka. Thirty new members were added. Committees were appointed on resolutions, credentials, memorials, laws of association, legislation and auditing, besides a historian. The following topics were presented in papers or addresses:

"Publicity and Politics," Charles F. Scott of Iola; "The Jayhawker Press," W. T. Morgan of Hutchinson; "A Wail of Women," Margaret Hill McCarter of Topeka; "The Boys at Home," W. L. Brown, speaker of the house; "The Shorn Lamb," Sheffield Ingalls, lieutenant governor of Kansas; "The Editor and the Pen," Thomas W. Morgan of Ottawa; "The Editor's Wife," Ewing Herbert of Hiawatha; "The Press and Public Policy," Governor George H. Hodges.

"Making a newspaper is an art," declared H. G. James of the Independence Reporter, in speaking on "Sentiment in the Publication of a Newspaper."

"Building an engine or constructing a palace is a trade," he said. "Practicing medicine or propounding the law is a profession. Preaching the gospel is a calling, but the making of a newspaper is an art.

"The ideal newspaper man must feel the sympathy of the minister, the concern of the physician, the solicitude of the lawyer and the responsibility of the financier toward the public in all its various moods and interests, and at the same time the righteous indignation of a guardian toward those who transgress or violate the just laws of society.

"The succcessful newspaper — I mean successful in its highest interpretation — is necessarily controlled by a sentimental nature, and the more pronounced this sentiment the greater the degree of success.

"Business in newspaper work does not demand a college education. It does not require a great financial backing. It does not comprehend as a prerequisite a genius for politics or popularity, though the value of these cannot be overestimated, but it does demand a fine sentimental instinct that seems to 'wire up' the possessor in sympathetic touch with all classes of mankind."

A Wide Sphere

"The man who conducts a newspaper for 'revenue only' is a failure. The sweep of thought is boundless. The sphere of the newspaper with a mission is as wide as the universe."

This paper was discussed by R. P. McColloch of the Anthony Bulletin and John Redmond of the Burlington Republic.

"Adopt the pay-as-you-enter system" was the advice of Fred Cook of the Jamestown Optimist, who spoke on "Cash In Advance on a Country Newspaper." "Stick to it. Work at it morning, noon and night. Get cash in advance, and your dreams will be undisturbed and your days will be balmy and pleasant."

Among those who discussed this paper were Asa Converse of the Wellsville Globe and R. P. McColloch of the Anthony Bulletin.

At the last session of the convention the following papers were read: "The Student Journalist," Merle Thorpe, dean of the Kansas University School of Journalism; "Watching the Business End," J. T. Moore, Pittsburgh Headlight; "Newspapers and the Boosting Game," J. F. Jarrell, publicity agent of the Santa Fe. A discussion on the "Cost System" was led by H. S. Neal of the department of journalism of the State University.

An interesting hour was enjoyed when a number of newspaper men told of early days in Kansas newspaper work. Among those who spoke were: W. A. Morgan of Cottonwood Falls, J. M. Cavaness of Chanute, Adrian

Reynolds of Neosho Falls, and T. A. McNeal of Topeka.

The new officers of the Kansas Editorial Association are as follows: Charles S. Finch, the Gazette, Lawrence, president; E. E. Kelley, Republican, Toronto, vice-president; N. P. Cretcher, Sedgwick Pantagraph, corresponding secretary; H. E. Bruce, Marquette Tribune, recording secretary; Glick Fockele, Leroy Reporter, treasurer.

✢ ✢ ✢

President Wilson attended a luncheon of the New Jersey Editorial Association in Trenton. At the meeting it was decided to change from "Editorial" to "Press" in the name. Senators and congressmen of the state were asked by resolution to favor an amendment to the parcel post laws to admit books, job printing matter, circulars, calendars, in bulk, to the parcel post at the regular merchandise rates. Chester Lord, managing editor of the New York Sun, was one of the honored guests.

✢ ✢ ✢

The owners of sixty weekly papers and job printing offices met at a Ben Franklin club in Northern Iowa the latter part of January and earnestly discussed job printing prices and the advertising situation. There was a spirit of progressiveness manifested. Naturally advertising rates and the method of securing advertising came up for consideration, as did, also, the best means for entering the foreign ad field.

✢ ✢ ✢

Webster City is the place of the next meeting of the Upper Des Moines and Corn Belt Editorial Association on March 12 to 14.

✢ ✢ ✢

INTELLECTUAL EQUIPMENTS FOR REPORTER

"There are many requirements in the equipment of a good reporter, and most of them can be supplied as precisely as the intellectual equipments of a good lawyer and a good doctor can be supplied — by courses of study. But, to carry the parallel one step further, in the case of the reporter, if he is finally to be assigned to the best story of the day, college education must be supplemented by practice, observation and an acquired knowledge of a story's value — a 'sense for news,' as we call it in shop talk.

"I should say that a reporter should cultivate curiosity. He should always be disposed to annex a fishing excursion, so to say, to every assignment he covers. A few more questions related to the subject of the assignment, but suggested perhaps by the character of the person he is interviewing by his business or profession, the place of his residence, such of his history as may become known — a few questions of such sort may unearth something which, to the eye of the reporter capable of seeing a story, enables him to return to a delighted city editor with more and better stuff than he was sent out to bring in. That is where your big stock of general information helps. The reporter who affects to be bored with the story he is on, brings in a boresome story."—Edward W. Townsend, before Missouri School of Journalism.

✢ ✢ ✢

PRETTY NEAR THE TRUTH

"How is the new filing system? Success?" asked the agent of the merchant to whom he had sold a "system" a few days before.

"Great!" said the merchant.

"Good!" said the agent, rubbing his hands. "And how is business?"

"Business," echoed the merchant. "Oh, we have stopped business to attend to the filing system."

South Dakota Editors

Hold Best Convention in History of the Association

SOUTH DAKOTA editors have always maintained the reputation of being "a live bunch" and they continue to make good. "Whatsoever thy hand findeth to do, do it with thy might" is a mighty good motto for every newspaper man and there is nothing that deserves greater zeal and earnestness then meetings of editors to confer as to the calling of newspaper-making and its obligations and service.

Clippings from these excellent daily papers, the Sioux Falls Argus-Leader, and the Daily Press, sent us by Secretary Schlosser, tell the interesting story of the recent convention at Sioux Falls, February 6 and 7.

The Argus-Leader gave the following brief history of the organization:

History of the Association

The South Dakota Press Association is one of the oldest organizations in the state. While several district meetings had been held previously, the first state meeting according to the records, show that the organization was perfected at Huron in 1882, when John Cain, then editor of the Huron Daily Times, was elected president. The following year the association met at Watertown, where General S. J. Conklin was elected president, and George Schlosser, now of Sioux Falls, secretary. General Conklin served as president until 1886, when at Aberdeen, Augustine Davis, of the Daily Huronite, Huron, was elected president. George W. Hopp of the Brookings Press was elected in 1889, and N. C. Nash of the Canton News in 1891. He was followed by Thomas W. Bishop of the Volga Tribune, who served until 1892, when John Longstaff of the Daily Huronite, Huron, was elected. In 1894 J. E. Patten of the Salem Special was elected president, and, in 1895, J. D. Reeves of the Groton Independent was chosen president. In 1896 T. B. Roberts of the Armour Chronicle-Tribune was elected, and in 1897, L. J. Bates of the Lake Preston Times became president. Glen M. Farley of the Madison Outlook, was elected president in 1898, and he was followed by Henry S. Volkmar of the Milbank Review in 1899. J. F. Halladay was elected president in 1900 and T. W. Taubman of the Plankinton Herald in 1901. Charles F. Allen of the Brookings Press was elected president in 1902, and Harry Wentzy of the Pukwana Press-Reporter was elected in 1905. He was followed by Charles F. Hackett of the Parker New Era, in 1906, and W. R. Donald of the Britton Sentinel in 1907. R. E. Dowdell of the Artesian Advocate was elected president in 1908 and Charles M. Day of the Daily Argus-Leader, Sioux Falls, in 1909. In 1910 W. F. Bancroft of the Public Opinion, Watertown, was elected and in 1911, Len V. Doty of the Times-Record of Doland was elected president. Charles McCaffree, of the Howard Press was elected president at the annual meeting held at Yankton in 1912.

George Schlosser of Sioux Falls was the first secretary of the association, serving for a number of years. He was succeeded by J. F. Halladay of the Iroquois Chief, and when Mr. Halladay became state auditor Glenn M. Farley of the Madison Outlook became secretary. Upon Mr. Farley's removal to the coast, John T. Cogan of

Sioux Falls was elected secretary and served seven years, after which J. F. Halladay of the Iroquois Chief was elected and is now serving.

The address of President Charles McCaffee was replete with good and wholesome thoughts and suggestions and we are printing it as part of the proceedings but do not want it to receive less attention than if printed separately and we are going to give more than usual space to the proceedings in the belief that most of the matters contained therein will be of value to the members of other associations and of general interest to newspaper publishers.

The most important doings of the morning session according to the Daily Argus-Leader, were the election of the officers and of the delegates to the National Press Association convention, at Colorado Springs, June 17 and 19.

The following are the new officers:

President—Hans DeMuth of Sioux Falls.

First Vice President—W. C. Lusk of Yankton.

Second Vice President—Robert Schaber of Hudson.

Secretary—F. J. Halladay of Iroquois.

Treasurer—John Widlun of Viborg.

Executive Committee—The president and secretary, together with M. M. Bennett of Yankton, E. B. Yule of Alexandria, Mrs. Nana Giblert of Salem.

Delegates to the National Press Association: George H. Grace of Lead; W. C. Lusk of Yankton; C. F. Hackett of Parker; John Stoner of Edson; Thomas Ryan of Elk Point; Frank S. Mease of Madison; Charles Mc Caffree of Howard; Mrs. Lydia Eastwood of Watertown; P. F. Leavens of Flandreau; Charles Hartsough of Marion; Clate Tynan of Kimball, Charles M. Day of Sioux Falls.

W. C. Lusk of the Yankton Press and Dakotan, talked on "The Methods of Increasing the Influence and Value of Our Association," which was followed by a discussion taken part in by E. B. Yule of Alexandria and I. D. Aldrich of Big Stone.

B. C. Dow, business manager of the Argus-Leader gave a most concisive talk on "Is It Good Policy to Give Premiums with Subscriptions." It was expected that this address would bring out a heated discussion, but owing to a change in the program the discussion took place before the address. That is the subject was discussed both ways before Mr. Dow gave his talk and at the close of the talk other matters were taken up.

Charles McCaffree followed with his annual address which was as follows:

President's Address

We who publish newspapers have an opportunity, a responsibility and a privilege.

Our orators of reputation will perhaps draw an average audience in the state of two or three hundred people and feel elated if the number is not less.

The Newspapers' Audience

The better country newspaper weekly addresses an audience of 5,000 to 6,000. Think of it, and of the best quality there is. Usually it is reached under the most pleasant circumstances, when the mind is open, when prejudice is laid aside. A person seems less guarded and suspicious, most susceptible in mood when in the midst of the familiar surroundings of home. A picture of your audience will show the head of the family tilted back in an easy chair with his gray socks headed for the hard coal, "ma" comfortable in a rocker after slipping three or four books with which she is trying to 'stay' the retreat of a retiring waist line, the future voters, the cat, the rising buckwheat and like home comforts all amiable. There is your audience at its best for clear thinking, and it refuses to take orders. There is where a lot of our problems are decided day by day. Often we don't know it till the next campaign.

Opportunities

What is our opportunity; are we living up to it? Do we lead out into the plains of beautiful thought. Or are we like the young Pennsylvanian who tired of his stony little farm and wrote to a relative in Canada for a job? He was promised one in the oil fields if he would prepare himself for it. So he went to college and learned all about the eocene and pleocene and unseen periods in the preparation of this earth; how the great forests grew; how they became coal and oil; in fact he learned all he could about oil. Then came home, sold the farm and went to Canada. The purchaser of the farm had to look after watering his cattle and found the young man had placed a board slantwise in the creek to push aside a scum on the water through which the stock refused to drink. He had the scum examined by the state chemist who pronounced it coal oil, and that farm has made several millionaires.

Fearlessness

The thought is driven home to me that what most of us need is not the how or what, but the fearlessness and the adequate self value to put our best character into our work.

The publisher who has been serving a constituency year after year — if he has at all met his opportunity — has inspired a trust and acquired an influence. Only occasionally does he get an indication as to how potent for good it may be. Its existence will be readily granted.

Responsibility

Then we must face the responsibility of what shall be done with it. A large class of interested and the most susceptible readers are children, and further, we would have few newspapers if it were not for the women readers. Can you get away from the responsibility of keeping your columns clean, keeping from them anything which would bring a blush to any brow or start a train of evil thought?

Cleanliness

We know that certain vulgar and suggestive articles sometime appear in good newspapers and we have to admit they help sell the papers. Catering to the somewhat lewd probably proves profitable. Logically it cannot be defended. I cannot view it other than violating a moral law for gain and there is too much a similarity to violating a statute law for gain which no one attempts to defend. It seems as if there is a desire growing for a vulgar class of literature. Evidences will occur to any mind, I think. Seeing a favorite South Dakota newspaper on an Omaha news stand one night last summer. I stepped in and finding the proprietor an intelligent young fellow had quite a little visit with him. Noting a stock of the pamphlets which emanate from East Aurora, N. Y., I remarked: "I suppose you find good sale for this snappy stuff." "Yes," he replied, "but the great demand, which I can't begin to supply, is for 'French' novels and that class which cannot go through the mail. Why if I could get enough of it I could make my fortune."

There is a demand for it but, in the light of our responsibility, we cannot honestly cater to it.

Responsibility as to Advertising

Then there is a responsibility as to the character of advertising which shall be placed before the reader.

Many papers are guaranteeing the patrons of their advertisers against loss in dealing with the advertisers. We have no right, I firmly believe, to carry an ad for any firm whose worth to the patron we question. It would seem as if our patrons should be permitted to trust our advertisers because their advertisisements appear in our columns. We want to get to the position where such a case as that apples ad mentioned yesterday could not appear, not because we questioned the pay for the ad but because we questioned its worth to our readers. Some of us perhaps have not the ability to do a great deal of good with our papers but anyone may do a vast deal of harm. Let us fight a good fight and keep the faith.

These matters were covered so much better yesterday than I may hope to handle them that they would all be avoided but for the time honored custom that the president should express some sentiment and the printer really desires something to put into the proceedings, it is published by the page.

As I get to the privilege of publishing a South Dakota newspaper we may all become enthusiastic. A prominent Iowa editor who attended the yesterday afternoon session, remarked they hadn't men of such ability at their gatherings in Iowa. Of course not, they don't have them anywhere else. We could from our number furnish the state both senators, three congressmen, officer the state house and every postoffice in the state with a high character and efficiency which has not always obtained. It is sad we are too busy to take the jobs.

High Character of South Dakota Editors

A publicity expert made a significant remark in my hearing concerning an editor who was desirous of the postoffice appointment, but whose friends thought he could not get it. The remark was "if he has been running his paper as he should, the public would not allow anyone else a chance at the postoffice."

Privilege of Editorial Service

But it is a privilege worth the ambition of a good man to know that all about the home country are honest, intelligent men, women and children looking to the editor for ideas in government, of home and neighborhood improvement, of better education and cleaner, more happy life. It is a privilege to know we may give our readers some impetus for these better things. We may do it in our seemingly small fields and who knows the value. A cup of cold water may prove of greater worth in the final analysis than all the wealth of India.

It is a privilege to have a hand in building a great state and no other force has had so much influence as the papers. They have boosted in its development, they have counseled in its growth. They have brought new citizens and improved the old. Our papers must at this time address nearly as many outside readers as the present population of the state. A half million readers absorbing the South Dakota spirit from the sparkling newspaper columns means a mighty influence whose wave does not reach its crest till the children who are feeling it now are located for themselves. We are privileged to carry the good tidings and to assist citizens of the future to people our 5,000,000 acres for sale by the state which need only the settler to bring them into productiveness, to improve the cultivated farms which would support several times the present population with equal returns, to pierce the bosom of the Black Hills where wealth beyond the estimate of any man awaits the engineers and machinery to place it in the market places of the world, to harness our streams which have possibilities for turning unnumbered wheels of manufacture.

Spirit Better

The spirit of this meeting seems to be better than ever before. I know it is going to spur many of us to better effort and greater good. As I said it is a privilege that we may join in building a great state and no one else may so truly be state builders. The invitation to help us work out a great destiny will be emblazoned where all the eager and vigorous and ambitious may catch the message.

The election of officers followed. C. M. Day of the Argus-Leader presented the name of Hans DeMuth of Sioux Falls as president. There was no opposition, and the nomination was seconded from practically every part of the hall and Mr. DeMuth was elected unanimously as were also all the other officers. The election of Mr. DeMuth was a bouquet to the foreign members of the association that an editor of a paper printed in other than the English language had been honored by being elected president of the association.

Mr. DeMuth, who has been off a sick bed but a few days, and still in a weak condition, made a short but pointed response to his election.

At the afternoon session there was some business transacted and a number of short talks. The first thing considered was the report of the committee on resolutions and their report which was as follows, was adopted after some discussion:

Resolutions

We, the members of the South Dakota Editorial Association, in the regular mid-winter session offer the following:

Resolved, That for the delightful time afforded by the local newspaper fraternity and the Commercial Club, especially for the evening's pleasure at the Symphony Orchestra concert, and other courtesies shown us, we express our sincere appreciation and gratitude.

Resolved, That it be the sense of this association, that more attention be given the editorial utterances, with the object in view that the average country newspaper be made a greater force by uplifting the community in which it circulates.

Resolved, That we favor the passage of senate bill No. 144, introduced by Senator Harris, which has for its object the repeal of the "Curtis Pamphlet Law."

Resolved, That we condemn the practice of jobbers and manufacturers entering into competition with the local printer.

Resolved, That we commend heartily the work being done by our legislative committee, and that we pledge to it our moral and financial support, to assist in carrying out the plans for securing legislation beneficial to the printing industry of the state.

Resolved, That we give our indorsement to the house bill, No. 168, introduced by Representative Hawley of Minnehaha county, making it a misdemeanor for a firm, or merchant, or corporation to misrepresent wares in advertising.

Resolved, That it is the sense of the association that its members be less partisan in the discussion of political and economic questions.

Resolved, That in the death of Col. Arthur Linn, of Canton, this association has suffered an irreparable loss, and be it further resolved that we extend to his aged widow our sincere sympathy.

Resolved, That we as an association indorse the bill introduced by Representative Nelson of Lincoln county, that has for its object the prohibition of the operation by a person in the state of intoxication of an automobile or motorcycle on the public highways, under penalty.

Resolved, That we, as an association, endorse what has been done by the immigration bureau of our state in its effective work during the past two years and favor of its continuance with increased appropriation.

Resolved, That we extend to our retiring worthy president, Charles McCaffree, and to our secretary, J. F. Halladay, our appreciation of their efforts toward making the mid-winter session of 1913, the best editorial meeting ever held in the state.

G. H. GRACE, PAUL DUTCHER,
ROBERT SCHABER, MARK BENNETT.
H. B. TYSELL, Committee.

The last hours of the meeting were taken up with a report of the legislative committee and discussing several important points brought out by this report.

Of the first day's session the Sioux Falls Daily Press gave the following most interesting outline:

Sioux Falls is in the hands of the newspaper men. Every incoming train to the city brought editors to the mid-winter meeting of the South Dakota Press Association yesterday and the attendance will be augmented by arrivals this morning.

At two o'clock in the afternoon the association convened and held the most successful and interesting business session ever held. The meeting was called to order by President McCaffree of Howard and the following were electel to membership: Fred G. Reeve of the Miner County Democrat, G. E. Sampson of the Western Newspaper Union, S. B. Averill of the Sioux Falls News and Hardy Carlson of the Volin Advance.

Miss Gertrude Walker of the Bruce Herald read an interesting paper on "The Editorial Page of the Country Weekly" which proved intensely interesting. A tinge of humor was apparent in several places which was heartily enjoyed.

After Miss Walker's paper five minute talks were indulged in on the subject, "Does It Pay to Conduct Piano or Premium Subcription Contests?" The first was by F. L. Mease of the Madison Sentinel who spoke the allotted time in favor of such a campaign. O. W. Dingman of the Centerville Journal who is especially well posted on contests as he has conducted three, spoke, and the trend of his argument led to the belief that he is fairly well satisfied with the result of such contests.

Paul Dutcher of the Brookings Register was another speaker whose advice was opportune as his paper is now conducting a subscription campaign. He announced that the result so far has proven satisfactory.

P. F. Levins of the Flandreau Herald gave a short narrative of his experience and he was decidedly in favor of such a method of swelling subscription lists and stated that it brings good results.

Fred Reeve of the Miner County Democrat took the opposite view of it. His talk was a valuable one as he also spoke from experience. He thought the aftermath of such a campaign is demoralizing.

M. M. Bennett of the Yankton Herald stated that he had conducted a campaign personally and found it to be an excellent scheme for collecting delinquent subscriptions and said that it had the advantage that money was received instead of cabbage, poultry and various other farm truck on back dues. He announced that he had also tried a contest with men who make it a business of opening subscription contests and found that system unsatisfactory. On the whole he did not favor the contest scheme.

Mrs. Eastwood who edits the Watertown Herald spoke entertainingly and gave it as her opinion that subscription contests tend to make the people suspicious and unless everything is done openly it will give rise to unfavorable criticesm. From her argument it was impossible to tell whether she advocated its use or not. Her talk was the last on the subscription contest subject.

E. J. Mannix of the Commercial News of Sioux Falls was called upon and made a lengthy and highly interesting talk on the problem of advancing the welfare of the small town and how to protect it from the disposition to do trading at outside points. He spent some time criticising the habit of purchasing from mail order houses. He suggested a buyer's information bureau in every town and gave several reasons why such a bureau would be of benefit both to the town and to the purchasers.

R. E. Dowdell of the Artesian Advocate spoke on the parcel post system.

John E. Kelley of Flandreau was called upon for an address and he talked on subjects of mutual interest to newspaper men and others alike but chose no specific subject.

After the talk by Mr. Kelley a motion was made that the suggestion advanced by E. J. Mannix be referred to the resolutions committee and the motion was carried. Mr. Mannix again took the floor and mentioned ten reasons why people are prone to buy from mail order houses chief among which was low price. He stated that the goods were sold on the merits of the price rather than upon the merits of the article itself.

Mr. Hartsough of the Marion Record brought up an instance of a Sioux City, Iowa, wholesale house doing its own job printing work with a plant of its own and soliciting business and at his suggestion a motion was made that the resolution committee be requested to pass a resolution against wholesalers soliciting printing.

Dean C. Trippler of the Canova Herald spoke on "The Financial Standing of Foreign Advertisers and How to Determine It." His address was of particlar interest to the newspaper men.

A discussion was indulged in by Messrs. Bennett and Lusk of Yankton, Grace of Lead, Aldrich of Bigstone and Mrs. Eastwood of Watertown during which some interesting facts were brought up.

Messrs. Sampson of Sioux Falls, Yule of Alexandria and Aldrich of Big Stone discussed the price of ready prints furnished by syndicates.

Miss Watkin's paper was discussed by Messrs. Bennet of Yankton, Hartsough of Marion Junction, Lusk of Yankton, Robinson of Parker, Day of Sioux Falls, Halladay of Iroquois, Dowdell of Artesian and Aldrich of Big Stone.

FIVE NEWSPAPER DONT'S

J. S. Johns, in an address before the students of the School of Journalism of the University of Missouri, after telling of the aid rendered by the St. Louis Post-Dispatch, with the hearty support of the late Mr. Pulitzer, in bringing the St. Louis boodlers to justice, and dwelling on the moral power of publicity, gave the following "Dont's" for a man who rejects the idea that a newspaper is a mere vendor of news and advertising:

"Don't echo flapdoodle; expose it.

"Don't bow to shams and humbugs; puncture them.

"Don't cater to prejudice and provincialism; throw light on them.

"Don't be hysterical.

"Don't slop over."

Connecticut Editors

Do Not Like the U. S. Newspaper Publicity Law—Banquet and Listen to Editor J. C. Hemphill of the New York Times as "A Journalist at Large"—Talk of President Taft and of Live Newspaper Matters

CONNECTICUT is not a large state, but it has some excellent newspaper men, and, at the annual banquets of the Connecticut Editorial Association, always supplements the home talent with the very best newspaper talent that can be drawn from the city of New York, and then calls on the professors of Yale and the local clergy of the state to round out "full measure, pressed down and running over."

The Newspaper Publicity Law Riddled by Newspaper Men and Repudiated by Congressmen

At the annual convention at New Haven, this year, February 10, according to a report in the Hartford Daily Courant, the newspaper publicity law, passed last year by congress as a rider to the regular postal appropriation bill, was riddled verbally, by the newspaper men and repudiated by nearly all members of congress from the state of Connecticut.

It was the opinion of the newspaper men that most of the congressmen did not understand what they were voting for in the rider to the appropriation bill, and that others held grudges against newspapers that had been too independent or critical.

Views of Connecticut Congressmen

The association's secretary, A. S. Barnes, of Bristol, reported he had written the Connecticut congressmen regarding their attitude toward the repeal of the newspaper publicity law.

The replies from the congressmen were extremely interesting. Senator George P. McLean wrote that the "law in question interferred with private rights in an unreasonable way" and "certain features of it should be modified." Senator Frank B. Brandegee was entirely noncommittal. "I will give it careful consideration when it comes up," he wrote, in reference to the bill repealing the law in question.

Congressman John Q. Tilson wrote in a positive vein. "I was very positive," he said, "that it was not only a fool law, but it was a vicious law; I therefore voted against it and will heartily favor its repeal." Congressman E. S. Henry wrote: "This was a case of vicious legislation attached to an appropriation bill," and "I shall certainly consider it my duty to vote for the repeal of the law."

Congressman Ebenezer J. Hill wrote that he was "opposed to it at the beginning and is opposed to it now," and that he "will do all in his power to secure its repeal." Congressman Thomas J. Riley wrote a letter of similar import.

Congressman Edwin W. Higgins, however, stood firmly for his support of the law and wrote a long letter explaining his views. "The newspaper," he said, "is a quasi-public institution. It receives considerable concessions from the government and the public is entitled to know who owns the paper. I shall not favor a repeal of the law."

The editorial association voted to support and to seek support for the proposed repeal of the law in question. A. S. Barnes of Bristol, Charles E. Perkins of Hartford, and William J. Mulligan of Thompsonville were appointed as a legislative committee to keep their eyes open for legislation affecting the newspaper business.

Cost Congress to be Held

It was also decided at the business meeting to hold a "cost congress" among the newspapers running job printing plants. This inquiry into the cost of job printing will be managed by a committee consisting of F. L. Praun of Deep River and L. O. Williams of Putnam.

Officers Re-elected

At the afternoon session the following officers were elected or — in most cases — re-elected:

President, E. G. Hill, of the New Haven Register.

Secretary-Treasurer, A. S. Barnes, of the Bristol Press.

Vice-Presidents: Hartford county, E. Hugh Crosby, of the Manchester Herald; Fairfield county, Victor W. Ferris, of the Norwalk Hour; Tolland county, Louis McLaughlin, of the Stafford Springs Press; New Haven county, W. C. Sharpe, of the Seymour Herald; New London county, F. P. Latimer of the New London Telegraph; Middlesex county, Ernest L. Praun, of the Deep River Era; Windham county, L. O. Williams, of the Putnam Patriot; Litchfield county, H. Rogers Jones, of the New Hartford Tribune.

Banquet Talks

Charles F. Chapin, of the Waterbury American, was introduced as toastmaster for the evening, by President E. G. Hill, and after a few remarks appropriate to the occasion introduced

The Managing Director of the Montreal Gazette, the Oldest Newspaper in Montreal, Canada

Where there was "the making of Canadian newspapers," this gentleman, Edward F. Slosk, is said to possess a striking resemblance to the great American commoner, William Jennings Bryan, both in face, personal appearance and portliness. His paper was founded in 1778. He did not stick very closely to his topic but talked of things in which Americans are interested, claiming that Canadians are English only in sentiment, and in all else are American and that Canada is and always will be the best customer of the United States, and that there is not and never can be, a difference of feeling between these two peoples who have so much in common and whose interests are so closely intertwined. He reviewed the origin of the Canadian newspapers and said that thus far they were tackling only the "thin crust of a very rich pie," for a population like that of New York state in size is scattered over a tremendous area. He told how the Canadian papers were dependent upon the American publications until a few years ago and how they have developed recently.

"We have the misfortune," he continued, "to have a very low postal rate. You may not consider this a misfortune but we do, for it has aided in bringing the selling price of our papers below the cost of making."

Mr. Slack then reviewed the "price-war" which has resulted in the possibility of obtaining the leading Canadian newspapers at a subscription rate of about one dollar a year. He said that a higher postal rate was one of the things that would remedy the condition — a condition which he said was spelling financial ruin for many publishers.

In touching on the subject of reciprocity, Mr. Slack said that when Canada rejected the matter, it was done as a business proposition — there was no ill feeling or resentment against the United States.

The Theological and Civic Education, and the Varied Experiences of J. C. Hemphill — "A Journalist at Large"

Major James C. Hemphill of the "New York Times" was accorded a splendid ovation when he rose to respond to the toast, "A Journalist at Large." Major Hemphill was formerly editor of the "Charlestown News and Courier," the "Richmond Times-Despatch" and the "Charlotte Observer."

"A journalist at large," said Major Hemphill, "as they say at Oyster Bay, that's me! Born in the hill country, raised on the Shorter Catechism and believing that whatever ought to be, is, or should be if it is not; lived with the best people in the world in the coast country at the very point where the earth and the heavens meet; schoolmate and friend of the Jew and blessed by his holiness, the Pope; conscious of the superiority of the southern man, yet never boastful of it, and ready to admit that there are some good people who live outside the jurisdiction of Governor Blease; acquainted with the art of making a newspaper from washing rollers, turning the press, setting the type, making up the mail, thundering against evil, riding on railroad passes in an exchange of courtesies; through the country weekly to the daily, from slave to manager, and now a 'journalist at large'— a sort of ticket-of-leave man and about to be translated to yet another field."

Newspapermen Are or Should Be Teachers and Leaders

Of newspapermen, he said: "We are teachers, at least we ought to be. We should lead. I would make journalism a profession and not simply a business. I would have men trained for it, just as men are trained for the pulpit, the law and medicine. I would have the law regulate its practice so that it would be free from partisan malice or corrupt influence or dishonest gain.

"As the press speaks the public is generally inclined. Why should not the journalists form a solemn league and covenant among themselves for their own benefit and the benefit of the long suffering public they serve.

Would Endow a National Newspaper

"If I were Andrew Carnegie I would take half of the fortune he has left and endow a newspaper at the National Capital that would express the broad national views on questions of legislation and administration without regard to the wishes of the business office."

In closing and alluding to the misjudging of men by the newspapers, Major Hemphill said: "It has always been so. It was so in Washington's time. It was so in Taft's time. Washington lost his temper when he was abused by the newspapers of his day.

Taft Greater in Defeat Than in Power

"Taft has proved to be greater in defeat than in power. Last week I had a heart-to-heart talk with him in Washington. The inaugural committee was building the scaffold and he was very busy with his final messages to congress and the people — for four years at least — undismayed at what had happened and abating not a jot or tittle in his loyalty to the faith of the fathers. I told him that I expected to be here tonight and asked him what I could say to you as the keepers of the public conscience in this great commonwealth and he answered simply that he would live in New Haven and teach to the students of your great university the constitution and the law, devoting his time to this subject with no other wish or purpose than to make himself useful to his profession and his country, and win the respect and affection to all his neighbors.

"Growing his honors — the highest any man could wear in this world — he will thus achieve the greatest of all his triumphs, the greatest of all distinctions — the distinction of good citizenship."

"The Newspaper and Public Opinion"

Following Major Hemphill, Rev. Dr. Charles R. Brown, dean of the Yale Divinity school, and heralded as one of the ten leading preachers of the country, was introduced to talk on the subject, "The Newspaper and Public Opinion."

"We live under a government of public opinion," said Dr. Brown. "The seat of government is not at Washington; it is not at Hartford; it is here. It is wherever people are thinking, resolving and acting.

"The newspaper sometimes fails to exercise its proper leadership in moulding public opinion, for lack of serious convictions, for lack of freedom and for lack of proper perspective. It may over-emphasize the non-significant detail and fail rightly to report and interpret the life of the community.

"We need to raise the personnel of the men who make the journals of the day. We need a public which will support the paper which shows itself competent and courageous in rightly directing the public mind."

Courts and the Press

The judiciary had a representative on the list of speakers in the person of Judge Robert L. Munger of Ansonia, one of the younger members of the New Haven county bar and now arbitrator of the public court cases of Ansonia. Judge Munger gave a very serious talk on "The Courts and the Press."

"It is entirely proper," said Judge Munger, "that the newspapers take the privilege of criticising the courts. I concede that the press has the right to such a privilege, but I do not concede that it has the right to criticise the courts in the manner that it sometimes does. If it is done merely for the purpose of attacking the dignity of the court or for substituting the opinion of the community for that of the judges, then I claim it is all wrong, and what influence the press has in moulding public opinion and educating the masses has simply gone to waste.

"But if the criticism is made by responsible parties and is not done with the idea of destroying the confidence in the courts, then it is proper and can be looked upon as entirely fair."

Judge Munger gave instances of severe and uncalled for criticism of the courts on the part of newspapers and other instances of criticisms that were constructive instead of destructive. He ended with an appeal to the newspaper men to lend their power towards making all press criticism of the courts constructive in order that these two vital influences of American life — the courts and the press — may go hand in hand in the march of civilization.

CIVIL WAR SHOT GETS J. WEST GOODWIN'S LEG

Veteran Missouri Editor Suffers Amputation from Effects of Old-time Wound

J. West Goodwin, veteran editor of the Sedalia, Mo., Bazoo, who has been in a hospital in that city for some weeks, ill from a gunshot wound received during the civil war, suffered the amputation of his left leg the other day Surgeons decided that only an operation could save Colonel Goodwin's life.

Col. J. West Goodwin is one of the most picturesque personalities of Missouri. His famous beaver hat, said to have been worn continuously since 1868, has been written of and about from one end of the country to the other, and its adventures and misadventures form an interesting chapter of humorous newspaper history. He founded the Sedalia Bazoo in 1868, in the days before Kansas City became a railroad center, and when Sedalia bade fair to be the metropolis of the southwest, and for a time it had the largest circulation of any paper between St. Louis and San Francisco. Colonel Goodwin often explained that he adopted the name Bazoo because he believed no one would copy it.—The Auxiliary, June 22, 1912.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, Parrsboro, N. S., Canada.

EASTERTIDE comes very nearly as early as it is allowed to this year, but Spring will be just in its young glory at its passing, and so there should be no even comparatively dull period. The Easter period has become a gift season only next in importance to Christmastide, and this, of course, means advertising of a kind that calls for some of the job printer's best licks, besides giving a chance for the live advertising man on a newspaper to induce dull advertisers to put on some of the brightness of the season. Printing-advertising that sets the advantages of definite Easter and Spring advertising plainly before those who should especially advertise at this season is in order now. Be timely! It is much better than spending one's spare time in evolving numerous kinds of letter heads and envelopes for one's self, which seems to be some excellent printers' sole idea of printing-advertising.

✣ ✣ ✣

SEND US SOME MORE, MR. LOGAN

The following name letter is from W. W. Logan, of the Johnston Printing Company, Welsh, W. Va.:

> Dear Sir: We believe in the blotter advertising, and use a large number for this purpose. We are enclosing one which we printed for general distribution, and with no thought of sending it to the National Printer-Journalist for criticism, but have decided to ask your criticism through the above medium. We appreciate that the border should have been joined better, and had we expected to send one of them to you, would have had this part of it perfect.
>
> Yours very truly,
>
> JOHNSON PRINTING CO.

The job looks so clean anyhow that very few outside of captious critics would see that the border was not perfect — if it were not printing-advertising! Such a job, however, which simply contains the address of the concern, the words "Coal, Lumber and Commercial Printing," the names of the members of the firm, W. W. Johnson and W. W. Logan, and the telephone number, should especially be as perfect in the joining of rules and in color register as in composition, and selection of ink and stock, no matter who receives a copy. Such a blotter as this is pleasant to look upon, but did you ever try one with more of the Advertising Idea. The repetition of the telephone number on both lower corners is unusual, but may serve to impress the idea of telephoning to these good printers on the public mind.

✣ ✣ ✣

> Dear Sir: Am enclosing a few specimens of job work under separate cover and would like to have you comment on same (if worthy) in your columns of journal. In looking over your journal a few days ago, I noticed the "More Work Through Publicity" department, and I am interested in the same. Trusting these specimens are acceptable, I am
>
> Yours truly,
>
> JOHN GARLINGER.
>
> Printer
> with People's Register
> Chambersburg, Pa.

Your work has many points of excellence, and shows distinct artistic ability. Whatever faults there are are very little ones. That is a fine letter head of the Nelson Shoe Company. But there is no need for a dash within the beautifully composed panel, under the names of the firm. You evidently realized this, for the dash is a thin one. But its very thinness gives the appearance of a flaw.

Having the heading, "Stores," in the red makes a sufficient division. The black curlycue has no place within such a border. Take it out and close up somewhat. A minute's work would make a flawless job of this.

Colgate & Company's letter head is very handsome. But would it not have been better to put "Established 1806" in the Gothic, as it has nothing to do with the soap or the powder?

Now I have no objection to the ornament in the White Leghorn's panel. I should have done so had it been in an ornamental border. You were up against it because of the copy for this ad. No doubt you wanted to get the "Large White Chickens" on the left, and it was too good a design otherwise to give up, and it was odd, anyway. I know just how you felt. Splendid job, that of the telephone company. You have the originality that, with very little turning into the right channels, makes designers whose work is famed from coast to coast.

✣ ✣ ✣

A NEWSPAPER'S NEWSPAPER

The 4-page house organ, "The Recordette," of Canon City, Colo., is 9 by 4⅛ inches. It is, says in the heading, "published occasionally by the 'Record'. The two issues sent me are dated "June, 1912" and "July, 1912," although I received them only about a month ago. The leading article in the June number is headed "The Newspaper — and Your Store," which begins: "Would you consider that this newspaper was well managed if it issued according to the mood of its publishers — instead of at regular, stated and invariable intervals?"

What does "this newspaper" mean — the 'Record" or the "Recordette?"— for the latter is considerable of a newspaper. And the argument for the regularity of store news would seem to apply with equal force to news of the "Record's" business? So why say "published occasionally?" And let us hope that these two excellent issues, which evidently appeared regularly in June and July, were not of the "spasmodic" kind scored in the introductory article.

For the "Recordette" appears to me to be a dandy little paper, and makes me want to see "The Record." It has some of the brightest little items that I have ever seen in such a paper, besides the pertinent articles that are longer but not too long. Here are some of them:

> A Record want ad will find most anything. It has even found lost money for people a half dozen times recently, and that is a hard test.
>
> The Record has been highly complimented on the serial stories it has run this season. To buy the books would cost more than the subscription to the Record.
>
> When a new resident comes to town, Mr. Business Man, advise him at once to subscribe for the Daily Record. Thus he will become a new reader of your ad, and the Record will help keep him in Canyon City, so that you will have a continued customer.
>
> Did you ever see the Record linotype at work? It is a wonder and well worth seeing. Come in and see it. Bring your woman and the kids.
>
> For eighteen years every man who has worked for the Record has gotten his wage money every Saturday night. To keep this up it is necessary to have your account paid promptly.
>
> Did you see the handsome annual put out by the Canyon high school seniors? It was executed entirely in the Record job rooms. It was pronounced the most perfect annual ever issued in Canyon City.
>
> The Record pay-roll is the sole support of eight married men having thirty-two persons in their families, and three single persons. It also pays out weekly salaries to six or eight other young folks, much more than enough to clothe them. The dollar you pay to the Record gets back into your till, more quickly than any other dollar you pay out.
>
> Don't charge the two plunks you paid out for that program to advertising. It should be charged to charity.

Other bright extracts from this newspaper's newspaper, which particularly refer to the evident unwisdom of sending orders for printing out of Canyon City, will be quoted in another installment of this department.

Each issue has a different view of rooms in the handsome offices. The caption of one of these is "Where You Can Talk in Private;" of the other, "We are Always Glad to Meet You There."

Such advertising as this, which is not especially expensive, should certainly bring business to the "Record." These short paragraphs will surely be read, and if they are not heeded Canon City is no place for a bright paper.

MIND YOUR OLD ENGLISH LETTERS

Mind your P's and Q's is the old adage. I used those apostrophes in accordance with all the grammars and punctuation books I have seen, but what are they for? I'm going to write it this way:

Ps and Qs

after this, until some proofreading critic gives me a good reason for the other form. But what I was going to say is this:

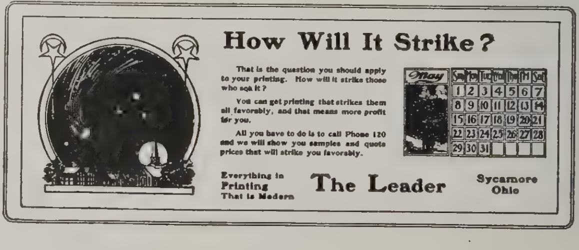
Mind your Ps and Qs, is the old adage. But in using Old English in these days, one should pay more attention to one's Ts, and Es and Cs and gs and ys. Ah! when lower-case is being written about, such words as gs and ys are not very pleasing. But is not "g"s and "y"s better than the use of apostrophe? Really, this is getting interesting.

Yes, one should pay more attention to "C"s, "T"s, "E"s, and even "G"s. Here is a most originally and attractively composed business card, bearing the line, "Fine Job Printing Neatly Executed." Within the name of the firm doing it, are Old English cap "E" for a cap "T" and a lower-case "y" for a "g." All the other lines, which are new English, are O. K. This mixing of the O. E. letters is very prevalent even among some of the best printers, and one of the foremost papers in America has a C for a T in its name as printed over an editorial column. How do the printers of German manage with a "k" that is simply a "t" with a little tail?

✣ ✣ ✣

HARMONY BETWEEN CUTS AND TYPE

The Weather Bureau has not reported any menace from comets of late, so this blotter (No. 0) from the Leader of Sycamore, Ohio, must have been sent in some years ago. However, it is still modern printing. There have been a good many comets in sight since De Vinne was introduced, but how good it looks in this job, and how well it harmonizes with the more modern, but still fresh and fashionable. There is, likewise, harmony between the heavy type and the cuts and rule work, thought having evidently been expended — however quickly the thought may work in a well-ordered mind. The ink is a rich dark green, on peach stock.



How Will It Strike?

That is the question you should apply to your printing. How will it strike those who see it?

You can get printing that strikes them all favorably, and that means more profit for you.

All you have to do is to call Phone 120 and we will show you samples and quote prices that will strike you favorably.

As you said "that strikes them all favorably" in the second paragraph, why not underscore or capitalize the "YOU" in the last one?

ART IDEAS WELL NAMED

Art Printing Shop, of 4324 Cottage Grove avenue, Chicago, issues a house organ that is not all a house organ, the name of which is Art Ideas. It contains such articles as "The Part 'Copy' Plays in Printing," "Good Stationery in Business," etc., of value to printers and to possible customers of printers. It is no less of an advertisement, however, than many of the other house organs that printers find of value in advertising the advantages of printing in general, and, of course, the especial advantages of the printing done by a particular shop. The novel part of the Art Printing Shop's campaign is the proposition it makes to trade publications to exchange advertising. The shop offers to send an electro of an advertisement with a coupon which reads, "Please send me, without expense or obligation on my part, Art Ideas for one year." Evidently the firm is taking advantage of the introduction of parcel post. (I write "parcel" instead of "parcels" because I agree with some of the more sensible phrase reformers who do not want to see the "s" box worked so hard. There is certainly no more need of writing "parcels post" than "letters box," and if a few thousand more writers fall in with the suggestion, the reform is accomplished.)

The Art Printing Shop's new idea of printing-advertising should be a good thing for the shop, the trade papers that accept the ad — and run an announcement in Art Ideas after receiving a sufficient assurance of a suitable circulation, and the advertisers who read the house organ as well as those who read the trade papers. Leaving out entirely consideration of this department, advertisers of all kinds can find in the National Printer-Journalist, for instance, single hints worth more than the year's subscription. In fact, I have found in the National Printer-Journalist, particularly in addresses delivered before editorial associations, ideas that I could not get in any other paper — even my own.

Here (No. 1) is a page of Art Ideas which contains six ads of The Art Printing Shop's own. In these the lines "Our Novelty Business Cards Talk," "— a new customer judges you by your card," "Art Ideas," "100,000," and the outline of the shipping tag and that of the hole, are in a bright red. This is a pretty good distribution of red on a page like this. Not only the ads that contain the red are prominent, but also the two advertisements, "Printing for Stock Dealers'" (why the apostrophe?) and "Does your wife, daughter, sister," etc., which are all in black. In one of these the heavy "P" of the initial is especially effective — much more so, considering the other color on the page, than if it were in red. In an article on "Street Car Advertising" that I wrote many years ago, I noticed how the effectiveness of many of the placards was lost by the lack of contrast in adjoining advertisements. Now especial attention is given by many street car advertising companies to this matter, so that all the cards are given good prominence, instead of, in some cases, none of them.

No. 1

Though this page of advertisements contains only one series of type with its corresponding italic, each ad has a pleasing individuality. My friend, Mr. Copper, who has the soul of an artist, likes ad pages, even though they consist of advertisements of a number of different concerns, entirely in one or two series. As such ads are set in many offices, they are so deadly uniform as to be somewhat monotonous, and often rob an advertiser of the individuality he not unnaturally desires. But where so many changes can be rung in with the use of one or two series, the effect has advertising as well as artistic value; and I am sure Brother Copper would be delighted with the display of ingenuity and individuality on this display-page.

✣ ✣ ✣

THERE IS MUCH IN SUCH A NAME

With the compliments of Charles N. Trivess, of the William H. Pool Printing and Binding Company, Chicago, comes a booklet describing the services of the Business Men's Advertising Bureau, which is operated in connection with that concern, "forming a distinct branch of the business." Any such special concession made by printers to The Advertising Idea is sure to be rewarded. Outside of initials and headings, the booklet is composed in 12-point and 18-point Cheltenham, leaded. Though Cheltenham is one of the faces that, because of the long ascenders, is sometimes termed as "self-leading," it stands leading so well that a booklet with a page 5¾ inches long, and composed in this manner, is decidedly "readable," even outside of the straight and pointed talks it contains. The book is in olive green, with the backgrounds of the initials of a terra-cotta like that employed by the publishers of Flaxman's Homeric pictures.

Business Men and
Advertisers

This Will Interest You

Business Man's Advertising Bureau
626-636 South Clark Street
CHICAGO

No. 2

A severely plain piece of ornamnetation is the oblong "affair" used on this title-page (No. 2). I believe these ornaments are sold by the foundry with the idea that they will be used with such faces. Naturally they are more attractive in color than in black.

* * *

A LETTER FROM ONE OF AMERICA'S BEST KNOWN PRINTERS

Dear Friend Woodworth: It has been many moons since I wrote to you to express my appreciation of your work for the benefit of the craft, but you can rest assured that your department is appreciated by your humble servant.

Much good is lost by the average printer from the fact that he does not delve into your department as he would his own work. He may scan the many good reproductions that you give us each month, but he does not take the time to work out the principles upon which the work was constructed or outlined in the beginning. I believe that much good is lost to the reader in not taking time to read the contents of the reproduction as well as the mechanical construction of the same.

The "anybody-can-do-that" idea is, in my mind, a misnomer, because experience has taught the studious class that no effort ever produced results only through hard work, and hard work comes with the thinking out how this or that piece of work was actually produced.

To produce better what some one else does well, is achieved by but few, yet we all have trouble sometimes to do better what some one else attempted to do well.

A merry Christmas and a happy New Year to you and yours is the wish of the writer.

Sincerely yours,
EDWARD W. STUTES (Himself).

Spokane, Wash.

ADVERTISING MACHINE COMPOSITION

The advertising of linotype and monotype composition is becoming more and more a feature of printing-advertising of a "Show-Me" (a Chicago term) order of publicity. "Specimens of Linotype Faces," issued by the Chicago Typesetting Company, 515 South Dearborn street, and the "Specimen Booklet of Linotype Faces" of the Superior Typesetting Company, 508 South Dearborn street, Chicago, are fine examples of this practical class of advertising. Both booklets are printed on very good paper. That of the former booklet is especially heavy, and that of the latter, although it contains no cuts, is Dill & Collins' offset suede finish. That there is a distinct charm in the use of high-class papers even for plain book work is

The most ancient materials employed for recording events were bricks, tiles, shells, and tables of stone. The modes of writing on these different substances were various. The tiles and brick were impressed with a stamp when in a soft state; the shells and tables of stone were etched or graven, the figures or characters being cut in their surface, and in some cases also stained with various colors. It was by the ancient art of stamping that walls, palaces and towers of Babylon were covered with **hieroglyphics,** which have but recently been brought to light from under the immense mounds of Mesopotamia by Layard and other explorers. The patriarch Job, who is supposed to have lived about 2,300 years after the creation, exclaimed, "O that my words were now written! O that they were printed in a

certainly shown in a very effective manner by these booklets. I have, however, seen some very good booklets of this kind printed on cheap stock. This page (3A), from the booklet first mentioned, is of a rather higher artistic order than that of many such productions. A number of pages show specimens of rules and figure work done with the Cox tabulating machine on the linotype.

Block-printing and printing with movable types seem to have been practiced in China and Japan long before they were known in Europe. It is said that in the year 175 the text of the Chinese classics was cut upon tablets, which were erected outside the university, and that impressions were taken of them, some of which are said to be still in existence. Printing from wooden blocks can be traced as far back as the sixth century, when the founder of the Suy dynasty is said to have had the remains of the classical books engraved on wood, **though it was not until the TENTH CENTURY that printed books became common.** In Japan the earliest example of block-printing dates from the period 764-770. It is said that the Chinese printed with movable types (of clay) from the middle of the eleventh century. The authorities of the British Museum exhibit as the earliest instance of Korean books printed with movable types a work printed in 1337. To the **Koreans** is attributed the invention of copper types in the beginning of the **fifteenth century.**

From such evidence as we have it would seem that Europe is not indebted to the Chinese or Japanese for the art of **block-printing**, nor for that of **printing with movable types.**

An important feature in the earliest books is that the printers imitated, not only the handwriting, with all its contractions, combined letters, etc., but all the other peculiarities of the MSS. they copied. There is in the first place the unevenness of the lines, which very often serves as a guide to the approximate date of a book, especially when we deal with the works of the same printer, since each commenced with uneven lines, and gradually made them less uneven, and finally even.

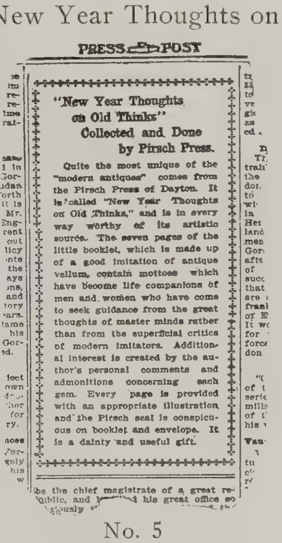
PLACE OF HONOR IN BOOK REVIEW

Though many pieces of printing-advertising well deserve the honor, few are chosen to be especially considered in a leading journal's book review, particularly by one who competently judges a real book as a piece of craftsmanship as well as for the reading matter it contains. The Columbus Press-Post has a book-reviewer who knows his business, and has no despicable ideas about "dignity," but the courage to see real art and literature in a worthy advertisement, and to give merited credit thereunto. The Press-Post has a book page that is not pedantic or dull, but is written by one who knows books and loves them. So no wonder he was charmed by "New Year Thoughts on Old Thinks," as compiled and "done" by that artist and book-lover, William Carl Pirsch. This clipping, or "tearing," as it perhaps might beter be called (No. 5), is on a piece of white paper that was partially pasted on the stock of the folder from which I took it. This is not torn from the paper in which it was originally printed, as is the case with some jobs of this nature. The printing is from a plate, and on the striking color job of which this excerpt was a part, the tone of the printing, so evidently from a plate, gave a rather more pleasing effect than in probability would have the original.



PRESS-POST

"New Year Thoughts
on Old Thinks"
Collected and Done
by Pirsch Press.

Quite the most unique of the "modern antiques" comes from the Pirsch Press of Dayton. It is called "New Year Thoughts on Old Thinks," and is in every way worthy of its artistic source. The seven pages of the little booklet, which is made up of a good imitation of antique vellum, contain mottoes which have become life companions of men and women who have come to seek guidance from the great thoughts of master minds rather than from the superficial critics of modern imitators. Additional interest is created by the author's personal comments and admonitions concerning each gem. Every page is provided with an appropriate illustration and the Pirsch seal is conspicuous on booklet and envelope. It is a dainty and useful gift.

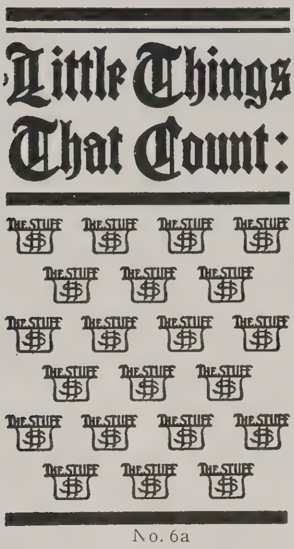
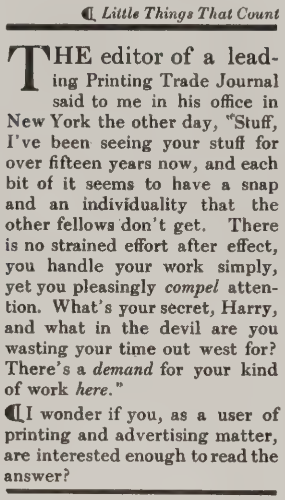
SENSE IN STUFF AND NONSENSE

"The fellow," chortles Stuff of Seattle, "who says there is no such thing as Originality, Individuality or Personality in the Printing and Advertising Game surely believes it — he proves that he isn't burdened with any of it." Mr. Stuff has them all — in fact, has so many of them that he can give an Individuality or a Personality to a firm that doesn't mind the bother so long as he pays for its assumption by somebody else. Mr. Stuff is a believer in the Importance of Little Things, as shown in a booklet whose cover, which is on the modernest cover stock, is shown No. 6A. Initials red, remainder black. There is force in even so little a thing as that colon.



Little Things That Count:

No. 6a



¶ *Little Things That Count*

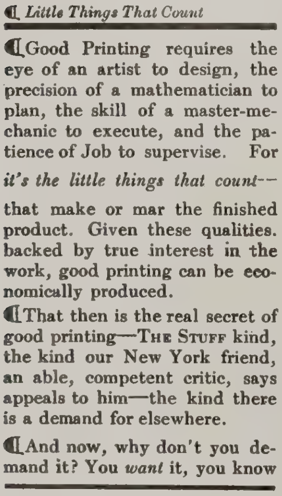
THE editor of a leading Printing Trade Journal said to me in his office in New York the other day, "Stuff, I've been seeing your stuff for over fifteen years now, and each bit of it seems to have a snap and an individuality that the other fellows don't get. There is no strained effort after effect, you handle your work simply, yet you pleasingly *compel* attention. What's your secret, Harry, and what in the devil are you wasting your time out west for? There's a *demand* for your kind of work *here*."

¶ I wonder if you, as a user of printing and advertising matter, are interested enough to read the answer?

No. 6b

This persiflagenous printer has lots of fun with his name, and doesn't mind who plays on it. That nameplate is $ure "The Stuff."

Here (No. 6B, C, and D) are three pages from the booklet, which show Mr. Stuff's ability in making composition talk. Note the italic voice. The lower margins of these pages are of about twice the depth of the upper margins.



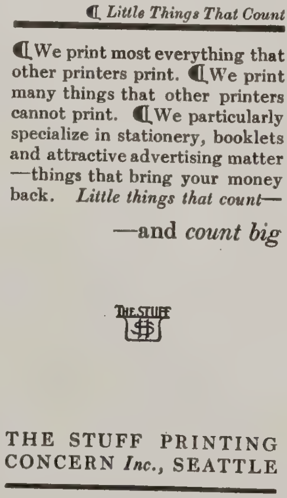
¶ *Little Things That Count*

¶ Good Printing requires the eye of an artist to design, the precision of a mathematician to plan, the skill of a master-mechanic to execute, and the patience of Job to supervise. For *it's the little things that count*— that make or mar the finished product. Given these qualities, backed by true interest in the work, good printing can be economically produced.

¶ That then is the real secret of good printing—The Stuff kind, the kind our New York friend, an able, competent critic, says appeals to him—the kind there is a demand for elsewhere.

¶ And now, why don't you demand it? You *want* it, you know

No. 6c



¶ *Little Things That Count*

¶ We print most everything that other printers print. ¶ We print many things that other printers cannot print. ¶ We particularly specialize in stationery, booklets and attractive advertising matter —things that bring your money back. *Little things that count*—

—and *count big*

THE STUFF PRINTING
CONCERN *Inc.*, SEATTLE

No. 6d

Only once in the body of the booklet is the 12-point Roman and an initial used, in the style of long ago, and that is at the start. There is a reserve about Mr. Stuff's work, even on a job that is purposely somewhat bizarre.

Such is "The Hot Stuff Rag," four pages printed in red on white cloth like that used for children's books, of which this (No. 7A) is page one, and this page two. Page three is in ragtime verse or worse. Every line except that in the refrain, which I refrain from printing, ends with "Stuff." But it was a wise old bard who wrote, "Dulce est desipere in loco"—it is sweet to chew the rag in place. And by doing so in this place Mr. Stuff has undoubtedly gotten up an advertisement that will bring the Re$ult$ with the dollar-marks. It is awful, Maybelle—too awful even for the promised Awful Number of Life, but it may be awful good advertising for all that. I have seen a good deal of the banquet programs of the Seattle Ad Club with both high-brow and booby prize lunatic nonsense, "in jesting guise," but we "are wise," and we "know what the jest is worth." Worth a good deal to Seattle, all right. Such pieces of printed matter, wonderfully printed, with totem-ornaments and many other things in riotous color, were sent all over the land, and doubtless were the means of making Seattle's year-advertised celebration a real Golden Potlatch.

A Bit of Rag about OUR Drag
Done in Ragtime on a Bit of Rag

No. 7a

The Apology for the Rag (No. 7B), which takes the full length of the second page, will probably be read because it is red, and is a pretty good excuse for this kind of advertising. Such a production as this is often good advertising for a printer, as it often leads to the printing (and the designing and the writing!) of programs where the genius of the rag-time minstrel may have full sway. The apology contains a good deal of sense, and its writer would doubtless agree that there should be strong threads of sense in even the most raggety rag.

❡An Apology]

DOWN at the Orpheum the other night a charming little lady with an unusually pleasing voice sang a sweet simple song, a song which admirably blended with the personality of the petite artist. Receiving a mild round of applause she responded with a stage-worn "Rag" and the house went wild. She chose a most fitting number and the strains of "Silver Threads among the Gold" softly, sweetly stole the tears as of old, but the rage for the "Rag" was evident. Again and again she ragged and rasped her precious voice to the thunderous approval of her hearers.

❡The thought came to me—how like my world, the printing world. After all what's the use? Does the public, really care for better printed things? Does it know what patient, painstaking study is necessary to produce pleasing, particular printing? And isn't the fellow who is slopping out the "Ragtime" stuff, the fellow who really doesn't know how to do any better, isn't he getting by with his turn?

❡After all it takes all kinds of people to make up the world, and an advertiser should not fail to keep that in mind. It is both proper and profitable to occasionally introduce "Ragtime" novelty in publicity campaigns, but not by the stage-worn stereotyped, sloppy print-shop route. Have the merit of originality and score strong on your point if you expect to hold the attention once it has been attracted. You know a joke is not a joke in at least two cases—when you forget to put in the joker, and when you hear "sure, heard it before."

❡Now this "Bit of Rag" has a message. That particular message is that we can design, create things out of whole cloth—as well as good paper. You have never seen a single thing like this before. It is not copyrighted, but it is dated. Keep it if for no other reason than for subsequent comparison. The copyists are hungry for ideas—we still have a few for sale at a nominal price, including the "Silver Threads among the Gold" quality.

❡At *Your* Service, HARRY S. STUFF

Comps RHDavis

The Birth of an Idea

THE lines of this prose-poem were dictated to a stenographer on the spur of the moment by Mr. Davis, of our Editorial Department, to occupy a page printing-press advertisement placed in Munsey's Magazine for July, 1911, by R. Hoe and Company

Within thirty days after the publication of that issue, over two thousand newspapers had reprinted the Hoe advertisement with editorial commendation.

Shortly thereafter advertising writers began to paraphrase it, and, before the expiration of the year, this form of expression had become the basis of big advertising campaigns throughout America, England, Germany and France.

In response to universal demand, it is reprinted in this form and presented with the compliments of

THE FRANK A. MUNSEY COMPANY

I AM the printing-press, born of the mother earth. My heart is of steel, my limbs are of iron, and my fingers are of brass.

I sing the songs of the world, the oratorios of history, the symphonies of all time.

I am the voice of to-day, the herald of to-morrow. I weave into the warp of the past the woof of the future. I tell the stories of peace and war alike.

I make the human heart beat with passion or tenderness. I stir the pulse of nations, and make brave men do braver deeds, and soldiers die.

I inspire the midnight toiler, weary at his loom, to lift his head again and gaze, with fearlessness, into the vast beyond, seeking the consolation of a hope eternal.

When I speak, a myriad people listen to my voice. The Saxon, the Latin, the Celt, the Hun, the Slav, the Hindu, all comprehend me.

I am the tireless clarion of the news. I cry your joys and sorrows every hour. I fill the dullard's mind with thoughts uplifting. I am light, knowledge, power. I epitomize the conquests of mind over matter.

I am the record of all things mankind has achieved. My offspring comes to you in the candle's glow, amid the dim lamps of poverty, the splendor of riches; at sunrise, at high noon, and in the waning evening.

I am the laughter and tears of the world, and I shall never die until all things return to the immutable dust.

I am the printing-press.

CHICAGO, MARCH, 1913

The news sense rests largely in honest, broad, deep intelligent human sympathy.

* * *

The promise is that the twenty-seventh Annual Convention of the National Press Association will be one of the most educative in the history of the organization. No one can afford to miss this great conference of editors and printers, aside from the fact that the magnificent, enchanting and educative trips through the Garden of the Gods, up Pike's Peak and to Cripple Creek and in all the surrounding region of scenic grandeur, with all the other entertainments, provided by the Chamber of Commerce of Colorado Springs, will be worth a journey across the continent and will afford one of the most delightful June outings that could be imagined.

* * *

There are very many good things to be found this month in our "Among the Associations Department." The organization workers today are up to the highest ideals. The members of the Kansas and South Dakota associations are noted for enterprise and activity, but the Connecticut and other organizations, whose doings are recorded this month, are no whit behind these in the splendid thoughts brought out.

* * *

Correct cost finding and efficiency are given large space this month, but no larger than desired. No matter whether one agrees with all that may be stated or presented by the different writers, there is much in each contribution that will help to better understand the up-to-date business methods and principles and inspire to the seeking of a better understanding and the adoption of sane and accurate methods. Neither printing nor newspaper making can be successfully conducted in this day without knowledge and the use of active brains with zeal and enthusiasm.

* * *

Schools of journalism, by all indications, are not only to prove successfully useful in preparing young men and young women to enter the profession with proper ideals, knowledge and equipment, but directly serviceable to those already conducting newspapers and printing offices. The addresses delivered before the students by eminent newspaper men, are no less valuable and inspiring to those already in these responsible callings than they are to novitiates, and the same is true of the most of the text books that are being written and published by the teachers in these schools, but beyond all this the schools of journalism, as in Kansas, are being taken right to the newspaper and printing offices, and their difficulties being met and solved.

* * *

The great advance of the cause of industrial education for boys and girls is one of the most promising features of the true advancement of these modern times, and of the salvation and upbuilding of the race.

The education of the hand and eye, and the training to useful employment, accompanied by the proper training and development of mind and spirit, make for strong, sane men and women with purposeful, healthy, useful, successful lives. It is nature's demand and God's plan. He who was called the Son of God, the Great Teacher was trained as a carpenter while the Spirit of Divinity was unfolding in the human body. The lack of good, well developed bodies, made skillful and competent to accomplish the tasks of life, has caused the wreck of countless lives, filled the world with misery and drawn minds and souls into wickedness and lined Hell with broken good intentions.

* * *

Secretary Schlosser, of the National Press Association writes very encouragingly as to the prospects of the approaching convention at Colorado Springs. Large delegations are already promised from several states, and the promise now is for very favorable and liberal arrangements with the railroads.

* * *

It is gratifying to contemplate the wide influence and the good results that have come from the intelligent warfare that has been waged on fake, fraudulent and impure advertising. Those publishers who claim no responsibility for the advertisements that appear in the pages of their papers are now the exception. It is with gratification that we notice this month, in our old Red Wing paper, an article along these lines that shows loyalty to the cause of honest, responsible journalism and is full of sound reasoning and the highest principles.

The more that is known of really successful newspaper men, the more it is established that absolute integrity, loyalty to the people, and a freedom from all graft or partizan political rings, have been the controlling principles in the conduct of their newspapers.

* * *

The readers of the National Printer-Journalist will have, cause, this month, for especial gratification over the completeness and practical usefulness of the several departments. All matters of printing, advertising and newspaper making are very broadly covered.

* * *

Endorsement is being given, by those who ought to know of his qualifications, to Samuel H. Musick of Pennsylvania, who is a candidate for the position of Public Printer.

John S. Leech, writing to Walter L. Tobey, of The Republican Publishing Company, of Hamilton, Ohio, says of Mr. Musick:

"He is a master printer of twenty-five years' experience. He is thoroughly familiar with the work of the government having spent eighteen years in the service in Washington and Manila. He has the necessary qualifications — legal, technical and political — to insure his eligibility and assure a creditable administration of the affairs of the Government Printing Office.

"His record has merited and received the commendation of the highest officials of this government. He is familiar with all of the specialties of operations of the allied printing trades and has demonstrated initiative in all of his work, particularly while collaborating with me in devising the system of apprentice instruction or vocational training described in the brochure recently mailed you and which has proved so successful."

Assuming all the risk that may be incurred by a play on the name, we venture to remark, that it might be well to have some one who would cause music in the Government Printing Office in Washington.

The Names on the Old Pressroom Wall

By Roscoe E. Haynes, Fairport, N. Y.

Way back in the old country print-shop
Where we worked as a boy at the trade,
And our first early efforts at learning
The great "art preservative" were made,
The apprentices all had a habit
With ink-begrimed fingers, to scrawl
Their names, and the dates of their service
High up on the old pressroom wall.

There was "Bobby" and "Willie" and "Charley"
And "Roxy" and "Bud" and the rest,
We remember them well, though they've vanished
To the north, to the south, east and west.
Now, "Bobby" and "Charley" are famous —
And their writings are quoted by all,
But we think of them still as in boyhood
When they wrote on the old pressroom wall.

Little "Roxy" conducts a great paper
And is known far and near through the land,
Though it doesn't seem long since he labored
"At the case," setting 'flimsy" by hand.
But poor "Bud" and "Willie" have left us —
Have answered the Great Foreman's call —
How little we thought of the future
As we wrote on the old pressroom wall.

There are others whose names were forgotten,
But we'll never forget the old times
When we "jeffed" to see who'd wash the windows
Or pitched pennies, nickels or dimes.
Now the "boys" are all grown, but in fancy
Again the old days we recall,
Proud that we in the list may be numbered
Who wrote on that old pressroom wall.

* * *

A most instructive and entertaining lecture was delivered by Mr. John R. Rogers, consulting engineer of the Mergenthaler Linotype Company, before the Ban Franklin and the Machine Composition Clubs of Chicago on Thursday evening, February 20. He gave a graphic account of the invention and development of the Lynotype.

Among the interesting incidents narrated, was that three men, unbeknown to each other, were working at the same time along similar lines for the same end; Mr. Mergenthaler of Baltimore, Mr. Shepard of Philadelphia, and Mr. Rogers himself, of Brooklyn. The first named won but not without a close race, and with the aid, through purchase, of some of the devices invented by the others.

The lecture was illustrated with stereopticon views, showing the Linotype and some of its parts in the different stages of development. The manner in which the inventive and experimental work was carried on and two or three millions of dollars were expended by capitalists, whose interest had been secured, with success only reached when all available funds were nearly exhausted, furnished strikingly dramatic passages in the lecture. He spoke in highest terms of President Dodge and also of the treasurer of the company, whose ability, persistency and optimism had very much to do with the final success.

The Greatest Newspaper Makers' and Printers' Congress

National Press Association Convention at Colorado Springs, June 17-19

Enchanting Excursions Through Garden of the Gods, Up Pike's Peak, Over to Cripple Creek and Other Places of Scenic Grandeur—Visit to the Union Printers' Home and Other Points of Interest

It is too early as yet to announce all the details of the program of the great convention to be held in Colorado Springs on June 17-18-19. However, enough has already been arranged to insure one of the most profitable and interesting occasions in the history of the Association. June is one of the most delightful months in the year for the trip and for the enjoyment of all the wonders of that most enchanting region of the Rocky mountains.

President Moffett announces the appointment of the following heads of departments:

President of Journalism Department; Prof. Charles Dillon, Department of Industrial Journalism, Kansas State Agricultural College, Manhattan, Kansas.

PLANNING THE NEXT ANNUAL TRIP OF THE NATIONAL PRESS ASSOCIATION OF AMERICA
YOU HAIN'T NOTHIN' TER DO TILL TERMORROW, HAVE YER?
CHARLES LEDERER

The Busy Secretary of the N. P. A.

President Department of Weekly Papers; F. O. Edgecombe, Editor Signal, Geneva, Nebraska.

President Department of Daily Papers; George B. Lockwood, Editor Evening Press, Muncie, Indiana.

President Cost Congress Department; Robert S. Denham, Cleveland, Ohio.

These are excellent selections and it is certain that most interesting and instructive programs will be presented. Either gentleman named would be able to make his department a success unaided, but it is proposed to call in aid from the most representative men in the country.

The following letter indicates that the work is in progress and there is abundance of time:

Kansas State Agricultural College, Manhattan, Kansas,
Feb. 21, 1913.

B. B. Herbert,
National Printer-Journalist,

My dear Father Herbert: I am working on the program for the department of journalism of the National Press Association for the meeting next June in Colorado Springs. I have asked Professor F. L. Martin of the Missouri State University department of journalism to act as secretary.

For the present I can only say that it is our intention to give two entire sessions to journalism in the next meeting. In this meeting we intend to emphasize these questions: The Newspapers and the Courts; Newspaper English and how to Improve It; Accuracy, the Important Thing to Teach.

Very cordially yours,
CHARLES DILLON.

Like letters have been received from others.

President A. D. Moffett writes as to the general program of the Convention: "I hope to have program in shape in a few days." It will appear in full in the April issue.

Secretary Schlosser reports everything progressing finely and sends the following letter from the secretary of the Colorado Springs Chamber of Commerce to George E. Hosmer, State Committeeman of Colorado, that gives an outline of the enchanting trips and entertainments to be tendered to those who attended this Twenty-eighth Annual Convention of the National Press Association.

TENTATIVE PROGRAM OF ENTERTAINMENT OF CONVENTION

Colorado Springs, Colo., Feb. 3, 1913.

Mr. Geo. E. Hosmer, State Printing Commissioner, Denver, Colo.

Dear Mr. Hosmer: Among the entertainment features which we are planning for the Annual Convention of the National Press Association of America, during the week of June 17th, are the following:

Smoker and entertainment, evening, at the Chamber of Commerce rooms or at the Antlers Hotel;

Trip over the Crystal Park Auto Trip (about one-half day);

Trip up the Mt. Manitou Scenic Incline and visit to Mt. Manitou Park (two to three hours);

Visit to the Cave of the Winds (two to four hours);

Trip through South Cheyenne Canon and to the Seven Falls (probably half a day), followed by a dance at Stratton Park Pavilion, in case this feature is arranged for the evening;

An out-door beef-steak fry or barbecue in connection with some one of these trips, such as the Garden of the Gods or Cheyenne Canon.

Visit to the Manitou Cliff Dwellings (one or two hours);

Visit to the Union Printers Home (two to three hours);

Automobile ride around the city, to various points of interest and over some of the convict-built highways of the Pikes Peak region (two hours to one-half day);

The Cripple Creek Trip (all day);

The Pikes Peak Cog Road trip (one-half day);

Camping out over night in the Garden of the Gods, with spectacular features.

We have not endeavored to make out a detailed program by days as this will depend to a great extent upon the nature of the business meeting. There is sufficient entertainment outlined above for five or six full days, without allowing much time for business meetings; so the program as finally made up will have to be determined in a conference such as was previously suggested at the time Mr. Schlosser comes to Colorado for this purpose. I believe, however, that this will give you a definite basis upon which to figure, and you can see that if the convention begins on either Monday or Tuesday there will be enough to keep the delegates busy the entire week, to Saturday night, in the Pikes Peak Region.

It is understood that the features, as above outlined, are to be in the nature of complimentary entertainment, extended by the Chamber of Commerce and the various scenic trips of the Pikes Peak Region.

You understand the difficulties which may possibly prevent arrangements of this kind with the Cripple Creek trip and the Pikes Peak Cog Road, but at the present time we feel safe in including these features.

Details for the unique features proposed for the Garden of the Gods have not been fully worked out, and the success of this will depend to a certain extent upon the co-operation we can secure from the State Militia, in which matter perhaps you can give us some valuable assistance later on.

We have one or two other features in mind, ,but have not worked them out as yet; and in view of the fact that this program must later be fitted into the business and convention program of your Association, felt that if any additional features were later found practicable, they could later be inserted.

The delay in sending this data has been due to the reorganization of the Chamber of Commerce and the difficulty of securing definite action at this period; also the possibility of complications which arose when it was found that the later date, at one time suggested, conflicted with bookings already made by various of the scenic attractions upon whom we were counting for assistance in this matter. I trust, however, that you have not been greatly inconvenienced and that the plans of the National officers have not been unduly delayed, and assure you that we shall be glad to take up any of these features in detail and to expedite arrangements for the convention and trips of the National Association in every way possible.

I am enclosing an extra copy of this letter which you may forward, if you so desire, to the national officers.

Yours very truly,
A. W. HENDERSON,
Secretary.

DEADBEATING PUBLICITY

It is curious that there are men who ought to know better and who profess to be honorable, able and successful business builders, who will seek favors and valuable services with no thought of making any return. Many of these are vain as to their accomplishments and overbearing in their intercourse with those whose goods they impudently seek to appropriate, and they frequently win by their very brazenness and lofty pretentiousness. Editor O. E. Broughton of the Sheboygan, Wis., Press, undertakes to deal with the not unusual manifestations of some of the higher-up-specimens of those who seek the promotion of their own business at the expense of the press. Under the caption "Too Poor to Advertise" he tells as follows of the familiar methods in vogue and of their littleness, if not meanness and dishonesty:

"A number of railroads as well as large automobile concerns have an idea that space in a newspaper can be had for the asking, and that legitimate advertising will be published free, providing it is ingeniously worded.

"The Press is not in this business for its health. In fact, at the present time we are not in need of any medicine of the kind prescribed by those corporations that are to poor to pay for advertising.

"Hardly a mail but what brings to this office several cleverly prepared statements listed as 'Of deep interest to your readers.' We are in close touch with our readers and we can see very little to interest them in the advertisements being sent to us in the form of 'readers.'

"No railroad company, just because they are running a train, would think of giving free passenger service. Our space in our newspaper is for sale just the same as the seats in the passenger train are for sale.

"We prepare our paper with news features and it leaves this office and goes out on its run just the same as the passenger train leaves the station. When some of these agents have an idea that they are going to load down our columns free of charge, they are wasting their time and energy. If they have a good advertising contract we can assure them that it will not find its way to the waste basket, where the kind above referred to are thrown each day upon their arrival.

"We would like to see the automobile business prosper and are willing to aid our local merchants in the disposal of their cars, and now and then we are inclined to run a reader without charge, providing it is of interest. We do not fancy, however, having some automobile expert telling us just what is a benefit to our readers and what is not.

"Our advertising columns are for sale, open to the world, and the man who frames up these letters and sends them to the Press as good live news, is only filling our waste paper basket at his own expense."

✣ ✣ ✣

A MODEL PRESS CONVENTION INVITATION

Office of the Secretary of the Webster City Commercial League

Webster City, Iowa, Feb. 22, 1913.

To the Editor:

To you, who in true brotherly love hold
Communion with the Editors here in March, we speak
A most hearty welcome; for your gayer hours
We have a musicale, reception and a banquet
Of eloquence and good things. Take the trail
March 13, leave business cares behind
And find yourself mingling with the bunch
Where all is joy and there is no sound
Save a gladsome greeting. * * * * * *
So come, for we do invite you to join
The innumerable caravan which moves
To Webster City, where all shall partake
Of pleasures in resplendent halls of myrth.
Whether thou come, bring also your wife or other
Lady friend to be welcomed and sustained and soothed
By our hospitality, they will approach our banquet table
Like one who would be refreshed on life's journey —
And ever after it will be more to them than a pleasant
dream.

With these greetings, we warn you not to miss the big meeting of the Upper Des Moines and Corn Belt Editorial Associations in this city March 13 and 14. The Webster City Commercial League has secured the fine Elks home for the two days' session. Webster City ladies will tender a reception to visiting ladies in the club parlors Thursday afternoon. Thursday evening the League will banquet visiting newspaper men and their friends. A toast program for this affair is being prepared in which prominent editors of the state and leading business men will participate. Following the banquet there will be a grand ball and other festivities. The keys of the city will be yours. Come and let us show you what a live and hustling city can do toward making your stay pleasant and profitable. We are going to strain every effort to make this meeting the largest and most successful these editorial associations have ever held. Extending you a most cordial invitation and hoping we may have the pleasure of seeing you and your friends here, we are

Very truly yours,
THE WEBSTER CITY COMMERCIAL LEAGUE.
E. S. BOUDINOT, President.
J. W. SCHROEDER, Secretary.

MORE WORK THROUGH PUBLICITY

(*Continued from Page 193*)

campaigns throughout America, England, Germany and France.

In response to universal demand, it is reprinted in this form and presented with the compliments of
THE FRANK A. MUNSEY COMPANY.

I believe that some of the imitations were better advertising, if not so good poetry — for instance, that of the National Cash Register Company, which I presume is one of the firms to whose advertising The Frank A. Munsey Company allude. Of course this style of writing is not new by thousands of poetic years. But its use in an advertisement was indeed novel, and made many ad-writers take notice and sit down — and write. Such productions catch the fancy of the public, who are more appreciative of poetic diction than many give them credit for.

The design on the back of this production (No. 8B) would surely be sufficiently ornamental were the three-cornered ornament omitted.

FROM HULL, O' THE SOUTH

Now this letter was written on June 20, 1910, which was at about the time I gave up this department for a while. I thought I had forwarded it to the National Printer-Journalist, as Mr. Hull is an old, old friend of the other department writers as well as myself:

> Friend Woodworth: I believe it has been about seven or eight years since I contributed anything to your department of the National Printer-Journalist; at least, not since I left my old home in Coshocton, Ohio. I have migrated southward a little, looking for a milder climate, but am not quite satisfied yet, so I expect to locate in Georgia or Alabama this fall.
>
> Am enclosing a few "things" I have done since coming to this section. Also am sending under separate cover a little booklet of "specimens of every day printing."
>
> Am at present employed as foreman of the largest book and job office in this section.
>
> Fraternally yours, HOWARD C. HULL.
> Asheville, N. C.

I learn from the letterhead that Mr. Hull was not only foreman of the Hull-Miller Printing Company, but president and manager as well. I hope he is well, wherever he is, and feel sure that he is still doing work that is not only up-to-date, but also a little ahead of date. Surely this card (No. 9) is up-to-1913, all right, even though it was produced in 1910. The rules are red, as are the words "Better Printing," and the cut is in brown, with the letters in red; the remainder is green, and the stock is cream linen-finish. Mr. Hull was always liberal in sending samples of his work to other contributors, and I hope he will see this comment, and let us hear from him soon.

* * *

St. Patrick's Day gives a good chance in many localities for the "holiday" advertising now so popular, presumably because it is so human. What Sentinel was it? — that sent me the handsome and original card with a dhudeen tied to it with a bit of green ribbon, and the words, in green, "You can untie this pipe and wear it today in memory of St. Patrick, who was a good man — he drove the snakes out of Ireland — but remember The Sentinel — which is a good newspaper — it drives the blues away from business men who use its advertising columns." And here is a four-page folder on stock of the color of that which has reached great popularity in textile fabrics under the name of "Paddy green." Shown in different tints are reptiles of various varieties, which it would not be well for many to look on after a St. Patrick's Day banquet were it not for the talismanic emblem of the shamrock, "which," on such nights, "keeps a man from harm." This partly weird but beautiful folder was sent me by the Pirsch Press, of Dayton, Ohio, after St. Patrick's Day in another year. But, wurra! wurra! Why this sheet of bright orange in the center of the production? It is, though, just a facsimile — paper and all — of a commendatory note from the Roycrofters, and they always use this kind of paper — and the initials and ornaments, as well as the typewriting, are in the color most sacred to Erin, so there is really no necessity for wigs on the green. There are three verses that explain the presence of so many reptiles. Though I have an abundance of St. Patrick's Day programs, with many Irish songs and sayings, I have none with this verse:

So success attend St. Patrick's fist,
  For he's a Saint so clever;
Oh! he gave the snakes and toads a twist,
  And bothered them forever!

The toads went pop, the frogs went hop,
  Slap dash into the water;
And the snakes committed suicide
  To save themselves from slaughter.

The timely advertiser will enjoy "the mornin' 's mornin'."

"BY PARCEL POST" ADVERTISING

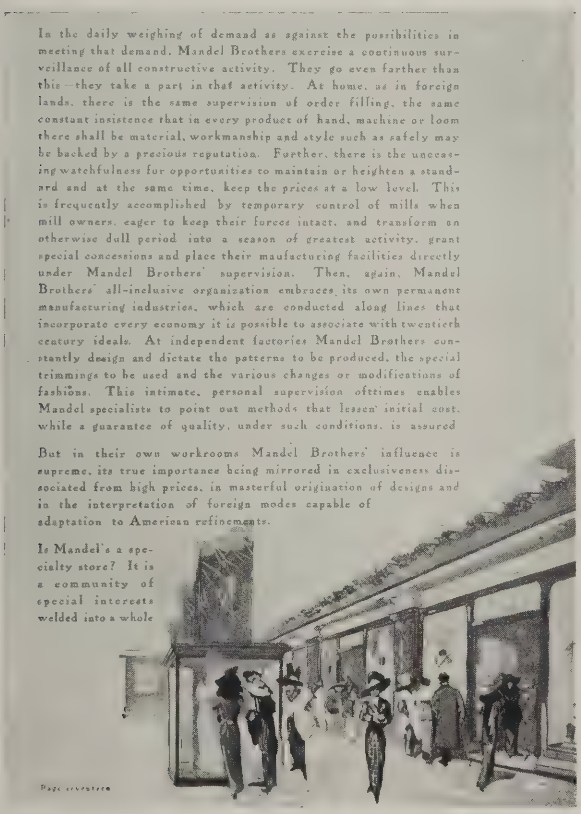
The New York Herald has been foremost in many newspaper innovations, and it is already out with an advertisement regarding a new classification in its famous want columns, namely, "By

Parcel Post." As printed in the Herald, there is a big cut such as the Herald only a short time ago would not print for itself or any other advertiser on any account.

* * *

A DEPARTMENT STORE'S UP-TO-NOW BOOKLET

I was sorry not to be able to accept the invitation of Mandel Brothers, Chicago, to "honour" them with my "presence at the formal opening of their new house of business" recently, but have no doubt some thousands availed themselves of the kind invitation, so that the opening came off with eclat. (I like to use that word once a year or so.) I was, however, glad to get their fine large booklet, "At Milestone Fifty-Seven," which sounds the latest note in high-class booklet making, with its satiny pages, and rare three-color work and vignettes that seem the outlines of a rare dream of the years of more than a half-century.



In the daily weighing of demand as against the possibilities in meeting that demand, Mandel Brothers exercise a continuous surveillance of all constructive activity. They go even farther than this—they take a part in that activity. At home, as in foreign lands, there is the same supervision of order filling, the same constant insistence that in every product of hand, machine or loom there shall be material, workmanship and style such as safely may be backed by a precious reputation. Further, there is the unceasing watchfulness for opportunities to maintain or heighten a standard and at the same time, keep the prices at a low level. This is frequently accomplished by temporary control of mills when mill owners, eager to keep their forces intact, and transform an otherwise dull period into a season of greatest activity, grant special concessions and place their maufacturing facilities directly under Mandel Brothers' supervision. Then, again, Mandel Brothers' all-inclusive organization embraces its own permanent manufacturing industries, which are conducted along lines that incorporate every economy it is possible to associate with twentieth century ideals. At independent factories Mandel Brothers constantly design and dictate the patterns to be produced, the special trimmings to be used and the various changes or modifications of fashions. This intimate, personal supervision ofttimes enables Mandel specialists to point out methods that lessen initial cost, while a guarantee of quality, under such conditions, is assured

But in their own workrooms Mandel Brothers' influence is supreme, its true importance being mirrored in exclusiveness dissociated from high prices, in masterful origination of designs and in the interpretation of foreign modes capable of adaptation to American refinements.

Is Mandel's a specialty store? It is a community of special interests welded into a whole

No. 11a

Perhaps some faint idea of the book can be given by a reproduction of one of the pages (11A) with one of the numerous wash-drawings in three colors. A half-tone may bring out the very faint orange vignette in the upper corner. The remarkable part of the booklet from a compositor's point of view is the spacing between the Avil that prevails throughout.

PRINTING HOUSE CRAFTSMEN MEET

The Philadelphia Club of Printing House Craftsmen held its regular monthly dinner and celebrated the third anniversary on February 13, 1913, at the Continental Hotel. About one hundred and thirty-two members and guests sat down to a most bountiful spread.

The speaker of the evening was Mr. Herman Loeb, director of the Department of Supplies of Philadelphia. He took no particular subject for his talk, but spoke in a very reminiscent way, saying how he had always enjoyed the smell of ink and paper and it was because of his love for the art preservative that he was persuaded to address us. Speaking further he told us of all the great men who had been printers and said that it must be the men of this and other like clubs that were to fill these places.

As this was anniversary night and that members of the New York Club of Printig House Craftsmen were instrumental in helping us to organize, we invited them to help us celebrate. About twenty-six of the New Yorkers responded and we certainly did enjoy their being with us.

President Sorensen called upon several of the New York members to give us a few words, among them being Mr. Sherwood, president of the New York Club; Mr. Morrison, Mr. Odell and Mr. Kendricks, all of whom, after a few knocks about this little berg, wound up by giving us many words of encouragement. Others to give us a short talk and help boost the Philadelphia Club were Mr. Griffith, of the Chas. Eneu Johnson Co., and our Vice President, Mr. H. Wigo. Mr. Griffith dwelt at some length on the good printing had done and was doing for humanity.

After basking in the radiance of this feast of eloquence for two and a half hours we were again to be given a treat by the entertainment committee who had prepared several numbers of exceptional merit.

The club adjourned at 11:45, but I am not sure all of the New York members are home yet as Mr. Bingham and several other members wished to show them what beautiful roof gardens and club houses Philadelphia had.

—N. E. HOPKINS, Sec'y.

FELLOWSHIP CLUB YEAR BOOK

THE FELLOWCRAFT CLUB
Graphic Arts
Euclid Arcade Building
Cleveland, O., Jan. 31, 1913.

National Printer-Journalist, 4618 Ravenswood Park, Chicago, Ill.

Gentlemen: The Fellowcraft of Cleveland has just issued a Year Book. It contains a list of officers since the inception of the club ten years ago, a group of views of the club rooms, a brief history of the club and the total paid up membership to the first of the year.

The club held its annual meeting on Tuesday, January 28th, and the following Board of Trustees were elected for the ensuing year:

Chas. U. Davis, of Davis & Cannon;
Chas. P. Carl, of The J. B. Savage Co.;
P. N. Calvert, of The Calvert-Hatch Co.;
Chas. Eisele, of A. J. Watt;
W. D. Frank, of The Gardner Printing Co.;
J. P. Corker, of The Ault & Wiborg Co.

The trustees met after the annual meeting and elected the following officers:

President, C. U. Davis;
Vice President, P. N. Calvert;
Treasurer, Chas. P. Carl.

The Secretary, Chairman of the Membership Committee, Chairman of House Committee, Chairman of the Entertainment Committee, are appointive positions by the President, and same will be filled at the next meeting of the Board of Trustees.

Yours very truly,
THE FELLOWCRAFT CLUB,
P. N. Calvert, Secretary.

Manufacturing Photo-Engravers of the Middle Atlantic States in Session

At Philadelphia on February 7 and 8 there was held an important Mid-Winter Conference by the Manufacturing Photo-Engravers of the Middle-Atlantic States. The conference, in its object, program and plans of work, is of educative value to all members of, and workers in, organizations for the promotion of the best interests of all departments of newspaper making, printing and allied trades.

Mr. H. A. Gatchel of Gatchel & Manning, Philadelphia, writes as follows of the objects had in view:

"This Conference was held with the idea of arousing interest and enthusiasm among the manufacturing photo-engravers of this section, so that along educational lines, there would be a better realization of the importance of the photo-engraving industry and the possibilities of development and extension and a better knowledge of the cost of producing their work, which would be accomplished by a membership and an active interest in the International Association of Manufacturing Photo-Engravers."

MID-WINTER CONFERENCE
OF MFG. PHOTO ENGRAVERS OF THE ATLANTIC COAST
HELD AT PHILA. PA. — FEB. 7-8

There is great need of "arousing interest and enthusiasm" among all members of local and state associations or clubs of newspaper makers and printers, to the end that the national organizations may become truly effective and useful.

The following was the interesting program, useful in suggestions:

Address of welcome, Mayor Blankenburg.
Reply to address of welcome, E. W. Houser.
Election of permanent chairman.
Election of permanent secretary.
Reading of communications.
Address, Max Levy.

"What Is I. A. P. E. Doing, and What Does It Intend to Do?" Louis Flader.

"Benefits to Be Derived from Sectional Meetings," H. V. Hurst.

"Importance of Being Able to Calculate the Cost of Your Finished Product," C. A. Stinson.

"Should Prices Be Standardized Sectionally as Well as Locally?" H. C. C. Stiles.

"Should a Uniform Cost System Be Adopted?" L. B. Folsom.

"To See Ourselves as Others See Us," E. R. Currier, Curtis Publishing Company.

Practical demonstration in estimating, direction of I. H. Rubin.

"The Photo-Engraver-at-law," A. W. Sanson, Esq.

"Efficiency in Production from a Practical Standpoint," John R. Bevan.

"Demoralization and Losses Arising from the Handling of 'Fillers,'" B. F. James.

"Extension of Credits," Joseph H. Weeks.

"Cost and Sale of Art Works," George Underdown.

"Methods of Selling," H. A. Gatchel.

"Ethics — 'Our Duty One to the Other.'— John M. Keenan.

The plan of having national officers to visit, address and confer with the members of subordinate or state and local bodies should be adopted by the National Press Association.

A dinner was tendered to the attendants upon the conference, Friday evening, February 7, by the Philadelphia Association of Photo-Engravers, and through the courtesy of Gatchel & Manning we are enabled to present an excellent half-tone illustration of the banquet scene at the Philadelphia Bourse Building. The faces that look out, in portraiture, are of young, bright, progressive men, and tell, at a glance, of the wonderful development, extension and progress of the photo-engravers' art, that has become the indispensable handmaiden of printing, art, catalog and book publishing, advertising and newspaper making, within only twenty-five years.

National Advertising Publicity and Allied Trades Exposition

HARRY COCHRANE
President of Exposition

Expositions have come to be markers of the world's advance and it would be impossible to conceive of any other show of the products of men that would be more typical than one at which will be displayed all the wonderful advances and improvements, new inventions of machinery and appliances, in the art and calling of printing, through the use of which it has been made possible to give to all men all the knowledge, news or information gathered from all the world, in all lines of human interest and endeavor.

Present civilization and the wonderful advances in business and in transportation, mining, agriculture and all the manufacturing industries have been made largely possible through the attainments made in the new appliances in the arts of printing and illustration, by which all the world, all workers, inventors and promoters may know of the possibilities and ways of accomplishment.

The expositions in the line of the printing art have made great strides in the last few years and the one at Cincinnati, last year, furnished such an example and effected such a record as would previously have been deemed beyond all possibilities of attainment.

Now, however, a greater is to be held in New York City, a location especially favorable for the collecting of great exhibits in all lines of the graphic arts. The exposition is to include not only printing with all the new wonders of composing machines, and of type-casting, of rotary, color, web, straight-line, tabular, art and automatic presses — as well as of the improved older styles of two revolution and job presses, that hold their own in the face of all changes — but also lithographing and book-binding machines, office equipment, advertising, publishing and allied trades.

In charge of this Exposition, as President, is Harry A. Cochrane, who has shown himself to be a man of resourcefulness and enterprise. He is a trained manager of expositions who does large things in a large way. He has taken upon himself, with the aid and backing of leaders in the craft and allied trades, the no small task of showing the great graphic arts industry in all its departments and connected branches and in the directly dependent callings.

The hearty co-operation of all the leading printing trade and technical journals was secured at the start as well as of the leading organizations of printers. The exposition has the endorsement of the Printers' League of America, New York Master Printers' Association, Ben Franklin Club of America, the Electrotypers' Board of Trade of New York, and the United Typothetae of America.

Fortunately or wisely, the exposition is to cover the same dates as those of the conventions in New York City, of the American Newspaper Publishers' Association, Associated Press and Printers' League of America.

Enterprising manufacturers and the leading dealers are sending out tickets to the trade in amounts running all the way from 20,000 to 60,000, and 150,000 tickets will be judiciously distributed to leading business establishments, the users of printed matter, so that the buying public may be made the better acquainted with the requirements for the proper equipment of modern printing offices and the great improvements and advancements that have been made, that have rendered it possible to meet every demand of the great industrial and commercial establishments with all their improved lines of machinery, appliances and products, needing description, illustration and advertising among the increasing tens and hundreds of thousands of possible buyers.

This Exposition will be a means of better understanding between producers and purchasers, manufacturers and users, and should prove, in many ways, a liberal education affording a broadness of views, and prove a helper to more and better equipment of offices for efficiency, economy and greater and better production and accomplishment.

The dates of the exposition, are April 19 to 26 inclusive — a whole week and every minute allowed can be well employed in viewing and studying the exhibits and then there will be much remaining for after study and inquiry, although one can see and clearly understand more in an hour than could be learned by reading in a month, with regard tc the action of new machines.

* * *

"CANNOT AFFORD TO MISS A NUMBER"

THE NEWS PUBLISHING COMPANY
Printing a Little Better
Than Seems Necessary
Middlebourne, W. Va., Feb. 16, 1913.

National Printer-Journalist, Chicago, Ill.

I simply cannot afford to miss a number. I assure you it is read in our office with great pleasure, and the only fault I find is that we cannot receive it each week.

Again thanking you for the interest manifested in my work, I beg to remain,

Sincerely yours,
CHAS. ASHCROFT, Mgr.,
The News Publishing Co.

Secretary Sheasgreen Takes Office

On the 1st of February, Secretary E. E. Sheasgreen of the Ben Franklin Club of America took over the duties of office from his predecessor and any communications addressed to him at his office, 1110 Harris Trust building, will receive attention.

Secretary Sheasgreen has the following message to the workers in the cause of improving conditions in the printing craft:

In taking up the new duties of secretary of the Ben Franklin Club of America, I wish to say that I appreciate both the honor and the responsibility.

It has been a great privilege to have had for many years a hand in this movement of progression that is sweeping printerdom. The last four years have been of vital importance to the craft — years which I have spent in the closest touch possible with conditions in many cities. To have installed cost-finding systems in a large number of plants, large and small, under all conditions; to have had the opportunity of studying the many different reasons why some of these plants have been failures, while others have been successes, and to have had the privilege of studying human nature, are experiences such as money could never buy — experiences never to be forgotten, but all of them with pleasant recollections.

E. E. Sheasgreen

Greater tasks still lay before all of us who are members of and workers in this great movement. We must be hard at the labors of our organization every day. We must not lose faith in our fellow man if results come slowly. Let us be comforted with the thought that human nature is very much the same wherever we look and also that enterprises do not differ materially one from another. Even though we find men engaged in printing or its allied trades, each has the same kind of problems to solve, each is feeling the same disappointments at failure, or joys at success.

Man is a natural complete organization within himself, and just as there are natural laws that govern the organization of the universe, likewise the same laws govern man in following the conduct of his affairs.

If men believe in themselves it is natural for them to believe in organization, and to organize in various bodies, though some think they are powerful enough to be independent of all men.

It is by and with the help of those who do believe in organization that the work of Ben Franklinism is to be advanced and in which work it has fallen to my lot to have a hand. Just as you gave freely and kindly of your moral and financial support to the retiring secretary, backing him most loyally wherever and whenever the needs demanded, it is asked that you continue to give the efforts of this office and of your secretary, the same consideration, for he needs your help and friendship.

During the coming year let us all strive harder than ever in the interests of one great powerful influence that will exert itself among the printers of this country and gradually lift the craft and mankind in general to a higher plane

* * *

THE DEVIL'S PRAYER

O Lord, I pray thee, make me a good Printer. Make me as wise as the proof-reader, who carries a dictionary in each of his vest pockets, and as honest as Bill, the pressman, who borrowed a quad last spring to use as a feed guide and returned it yesterday, as good as new: make me to be faithful as Jerry, the stone-man, who comes down to the shop every Sunday and cleans up the pi he has made during the week: as industrious as Old Tom, the comp., who has not missed a day at his frame since he came to work for the firm twenty years ago: and lastly, O Lord, make me as patient as the poor Boss, who has put up with my deviltry for three mortal years, and paid me good hard cash for the privilege!

— Roscoe E. Haynes, Fairport, N. Y.

"A GREAT PUBLICATION"

Sedalia, Mo., Feb. 15, 1913.

Col. B. B. Herbert,
Chicago, Ill.

My Dear Herbert: I think it was in February or March, 1885, I attended the New Orleans Exposition, and one day, wandering about the place, I noticed a sign on the side of a door which read as follows:

NATIONAL EDITORIAL ASSOCIATION
MEETS HERE TODAY!

I looked at the sign several times that day and I did not enter, because I thought it was the method of some resourceful rascal with an advertising scheme with which he wanted to "work" the press.

I was woefully mistaken and have always regretted I did not break in that place when the sign was so prominent.

Then later the National Journalist was started, and I have taken it ever since — not missed an issue.

It is a great publication and I am proud of it, and I congratulate you on publishing it twenty-five years. The good it has done me and my help cannot be calculated. I have bound something like twenty volumes and loaned the bound volumes to the Missouri School of Journalism at Columbia, Mo.

Again I want The Journalist, and enclosed please find exchange calling for two dollars, and it calls for The Journalist for the year 1913. Can I get it?

With best wishes and kind personal regards, I beg to remain, Very sincerely,

J. WEST GOODWIN.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

ONE of the most deplorable features of the newspaper business is the apparent lack of appreciation on the part of a portion, and I sometimes suspicion a very large portion, of the people. I have noticed, and no doubt you, too, dear reader, have noticed, that people will spend their money freely for almost anything else they crave, but stoop to many stingy little tricks to avoid subscribing for their home paper.

It has often been argued that the reason why this is true is because newspapers are not a necessity, but I assert that the reason why a great many such people do not buy it, is not because literature is not a necessity to their happiness, but merely because it has become habitual, yea, even hereditary with some of them, to get their reading matter for nothing. The very familiar term so fondly applied to printing, "the art preservative," holds the explanation as to why so few printers have grown wealthy. If books and newspapers, like bread, were consumed by use, how us printers would thrive! But a book, and, for a time, at least, even a newspaper is quite as valuable after its purchaser has used it as it was the moment it came from the press, hence the opportunity for the great branch of leeches in the human family to profit by the labors of a noble profession without contributing a cent toward that profession's support. People who wouldn't think of borrowing regularly from any other of their neighbors' possessions, will ask the loan of books and papers without a blush.

Doubtless nothing else which poor folks can afford comes as cheap (quality, quantity and benefit considered) as a weekly newspaper, yet the average family will see to it that every other of their wants is satisfied before they think of contributing a dollar to the support of the home newspaper. Even those who are known to spend much money foolishly, and those who are given to more or less extravagance, are often quite economical in buying reading matter. This is not because they do not read, as a rule, but simply because they do not realize the newspaper's importance in the world's advancement,, nor appreciate the value of a print-shop in the community.

An incident nicely illustrating this point came to my personal notice just lately. A couple of young men were going away to college. One of them called to place a 25-cent subscription for the home paper. As he kindly paid over the insignificant sum, he requested that, if his colleague should happen to call for the same purpose, it would be a favor if we should apprise him of the fact that the paper had already been ordered. The two young men planned on rooming together in the college town. Individually they were provided with everything each would require during the term, but the newspaper had been singled out as the one thing which could be shared together — and yet the pleasure of receiving that paper during the time which they expected to be away from home cost them the mere sum of 25 cents — a sum which either one of these young men would throw away on almost anything that might attract his fancy, without a moment's hesitation.

And, now, in conclusion, why is it that the masses figure so closely whenever it comes to dealing with the printer-journalist? Is it more the public's fault than it is the fault of the printers themselves? I believe the printers themselves are responsible for at least a part of their troubles, and the chief way by which they are responsible is through their characteristic modesty in demanding their rights and impressing their own importance upon the people at large. No other class of business men ought to be better known to the power in printers' ink and the irresistible influence of publicity, yet how many of us lack the courage to force the fact of the importance of our own calling upon our readers! But it's time we all got over that silly old-fashioned sentiment — it's time we all took up our own horns and begun to lustily toot them. Thus the public may mentally become educated above slighting their newspaper men, or shamed into broader liberality.

✣ ✣ ✣

Fremont, Mich., Dec. 20, 1912.

O. Byron Copper, De Soto, Wisconsin.

Dear Sir: Under separate cover we are sending you a copy of our paper, The Fremont Times-Indicator, which we hope you will use as an object of criticism in the National Printer-Journalist. We took this copy from a few left of this issue and notice a few nigger heads in an adv. on the 3rd page. These were noticed shortly after we began press work so appear in only a small part of the issue.

Respectfully yours,
TIMES-INDICATOR.

In many respects the Fremont Times-Indicator is a remarkably fine newspaper product. Its columns are resplendent in modern faces and the presswork is beyond reproach. The contents are both abundant and excellent. There are a number of bright, attractive headed stories, a lot of short locals and personal mention, a pageful of country correspondence and "other things too numerous to mention." One fact that instantly impresses me favorably is the fine uniformity maintained in head styles. There is evidence of the expenditure of both care and skill in making this feature correct. That it paid, there can be no question. A seven-column quarto, printed entirely at home, is a thing of joy to a newspaper man, provided other things are as equal, as they are generally throughout this specimen. There is not one of the great fifty-six columns in this sheet but which contains something worth while — and as for displayed advertisements, for quantity and quality those in this paper are seldom excelled. These ads have all been skilfully handled, too. But now for the other side of the story: It seems a shame that under conditions so favorable for the ideal, one should find that quality so far from being realized. Why were it not possible in so roomy a sheet to preserve a front page free from displayed matter? And why, too, with the opportunity so inviting, were it not possible to maintain the ideal in the arrangement of matter in other pages? This is really the only point in this sheet that presses it below the standards of excellence — this littered aspect of its pages caused by scattering displayed spaces to the four corners of each page to accomplish that which is just as easily accomplished by following the ideal method of makeup so often uotlined in these columns — namely, to get the greatest possible number of ads next to pure reading matter. Before closing I want to congratulate the Times-Indicator publishers on the fact of having a classified want column. It's a mighty good thing, and a profitable thing for any weekly, if properly handled and boosted occasionally in other columns.

✣ ✣ ✣

Fowler, Kansas, Dec. 16, 1912.

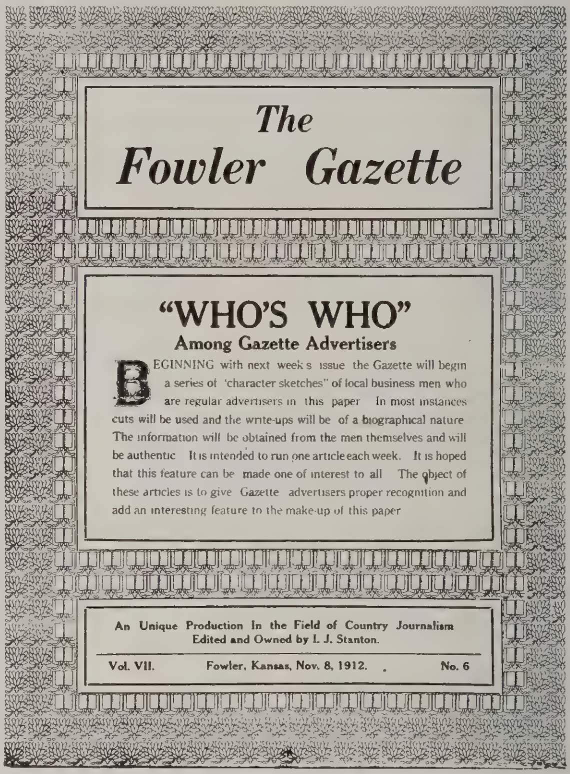
O. Byron Copper, De Soto, Wis.

My dear Mr. Copper: After so long a time I have mustered up courage to send you a few copies of the Fowler Gazette, which was changed to magazine form in the issue of Nov. 1. I send you these papers with some misgivings, for I have not yet learned what the penalty is for a country editor to step out of the beaten path and do things different. Yet I believe you will view the matter in the right light and commend or criticise as the needs appear.

The work on this paper was all done in my shop by one printer and myself. As I am also postmaster the paper represents the work of about one man and a half. I take a special delight in the mechanical end of my paper as well as the editorial part and I want to say that I never enjoyed anything better in my life than the making of this "newsazine," as you term it.

In criticising this effort again kindly remember that it comes from a non-county seat town of less than 600 inhabitants, from a county of 5,000 population and from the oft defamed "Shortgrass" section of the great state of Kansas. It comes from a nook out here where things grow different from any other corner in the great-out-of-doors.

The idea of this change has long been with me and before I made the venture I was firmly convinced that it was practical. In practically every feature I considered, before making the venture, I have verified and found that my calculations were well founded. In fact, Gazette readers, as well as advertisers, are far better pleased with the paper than I ever dreamed they would be. Business has picked up from the first issue and an enthusiasm is in evidence that never was apparent before. More copies of the paper are being filed away for "keeps," more copies are being sent to friends in other places and more extra copies are being sold than ever before.



The
Fowler Gazette

"WHO'S WHO"
Among Gazette Advertisers

BEGINNING with next week's issue the Gazette will begin a series of "character sketches" of local business men who are regular advertisers in this paper. In most instances cuts will be used and the write-ups will be of a biographical nature. The information will be obtained from the men themselves and will be authentic. It is intended to run one article each week. It is hoped that this feature can be made one of interest to all. The object of these articles is to give Gazette advertisers proper recognition and add an interesting feature to the make-up of this paper.

An Unique Production In the Field of Country Journalism
Edited and Owned by I. J. Stanton.

Vol. VII. Fowler, Kansas, Nov. 8, 1912. No. 6

No. 1

I realized that I was making quite a venture and financially I was not able to make a mistake but so far I am highly pleased from every standpoint.

However, I do not intend to say that I am satisfied with the Gazette as it is, but consider that it is as good as I could expect for the first few issues. I hope, as the weeks, months and years go by, to make it something that will be a real credit to the profession which I represent as well as a profitable venture from a financial standpoint.

You will gather from my first issue that an editorial page will appear only once a month. I find that it is practically impossible to get up a good bunch of editorial stuff each week, and do what other work I am compelled to do. Then I want to give the country correspondents a chance to be "it." I may be wrong but I have always held that the successful country paper is the one which encourages a large number of rural correspondents, the more the better. I have been in the business only about six years but I have had no occasion to change my mind about that point.

In the issue of December 6, I presented the first editorial page since I changed the form. On this page nothing will appear but my own stuff. It may not amount to much but it is my "say," and I believe every editor ought to have his say once in a while in order for his readers to get acquainted with him. The paper without editorials, in my opinion, now and then, don't amount to much.

There is some more expense to putting out the Gazette in this form but if the added receipts will not offset this added cost there is one thing very sure: the pleasure attending the finished product more than makes up the deficit.

Again I repeat that I have many more features in mind which I hope to see in my paper in the future but I will have to wait until President-elect Wilson gets his new postmasters installed when I will have more time for newspaper work.

Awaiting your criticism and comments, should they find a place in the valuable National Printer-Journalist, I am,

Yours fraternally,
I. J. STANTON.

I sincerely hope that none of my readers will pass over the foregoing letter, thinking it not worth while to read. It is really better than anything I could have penned to fill the same space, and, I am pleased to add, embodies several of my own pet ideas. But, with no further comment on the letter, I am anxious to turn my attention to the "newsazine," as I have christened Brother Stanton's new newspaper creation, which is a country newspaper in magazine form. The size of the page is 8 x 11 inches. Exhibit No. 1 shows the cover page regularly used and Exhibit No. 2 that of one of the special monthly numbers, of which one appears during the first week in each month. The Gazette in its novel new form makes a dainty thing in the way of a newspaper and an extremely handy thing to handle and read. Each page regularly contains three 13-em columns, with a pica between them, making the entire width of page 41 picas. A single wire staple at the center holds the several folds together. The regular size is sixteen pages, including the cover, which, as yet, consists of the same quality of stock used in other pages, which is a fair quality of white print, but I surmise that some day Brother Stanton will want a cover of a different grade and color, especially on the special monthly issue. These neat little pages offer an excellent opportunity for fancy ad-setting and I heartily congratulate the makers on the handsome way in which they are improving the opportunity. Specimens No. 3 to No. 8, inclusive, fully exemplify the remark. The presswork on this "newsazine" is

RICH & THOMAN

No. 3

Please Remember

THAT WE are still doing business at the Old Stand, with a full line of DRY GOODS and CLOTHING for Men and Women, Boys and Girls.

Just received another shipment of the FAMOUS WHITE HOUSE SHOES. See our line of Misses' and Ladies' CLOAKS and SUITS, they are beauties, and are not only up-to-date, but are up to NOW. Also our line of SUITS and OVERCOATS for Men and Boys is new and complete.

Our Grocery stock is fresh and clean, and while we claim to be the cheapest house in town, we consider QUALITY FIRST. Come in and see us; we will treat you right.

The Peoples Store

No. 4

Everything to Eat and Wear

Don't go all day with cold wet feet, when you can get a pair of Overshoes or Rubbers, for so little cost, and be comfortable. We are just now unpacking one of the largest and most complete lines of Rubber Goods that has ever come to Fowler, and the price is as low as the lowest, quality considered. Remember also that we have the Snappiest Line of Ladies' and Misses Tailored Suits ever seen in a town of this size. Also our line of Ladies', Misses', and Children's Coats is complete in every detail. You have only to examine these goods to be convinced of the extra values we offer We invite inspection and defy competition. For Men and Boys we have an up-to-date Line of

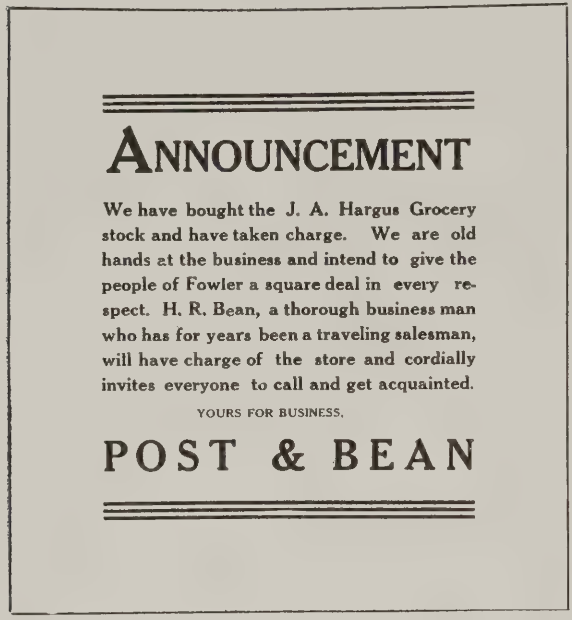
HATS, CAPS, SUITS AND OVERCOATS.

Yes, and Shoes for the whole family. We sell Groceries all the time, and pay the highest market price for Produce. When in need of anything in our line, come in. You will be treated right whether you buy or not

The People's Store

No. 5

as high grade as the idea embodied in this cute little sheet, which this Southwestern Kansas editor is working out down there in the "shortgrass country." Once a month, as intimated in the letter above, Brother Stanton "has his say" in an exclusive editorial page; and, without flattery, I must sincerely commend the choice of subject and the charming originality of the paragraphs of which that page is composed. The editor has that enviable gift of interesting and gripping his reader. This is, in fact, an editorial department right after my own heart, planned strictly in accord with ideals as set forth fully in a past installment of this department of the N. P.-J. As a fitting climax to this review, although the project is as yet hardly out of the experimental stage, I most emphatically commend Brother Stanton's initiative and wish him an abundance of success in his interesting departure in country journalism.



ANNOUNCEMENT

We have bought the J. A. Hargus Grocery stock and have taken charge. We are old hands at the business and intend to give the people of Fowler a square deal in every respect. H. R. Bean, a thorough business man who has for years been a traveling salesman, will have charge of the store and cordially invites everyone to call and get acquainted.

✣ ✣ ✣

Eau Claire, Mich., Dec. 14, 1912.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: As you are the critic for the National Printer-Journalist, and we value your opinion highly, our foreman, Mr. L. B. Voke, sent you a copy of our Christmas number.

This issue was printed on a Diamond Cylinder, and the regular force did it, a woman and a boy being employed extra for folding only.

Eau Claire has less than 500 population and we thought 18 pages, issued a year ago, was pretty good work, but to handle the business, had to beat it four pages this year.

There are nearly 2,000 inches of display advertising and nearly 500 lines of paid readers, the total business of the issue figuring $229.09.

We enjoy your department very much and would find it as hard to get along without your department as we would without the National Printer-Journalist.

Very truly yours,
O. C. WALTSGOTT.

Brother Waltsgott's paper is that Berrien County Journal, which is published in the "biggest little town in Michigan." This is a sort of slogan with the Journal-makers, and I cannot see, with the above cold facts confronting one, how it can be doubted. Think of a twenty-two-page newspaper

JUST BEFORE CHRISTMAS

Discount Sale of Manufacturers' Samples

Away back four months ago we began making preparations for this great annual "Come and See" Sale—the biggest noise in furniture circles that has ever been announced in this section. In description it's just exactly what the name implies—an offering at Bargain Prices of the sample lines of makers of every kind of furniture. Thes pieces have been used a few weeks by makers in showing their products to retailers so their quality and perfection are beyond reproach, and during these shows we made arrangements with the best factories to buy their samples at a portion of the regular value when they were through with their use. As a result we offer you right here before Xmas, the best there is in these lines in one or two numbers only of a style at liberal reductions and THE OPPORTUNITY TO SAVE IS YOURS. "COME AND SEE."

Handsome Brass and Iron Beds

Make a sure choice from this manufacturers' sample line of brass and metal beds. A display we are proud of and you will be surprised at. We haven't omitted a new and right design in the showing and no matter what the dimensions of the room or the purse the one you want is here. These are in all popular colors, genuine sanitaire Gold and brass Beds in various popular finishes of satin and polished effects. All made with extra heavy chills and rails and in good full widths and lengths, prices

95c to $37.50

Popular Prices in Bed Room Furniture

We want to refer you particularly to this department of furniture for the sleeping rooms—good, honest, better than regular values, every one of them, and in an especially attractive collection. There are some interesting new styles in this class of goods this year that abound in a world of beauty and usefulness and they are all shown to an advantage in these samples. Look over this collection of Dressers and Chiffoniers in Circassian Walnut, Mahogany, Birds' Eye Maple, Oak, White Enamel, prices from

$5.75 to $48.50

The Greatest Rocker Values

Don't forget the adaptability of a big, roomy rocker for the convenience of every home. No home has too many—too many haven't enough. There's a big opportunity to make a selection from these manufacturers' samples at big values and in every desireable size and finish.

SPECIAL

A special quantity purchase of magnificent rockers, in a beautiful and durable finish, has shaped back, full roll seat and heavy arms and well balanced rockers.

Very Special

$3.85

"Come and See"

Dining Tables

If you want a big gift that's noticeable and appreciated and just as useful as it is big, select from these samples of Dining Tables in every design, finish and style at from

$4.25

to

$45

Buffets, China Closets, Etc.

Of special merit as a gift is a buffet or china closet—of more than special note are the money saving advantages offered here. Come and see them in Circassian walnut, early English, fumed and golden quartered oak, during the "Come and See" sale, $48 down to

$12

"Come and See"

Great for the Home Are Bed Davenports

Nothing could be better for a home gift than these convenient Bed Davenports. They combine a degree of beauty and usefulness in the living room all day and are easily transformed into a bed at night. A child can operate one and it's always ready and always in place. They absolutely do away with the furnishing and maintaining of a spare room. These big sanitary davenports are shown in leather and varied designs in plush upholsteries. The frames are in massive mahogany, early English and golden oak, while the springs and understructure are of the very best; up from

$18.50

Swell Medium Priced Dining Chairs

There's a big supply of Dining Chairs in this display of Manufacturers' Samples. There are more makers of chairs than any other goods, hence the fact that the showing here is extra large, but we selected only the best of "shows." Make your choice from an assortment of some thirty different styles and in every popular finish.

59c to $4.50

Artistic and Durable Library Tables

You'll find a lot of genuine pleasure in making a gift of this sort. you'll find also an abundance of satisfaction in selecting one of these high grade samples at a saving of many per cent. They're here in splendid assortment of styles $4.85 to $55

Bargains At The Rug Store

Here's attractive news from the Big Rug Store—news that's not interesting alone for the extent of the beautiful and exclusive styles but greatly increased by the fact that they're the cream of some of the country's best weaves and right in every respect. Patterns and designs are so varied that the choice is the best we have ever placed or you have ever seen. They're in Wiltons, Body Brussels, Brussels, Granite, Ingrain, Fibre and every popular weave and fabric.

SPECIAL

One lot of 150 small, convenient sized rugs in handsome patterns and colors

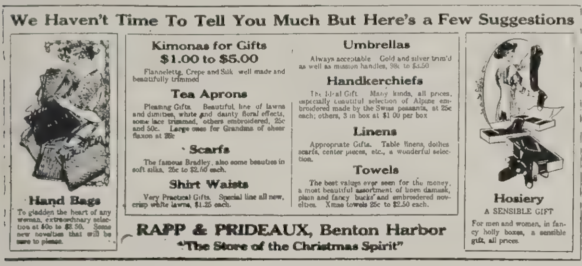
"Come and See"

No. 9

emanating from a town of only 500 population — and, what is more remarkable, this big twenty-two-page newspaper was not only right up-to-date in every particular, but every feature of its making was eminently high grade — editorial work, composition, press work, were all just about as good as you'll find 'em in the country — and that's quite as often as you'll find 'em anywhere, for the brains of our great cities, as a rule, were bred upon the farm, anyhow. The typography of this fine, big, six-columned sheet is a veritable joy, too. The faces are new and of tasteful designs, and the lads who "assemble the silent messengers of thought" in this office know how the trick is most cleverly turned. In looking for ad specimens suitable for reproduction herewith I found such an array of them that a selection was difficult. However, I have finally chosen two (Exhibits No. 9 and No. 10) both of which are practically without fault. Ere I dispose of this specimen, I want to commend its makers for the fact that, notwithstanding their enormous run of advertising, they still found it possible, and profitable, to maintain a clean front page — and, by the way, it will be noticed also that a decent rate is secured for space. Another gratifying fact is that the Journal is not one of these cheap papers — it costs the subscriber $1.50 per annum, which is as little as any good six-column quarto ought to sell for. Men who are publishing such papers for less are running their business at a loss — or, at least, without profit in the circulation department.



We Haven't Time To Tell You Much But Here's a Few Suggestions

Hand Bags
To gladden the heart of any woman, extraordinary selection at 50c to $2.50. Some new novelties that will be sure to please.

Kimonas for Gifts
$1.00 to $5.00
Flannelette, Crepe and Silk well made and beautifully trimmed

Tea Aprons
Pleasing Gifts. Beautiful line of lawns and dimities, white and dainty floral effects, some lace trimmed, others embroidered, 25c and 50c. Large ones for Grandma of sheer flaxon at 25c

Scarfs
The famous Bradley, also some beauties in soft silks, 25c to $2.50 each.

Shirt Waists
Very Practical Gifts. Special line all new, crisp white lawns, $1.25 each.

Umbrellas
Always acceptable. Gold and silver trim'd as well as mission handles, 98c to $3.50

Handkerchiefs
The Ideal Gift. Many kinds, all prices, especially beautiful selection of Alpine embroidered made by the Swiss peasants, at 25c each; others, 3 in box at $1.00 per box

Linens
Appropriate Gifts. Table linens, doilies scarfs, center pieces, etc., a wonderful selection.

Towels
The best values ever seen for the money, a most beautiful assortment of linen damask, plain and fancy bucks and embroidered novelties. Xmas towels 25c to $2.50 each.

Hosiery
A SENSIBLE GIFT
For men and women, in fancy holly boxes, a sensible gift, all prices.

Marmarth, N. Dak., Dec. 16, 1912.

O. Byron Copper, De Soto, Wis.

Dear Sir: Now and then we (all of us) attain a new interest in our vocation and somehow this week the result of our labors leads me to take time to send a couple of samples our our last two weeks edition to you for your able criticism.

If you find anything in either of the copies really worth while I shall be pleased to know.

Sincerely and fraternally,
JAMES H. CRAMER.

After I have reproduced the first page of one of the sample copies of Brother Cramer's Marmarth Mail, then I'll put it squarely up to you, dear reader, if I wouldn't be blind, if I shouldn't find something in this sheet really worth while. (Exhibit No. 11.) This is certainly a well gotten-up newspaper page, and the excellent print is not least among its fine features. The many well-worded news-stories, from a column, or more, in length, down to stickful, or less, and the delightfully clever department of editorial paragraphs, tell the tale of the natural ability of the Mail's editor, better than I can, notwithstanding my genuine admiration. This publication is all-home-printed on a high-grade of stock, and I must again emphasize my appreciation of the superb impression secured on its pages. Some excellent results are secured by the ad-compositor, due to the unique combination of the fine modern materials employed, a high regard for white

space, and an artistic taste. (Exhibits Nos. 12 to 15, inclusive.)

Whether you are one of the enlightened ones who have given up the idea of the existence of an evil one, or not, the following letter so well illustrates how Satan sometimes seems to take possession of a printing office (devil and all) that I am quoting it verbatim, although I am under the impression that the paper which should accompany it was considered in last month's department:

Kensett, Iowa, Dec. 14, 1912.

O. Byron Copper, De Soto, Wis.

Dear Sir: Have sent you under separate cover sample of our Christmas number. We cannot claim much for it artistically. Everything this year conspired against us. Grippers breaking (with no hope of quick repairs) folder tapes lying down on the job, tympan going to the bad, even electric lights failing, so we had two runs to make by lamp-light. Yet, myself, one man and a young boy started in Monday and put the edition in the mail Friday p. m. I spent the better part of two days of that time soliciting the ads and writing them. On the whole, we think we shall give ourselves credit for a good week's work.

Yours truly,
H. H. HALLETT.

JEWELER AND OPTICIAN

No. 14

There are not many country newspaper-makers of many years' experience who have not been right up against just such runs of "bad luck" as Brother Hallett describes in the foregoing letter, and therefore we can all sympathize with him. I have been right there, personally, several times, when it seemed the whole world had turned against me as black as the ink in the fountain or that smeared upon my hands — when I have actually cursed the day I first set foot inside of a print-shop — but, after it was all over, the sun has again issued from behind the clouds, and, viewing the finished work, over which I had sweat and sworn to produce, I have had that exhilarating glow of self-satisfaction generated within me, that comes to the conqueror of heavy odds. Such a glow I see glimmering between the closing lines of Brother Hallett's letter above. By the by, this Brother Hallett is nobody's fool. He not only issues a live, healthy six-column quarterly weekly at his home town of Kensett, Iowa (of which I shall speak a little more fully later on), but he has also invented a loose-leaf advertising record of clever design, which he sells to brother publishers at a fair price. Brother Hallett's paper is what one might term triplets — because, besides the Kensett News it has two sub-

headings, one being the Grafton Journal and the other the Joice Review. As may be suspected, the sheet is all home printed and very creditable in every respect.

* * *

Clark, S. Dak., Jan. 7, 1913.

O. Byron Copper, De Soto, Wis.

Dear Sir: Am sending you under separate cover a copy of this week's Courier. Wish you to criticise same and have it reproduced in the Journalist if possible. Would like the envelope criticised also. Thought it was pretty nifty. If both these are reproduced please see that we get a copy of the paper and mail us the cuts at once. Will remit postal money order as soon as we receive them. Thanking you sincerely for past favorable criticisms on my work, I beg to remain,

Yours very sincerely,
ROY A. BAST.

A publication of somewhat different type, but even more praiseworthy, if possible, than the one just reviewed above, is this Clark County Courier, of which R. A. Dunham is publisher, and this department's old-time friend, Roy O. Babst, is manager. The Courier is a five-column quarto. Small, did you say? Only in dimensions, for it is replete with as much, and more, good, wholesome, newsy reading matter than many a six-column quarto contains, making it the "biggest little paper" that has graced my desk for some days. It is all-home-printed, and well printed, at that. The modest, yet attractive, front page is shown herewith as Exhibit No. 16. I was never an admirer of the hanging-indention style of sub-headings, although it is entirely good form and permissible. But the headman should see to it that all such "decks" are of equal length. As hinted, the contents of this sheet are particularly abundant and good. There is one solid pageful of short locals, besides much other good stuff. All the sheet lacks is a department of editorial expression. As to the ads — they are

How to Get One Set of These Beautiful Dishes

Read and Know

We have been able to secure fifty sets of these beautiful dinner sets at a bargain, and for the purpose of advertising the Courier will frunish one set to each family for just what they cost us, plus the freight, providing they pay their subscription to the Courier one year in advance. Those who have already paid for the paper in advance or who receive the paper on account of the advertising they carry, may have a set of the dishes for $4.00. Just think of it! For those who are in arrears, or who wish to subscribe, we make the astonishing offer of one year's subscription to the Courier and a set of dishes for $5.00. Here is a chance to get your wife a swell dinner set at a very nominal cost. We have three designs to choose from, and they are to be seen at this office. Call in at any time and inspect them. In addition to the above proposition, we will present absolutely without cost or condition, one beautiful serving dish to each of the first fifty out of town ladies who call and ask for them between three and five o'clock next Saturday afternoon.

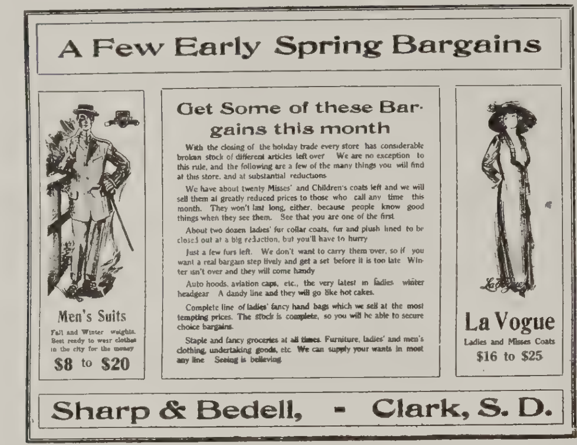
beauties, and among them are several masterpieces. Three of these latter are reproduced as Exhibits Nos. 17 to 19, inclusive. The compositor of these specimens has a talent much above the ordinary, a true appreciation of the value of liberal white margins and a skillful proclivity for the use of panels.



A Few Early Spring Bargains

Get Some of these Bargains this month

With the closing of the holiday trade every store has considerable broken stock of different articles left over. We are no exception to this rule, and the following are a few of the many things you will find at this store, and at substantial reductions.

We have about twenty Misses' and Children's coats left and we will sell them at greatly reduced prices to those who call any time this month. They won't last long, either, because people know good things when they see them. See that you are one of the first.

About two dozen ladies' fur collar coats, fur and plush lined to be closed out at a big reduction, but you'll have to hurry.

Just a few furs left. We don't want to carry them over, so if you want a real bargain step lively and get a set before it is too late. Winter isn't over and they will come handy.

Auto hoods, aviation caps, etc., the very latest in ladies' winter headgear. A dandy line and they will go like hot cakes.

Complete line of ladies' fancy hand bags which we sell at the most tempting prices. The stock is complete, so you will be able to secure choice bargains.

Staple and fancy groceries at all times. Furniture, ladies' and men's clothing, undertaking goods, etc. We can supply your wants in most any line. Seeing is believing.

Men's Suits

Fall and Winter weights. Best ready to wear clothes in the city for the money

No. 20

Regular readers of these columns will doubtless recall Brother Frier's handsome sheet, The Benton Republican, and likewise the handsome things which I have been moved to say about it in the past. The front page of the issue of January 10 is a pleasing one (Exhibit No. 20), although, personally, I prefer a somewhat less monotonous style of makeup. I like to see the column tops opened alternately with the double-deck heads, rather than having every one of them adorned with duplicate headlines. For instance, the first page of the issue of January 3 (Exhibit No. 21) pleases my fancy considerably more than the first. One thing of which I heartily approve in both of these pages is the conspicuous modesty in evidence. The headletter employed is an ideal one. And, as to Foreman Ross' page ads (Exhibits Nos. 22 and 23) they are remarkably well done, showing the extreme of empaneling, but with good display and good balance. I should add that the contents and editorial work on the Republican are just as fine as ever — and that's always first class.

✣ ✣ ✣

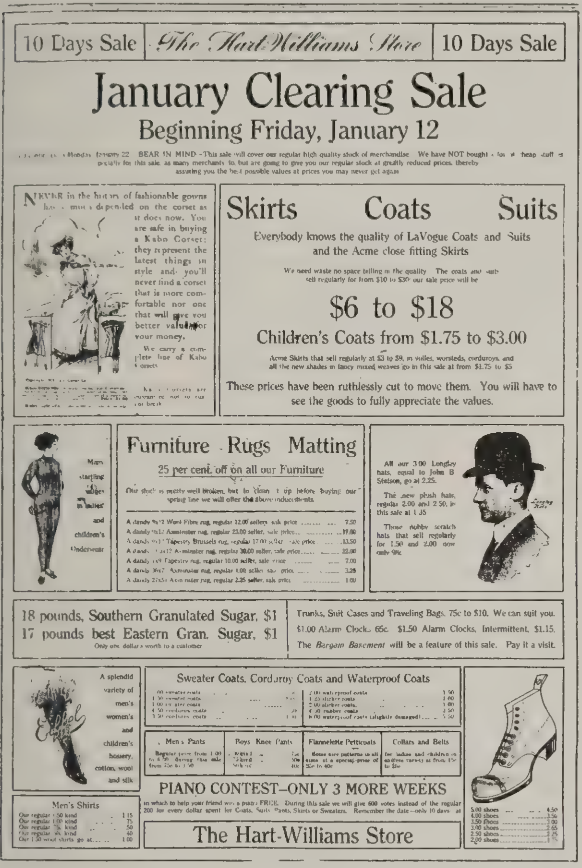
Caledonia, N. Y., Dec. 19, 1912.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: There has been sent you under separate cover a copy of the Christmas Community Edition of The Era.

Whatever of criticism, adverse or otherwise, you have to offer will be welcome. The number was produced under difficult circumstances. The week before the issue the young lady compositor in the office lost four days and one-half by illness and the pressman-compositor three, while the latter's helper was unable to assist at all in the office the week of its issue, due to illness. Practically all the ad composition was done by one man, the foreman, between noon Thursday and noon of the next Wednesday, with many hours of overtime. Of course under such conditions the best work is impossible. Of the 33½ columns of ads reset for this issue, one man set all but a trifle over two columns.

A portion of the straight matter was linotyped in a nearby town, owing to the illness in the force. The editorial matter in this issue is not up to its usual standard due to the unusual amount of work outside and in that it was necessary for the editor himself to attend to personally.



10 Days Sale | The Hart-Williams Store | 10 Days Sale

January Clearing Sale

Beginning Friday, January 12

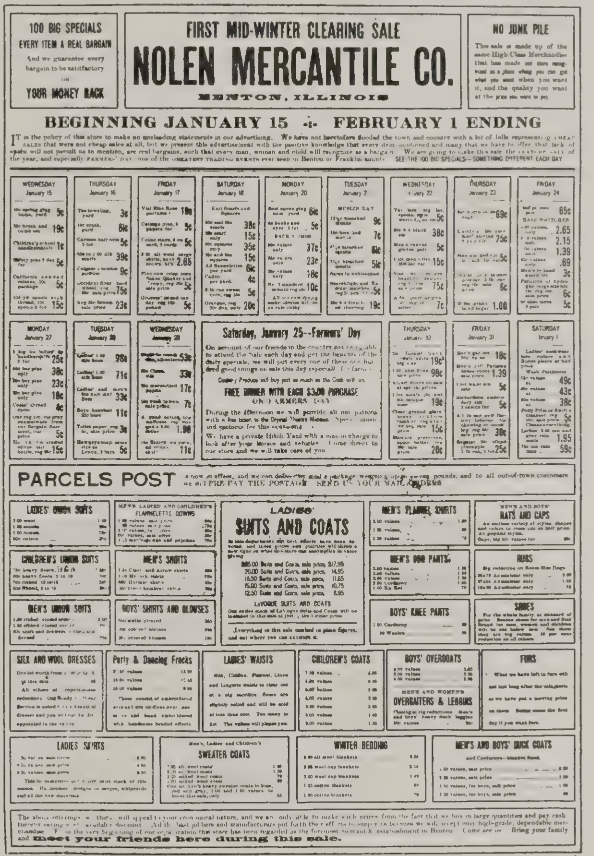
No. 22

The National Printer-Journalist is read with great interest as soon as it reaches the editor's desk.

Respectfully yours,
R. A. PECK.

Brother Peck need offer no excuses for this Christmas number of The Caledonia Era. In spite of hardships under which it was produced, it came forth a creditable achievement. It was inclosed in the Western Newspaper Union's bright lithographed cover and contained an abundance of interesting reading matter in its twelve home-printed pages. Editor Peck is the man who writes some mighty good editorial stuff under the unique caption of "Editorial Ebullitions." Referring therein to this special edition, the editorial pot (or, more properly "Peck-measure," which, in this case, I assure you, considerably exceeds eight quarts) boiled over as follows:

"We call this extra holiday edition a Community Christmas number because, as this newspaper adds years to its existence, its editor feels more and more that the paper belongs to and is of use to all the community it serves. As was expressed in a recent number, this paper takes pride in the feeling that it has helped in some degree at least in bringing more nearly to know each other the village and rural residents of Northern Livingston and Southern Monroe counties by bringing to them once each week the news of the local happenings therein. We have endeavored to give everyone having relations with the public of this section the opportunity of extending the greetings of the season through this issue's columns. If we have failed to do so it is because of the immense special work the undertaking involved."



100 BIG SPECIALS
EVERY ITEM A REAL BARGAIN
And we guarantee every bargain to be satisfactory
OR
YOUR MONEY BACK

FIRST MID-WINTER CLEARING SALE
NOLEN MERCANTILE CO.
BENTON, ILLINOIS

No. 23

✣ ✣ ✣

Forest Grove, Ore., Dec. 20, 1912.

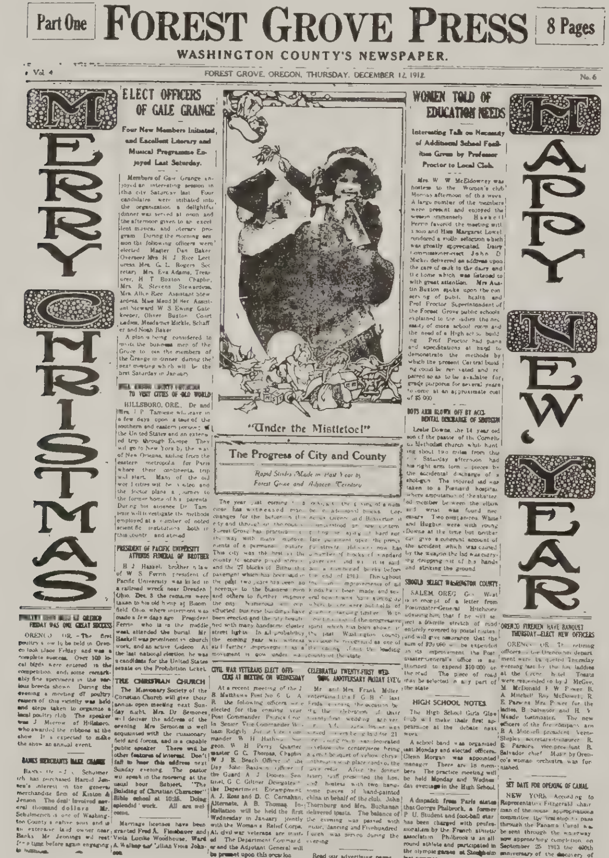
Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: Under separate cover have mailed you copy of Xmas edition of the Press. Might say that the entire edition was turned out from Monday morning to Thursday evening, or four days, by two ad men and two straight comps, with myself on the country Campbell. Turned out 2,000 copies and printed two pages at a run. Besides running the cylinder, gathered and wrote the news, arranged the dummies, and designed a number of the ads. Also went without sleep from 6 A. M. Wednesday until Friday evening 8 o'clock, when climbed into the hay for a 10-hour stretch of "napping."

If you consider the copy sent you worth the criticism, would be glad to hear your opinion. Hoping we may become better acquainted,

Fraternally yours,
G. E. SECOUR.

(I suppose I never shall get through examining Christmas editions, this year, until another holiday seasons is upon me—but, no matter—I like 'em.) This Christmas special of the Forest Grove Press had for its gala-day dress one of the most beautiful lithographed holiday covers I have seen this season. It bears no imprint (a sad neglect on the part of its printer), but I suspicion American Press Association origin. The edition proper consisted of sixteen pages, the cover making twenty in all. That the pages of this special number were very artistically gotten up, is best exemplified by showing the front of the first section (Exhibit No. 24), and in viewing it, I ask the reader to study closely the exquisite uniformity of headings and the tasteful and well-balanced arrangement throughout. Nothing in the way of newspaper work could be much better. And that statement, notwithstanding its breadth, is a fair verdict applied to this Christmas edition as a whole. Brother Secour's editorial work proves him a natural news-monger and a clever writer. His work shows a love and a gift for the game, and I most sincerely congratulate him upon his superlative editorial page, from which I take the liberty to quote the following bit of news, which will be extremely stale, however, by the time this appears in print:



Part One FOREST GROVE PRESS 8 Pages

No. 24

SALUTATORY

Arrangements have been made whereby I have taken over the entire management of the Press Publishing Company and the editorship of the Forest Grove Press. In doing this, it is with a full realization of the many responsibilities and duties accruing to the management of an up-to-date printing establishment and the publishing of a modern newspaper. As in the past the Press will endeavor to faithfully convey to its many readers and subscribers an accurate account of the happenings in city and county each week. It will work for the betterment and up-building of the community as a whole and of the individual units in particular. Support will be rendered all projects that are worthy and the light of publicity thrown upon those that prove otherwise. The Press stands for advancement and progress, first, last and all the time, and hopes to work in harmonious accord with all for the achievement of better things and lasting good.

G. E. SECOUR.

Even from this one paragraph it can be seen that this newspaper man has a wholesome command of words and a crisp, clean-cut style of expression that carries his sentences through the reader's hide, be the reader ever so thick-skinned. The Press evinces gratifying evidences of prosperity, and I hope and expect to learn of a continuance of such good fortune for it in the future.

✣ ✣ ✣

TAKING THE AGRICULTURAL COLLEGE TO THE FARMER

On March 3, The Denver & Rio Grande Railroad in connection with the Colorado Agricultural College will start a special agricultural demonstration train over its line on a nine days tour of the principal farming and stock raising sections of the Upper Arkansas, Eagle, Roaring Fork, Grand, Uncompahgre, North Fork and San Luis valleys in Colorado. This special educational train will consist of coaches for lecture purposes and baggage cars containing exhibits on Agronomy, including Alfalfa Improvement, Seed Selection, Seed Improvement, Bee Culture, Animal Husbandry, including Dairying and Poultry Raising, Home Economics, Rural School Betterment and other subjects of vital interest to the farming and stock-raising communities.

This is the fifth year that the Denver & Rio Grande in co-operation with the agricultural colleges of Colorado and Utah has operated special demonstration trains through its agricultural districts. The results have been so beneficial to the farmers and the returns to the railroad from increased acreage and greater production are so satisfying that it more than compensates the company for the free service performed.

✣ ✣ ✣

L. E. Lookabill of the Lookabill Printing House, publisher of The Critic, Roanoke, Va., is being mentioned for the important office of Fourth Assistant Postmaster General. He is accredited as a man of many useful and successful activities for the public good.

He has initiated and successfully forwarded plans for improving the local mail service on the Roanoke & Southern railroad, is one of the best known firemen in Virginia and has done splendid work as president of the Virginia State Firemen's Association, and as a Roanoke "booster" and member of the Commercial Club as well as in social, charitable and other organizations. The Fireman's Herald of New York City says:

"L. E. Lookabill, of Roanoke, Va.—is being prominently mentioned for office under the incoming federal administration. The office for which his friends, whom he numbers by the hundreds, deem him peculiarly fitted is Fourth Assistant Postmaster General. Mr. Lookabill was one of President-elect Wilson's staunchest supporters from the moment the New Jersey governor was mentioned as a presidential possibility, and it is rumored that Mr. Lookabill's eligibility for the post mentioned is regarded with favor by those close to Governor Wilson

REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 440 S. Dearborn Street, Chicago.

THERE is no reason why a printer should "spread himself" to get out something nice at Christmas time, and then skimp, and neglect his ideals of beauty, for the balance of the year. There seems to be more and more of a feeling that the Christmas spirit should pervade the entire year, rather than being in evidence merely for a few of the shortest winter days; and I am sure people can appreciate art in printing as well in April or August as in December.

And now, to tell one of the inner secrets of the sanctum, this little introduction, while eminently true and I hope not in any way amiss, is made necessary by the fact that I want to show some of the Christmas greetings which came to this office. While none of these were in the nature of "after-thoughts" on the part of the senders, they were delayed in getting to my desk because of the change in department administration. I believe, however, that when this issue gets to press I shall be fully up to date with all work which has been sent in, and shall be ready to handle everything promptly hereafter. Please send specimens to the address given above, as they will reach me sooner at that address than at any other.

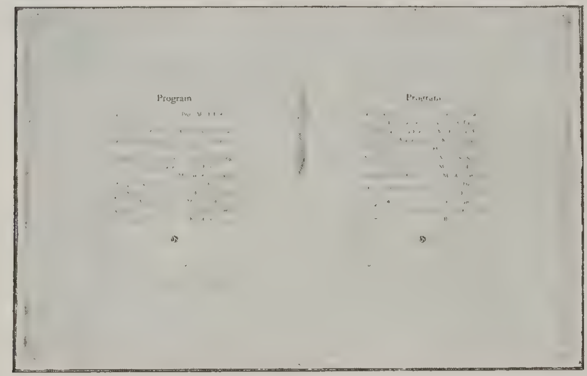
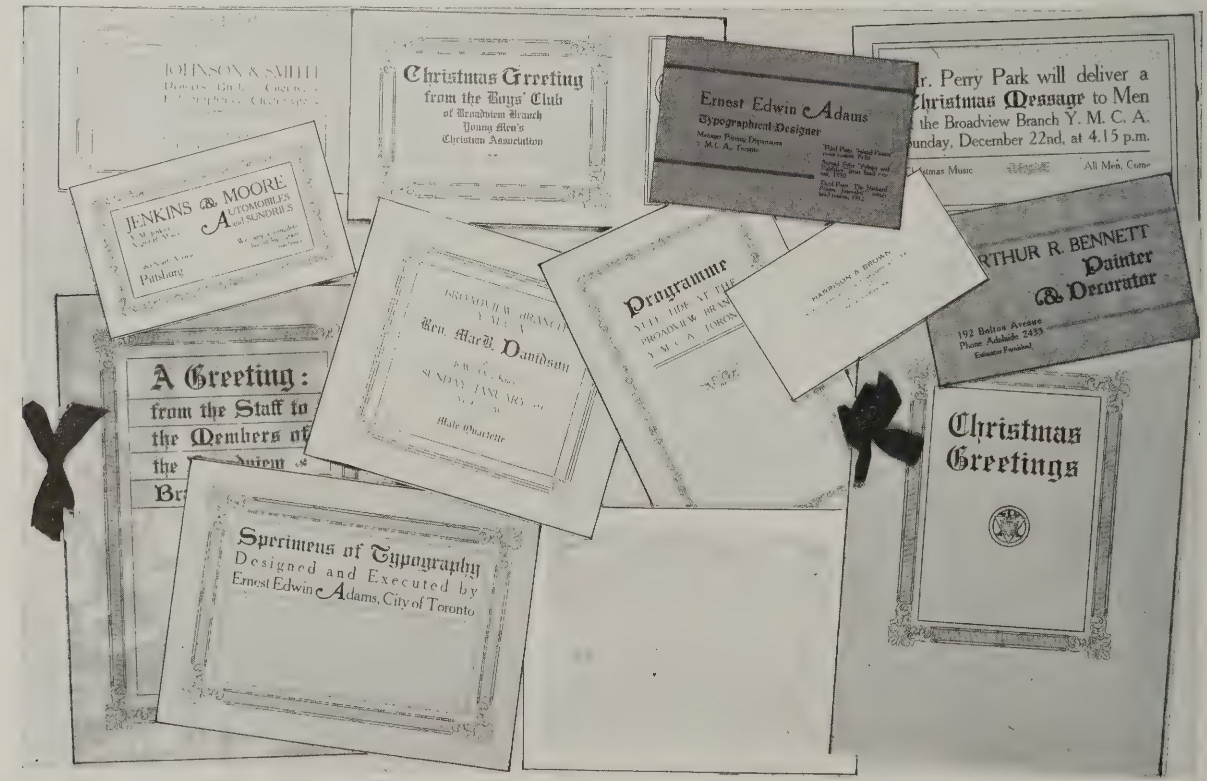
The Alling & Cory Company Pittsburgh
TRADE MARK
NEENAH PAPER COMPANY

While most of these Christmas greetings will have to go without individual comment, I want to call attention to two or three. The large folder with the word "Greeting" at the top, and the cut of a large printing office with the figures "1913" below it, is from the Colonial Printing Company of Philadelphia and has a peculiarly "Christmasy" flavor. The snow blowing across the face of the cut and piling up at various points; the superbly executed holly; the red glow of lights in the windows, suggestive of Christmas eve — these are all most excellently designed and worked out. Inside is a simple greeting on a folded sheet, printed in black, red and gold. The wall hanger with the legend beginning "There never was a Christmas morning —" is from Biggers, of Houston, Texas, and is well worthy of him. The background card is a dark green cover stock, the smaller sheet a light shade of rough brown paper, and the printing is in green, orange and pink tint. The greeting from the Alling & Cory Company, Pittsburgh, is characterized by a wealth of well applied color. The little folder from the Cook Printing Company of Los Angeles has the row of Christmas trees in light green, the initial in red and the text in silver gray. Some of these will very likely serve as an inspiration for many of our readers in some of their Easter work. Easter occurs this month, you will remember, so that this work will be coming on very soon and you had best be prepared for it.

* * *

The refinement of elegance — or the elegance of refinement, whichever you choose to call it — was never more in evidence than in the program of the Griffith-Stillings Press Benefit Association. This is an organization of employes of this noted print shop, and Mr. J. E. Griffith writes that the work of preparing and printing this program was done by the men in their own time. The imprint states that it was "Made in the heart of Boston by men who put heart into their efforts," and it certainly looks the part. The stock is a soft, white, "cottony" book paper, with the edges deckled by the employes. The leaves are bound up double and have blind stamping as a border around the printed matter. The printing is all on separate smaller sheets of the same stock, these sheets being tipped on inside the blind-stamped border. Three subdued tones of ink are used. A white rough Lombardia cover is used, with a blind-stamped panel and the trade mark of the firm embossed in gold.





* * *

Ernest Edwin Adams is manager of the printing department of the Young Men's Christian Association of Toronto, Ontario; and his card also states that he is the winner of third prize in the National Printer-Journalist letter head contest for 1912, as well as winner of various other places in contests carried on by our contemporaries. I have forgotten the details of the contest of 1912 to which Mr. Adam's card alludes, but there must have been some mighty good entries if this man had to be content with third place. I am not familiar with the name of that new border which he uses to such good purpose. It gives some of the work a delightful cameo effect, and is always used with the utmost good taste.

* * *

Before we go any further it might be well to comment upon the advisability of Young Men's Christian Associations, in towns where they are large enough to warrant it, taking up work such as this and establishing printing departments of their own. They usually have a large amount of printing which must be done, and another large amount which could be used to good advantage in the work, were it not for the fact that printers' bills run up tremendously fast for an organization which has to depend upon free-will offerings for a large part of its support. And for another thing it would help to give employment to some of the young men whom the Association is trying to influence. I hope Mr. Adams will tell us sometime how the problem is working out in his own particular shop.

And now for some more of these excellent specimens. Please note the announcement of the D. McCall Co., especially with reference to the good taste displayed in the handling of the ornaments at the top. They are so chosen and placed as to appear a part of one general design, an effect which is heightened by the unifying effect of the tint underlying the entire printed portion of the card. I am writing this at night, so shall not attempt to tell what the colors are; but whatever they may be they are very soft and subdued, so that nothing stands out too boldly. It is always a problem, however, how these things will look to the reader after they go through the engraver's hands. He will do something dreadful, I know, to the Christmas greeting of the Broadview Branch Y. M. C. A., with its mottled cover and its ink combination of black, red and gold. But with all his limitations the engraver is a good deal of a help to us after all, as the illustrations on these pages abundantly testify. The announcements are printed on gray stock in black and tint and are much better than the ordinary run of this work, done as it is to hand out promiscuously and in considerable quantities.

* * *

C. W. Ludtke, Jr., of Makesan, Wis., wants to know what was the matter with the letter heads which he submitted in the contest last year, and which were not entered, another of his which he considers far inferior being taken in preference. Goodness, Brother, I wasn't one of the judges and am unable to tell you a thing about it. These two which you have sent in look good to me, especially the one with the rule around the entire sheet.

* * *

Thomas M. Carrigan is the producer of several cover pages which have come in from the office of the Goshen Democrat, Goshen, N. Y. I scarcely feel satisfied with the cover of the catalogue for the Goshen Public Schools. I am not sure but I should have used simply "Goshen Public Schools" in two lines in the top panel, and "Catalogue 1912-1913" in two lines of a smaller size in the lower panel. I am reasonably certain, however, that I should have left out the poppy ornament — the emblem of sluggishness and inactivity — and substituted something more appropriate to educational work. The title page of this catalogue is also given. I believe it would be strengthened by setting the list of the different schools slightly smaller and running a rule around them. It would be difficult to find any fault with the cover of the booklet, "Economy is Wealth." The hotel leaflets are also very good. While the cover for the report of the Home for Aged Women gives one a fairly good first impression it scarcely bears analysis, with its pyramid title, its inverted pyramid ornament, its square type matter in the center, and its plain straight line at the bottom. Some printers would have set the title in two lines instead of three, and run a double rule over the line at the bottom. To be completely acceptable at this desk, however, it should be set in an entirely different series of type. The booklet for the Building Trades Association is open to a certain extent to the same criticism, having a square effect at the top, pyramid in the middle, and "Long line short line" at the bottom. This is marred, also, by having somewhat too large sizes used throughout, and by the use of an imappropriate border.

TWENTY-FOURTH ANNUAL REPORT 1912

No. 27 South Street, Middletown, N. Y.

The Hampton Hotel

* * *

The old shaded type — or rather a refinement of the styles that were in vogue when we began our apprenticeship — seems to be gradually but surely coming back into style. Well, the ordinary printer knows how to handle type better now than he did at that time, and will get better results from it than the old-time journeymen at the craft.

This specimen is reproduced from a foundry leaflet because it shows a style of cover design which can often be used to good advantage and should not be lost sight of. In the present instance the rule around the border is slightly heavier than that used in the top panel, which I consider a mistake. This other design is also taken from the same leaflet, chiefly to show how effectively a stock ornament can be worked into a design. The tint rule under the name of the author I do not care for in this particular place.

Our great and good friend, Howard Hull, is still on the job. I suspect from notations on one or two of his specimens that some have been lost from the lot before they got to my hands. I have, however, the little folder entitled "Our Hobby" and am very glad that this was not among the missing. It is in black and red on gray stock. Send us in some more of those reset jobs for which you are famous.

✣ ✣ ✣

Many poor pieces of job composition are explained by the compositor saying that he was going to use something else but the type wasn't in the case. Doubtless this excuse is rung in sometimes as a last resort to turn the keen edge of faultfinding; but I am convinced in a majority of cases it is given in good faith. And the moral is, keep the type in the cases rather than in standing jobs. This is commented on by someone who signs himself "A. D. E.," writing in The American Bulletin, published by the American Type Founders Company. He says:

> Keep your type in the case. Except under extraordinary circumstances it does not pay to keep it standing. Not only are you tying up a lot of money in standing type, but your compositors have to hunt for sorts and the time they spend in hunting for them is wasted. They have to brace up the jobs from which the sorts are picked and here again time is wasted. Again, the standing job from which the sorts are picked often "pies" and there is a further waste of valuable time.
>
> I was one of those fellows who kept type standing so I could give my customers lower prices for their second

or subsequent jobs of certains forms. When I began looking into the matter I found I was spending good money for wasted time, which might be saved, that the customer, not I, might reap the benefit. When this fact sifted through my brain I ordered all the type in cases with the exception of that which was run time and time again, and even then I took care to give instructions that under no circumstances were these jobs to be "picked" for sorts. I am satisfied that I have made money by this operation.

If you must have some jobs standing, see that you have reasonably full cases of type. It pays by eliminating the time spent in hunting for sorts, etc. In a few days you will save enough in actual expense to buy enough type to create this condition of affairs and after that it is all money gained — velvet, as the gamesters say. Besides, with full cases you are in position to take any job that your presses can do and be able to promise to a reasonable degree of certainty just when it will be done. Soon after I started in on this plan I began to see profits which never before existed for me.

* * *

SCHOOL OF JOURNALISM TO SERVE THE STATE'S NEWSPAPERS AND PRINTING OFFICES

It is stated that the first call upon a State University to extend its state service work to meet the needs of editors and publishers was made by the Kansas Editorial Association at its annual meeting in Topeka. The editors adopted a resolution, by a unanimous vote, asking the University of Kansas to provide a cost expert to tour the state, installing the system in their offices and to act as a general adviser to the publishers on technical problems. The association requested the department of journalism to prepare a book on the workings of the cost system for general distribution.

The plan of making the equipment and faculty of a university an aid to the newspaper interests originated with Professor Merle Thorpe, head of the department of journalism of the University of Kansas. Professor Thorpe pointed out that since publishing was the sixth industry in importance in Kansas, it deserved equal attention with farming, medicine, pharmacy, teaching and any of the forty other callings which the University of Kansas is directly assisting.

As preliminary steps in this service work the department of journalism has established a clearing house in which editors may list their papers for sale and be put in touch with buyers who are seeking papers through the department, and also furnishes estimates on technical jobs and gives advice on the cost system.

Professor Thorpe recommended to the university regents that they detail H. S. Neal, head of the department printing plant, and one of the best cost experts in the country, to put the offices of Kansas on a cost basis, as the Editorial Association requested. This plan was incorporated into the university budget, which is now under consideration by the legislature.

The following resolutions of the editors endorse the work of the department of journalism in addition to asking for the cost service:

Resolved, That we, the Kansas Editorial Association, commend the work of the department of journalism at the University and the department of industrial journalism at the State Agricultural College, in giving practical training in newspaper work and equipping students for better service. We believe they should receive every encouragement and be given the means to fulfill their plans for usfulness to Kansas newspaper interests.

We favor the carrying on of the plans of the department of journalism at the University of Kansas for placing a cost expert at the service of Kansas publishers, who represent the sixth industry in Kansas, but have received no direct benefit along the lines of service work done by the state institutions.

Resolved, That we request the University to publish the booklet on a simplified cost system for small printing offices, prepared by the department of journalism, in order that it may be distributed among the editors and printers of Kansas.

* * *

BUSINESS NOTES

Wanner Machinery Company, of Chicago, have added to their line the sale of the Omaha folder. This is the machine that has made a great success in the country offices that require an attached folder.

* * *

The Hamilton Steel Cabinet, with movable top, shown in insert this month, will be of interest to all printers who are looking out for the future as well as for the present. The cabinet is so constructed that the top may be changed at any time to meet new conditions. The insert this month is the second of four, describing and illustrating the Hamilton manufactures. The other two will appear in April and May respectively. It will be found profitable carefully to read and consider the facts presented in these and other inserts from month to month.

* * *

There is scarcely anything more convincing as to the values, adaptableness and continued profitableness of a machine than is the repeated order for the machine by the satisfied users thereof.

The four page insert of the Merganthaler Linotype Company this month, giving facts as to "Repeat Orders for Multiple Magazine Linotypes," furnishes proof of the fact of the great and recognized value of the machine as meeting an insistent want or demand, and that — except for special classes of work — shows "the Multiple Way Is the Modern Way."

* * *

We call our readers' attention to page 157, showing the Art Caxton Platen Press. This press is manufactured by John Haddon & Company, London, and its Sole American agency has been placed with H. Hinze & Company, Tribune building, New York City. Mr. Hinze reports the sale of about twenty of these presses in this country, and asserts that the outlook for future business is very bright.

Mr. Fletcher representing John Haddon & Co. has been staying here for several weeks to look after the installation of a number of machines, and he will probably stay another few weeks to have the customers become acquainted with this wonderful press, which is the largest and heaviest of its kind on the market.

Mr. Hinze has just opened a show-room at 116 Nassau street, ground floor, and is expecting one of his latest models, and we advise our readers to communicate with Mr. Hinze regarding the demonstration of this wonderful press.

* * *

Keystone Type Foundry gives a very attractive showing, in text and illustrations, this month, of a few pieces selected from their extensive lines of Steel Composing Room Furniture. These each and all embody the latest and most modern ideas of efficiency in design and construction. The idea claimed by the Keystone Type Foundry is "the giving to each the exact equipment in design and arrangement needed to handle the work in that particular plant to the best advantage."

C. M. Ritchey formerly Western Representative of the St. Louis Republic and Farm Progress has joined the staff of the Arthur Capper publications, and will represent the Missouri Valley Farmer and Kansas Weekly Capital in both Eastern and Western territory. Mr. and Mrs. Arthur Capper of the Topeka Daily Capital returned on February 16 from a five weeks' trip to Panama and the West Indies. The trip was made with a large party of Southern and Western business men.

Among the newspaper men who were in the party were Frank G. Bonfils, of the Denver Post; H. L. Pittock, of the Portland Oregonian; Samuel A. Perkins, of the Tacoma Ledger, and Robert J. Burdette, the California humorist. They spent several days at the canal, and also stopped at Kingston, Jamaica, and Havana.

"INTERESTING AND INSTRUCTIVE"

The Phoenix Press, 2218 Pitkin Avenue, Brooklyn, N. Y.

Feb. 21, 1913.

Mr. B. B. Herbert,
Editor National Printer-Journalist,
Chicago.

Dear Sir: Enclosed please find M. O. for four dollars in payment of 1912 and 1913 subscription.

I always look forward to the receipt of the Journalist as I enjoy the many items, which are both interesting and instructive. I wish to congratulate you upon your Silver anniversary, and hope that you will continue the publication, and that we may celebrate the Golden anniversary.

Very truly yours,
S. RUBINSKY,
Prop. Pheonix Press.

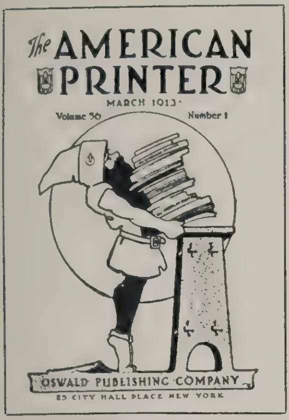
The Contest in Printshop Knowledge



has stirred printers everywhere and awakened them to the fact that they know very little, comparatively, about their vocation. They are looking up facts. It costs nothing to enter, as the contest is purely educational. Write for a set of the rules and questions.

The March number of the American Printer

contains full particulars about the contest, and is filled with interesting, practical matter for all departments of the printing business, color inserts, reset advertisements, groups of commercial printing, and portraits of well-known printers and publishers. Among the subjects treated are typography, advertising, selling, presswork, machine composition, estimating, apprentices, binding, queer things, review of books, business and cost problems, engraving, convention talks, news of various kinds, supply field information. THE AMERICAN PRINTER is a magazine of printing, and should be read regularly.

Send 30c for a copy of the March number, or $3.00 for a year's subscription

OFFER No. 2

National Printer-Journalist (monthly $2) **Printing Art Suggestion Book (monthly $1)**	**$2.50**

The Printing Trade News

The Printing Trade News, 64 pages, is published weekly and has a very comprehensive business news service from all sections of the country. It deals entirely with the affairs of the business office and the executives. It collects weekly beside printing house news, that of the binders and rulers, the electrotypers, engravers, trade composition houses, the supply trade paper houses, lithographers, etc., has a business fiction story each week, patents of interest to printers, and editorially reviews important doings of printers and publishers during the week.

The Printing Art Suggestion Book

This is a monthly publication issued by the University Press, Cambridge, Mass., containing examples of typographic and other designs intended to assist the printer and those who are printing in the choice of color schemes, inks, and papers. It contains samples of standard papers, as well as novelties which are brought out from time to time by the various mills. It is full of ideas and suggestions for typographic design, display, and color schemes.

PAPER and TYPE

Must Be Complementary

to produce the most pleasing effect, and it is obvious that the advertising value of printed things absolutely depends upon the harmonious relationship between the two.

One must be able to read a catalog, circular or book with perfect ease and comfort and without undue strain on the eyes. Especially is this point essential to keep in mind where there is considerable text-matter.

It is a serious strain on the optics to read text, even if set in fair sized type, when printed on a highly finished, shiny paper. The glare of the paper is distracting and renders reading extremely tiresome, as well as harmful. To prevent this the printing should be done on paper which has a highly receptive printing surface but is free from the objectionable glare, and has a soft, restful color. Such a paper will assist the type matter in concentrating the reader's attention where it is wanted.

STAR ENGLISH FINISH BOOK fills the bill to the letter. That its splendid quality is fully appreciated is evidenced by its steadily increasing sales. We strongly recommend it for your consideration in connection with catalogs and advertising literature, text and school books, magazines and periodicals.

You will undoubtedly find STAR ENGLISH FINISH a better paper for many purposes for which you are now using paper of higher cost.

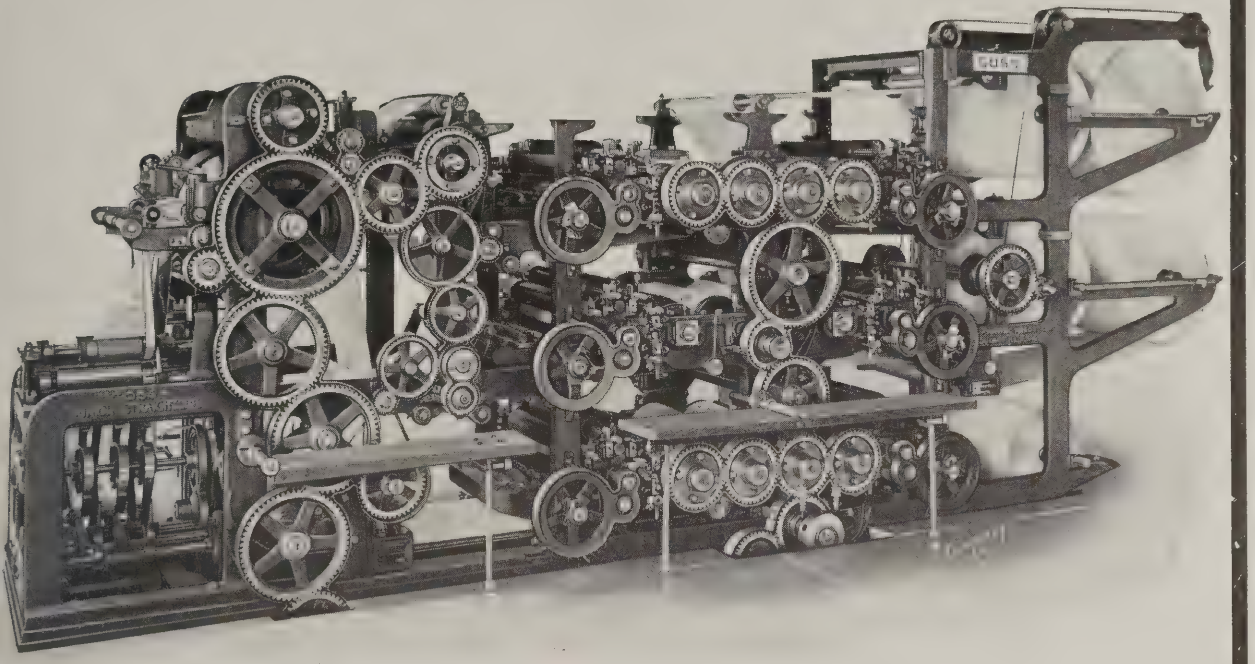
SOMETHING ENTIRELY NEW

THE

GOSS Junior Straightline

Built on Our Regular Straightline Design



Built 2, 3, 4-deck high, or in tandem, according to space or selection, producing 4, 6, 8, 10, 12, 14, 16 pages in book form, printing seven columns wide by length of columns from 20 in. to 22 in. All plates cast from our standard stereotype machines (no boring of plates required). Can be arranged to print from one to three extra colors. Additional decks or sections can be added at any time in the future. Can be made to deliver products either one-half or one-quarter page size. Best workmanship and material used in its construction. Ask for further particulars.

Manufactured by

NEW YORK OFFICE: No. One Madison Avenue, Metropolitan Building

Says Barnhart's Jake:

"It's scandalous the big fires we've been having in Chicago this winter. It gives me the shivers to think how many perfectly good pool balls must have gone up in smoke in that Brunswick-Balke blaze. Lucky thing it was day time when the old World's Fair hotel on the Midway started because it started quick and somebody would certainly have been singed if the fire had started at night.

"There are a lot of printshops around Chicago and in other cities that would burn like a stack of matchboxes if they ever got a chance. The old wooden stands and cabinets would make a nasty blaze. And if there's anything that puts a printer to the bad it's a fire in the composing room. Besides destroying a lot of valuable type and sundries it invariably burns up the copy and cuts for some big catalog job or issue of a paper which puts a good customer to all kinds of trouble and gives the shop a black eye generally.

"If these printers would just get their eyes open and provide their composing rooms with Barnhart All-Steel Furniture they would remove all danger from that source and be thankful ever afterward. But I suppose some of them will have to wait until the fire comes. It's like the song says: 'You never miss the little Miss until she's Mrs. Somebody Else?'

"Seriously, though, if printers generally realized how much it would be worth to them to have an up-to-date, fireproof, sanitary composing room—the kind that makes the compositor happy he's living—we couldn't turn out Barnhart Steel Composing Room Furniture fast enough."

The Babcock Optimus

The Babcock Optimus

It is easier to get rigidity above impression than below it. As in the previously described bed supports, here too the Optimus is first. Its cylinder is heavy; powerful inside bracing increases its rigidity beyond any requirement; it is accurately balanced for smooth running. A steel shaft that seems unnecessarily large is driven to place before cylinder is turned and finished. The cylinder's rigidity on impression however depends not more upon itself than upon the auxiliaries of boxes and lift. Combined or separate the Optimus' whole is a splendid example of mechanical perfection, effectiveness and simplicity.

Optimus cylinder boxes are its cylinder lift. They unite two functions widely separated in others, and less simple and direct. Technically the Optimus has a split box, with upper and lower parts. Firmly fastened together, the box is bored and reamed twice; separated the interiors are readily scraped to perfect surfaces. Into the completed box with the same precision and made in the same way is fitted a sleeve that receives the cylinder shaft. This sleeve where the shaft rests is eccentric. The cylinder is lifted by bringing the high point of the eccentric down, and a simple cam and lever action does this.

That is all there is of the Optimus cylinder lift, positively the simplest and strongest used, lacking springs, toggles, rods and complexity of any sort. It is a vital item in press rigidity. The long bearings and their exact surfaces give slow wear, and after use for years the split box affords a take-up. When on impression the eccentric is centered; there is no strain on connections.

Other cylinder boxes, made differently, are loose in the sideframes and slide up and down with the cylinder. Those of the Optimus do not slide; they are bolted solidly to the frames, and bring the impression line under a cylinder held rigidly to place in the most direct way, entirely barren of parts and movements that furnish elasticity and quick wear.

It is immaterial when cylinder is tripped. Should it be on form, the impression will be completed without waste; it will rise at the end of it easily and naturally.

The efficiency of any press on trying work depends greatly upon its lift. The compactness and solidity of the eccentric lift insures Optimus rigidity. It is one of the several things that combined give us a press stronger under impression than any the trade has ever known.

Keystone-ize Your Plant

Discard Obsolete Materials and Methods

THE OLD TIME stage coach, the canal boat and the tallow dip are but memories of our oldest inhabitants. Such methods would be wholly inefficient in these days of 100-mile-an-hour mail and express trains, wireless telegraphy and electric lights, yet, in the printing industry, especially in composing rooms, where all printed work originates, we invariably find that methods just as ancient and obsolete are still retained. The Keystone has made a study and analysis of such conditions in printing plants, and with the ability to improve and modernize we introduce better methods, eliminate lost motion, obtain greater efficiency, and thereby insure increased production and better quality at reduced cost.

Keystone originated the idea of combining a real, practical, labor-saving and cost-reducing working system with the most durable and satisfactory construction in Steel Furniture yet devised, and the two, in harmonious combination, are obtainable only in what is known as our service and our composing-room equipment. We devised the working system first, and embodied it in the only really serviceable and lasting construction ever offered to the printers of this country.

Remember this: Keystone was the first to design and build the present-day composing-room equipment in steel, and was the first to erect and operate a plant for this specific purpose, and is today furnishing this service to more printing plants of this country than all its competitors combined.

Would it interest you if we should suggest a working system that would effect a saving of from 10 to 25 per cent. in cost of operating your plant, and insure a larger output in a reduced floor space? We would like to submit proofs of what our service has done for others. Put us on the job at once.

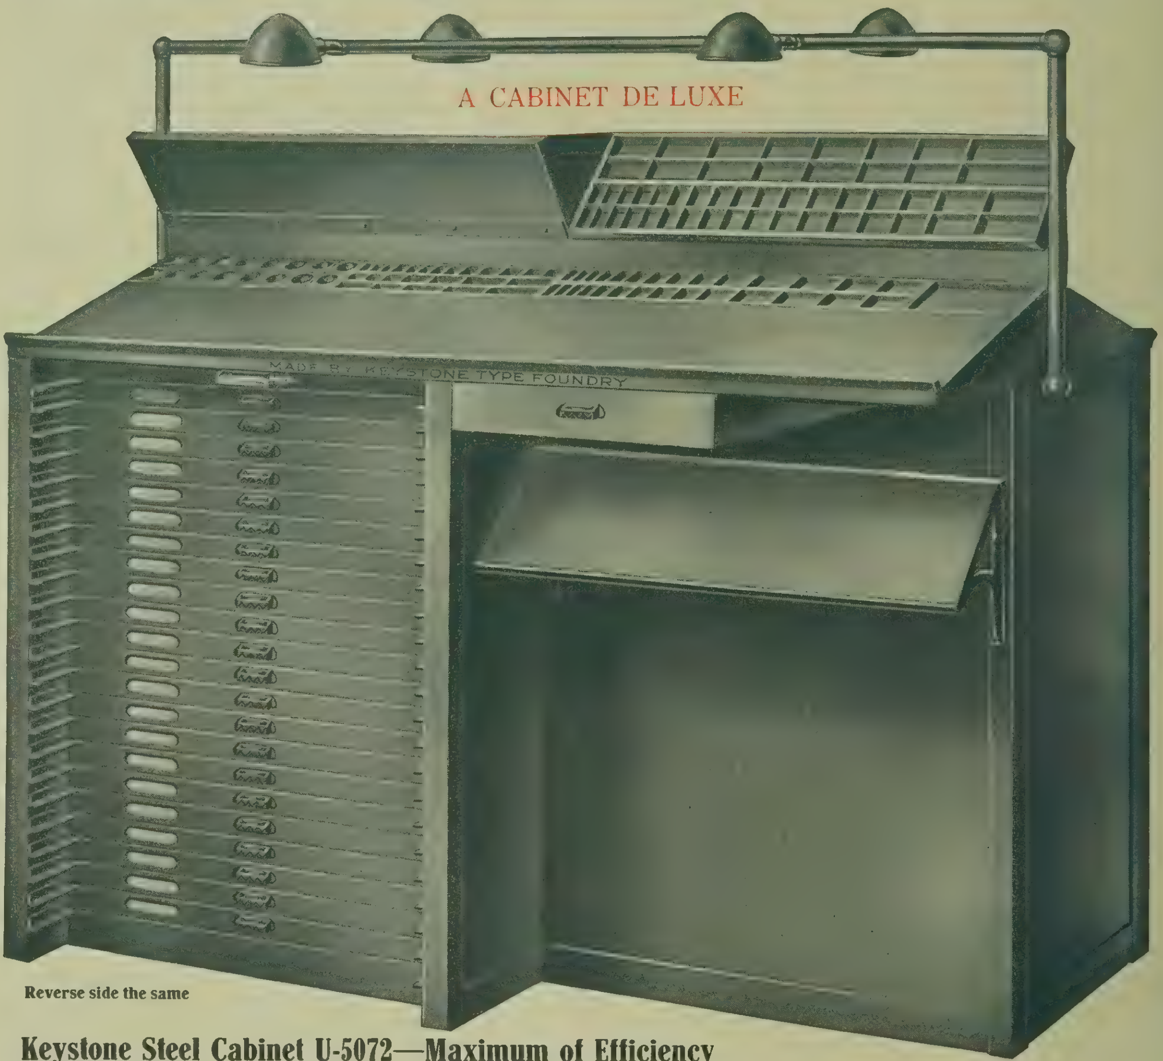
Composing Room Efficiency



Reverse side the same

Keystone Steel Cabinet U-5072—Maximum of Efficiency

BOTH sides of this Cabinet are exactly alike and the arrangement of the Equipment is such that when two compositors are working, one on each side of the cabinet, either has his own individual equipment—a double-depth lead and slug rack on top; a slanting work-bank the full length of the cabinet with a sunken section containing auxiliary boxes for holding half measures, justifiers or rule, and sixteen round bottom boxes for copper and brass spaces; a drawer under the work-bank of ample proportions for copy, sticks, etc., and a man's small personal belongings. There is also a shelf below the drawer large enough to hold two quarter size cases or a dumping galley.

Such an arrangement as the above should make every compositor take a personal pride in preserving this material and keeping his equipment clean and in good order. By so doing he would concentrate adequate working material of the right kind within easy reach, save many useless steps, add to his efficiency, decrease cost of production and increase profits. A composing room equipped with these cabinets presents a fine appearance, combines efficiency and cleanliness and promotes health and good order.

The cabinet contains twenty-two extra-depth cases on each side and occupies a floor space of 71½ x 33½ inches. The electric lighting is excellent; four top lights and shades are so placed that the banks on both sides are well and evenly lighted and that no direct rays reach the compositor's eyes; a light is also placed over each tier of cases under work-bank.

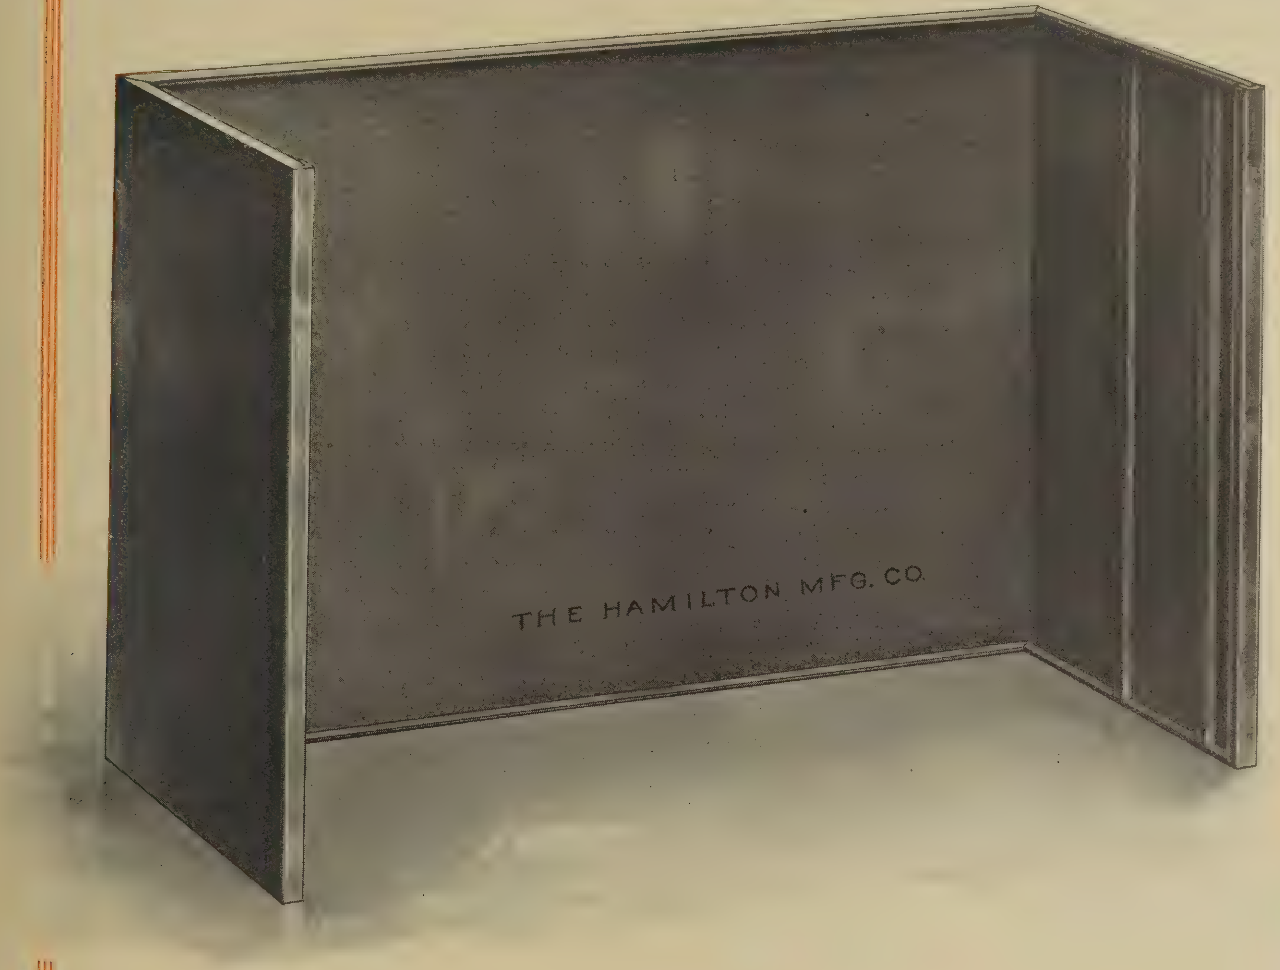
This insert set in John Hancock Condensed and Harris Roman

Hamilton Steel Furniture

A SINGLE PIECE of high grade steel goes into one of our mammoth presses and comes out a cabinet body; a body without a joint or weakened spot in it; one that will stand up under the most exacting trial, with no joints to break in shipping and no seams to open and let in dust, fire and water. The bodies are made in channel shape — the strongest formation known. They are not only rigid and durable, but have a finish and appearance all their own with their smooth rounded corners where there is no place to catch dust or tear clothing.



THE HAMILTON MFG. CO.

Look at the illustration and note the channels of steel, electric welded on the inner wall of the body to provide greater stiffness or rigidity needed in the support of the heavy loads of type stored in these Cabinets. That makes a good stiff Cabinet you say. Yes, but not strong enough yet for the many years service it is to perform. There are full plates top and bottom of the body which hold the body rigid and true, and will keep it that way as long as you need Cabinets.

Thirty years of experience in the building of furniture for printers has taught us the essentials in furniture of this character. Insist upon Hamilton furniture and you will get the benefit of this experience.

THE HAMILTON MANUFACTURING CO.

Main Offices and Factories, TWO RIVERS, WIS. **Eastern Office and Warehouse, RAHWAY, N. J.**

HAMILTON GOODS CARRIED IN STOCK BY ALL TYPE FOUNDRIES AND DEALERS

A VALUABLE LINE GAUGE, graduated by picas and nonpareils, mailed free to every inquiring printer.

Hamilton Wood Furniture

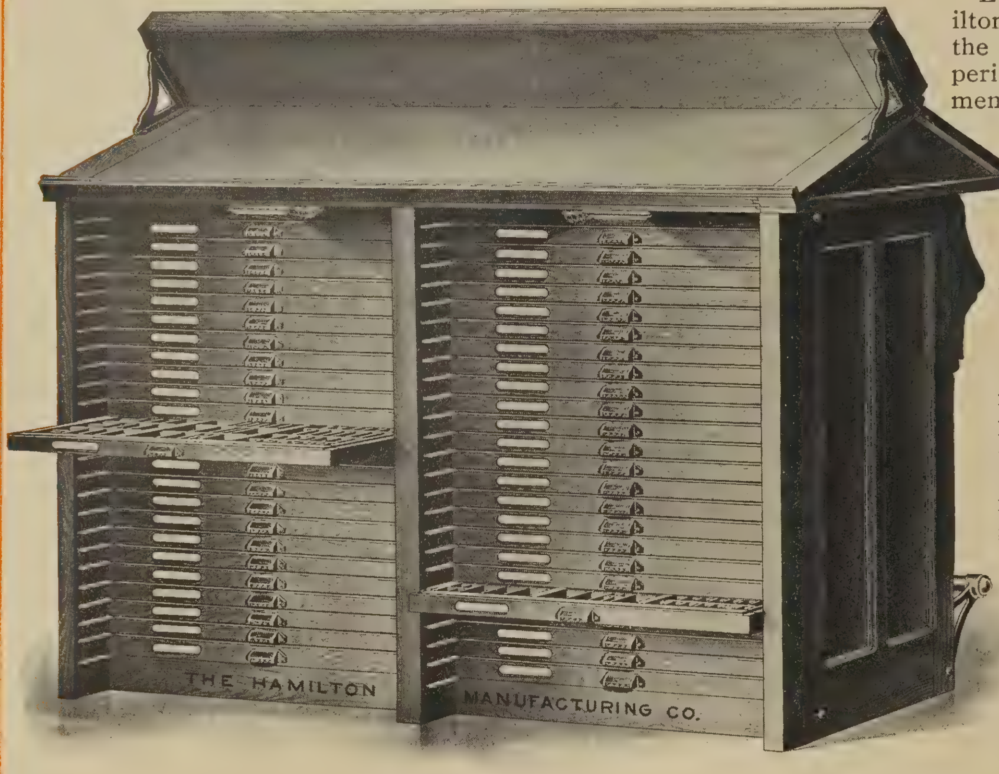
THE IDEAS and ideals embodied in the construction of the Hamilton line of Composing Room Furniture represent the crystallized thot and suggestions of thousands of practical working printers and experts, all working for the most economical production of the product of the printing-plant.

The perfection of details, as to construction, arrangement and location of the working materials, beauty in design, minimized floor space occupied, etc., are all matters of *evolution,* not *revolution.*

If we should attempt to manufacture a watch in our factories, it would, no doubt, be fearfully and wonderfully constructed, but when it comes to composing room furniture we are at home in our own chosen field.

We know the requirements of printing and printers and these requirements enter into our goods. That is the secret of the Hamilton quality.

Every buyer of Hamilton Furniture secures the benefit of this experience and improvement. You would not buy a watch made in a furniture factory or a piece of furniture made in a watch factory. Rather buy the article from the concern longest in the field with the practical experience back of it. In other words, pay only for your own experimenting. There is food for reflection in this suggestion. This the Hamilton trade mark is a guarantee of quality in Composing Room Furniture.



The Tracy Cabinet — Job Side

The style of composing cabinets with low Job Top arrangement, allowing full view of the composing room without obstruction has now come into general use in up-to-date printing-plants.

This type of construction is well represented in the Tracy Cabinet. Other types of this style are the American, Mills and Ad-Man's Cabinets, all made with removable and interchangeable tops and with uniform bodies. These Cabinets have no brackets in connection with top equipment, the cases resting on solid working surfaces.

Catalog and circulars illustrating and describing these cabinets in full will be supplied on request.

Ask for a copy of "COMPOSING-ROOM ECONOMY," showing floor plans of thirty-two modernized composing-rooms in some of the leading printing-plants in the United States.

WOOD TYPE

Special catalog of Wood Type and Borders sent on request. Hamilton's Wood Type is of uniform height. Made in any size desired in any assortment of characters. Material the best selected end-grain rock maple—lasts a life time. Wood type is light in weight and cheaper than metal. Our catalog has a most effective showing of type faces, borders, ornaments, catch words and calendar logotypes.

Good proofs add to the prestige of your plant

The Composing Room Cylinder

produces quality work. The simplest and most durable press made. Feeds to grippers, or sheets may be laid on forms. Absolute register, automatic inking. Safety grippers prevent injury to forms.

Ideal for street car cards, rent and sale signs and other short run jobs. Proofs forms that are too large or your Gordons. Prints runs that are unprofitable for your Cylinders.

Made in two sizes 25" x 25" and 17" x 25"

Send for catalog and sample proofs. The time to save on your proofing is ***now***

EASTERN SALES COMPANY, MANUFACTURERS 1528 Peoples Gas Bldg., **CHICAGO**

AMERICANIZE YOUR OFFICE

Americanize your composing room by filling the cases with modern up-to-now American Type.

Trade follows the printer unflaggingly who is enterprising and gives frequent demonstration of his progressiveness by using the latest types, borders and ornaments.

Buyers of printing generally, (managers, advertising men and others who have never had printers' ink on their hands) are familiar with the different faces of American Type and know the characteristics of the "families"—Cheltenham, Bodoni, etc., and they often specify the use of these faces.

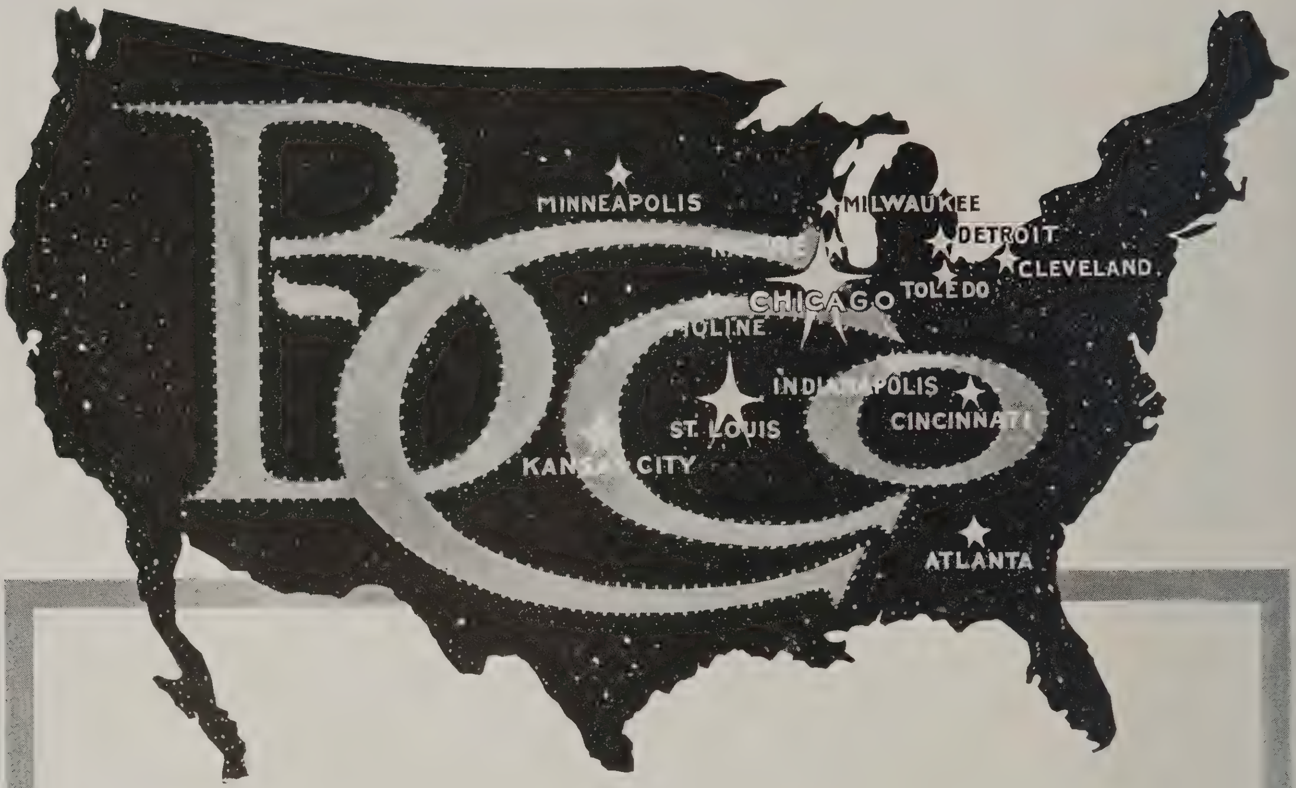
All of the successful printing offices of this country are equipped with American Type. As old faces have become worn and out-of-date they have been returned and new type bought.

The best work is admittedly done by the use of the highest grade of materials. The most artistic printing is only possible by the employment of the best type, of the most modern design.

American Type in the composing room will mean money in your pocket, both pockets!

AMERICAN TYPE FOUNDERS COMPANY

Set in 12. 18 and 24 point Bodoni, cast by the American Type Founders Company.



Selling Engravings to the Nation

Because of the detail and the individual attention involved in the production of illustrations and engravings it was long supposed that no engraving concern could satisfy more than a local demand.

Back in 1902 ***Barnes-Crosby Company*** took the first step in shattering this fallacy by installing a branch office at Detroit. Since that time not a year has passed that has not seen a new B.-C. office established.

Today, with two immense manufacturing plants located in Chicago and St. Louis, eleven permanent branch offices and a force of traveling salesmen, Barnes-Crosby Company stands as the highest type of business organization.

Our experience in meeting the varying needs of so many customers is part of the intrinsic value you secure in dealing with us. The above map will help you to locate our nearest branch office.

CASLON FULL FACE

GRAY TONE BRASS RULE

Ole Dan Tucker

"If Ole Dan he had corn to buy,
He'd mo'ne and wipe his weepin' eye;
But when Ole Dan had corn to sell,
He was as sassy as all hell."

The present application of the above text is that while we have Presses to sell we are not "sassy" about it; but if the recent rate of in-coming orders holds on there surely will be a lot of belated printers who will "mourn" and perhaps, in vexation of spirit, "wipe their weeping eyes" for not having gotten sooner in line.

The fact is that if printers in general had a realizing sense of the Profit Earning Capacity of our new Laureate and Model-C Platen Printing Machines, and also the extent to which they may substitute the use of bulky and expensive cylinders, we would need a town the size of Gary to supply the demand.

We would like to build such a town and can do it if necessary, the name thereof to be "Laureate!"

A new catalog, illustrated with examples of three-color and half-tone work, is about ready for issue. It is intended for Master Printers; if you would care for a copy, we shall be pleased to forward the same upon request.

NATIONAL PRINTER JOURNALIST
A JOURNAL FOR PRINTING AND ALLIED TRADES

Volume Thirty-One Chicago, April, 1913 Number Four

What About the Junk?

By Jens K. Grondahl, Daily Republican, Red Wing, Minn.

NO PRINTER makes a permanent success of his business unless he can answer satisfactorily to himself and his bank account, the vital question, "What about the junk?"

The human eye is too dull to detect the decay and deterioration going on before it, and a man may follow his machinery from the time it comes from the factory, through busy days of ceaseless toil, until everything is ready for the scrap heap, without realizing in the least that he is taking part in a funeral procession. Machinery is created, labors and dies, just as certainly as the human species, the only difference is that machinery cuts cross lots to the cemetery while the man does not cut the corners quite so sharp and dallies a little longer, and not a great deal longer at that, before he winds up at his last resting place.

The very minute that the wheels start turning in a modern, up-to-date printing establishment, that very minute begins the march of expensive presses and type and costly materials on their way to the junk pile. The destructive germs of time and wear have been lying in wait for their new feast and do not lose a moment in attacking the beautiful new products from the factory and foundry. A broken wheel, a bent rod, a headless screw, before long compels a hurry-up call to the repair man and the machine doctor is thenceforth more or less permanently employed in staving off the evil day of final disintegration.

If the rapid deterioration of printing machinery could be made visible to the eye of the printer, the vision would haunt him like a nightmare every time he figures on a job. We see in moving pictures a large building being constructed or torn down in a few moments while the scene passes before our eyes. We see a corn stalk or a flower grow to maturity and fade away while the minute-hand moves a short distance on the dial. To make this seeming wonder possible, pictures are taken successively, at intervals of hours or days, and then when they are rapidly passed before the eyes of the spectator the whole process of growth and decay is viewed in a few moments of time. I have often thought that if similar pictures could be taken of a printing establishment, and the important pieces of machinery which the modern demands of the trade require, it would be an object lesson for the printer which would engrave itself on his memory forever and a day. He would see his beautiful machinery come in the front door, almost immediately begin to fall apart, and with ten grasshopper jumps pass through the building and to the scrap heap in the back yard. Expensive fonts of artistic type would accomplish the same remarkable feat in four quick jumps. Materials and appliances of all kinds would be seen in a spirited race for the hell-box and good American dollars, the dollars that

Jens K Grondahl

should be corralled and put in the cash drawer for the benefit of the business and the man who runs it, would be found the most lusty sprinters in the merry race, quick to escape beyond reach.

It is the purpose of the Ben Franklin movement, the Typothatae and the cost congresses that have been active during the past few years, to demonstrate, among other things, to the printer, how rapidly deterioration destroys the value of type, machinery and appliances, in order that they may learn that every job of printing must bear its proper share of the burden incident to such deterioration.

In considering depreciation on machinery, it should also be borne in mind that some revolutionary methods are confronting the printing trade. Presses and appliances which now are new and up-to-date, within the next few years, may be superseded by processes and machinery likely to convert the better part of any modern print shop into valueless property. Inventive genius is working overtime creating machinery and contrivances, the efficiency of which will be so superior to what is now considered the best, as to be revolutionary in their effect upon the printing trade. This fact should be kept prominent in the minds of those who consider the question at the head of this paper, and which question I have asked, not so much for the purpose of answering it myself as to have others work out for themselves the proper answer.

The printer who does not realize the necessity of including in the price of a job of printing a reasonable percentage to compensate him for the life which is taken out of his machinery while producing it, and the cost of replacement by new machinery, not only destroys his own success but also destroys the prices for others, is like the sentinel who does not understand the countersign and puts the whole army in peril. It is urgent, therefore, that those who have learned the lessons of deterioration should be more than persistent in impressing upon their fellow printers the proper answer to the all-important question, "What About the Junk?"

The printers' organizations and cost congresses, to which I have referred, have done and are doing much in this direction. Since the campaign of education started a few years ago almost every printer in the country has in some way come in contact with the idea of the new development which means independence instead of poverty, progress instead of retrogression, and success instead of failure, for those in the trade, who accept the principles of the new creed, that printing is as much entitled to an honest profit as any other line of business or manufacture.

In figuring cost and depreciation, not only the individual but the printers' organizations as well, are prone to overlook the real value of the most important machinery that has yet been put in a print shop. Upon this machinery depends all other machinery. I refer to the body and brain of the man who conducts the shop. There is perhaps no machinery in the entire printing business that receives as hard wear and as little attention. When a bearing squeaks it gets oil, when a box is hot it is given rest and when a machine is generally out of order it is immediately laid up until it is again in shape for work. Not always so with the man who runs the shop and whose body and brain are generally being ground between the upper stone of a profitless business and the nether stone of dire necessity. He can give rest to the physical and mental machinery only when deterioration reaches such an extreme stage that the doctor sends him to bed and orders the wife to the drug store to be trusted for a porous plaster and a bottle of nerve tonic.

Now let me ask, what is this piece of human machinery worth and how should it be treated in the scheme of cost-finding? Also let me ask you, who are just starting in the printing business with a vigorous body and mind and a shop well equipped to meet the demands of your customers, what price do you put upon that store-house of mental and physical energy, which you are ready to apply to your business and upon which you depend for your success? Before answering, remember that fifteen, twenty or twenty-five years of the hard work which you will encounter, will, in all probability, mark the limit of your useful career, and when you have attained the end of your days of activity, "What about the junk?"

If some one came and offered to take your proposition and your possibilities off your hands and engage your services for the rest of your natural life, tell me, what would you consider a fair offer? If some one promised to pay you, dollar for dollar, for all your type and machinery and agreed to house, clothe and feed yourself and family in fairly respectable fashion, and on top of that offered you ten thousand dollars in cash if you would give all your mental and physical vigor to the business for the entire time of your activity, would you accept it? Supposing the offer was fifteen thousand dollars? Supposing it was twenty thousand? Supposing it was twenty-five thousand dollars?

If you were possessed of the usual ambition of a young man who starts out upon a business career you would hesitate before accepting even a much larger sum, and besides deeming the price inadequate you would consider it little short of slavery to give your magnificent body and mind for such a compensation. This simply demonstrates that your personal self is an asset which should be figured on a certain fair basis, so that when age and infirmities compel you to retire from active life, there should be an adequate answer in dollars and cents to the question, "What about the junk?" If you were entirely incapacitated in a railroad accident, sustaining the loss of one or more limbs, twenty-five thousand dollars would not be too large a recompense — would it — for such an incapacity? Suppose we take that sum as the reasonable net value of your human machinery, after it has been given that ordinary care which must be given to all machinery, mechanical or human, to keep it in working order. That sum agreed on, for the purpose of illustration, how much would you charge against a job of printing to offset the wear and tear which will ultimately reduce the machine of all your machines to uselessness and relegate it to the scrap heap?

Look up the life insurance mortality tables and figure out the so-called expectancy of your life. Deduct the years which will be given to acquire experience in your business and the last years of the "lean and slippered pantaloon," and determine about how many years of active life you can expect. After having arrived at such an understanding with yourself, would it be unreasonable, would it be unfair, to add a certain percentage to your volume of business to provide a bank account which shall represent the money-equivalent of the physical and mental energy you gave your customers during your active life? The art preservative should preserve something for the one that practices the art. There is no reason, when you retire from your business, why you and your family should not be in position to enjoy some of those good things of life which a man and his family are entitled to after having expended the strength of a lifetime in the marts of trade. You should be in position not only to educate your family and to provide yourself against the dangers of the rainy day, but also be able to spend a month or two at Palm Beach during the coldest part of the winter if the rheumatism and the bronchial ailment you contracted in your business should demand it. Therefore, in determining what the goods you manufacture cost you, and what they should be sold for, you should have before your eyes, written in brass and tacked to the top of your desk, so you cannot escape seeing it, this question, "What about the junk?"

Teaching Industrial Writing at the Kansas Agricultural College

From Harlan David Smith, Assistant in Industrial Journalism, Kansas Agricultural College, Manhattan

WHEN HENRY JACKSON WATERS, president of the Kansas Agricultural College, founded a school of industrial journalism in 1910, it was because he saw the need of an improvement in the literature of the farm and the shop. It was not the intention of this school — a new venture in journalism — to make editors; rather to teach young men and young women in the professional and technical courses of study how to write interestingly of their work. That is the purpose of the school still, although a four-year course in industrial journalism was added in 1911 when it became evident that a journalism for the industries was an attractive field for many students in the agricultural college.

But starting a school to teach a new kind of journalism carried with it the greater task of finding a man who knew this kind of writing and could teach it. Where was there a head for such a school? Where was a man deeply interested in agriculture and the industries who could write about them entertainingly — so people would read what he wrote? Where was a man who had proved that a success could be made of this sort of writing; that there was a demand for popular stories of the farm and the shop? Where find a man who could originate a successful method of teaching industrial writing? It became evident to President Waters, shortly, that the head of this new school would be a pioneer.

Charles Dillon, of the Kansas City Star, was selected, finally, because he had made a success of industrial writing. For eleven years he had written on farm, garden, and industrial subjects for that paper. His stories of farm life, popularly written, had been published in the leading magazines of the country. He was a seasoned newspaper man of twenty-two years experience who knew how stories must be written to get readers. He never had taught journalism, to be sure. Never even had been called "professor." But he had ideas about writing on industrial topics, and he was selling those ideas on the magazine market. So to the Kansas Agricultural College came Charles Dillon as "professor of industrial journalism."

The school of journalism in this college is founded along lines wholly different from those of any other in the country. It is not in any way in competition with the department of journalism in the University of Kansas. In the university the idea is to make reporters. In the school of industrial journalism the object, primarily, is to teach students to write stories of their work in a readable style; to pick out the feature of a story and put it at the top where it will get the reader's attention.

"Stories of the farm can be written just as interestingly as news stories," says Mr. Dillon — he uses his title of professor only on state occasions. "Put the feature of the story in the first paragraph just the same as a big paper would in playing up a catastrophe or a national event," he tells the young writers. "And write in plain English with small words.

"The agricultural and industrial journals afford a field for the young men and young women studying in our department," said Mr. Dillon. "Every paper of this kind, of consequence, is seeking competent writers. I visited thirty-five or forty of the leading farm journals recently and in every office heard the same story. The editors were eager for men, trained agriculturally or in certain industries, who can write. The big trade papers need this kind of men. Both kinds of publications want men who know as much as possibly could be taught them in a four-year course. They must know how to set down in clear, concise English what they know, with the technical or the scientific left out or carefuly explained.

Charles Dillon
State Agricultural College, Manhattan, Kansas

"I know this demand exists because I have letters asking for exactly the kind of men we are training. Editors want men who can tell about corn or wheat or animal husbandry or dairying in a way that will attract readers. It isn't the amount that you write that counts on a paper; it's what you write and how many readers you get."

Not only do the sons and daughters of Kansas farmers acquire ease of expression while disseminating authentic information of much value to the people of the state, but they also have proved a mighty machine of publicity for the state and the college. For everyone who prints a newspaper or a magazine nowadays is eager to use interesting material about farm life. And these junior and senior students in industrial journalism know how to write these stories so editors will read. A clipping bureau maintained by the department shows that approximately 600 columns of matter, the most of which is written by students, is published every month from material sent out from this school. In addition to publishing a weekly paper, The Kansas Industrialist, exclusive stories are sent out to the daily and weekly papers of the state and to some fifty farm papers all over the United States. The department also prepares an illustrated agricultural page every three weeks. This page, known as the Kansas Farm Page, goes to hundreds of weeklies in Kansas.

Robert Wilson Neal, professor of English and journalism in the Massachusetts Agricultural College, has this to say of Kansas' new school of writing:

"Why should the Kansas Agricultural College be a household word throughout Kansas and outside of Kansas? The answer is because of Charles Dillon and The Kansas Industrialist. Mr. Dillon is professor of the theory and practice of industrial journalism in the agricultural college at Manhattan. His paper, The Kansas Industrialist (not the Manhattan Industrialist: Dillon roars like a lion with the dyspepsia whenever he finds it quoted so) is the weekly organ of the college through which he spreads news of the work being done by the college and exemplifies his conception of industrial journalism.

"The Industrialist is unique among papers. Not a trade paper; not a farm paper; not a country life periodical, nor a student publication, nor yet merely a newspaper, although, in part, all of these. It stands alone. In Dillon's hands The Industrialist may be called an extraordinary sort of newspaper. Its news is not "the news of the world," nor yet "local news" in the sense that these terms commonly bear. It is industrial news, partly of the world, but largely of the state and the locality — news about agriculture, domestic science, mechanics, industrial science, rural and industrial home life and affairs. News of such sort abounds especially at the Manhattan college.

"If a professor of domestic science finds that a co-operative laundry, which will lighten labor and cheapen washing, can be equipped for $129, Dillon and his Industrialist pounce on the fact like a hawk on a field mouse. If President Waters announces an especially good and cheap way of home curing meats, The Industrialist makes a two-column story of it. Gates, gas engines, music, menus, hay-rakes, hockey, games, fashions, fence posts — they are all one to Dillon so long as they spring from or affect the industrial existence of his state.

"And it all proves the livest kind of news. You will have to look close to find anything dead in The Industrialist. Things that are, by nature, dead or dying (such as scientific and experiment station bulletins when written in obscure and technical language) the young news men of The Industrialist are taught to resurrect, revivify, and send anew into the world — to be hailed with welcome. The Industrialist is made by industrious people for industrious people who lead the industrial life, and from editorial leaders to news story and squib, it both interprets and inspires this life.

"Containing what it does written up in the way in which this is written, The Industrialist is inevitably quoted widely, consequently the Kansas Agricultural College and Dillon constantly become better known. A paper so made could not fail to become known, or to make the institution that produced it better known.

"For the first great illustration of what may be done through such journalism we are indebted to Mr. Dillon's experiment. Others preceded him and preceded him successfully. But Mr. Dillon's step carries him beyond the line of the conventional, as the conventional had been, and brought him where he appeared suddenly as an originator.

"Even if in later development in the hands of others, there comes a toning down and modifying of his methods, he will nevertheless stand as one of the creative pioneers — the man who showed once and for all by actual accomplishment that the principles of journalism can be applied in building up a distinct type of journalism devoted especially to the interests of the great industrial classes as these interests spring from the daily affairs of the industrial existence; and that there is a place for journalism so directed."

Mr. Dillon's special articles and stories have been printed, in the last few years, in The Saturday Evening Post, The Country Gentleman, Harper's Weekly, Collier's Weekly, The American Magazine, The Technical World, The Delineator, The World's Work, The Outlook and many other leading publications. Doubtless his writing had attracted the attention of many editors, for when the National Press Association was looking for a man to succeed Dean Walter Williams, of Missouri, as president of the journalism section of the association, Mr. Dillon was elected unanimously. He is to preside over the sessions of that section, next June, when the editors meet in Colorado Springs in their national convention. The program as he has outlined it, tentatively, shows the practicable and practical ideas he wishes to carry out. What, I asked him, a few days ago, can you find to talk about that will interest editors from all over this big country?

"Well, for one thing," Mr. Dillon replied, "in trying to meet the desires of President Moffett of Indiana we shall have to talk about things that will touch every paper. These editors will not stay to hear theories unless those theories come mighty close to the practicable line. Therefore, I propose that we have at least one good address on 'Newspapers and the Courts.' Editors certainly should be interested in that. I shall try to have one broad-minded lawyer on the program to handle a section of this subject.

"We are all eager to improve the English of newspapers because it is the English of the people and it must be kept up to the highest standard. We shall have some one discuss ways to bring this about.

"We need to impress upon students in the colleges the importance of accuracy. Mistakes, trivial or serious, form the basis of the chief reproach that lies against our profession. I shall ask, also, that the editors give attention to the country weeklies and dailies. The country press is by far the most important influence in the Nation today. It is closer to its constituencies. It needs improving and the part that needs improving the most is seldom represented in the annual conventions, state or national. We must reach that part through clean-cut, brief, useful publicity.

"President Moffett wishes two sessions given to our part in the newspaper business. We cannot afford to neglect the big opportunities his interest gives us."

The Uplift of the Printer-Publisher

By Frank E. Noyes, of Eagle Printing Co., Marinette, Wis.

WHEN in Egypt, the Children of Israel had a hard time of it, trying to make bricks without straw. Your humble servant is having an equally hard time trying to work out an intelligent symposium from the statistics that have been furnished him. When I agreed to prepare this paper, I did it under protest and because the officers seemed to have no one else who was available; and it was agreed that the secretary should collect statistical information from the country printer-publishers of the state which could be compiled and used in illustration of what I had to say. Blanks were sent to be filled out and returned; but from the large number solicited only four blanks were returned. On none of these were all the questions completely and fully answered. Some of the answers were clearly so erroneous as not to be relied upon. For instance, on one blank the average amount of advertising published each week was given and the rate per inch, which showed that something over $6,000 was earned during the year by advertising. Adding to this the amount received from job work and subscriptions, made a yearly business of over $9,600. After answering the questions on the blank the total cash receipts of the business for the year were given as less than $5,000, or over a thousand dollars less than the advertising alone as figured from the answers. It is plain to be seen that from such statistics no intelligent summary can be made.

The country printer-publishers are asleep and indifferent to their own welfare. There can be no general uplift until they arouse themselves, take an interest in what they are doing and earnestly endeavor to learn and to better their conditions. Contrast these publishers with the members of the Inland Daily Press Association. At the last meeting of that association I promised to prepare a paper along a certain line, if the secretary would collect statistics from the members. From the 90 members circularized 52 returned answers; and nearly every answer was full and complete.

What is the matter with the country publisher today? He knows absolutely nothing about what it costs him to do business and generally does not seem to care. He frequently sells his job work and his advertising space for less than it costs him to produce it. He does this because he does not know any better. Before he can be uplifted he must have a stronger desire to learn better and to know what his newspaper costs him; and he must sell his advertising at a price that will yield him a reasonable profit. Arthur Brisbane says the country publisher will not come into his own until he makes a profit of five dollars for every subscription to his paper. God hasten the day when this millenium shall arrive.

The head of the department of journalism of the University of Kansas recently sent out 600 inquiry blanks to the printer-publishers of his state in an effort to obtain a knowledge of conditions existing and the reasons for them. He knew from statistics that the printing industry was the sixth in volume in that state and wanted to know why there was so little profit in it. He received 213 replies. He thinks the two-thirds who did not answer were stumped on the question of what their profits were for 1912. More than half who answered him said they had taken out of their business from $8 to $12 per week for their " salaries " and had made no profit. A few made $15 per week, part of the time. I quote:

" The average number of hours put in each week for this stupendous wage was seventy-one. That's ten hours a day including Sunday. Some editors admitted surprise when in checking up their working hours they found it averaging fourteen and fifteen hours a day, seven days in a week. glanced at the profits of one man who was working ninety-six hours a week. He had taken out less than $50 a month, he said. That was at the rate of 12 cents an hour. The 12 cents an hour man had a wife who ' set up a galley a day ' and who ' helped collect the bills.' Nothing was allowed for her work."

Is there any industry today so low down in the scale financially or economically? Doubtless some of these poorly-paid editors were writing editorials about the sweat-shop condition in the larger cities, perhaps not realizing that their own condition was as bad, or worse, but that no one was solicitous for them because they were free moral agents, in business for themselves, and voluntarily existing under conditions which in other industries they would condemn in scathing terms.

As Professor Thorpe says, " Either somebody is getting something for nothing, or there is a woeful waste somewhere." The obvious thing to do is to stop the waste or stop the fellow who is carrying off our property. The professor says this can be done, as it has been done in many cases, by separating the newspaper and job departments and putting in an intelligent cost system.

How many Wisconsin printer-publishers are in the same condition as their Kansas brethren?

What does it cost on the average to produce an inch of advertising? What does it cost to put the advertising into type, read proof, make up forms and get it on the press? These things can be ascertained but they cannot be until an intelligent cost system is installed and carefully followed.

To arrive at an intelligent answer to these questions you must know your hour cost: not what you pay for labor, but what that labor costs you after you have added to it such items as rent, heat, light, power, insurance, taxes, interest on investment, repairs, depreciation, advertising, postage, rollers, benzine, twine and the many other small items that are so frequently overlooked. Then you must eliminate the idle or wasted time and the time spent in distribution, and get the cost of the productive hour. And, above all, do not forget the salary of the proprietor or manager. It is a legitimate charge against the business and should be the first item to be taken care of on the pay-roll, instead of the last.

Every publisher can earn good wages in some line of human industry. He is worth just as much to his own business and should be paid just as well.

But the cost of the inch? What is it? How cheaply can it be produced? It is a custom in many newspaper offices to charge 5 cents extra per running inch for composition where advertising is to be put into type. This is better than nothing, but it is not enough. The composition costs more than that.

Mr. J. C. Morrison of Morris, Minn., tells in the September Inland Printer how he installed a cost system and found from records in his office what the advertising inch cost him. He found that the cost of setting advertising type was 6 cents per running inch. This was on the basis of 90 cents per chargeable hour in his office. In my office the chargeable hour cost is considerably above this, but the inch cost does not materially differ. My records show that the easiest advertising ever handled by us cost for composition on a month's record a little less than 4 cents per inch. This is exceptionally low. Records kept of the largest account we carry for months of March and December last showed a composition cost of 6.2 cents for the latter month and 6.43 cents for the former month. To this should be added at least one cent for proof and make-up, bringing the cost to press about 7½ cents per running inch. Can any of you country publishers who sell your space for 6 and 8 cents per inch, tell where your profit comes from?

The advertising in a newspaper ought to pay at least all the cost of producing it, leaving the subscription receipts as net profit. On this basis Mr. Morrison found the 17,836 inches he published in one year cost him 19 cents per inch; or, subtracting the receipts for legals and locals, 13 cents per inch.

One of the four blanks returned to me is filled out by a man publishing a country newspaper with about 1,000 circulation. He gives his pay-roll, cost for ready-prints, overhead expenses, states the amount of advertising and job work done, and allows himself a salary of $20 per week. Charging his newspaper with its ratio of the whole business cost on the basis of the total business done, assuming the newspaper plant to represent an investment of $2,500, and charging against the paper a depreciation of 10 per cent and interest on the investment at 6 per cent, I have figured that his advertising cost him to produce 20.6 cents per inch. He says he sold it at from 8 to 10 cents. If we credit the newspaper cost with half the subscription receipts, the advertising inch cost would still be 14 cents. If we credit the newspaper cost with all the subscription receipts we still have an advertising inch cost of nearly 8 cents, or about the rate at which he sold it. What he drew out besides his salary was from his depreciation and the interest on his investment. He is worth $20 per week in other work, could have drawn his interest, if the investment had been in a mortgage, and no depreciation would have resulted. This man is called one of the prosperous of the smaller country publishers. Yet he made practically nothing except his salary, and that salary a very meager one. He paid his foreman $13.50 a week and himself only $20. The proprietor's salary should never be less than twice that of the foreman, and the business should be made to pay it. On this basis he should have drawn over $350 per year more, which would have made the cost of his advertising inch still higher.

Mr. E. K. Whiting, in an article published recently in several trade papers, says his hour cost for composition is 83 cents per hour, and that from actual records of time spent in setting advertising it cost him 8⅓ cents per inch. Here is evidently a lack of efficiency. With an hour cost a fourth greater, my composition cost is a fourth less. The cost can be reduced by having plenty of material to work with — a plethora of leads, slugs, rule, quads and spaces, and large fonts of type — so there is no waiting by the workman; and having the materials so arranged as to require as little traveling as possible. The cost of good help is nearly double what it was fifteen or twenty years ago, and every waste minute means a loss to the employer. It is cheaper to pay for working material than for lost time.

In these days of increased living costs the country publisher should stop and think what he can do to overcome them. Are you getting more for your advertising, subscriptions and job work than the prices of fifteen or twenty years ago? And if not, why not? If not, is it not because you do not know what it costs you to do business? Most of the printer-publishers today are selling their advertising, their papers and their job work for less than cost and wearing out their plants and themselves alike to no purpose. One who has saved a competence for his old age is the exception and not the rule.

Is there a remedy for this condition? There is. It is found in the one word, "Organization." All the successful businesses of the country today are organized. They meet frequently, discuss methods of improvement and co-operate for mutual benefit. The country printer-publisher stands almost alone. He seldom meets his fellow publisher, and has no way of finding out the methods of improving his business and bettering his condition. There are over 500 weekly newspapers in Wisconsin, but the active membership of the Wisconsin Press Association embraces scarcely one-fifth of these and hardly one-third of the active membership attend the annual meetings of the association. Is it any wonder that the country publisher "goes it alone" and is a back number from a business standpoint? Many an able man in newspaper work has so hedged himself about with his own environment as to become narrow in a business sense. If the country printer-publishers of the state could be gotten together in a strong organization, they would become the most powerful influence in the state for their own uplift and that of the state at large; but each one pulling alone, and perhaps in a different way, can accomplish little or nothing. One of the best organized states in the Union is South Dakota, and because of this the laws of that state are more favorable to newspapers than those of any other state. Organization means strength of purpose: it means co-operation; it means power, influence, accomplishment. It means an uplifting all along the line. It means the printer-publisher's social and financial salvation.

The first effective organization among printers was that of the larger plants in the East and is known as the United Typothetae of America. The members learned from each other and many of them started cost systems. This organization was followed by Ben Franklin clubs in various parts of the country, and the leading spirits in both got together at Chicago in October, 1909, in the first International Cost Congress. A committee was appointed which formulated rules for cost accounting and supplemented these by blanks suitable for keeping cost records. The system was endorsed at a second cost congress in St. Louis in 1910, at Denver in 1911, and again at Chicago in 1912. The leading printers in all the cities belong to one or the other of these organizations, and the most prosperous are the ones who have longest been members and who have faithfully followed cost accounting. Organization, cost accounting and prosperity go together.

What the larger printers have done the samller printer-publishers can do. They can make themselves prosperous by knowing more about their business, learning what it costs them to produce newspapers, advertising and job printing, and selling their product at a price sufficient to yield a good profit; for it is a foregone conclusion that no man who really knows what his product costs is going to sell it at or below cost. The trouble now is, he does not know. With organization will come knowledge, with knowledge, confidence, and with confidence, profit.

Every printer-publisher in the state should belong to the Ben Franklin Club. He cannot afford to stay out. The small investment in dues and attendance upon meetings will pay him many times over and prove the most profitable investment he ever made. With membership will come knowledge of costs and of plant efficiency, increased profits and competence. The officers and members will always be glad to render their assistance.

How many printer-publishers who think they are making a little money know which end of the business makes the money or whether the newspaper or the job end produces the greater profit? I used to think that the newspaper was the long end of my business. Its gross business is more than that of the job department. It has a good circulation, runs a fair amount of advertising and has a prosperous appearance. After keeping careful records for a year under the cost system, I discovered that the newspaper was making no money and that the comfortable profits of the business all came from the job department. How many printer-publishers are losing money through their newspapers? And how many are making enough through their newspapers to make up for the losses in their job department? How many are barely ekeing out an existence, working for less than journeymen's wages and losing money in both departments? An accurate cost system will tell you all about these things. With knowledge will come inquiry; with inquiry will come further knowledge; and with a knowledge of causes will come an intelligent application of remedies. A cost system will tell you not only the cost of the different parts of the manufacture of your newspaper, but it will tell you also the cost of every job you turn out; whether that job is profitable and how much you make or lose on each transaction; and with such knowledge the losses will all be eliminated and everything produced will yield a profit. Your charges will be just and uniform and you will be able to demonstrate to anyone that you are right and entitled to the fair profit you charge. So join the Franklin Club, put in a cost system and be one of the self-respecting and well-to-do members of your profession and of your community.

The Story of the Little Pink Tooth

By Ed. E. Sheasgreen, Before the Chicago Ben Franklin Luncheon, March 6, 1913

The little incident which I am about to relate is not a funny or a humorous one, but carries with it a story of the dark, a lost article, light and good common sense organization work.

While staying at Norwood, Ohio, where I was for some time installing Cost Systems, it happened one evening, just before the street lamps were lighted that I was walking toward my stopping place. As I got near the corner, I saw a child bending over near the edge of the walk and frantically digging and throwing the sod in every direction. She was screaming and crying at the top of her voice, "I have lost my little pink tooth, I have lost my little pink tooth, Oh Mamma! Oh Mamma!"

I saw running toward her another little girl, and with her a woman who proved to be the mother of the troubled child.

"Mamma, Mamma, I can't find my little pink tooth," continued to wail the little girl.

"Well, dearie, just a moment, just a moment, let us light a light," I heard the mother say, as I got nearer to them. She struck a match and lighted a candle. In the presence of the flickering candle light the frantic efforts of the child ceased.

Calmly and with method, the mother and the two children had begun a systematic search by the time I had reached their side. Of a sudden the great electric light on the corner flared out. It's brightness revealed over on the walk, some eight or ten feet from where the little girl had been digging, the little "pink tooth," so called by the child, a contrivance the dentist had used in treating the child's teeth and which in her play had loosened and slipped from its place.

Now how does this story apply to the printer's condition? to the poor business man's condition?

The great majority of these business men are like the little girl who lost her "little pink tooth"— digging, cutting, slashing, and as much in the dark as was the little child who so frantically sought the lost article.

Because these and other business men are in the dark and blindly digging and floundering on all sides, they and their businesses are soon driven into the deepest ruts, in time, to be buried in the grave of failure, where they will be forever and entirely forgotten of men.

Now, when light is offered these men, light in the shape of knowledge of costs which may be said to come first of a thought, or as a word spoken — as lighted matches and candles offered by a friend or foe — these men often would blow the light out.

But there are those who did accept and now, as cost reports, facts and figures — those great electric flashes of knowledge — come to their rescue, and they would carry this new light to other men, many there are who still doubt and even fight to stay in the dark. But some day the full sun of cost knowledge will burst over all such foolish men and they will see their own true selves.

But how strange that the majority of men do prefer to work in the dark while imagining that they are actually in the light. They are not as wise as the child who lost her "little pink tooth"— for when the match was lighted she stopped crying, ceased her frantic efforts, and when the candle was lighted began to work carefully, intelligently, with her Mother, the bearer of the light.

There is nothing so terrifying as to find one's self suddenly in trouble in the dark — nothing so reassuring as to meet a friend in whom one has confidence and who can furnish light and assistance.

Now when the candle was lighted the Mother and the two little girls began a systematic search. These three persons made up a working organization, and each of their individual selves were also working organizations, but before any kind of organization work could be accomplished, real effective work, there had to be light. If the little girl alone could have had the light, possibly she could have found the little lost tooth. But with a bigger and better working organization, and with more light, she did find that which she was seeking — for she had an organization capable of most effective work.

This little story of seeking by the aid of light some desired thing, connects us not only with every human machine, but, as well, with every kind of man made machine in every kind of industry. Each machine human or man made is an organization; that which is human being the counterpart of the Great Creator, that which is man made being brought into shape and action through the light that the brain of a genius flared out among men who said. "It can't be done."

It is light that has lead the printers of the country up to the present time where we find their two mighty organizations about to join forces and as one body take up the great cause of giving to the craft still more light, and to work in the cause of business education among printers as never before.

Yes, this little story of the lost "pink tooth" shows us, who are believers and workers in organization work, that we are on the right track, not only because we believe in organization, but because we know that our organization has light, works in the light, will ever work in the light — the light of knowledge of the cost of production, and to work to that end that the lost article. Legitimate Profits, may be found by those who use the light and who work diligently and efficiently to find them.

Sales Efficiency

By W. E. Hobill

I ONCE had the pleasure of hearing Mr. Preston, of the Sheldon School, lecture on salesmanship. During his talk he made use of a small diagram representing two circles, one quite small and one large, the smaller being in the center of the large one. The smaller of these circles represent what you have to sell, the larger one the prospect's money in his pocket or bank. Now it is necessary for you to enlarge the smaller circle (your article for sale) until it is larger than the outer circle (his money). All sales must be made in the mind of your prospect before the contract is signed. Therefore, when you can impress his mind so that the desire to possess your article is greater than the value of his money involved the trade is made.

I don't know how many printers in this country have heard this explained. I have come to the conclusion, however, that some of them work the system backwards and instead of enlarging the smaller circle until it is outside the larger one, they begin by reducing the large circle until it comes inside the small one. This is the wrong system — make your circle (the price) the proper size and get it or don't trade.

Now the important thing is how to enlarge the smaller circle; and in this connection I am going to read you the statements of ten or twelve of the best salesmen of the McCaskey Register Company. This company employes several hundred salesmen scattered all over the country. The company asked thirty of their best salesmen "To what do you attribute your success in selling registers?" and the following are the replies. I want you to note the similarity of the reasons given:

By J. W. Thompson: "I have been asked to tell how I led the sales force for two years, and I will begin by saying that the reason I have made a success is, I have been honest with my customers, and they believe what I tell them.

"In the second place, I believe the McCaskey register is the best accounting system in the world.

"In the third place, I know the proposition thoroughly and when I go into a man's store I find out something about his business before I talk register to him. After I learn his weak parts and the points which appeal to him most, I talk along that line.

"If I find I am making him sore by talking register to him, I leave the register subject, and talk something else. After a while he will ask me about the register, and then I go back at him again.

"If I were going to tell you in a few words how to sell goods on the road, I would tell you to always be a man. Look neat and clean, do not drink whiskey and blow a whiskey breath in a man's face, and try to judge a man's disposition when you shake hands with him.

"It is better not to sell a merchant at all than to sell him too small a register."

By G. A. Bockrath: "You ask me to write you how I secured the business. This, you probably realize, is a hard question to answer, as there are so many things that enter into it and there really is no fixed rule to follow. What business I did get I got by steady work and keeping after my prospects. A good many sales were made after several visits and the use of about as many selling arguments as I could think of."

By J. F. Cooley: "Whatever success I have achieved in selling McCaskey products was due, first, to the fact that I was thoroughly sold on the goods before attempting to sell them to others.

"Second, in demonstrating, I never misrepresent the article offered. That makes the salesman strong with the merchant, therefore, a satisfied merchant becomes a McCaskey booster."

By M. W. Alvis: "How did I attain fourth position in the McCaskey ranks? It is told in few words, and I think the first essential is my sincere belief in the system and the company making it.

"I never deceive a customer nor make false promises, and whether I sell him or not, I endeavor to win his confidence and make him my friend.

"I put the best that is in me into my work and am fortunate in realizing that there is much for me to learn. Hence, when not working I study the system and its literature, together with some helpful magazines. I send in daily reports on every merchant, asking the company's assistance, as well as using some of my own advertising schemes."

By J. R. Adams: "The writer stands seventh in the first ten for 1912. You want to know how I succeeded in getting into the first ten three different years. There are various causes.

"No. 1. Reasons of pressure. I have a wife and three children to care for. The children are all in high school. Also, I have to feed two mortgages.

"No. 2. Negative reasons. I carefully avoid hindrances to success, such as tobacco, beer, whiskey, overeating, undersleeping, lack of exercise, gambling, and vitality-wasting excesses of every sort.

"No. 3. Positive reasons. I am ambitious to succeed. I study the proposition and its application to various lines of business day and night. I test all new demonstrations and sales-talk thoroughly, and accept or reject according to results. But the main secret of whatever success I have attained is plain, vulgar work. The genius of salesmanship is not inspiration, but perspiration; first mental, then physical."

By A. B. Fitts: "You ask my method of selling McCaskey registers and other products of the McCaskey Register Company. In my humble way I will say:

"First. Be strictly on to your proposition.

"Second. Always sell a register to a customer because he needs it and not because you can bulldoze him into buying it. A McCaskey register is good for the man who needs it and an elephant to its customer, salesman and company if he does not need it.

"Third. Learn all about sales pads. Study the competitors' pads and learn his prices. When you see a pad on the counter twenty feet from you, know who manufactured it and the probable cost for 500, 1,000 and upwards.

"Fourth. Commence hustling Monday morning and let Saturday night late drive you home.

"Fifth. Learn the name, face and condition of every merchant in your territory. Know him well, give him a hearty handshake when you meet him and say: 'How are you, Mr. Jones. I hope your business is good.' If he has a pretty store, ninety-nine times out of a hundred it pays to tell him so.

"Sixth. If possible know when every pad user will need pads again. Keep in touch with him. (I know every customer, with a few exceptions, in my territory, and usually can tell when he bought pads last, how many and the price he paid.)

"Seventh. To do this you must study well your propositions, your territory, your business men, your register, your demonstrations, and learn all you possibly can about sales pads — and then — work like a tiger.

By A. P. Warman: "This is my ninth year with the McCaskey Register Company, and one year I was at the top and am glad to say never was lower than twentieth man. I am still working in the territory I started in.

"The only way to sell McCaskey registers is first to know the proposition and not have any side lines. Do not try to call upon all customers at once; call upon a few and stick to them. If you have a prospect interested, you will never make him angry by calling again and again, but never call upon a man and get him interested and not go back and see him again for three or six months, as you will have to go over it all again.

"Always see that your register is giving entire satisfaction after it is in use; call upon your users often; they will help you sell another.

"Tell the truth. You do not have to lie to sell McCaskey's. Do not promise things you do not expect to live up to.

"Be frank, and if you do not think the McCaskey will do the prospect's work as he wants it, tell him so. Then show him how you can do it better in the McCaskey way.

"Do not sell a man because he is easy, and if you know he will not use it afterward; you had better not get his name on the dotted line.

"Too many salesmen say and do anything to get a name on the dotted line, and there is the beginning of their failure. Sell your man and leave it to him to say, 'I will take it.'

"Never ask a man to 'sign here' until you have sold him. I do not think I have ever asked a man to buy.

"Tell the truth and work.

"Never promise anything unless you can fulfill it.

"Use your users.

"If you do not sell your P. P. first time, call again.

"Be systematic yourself."

By B. F. Ginther: "There are just two words which explain how I made my last year's record — enthusiasm and work.

"Any salesman given as meritorious a proposition as the McCaskey system, who will make these two words the guiding star of his mental and physical compass, cannot fail to equal or exceed my record.

"To make a successful McCaskey salesman a man must first be solid on the system himself (that is the bed-rock of his enthusiasm); and then he must carry his message to the other fellow — the P. P. (and here enters the element of work), for this latter elusive personage is not going to hunt up the salesman and insist on being permitted to sign on the dotted line."

Now there is an element in salesmanship and business that is growing stronger day by day, making men more efficient and of greater value. We have passed through the spasms of system with its desks, desks and more desks, filing cases and cabinets. These are necessary up to a certain point, but when the system gets so complicated that it requires two hours and five or six people to get a few cuts it has lost its usefulness. I recently had occasion to get a few cuts for a rush job. The advertising manager pushed a button and his assistant came in, who turned the order over to his clerk, who called a boy; the boy took the order to a filing clerk in another part of the building, who looked up his card index and gave the cut number and case number to another boy, who proceeded to look up the cuts. They were charged up and passed along the line, and in just two hours I received the cuts — for the RUSH order!

We are now turning our attention to efficiency in everything, and I am afraid one end of it is being overworked. We are told by Harrington Emerson, the efficiency expert, that "Efficiency is the accomplishment of a much greater result by very much less effort." This teaching is undoubtedly true, but rather dangerous, as some of us might lose the hustle habit and expect to accomplish greater results with too little effort and find that some one else was on the job with less efficiency but more hustle and hard work.

Speaking of work — we are told by the long-haired philosopher of East Aurora we should love our work — but I am afraid that there are times in all our lives when we reach the point described by a southern general.

One day after a hard battle he was resting under a tree near the road, when one of his soldiers passed. The poor fellow had one arm in a sling, his clothing was torn, his shoes worn through, and he could scarcely get along. As he passed the general he was mumbling to himself, "I love my country. I'll go hungry and thirsty for my country, and I'll die for my country, but if this damned war is ever over I'll never love another country."

We are entering upon an age when character is becoming the dominating feature in salesmanship and business. In this connection I wish to call to your mind the testimony of J. P. Morgan before the Pujo committee of the congressional body investigating the so-called money trust, as reported in the McCaskey bulletin.

Character Value

By M. B. No one disputes the fact that J. P. Morgan is not as cannily shrewd as financiers are made. Nor will anyone assert that he is an easy mark, soft prey for gentlemen who do not find it difficult to loose a flow of smooth and oily language when they are bent on separating a man from his money.

We have always understood that a man had to pledge at least one lung, sometimes both, when he approached J. P. Morgan & Company, intent upon borrowing money. And now Morgan himself, upon oath, says he has often given a man a check for a million dollars, when that man, the borrower, had not a cent in the world and Morgan knew he had nothing.

This matter developed at a meeting of the Pujo committee, the congressional body investigating the so-called money trust.

Here is some of the testimony, the questions asked by the committee's attorney, Mr. Untermeyer, and answered by J. P. Morgan:

"I know lots of men,"said Morgan, "who can borrow any amount and whose credit is unquestioned."

"Is that not because it is believed they have the money behind them?"

"No, sir. It is because people believe in the man."

"Regardless of whether he has any financial backing at all?"

"It is, very often."

"And he might not be worth anything?"

"He might not have anything. I have known a man to come into my office and I have given him a check for a million dollars when I knew he had not a cent in the world."

"There are not many of them?"

"Yes, a good many."

"Commercial credits are based upon the possession of money or property?"

"Money or property, or **character.**"

"Is not commercial credit based primarily upon money or property?"

"No, sir; the first thing is character."

"Before money or property?"

"Before money or anything else. Money cannot buy it."

"So that a man with character, without anything at all behind it, can get all the credit he wants, and a man with property cannot get it?"

"That is very often the case."

"But is that the rule of business?"

"That is the rule of business, sir."

"If he has government bonds, or railroad bonds, and goes in to get credit, he gets it, and on the security of these bonds, does he not?"

"Yes."

"He does not get it on his face or his character, does he?"..

"Yes, he gets it on his character."

"I see; then he might as well take the bonds home, might he not?"

"A man I do not trust could not get money from me on all the bonds in Christendom."

"That is the rule all over the world?"

"I think that is the fundamental basis of business!"

There we have it, the fundamental basis of business is trust, confidence, conviction that the man with whom we are doing business is on the square, reliable, who stays put, who cannot be cajoled, flattered, bluffed, nor forced into doing the forbidden thing.

Bankers will tell you, if you inquire, cautiously and guardedly, that they lend money to men of good character and limited means when others of abundant financial resources and doubtful character are refused credit.

Not all of us are borrowers. Few are ever in position to walk into a bank and call for a loan. But the principle involved, whether we want to borrow, buy or sell, is the same. The fundamental rule of business is confidence in the man with whom you do business.

You will note that the statement of these McCaskey salesmen scattered all over the country is the same as given by Mr. Morgan. You must be honest, truthful, and "on the square." You must know your business and be able to create confidence in yourself and the house you represent. Your house in turn must deliver the goods as sold or represented and on time in order to bring about continued success. It is impossible to find new customers all the time.

One of the great difficulties I find with salesmen is to over-sell a customer, promising anything under the sun to get the order. This is a great mistake and does an injury not only to the house but the salesman as well.

Some salesmen talk too much, promise too much — let the other fellow do part of the talking — you may learn something to your advantage.

The tendency to open one's mouth too often is best illustrated by the story of a suicide whose body was brought to the morgue. The papers were busy publishing the story, trying to locate some one who could identify the body. On the second day after the body was found a limousine stopped in front of the morgue and a handsomely gowned lady came in. She took one look at the corpse, and commenced to cry and sob about her poor husband. On leaving she ordered the undertaker to prepare the body for burial and she would drop in next day and see how he looked. The undertaker, seeing a fat fee in sight, selected an expensive outfit and had everything arranged. As the lady entered the room the following day she noticed the lower jaw had dropped down, showing a row of gold teeth. "That is not my husband," she exclaimed; "he never had gold teeth." "But, madam, he may have had them crowned recently," put in the undertaker, as he followed her to the door. "Oh, no, he didn't, that isn't my husband." And out she went. The undertaker, thoroughly disgusted, walked back to where the body lay, and giving it a jab under the jaw, exclaimed, "There, damn you, if you had kept your mouth closed you would have had a decent funeral."

A Few Don'ts

Don't talk too much.

Don't call a prospect by his first name the second time you meet him.

Don't make a promise you know it is impossible to keep.

Don't take an order at some other printer's price. Make your own price.

Don't substitute. Give a customer what he pays for.

Don't waste your time trying to take a big job (running regular) away from some one. Remember if your competitor loses out he must go out in the market and get something to take its place, and that only makes competition greater. If his customer is satisfied, let it alone, unless asked to bid, and I am not sure but it is good policy to keep the other fellow's presses tied up even then.

Don't try to sell everybody — get a few good customers, look after them and they will look after you. You learn their ways, know what they want and can grasp their ideas much quicker, thereby giving better service and saving them time — which is money — often a great deal more than they could make by shopping around.

Don't overcharge because you think you have an "easy mark." The man you thought "an easy mark" was probably trying to establish connections where "honesty" is the policy. He will find you out. You may lose a good customer.

Don't undercharge, or you may lose your business. If you put in over-time to accomodate a customer, charge over-time for it. My experience has been that good business men do not expect you to work for cost or less.

Don't put in a cost system and forget to use it, as it is not automatic, and if not kept going — is idiotic.

Gentlemen, I thank you.

ELECTROTYPERS' DAY AT THE PRINTING EXPOSITION

The Employing Electrotypers' and Stereotypers' Association of New York

New York, Feb. 19, 1913.

The National Printer-Journalist,
Chicago, Ill.

Gentlemen: It affords me much pleasure to advise you that arrangements have been made with the management of the National Printing Trades Exposition to be held in New York City, April 19 to 26, whereby Wednesday, April 23, has been reserved and will be known as "Electrotypers' Day." The Employing Electrotypers' and Stereotypers' Association of New York, wish to extend an invitation to employing electrotypers of other cities, to visit this exposition, attend the afternoon meeting which will be devoted to matters pertaining to the good and welfare of the trade and at which several well known speakers will be heard, and after this meeting, become their guests at a banquet to be served in the building which incidentally will commemorate our twenty-seventh annual meeting.

Fraternally yours,
The Employing Electrotypers' and Stereotypers' Association of N. Y.
ALFRED J. LAVIGNE,
President.

Composition Room Efficiency

Address by Charles W. Kellogg, Efficiency Engineer of the American Type Founders Company, at the Second Annual Convention and Cost Congress of the Wisconsin State Franklin Club, Held in Milwaukee, March 7 and 8, 1913

AT a recent banquet of printers a good story was told relating in particular to efficiency in the business office. It appears that a certain printer had become very much interested in the question of efficiency. The results obtained from its teachings in the manufacturing departments of his business were so satisfactory he decided to apply the principles of efficiency to the business office. He knew how much time was being wasted by his clerical force, and how much ink could be saved by not dotting the i's or crossing the t's, and he discharged his bookkeeper because, as he said, he took twelve motions too many in hugging the typewriter.

I have given but very little study to the problem of efficient business office management, so I shall leave that question for you to discuss and confine myself to the subject assigned me — that of "Efficiency in the Composing Room."

The efficiency movement is not a new one. Instead its principles and teachings have been applied to practically every line of business for many years. It would be difficult to find a large manufacturing plant that does not support a cost system and an efficiency department. Either of these departments are necessary for success — and one is not complete without the other.

Because of the large and varied assortment of work that passes through the average printing office, I know of no industry that should have the principles of costs and efficiency applied to it more than that of printing. The printer is awake to this fact and as a result scientific efficiency, as applied to the composing room, is now holding his attention along with that of cost-finding. These are the two departments of the business that have been neglected in the past, and, as a matter of fact, they are the ones that should have received the earliest attention.

Efficiency is the watchword of the day, and wherever you see a gathering of printers this is a topic freely discussed. Its teachings are being applied to every department of the business — the administrative office, the composing room, the electrotype foundry, the press room and the bindery.

Efficient management, and efficient machinery and equipment must go hand in hand with the knowledge of costs in order to make success complete in the operation of a printing plant. This fact becomes more and more apparent each day as the printer digs down deeper into the cost question, and it has not taken him long to discover just where the leaks are.

The composing room has long been termed the "sink hole" of the printing office, and the burden of the expense of running a plant has unjustly been heaped upon its shoulders. No one can give a valid reason why this should have been done.

The adoption of a standard uniform cost-finding system by the printers of the United States has shown that this is entirely wrong, and that the composing room is the most important department — the producing end of the business — the department that feeds all other departments.

It is the department that carries the long end of the pay-roll — and it is the department that has been the most neglected and abused of all. In other words, the composing room has always been made the "goat" for the entire business.

Even now, in some of the large shops, where machine composition is playing an important part in the composing room, and where the cost system has been in operation for some little time, the distribution of charges is not being correctly made. As a result some sections of the composing room are still being compelled to carry an unjust burden, and as a still further result, some of the profits which the printer thinks he is making on a certain class of work, are, in reality, only profits on paper.

However, it takes time to perfect any kind of a system, and all will be righted in due time. It will be corrected by the faithful following out of the principles of the Standard Uniform Cost Finding System — the system which is proving a life-saver for the printer.

Every producing printer in this room today is interested in bettering his own financial condition, and I am going to ask you to spend a few moments of your time and go with me into your own composing room.

Look at the condition of the cases, the old style type stands; the relative position of the lead and slug racks and rule cases to that of the workmen; the long distances traveled by the compositors, the make-up men and other employees to and from the foreman's desk; the manner of handling the matter after it has been composed and awaiting final disposition; consider the relative position of the proof readers to the compositors, the proof presses and the foreman's desk, and then again, the location of all the different departments to the business office.

Consider all these features carefully and you will readily understand why your composing room is being operated at such a high cost.

Do you not think that with a little study you could rearrange the room and cut down to a minimum the thousand and one useless steps taken by your employees?

You certainly know that every needless step taken by a workman is costing you money and helps to decrease the efficiency and increase the producing cost in your plant.

Less than three weeks ago I was called to one of the large Ohio cities to lay out a printing plant. In studying the conditions that existed in the plant I found, among other things, that the maximum distance traveled by some of the compositors to and from the foreman's desk was 180 feet. The average distance traveled by the compositors between the cases and the lead and slug and rule racks was at least 35 feet.

A rearrangement of the plant on a scientific efficiency basis, cut down the maximum distance traveled by the compositors to and from the foreman's desk to 24 feet, and the distance was only a few steps for a majority of the men working on the floor.

By the installation of new and modern furniture all the working material necessary for each man was brought close to hand. I have only referred to one or two of the many items that went to make up the too high cost of production in this particular plant, which has been operating under these same conditions for many years.

It cost less than $2,500 for the installation of new furniture in this office, and with it they will be able to reduce their cost of production to the minimum. This firm now realizes the fact that during the term of their existence they have wasted thousands and thousands of dollars because the impression that a composing room could not be operated at a profit had become fixed in their minds.

This is only one of the dozens of plants — both large and small — that I have rearranged during the past few months, and in nearly every instance conditions were found to exist similar to those of the office in the Ohio city. They are the conditions which really exist in most of the composing rooms.

It is not my purpose to take up your time in explaining conditions as I have found them throughout the country. We all know they are bad — the Standard Uniform Cost System has proven this to us beyond a reasonable doubt.

What we are most interested in now is a remedy for the evil we all know to exist.

When you go back to your offices today, tomorrow or the next day, give this matter of efficiency in the composing room careful consideration. Study over the conditions that really exist in your own composing room.

Perhaps, gentlemen, when you do this you will find your compositors using type cases full of type as working banks. You have a cabinet or stand with a pair of cases on top. These cases will hold 50 pounds of type. Fifty pounds of eight point cost you $25.60, and a pair of cases cost you $1.44 — $27.04 in all. On a double cabinet or stand that is $54.08, and very often one compositor occupies a double cabinet. That is a very expensive working bank. The compositor covers the type cases with his galleys, materials, copy, and other cases he uses from time to time. He sets very little out of the cases he is covering.

When another compositor wants those cases there is much disturbance and loss of time, and sometimes ill-feeling and cross words, especially when two or three pairs are piled one on top of others. The boxes in these top cases get littered up and dirty. This is all wrong. There should be no type cases permanently in front of a job compositor.

I always advise keeping the cases in the racks or cabinets, or stands, and providing the cabinets or stands with working tops or banks, plain wood or steel, which cost less than the type cases, are better to work on, easy to keep clean and tidy, and enable the owner to keep his type clean and easy of approach by all his compositors.

If your stands or cabinets are made so that economic working tops cannot be added to them, it will pay you to discard them, because they are undermining your natural profits. They are inefficient.

One or two of the large supply houses now maintain a corps of efficiency engineers for the benefit of their customers. Whenever possible I would suggest that you arrange for one of these engineers to assist you in the rearrangement of your plant. The advantage in this is the fact that he is continually making a study of composing room problems; he goes into the plant as a disinterested person; makes a careful study of the conditions under which each of the men are working; hears the complaints of all the employees, and studies the peculiar conditions, size and possibilities of growth of the plant.

After this he lays out the plant as it should be, in order to obtain the utmost efficiency from the work of every employee.

A good efficiency engineer will make suggestions as to what furniture should be bought, and designs such special furniture as may be required, using, of course, as much, or parts of such of your present tequipment as may be practical.

The work of the efficiency engineer is not to see how large a bill of goods he can get the customer to buy, but instead, he directs his energies along the line of assisting you to so arrange your plant as to enable you to obtain from it the utmost efficiency — and this, of course, makes it possible for you to lower your cost of production. The idea is to have everything so arranged that from the time the copy emerges into the composing room until the forms are sent to the presses, the work moves in an undisturbed channel — without confusion — and with no back-ups or cross currents.

You will be surprised at the results and the small cost of buying the necessary equipment — and making the changes.

It is not absolutely necessary to have an efficiency expert do this work for you. It is advisable, but possibly it would not always be convenient. You can, if you care to, do it yourself, or it may be you have a bright young man in your office to whom you could delegate the work. Make him your enfficeicy man, and let him extend the line of operation to every department of the business.

There is no secret as to how the work is accomplished, and if you will observe the following suggestions there will be but little chance of failure.

First make a survey of the room, measuring the floor space, locating the windows, doors, posts, heaters, stairways, elevators, and other obstructions, and drawing a floor plan to one-quarter-inch-to-the-foot scale, on paper ruled to one-quarter inch squares, which you can easily buy at one of your local stores. When this is completed, measure the floor space required for each piece of furniture, machine, etc. Take a piece of cardboard and cut out the several items exactly to scale — one-quarter inch to the foot, and arrange them on the floor plan as drawn.

After you have everything arranged as you think it should be, then study the result. Consider carefully what each man has to do, and where he has to go to obtain his working material. Study his relative position to the foreman's desk, the proof press, the galley slides, etc. You may find that you will have to change your plans somewhat in order to bring all these different items closer together. Every item of furniture, every machine, and every employee should be carefully considered.

It will then be a good plan to call in the salesman from the supply house from whom you are buying and have him go over all the details carefully with you. Between you, you will probably plan out certain pieces of furniture which can be substituted for some you are now using in order to make the plant more efficient and save the employees a lot of unnecessary and useless steps. After all the nacessary changes have been made you can then draw in carefully on the floor plan the several items as arranged.

I would strongly advise you not to adopt plans for your office which have been used by another house. Because of the peculiarities of your production, or of the construction of your building, your plant presents a problem widely different from that of any other printing plant. It is therefore impossible to lay down a set of rules for every one's guidance.

A short time ago a book of layouts was published for general distribution, but it would be unlikely that any of them would be adapted to your plant. It would be far better to spend a little money if necessary in having your plant arranged in a systematic manner, by one who will make himself familiar with every requirement of your business, and give you the benfit of his observation and experience in methods which reduce costs of production.

The work along efficiency lines should not stop with the composing room. Its principles should be extended to the stock room, the press room and the bindery. Every printing office should be provided with a good stock room where the several grades of paper can be arranged on shelves or platforms, and kept free from the dirt and dust that naturally accumulates where machinery is used to any considerable extent.

I visited a press room the other day where a vast amount of high grade catalogue work is printed. Tons of paper were piled upon the floor about the press room, and down under the ink fountains of the presses were dozens of cans of ink — some of it expensive colored inks — and but very few of the cans were covered. The loss on blank paper and ink in this office each year must be something enormous.

Still another item to receive careful consideration is the material for the workmen. It is a fact that in many instances I find the offices over-equipped. In a medium-sized office the other day I found it would require nearly six hundred cases to care for the type. A further investigation showed at least one-third of this type was rarely if ever used, and it was taking up valuable space — space that was costing the owner a rental of 40 cents a square foot. This was another case of extreme inefficiency.

It is far better to have a few well selected series of type, and have enough of each so that the time lost by the compositor in pulling letters to complete a job will be reduced to the minimum.

What I have had to say regarding efficiency in the composing room is applicable to the small office as well as to the large, and the same methods can be employed in reducing the cost of production in one as well as the other.

No office, however small, should be without the cost system. You are attending this convention to learn more about this system and you are sure to take home with you a vast amount of information which if applied to your own business, in one way or the other, is certain to result in your financial gain.

A large number of country publishers operate in connection with their newspaper a commercial printing plant, and it is a sad fact, that many of them find it necessary to use a certain amount of the profits derived from the latter in making both ends meet on the newspaper.

In this connection I wish every one of you who operate combination plants would read the article by J. C. Morrison, publisher of the Tribune, at Morris, Minn., and entitled "The Cost of the Solid Inch."

It was reproddced in full in the January issue of the American bulletin, and a copy can be had for the asking, by addressing any one of the branches of the American Type Founders Company.

Mr. Morrison was greatly benefited by installing a cost system, and in his article he shows what the country newspaper publisher may be losing, and how he may transforms his losses into profits.

Thus far I have dealt mainly with the working conditions of the composing room, but before closing I wish to refer briefly to the problem of efficient management of composing rooms. This has many angles, many of which are quite new.

Show me, for instance, an office which really knows the cost per thousand ems of composition by hand, by linotype, and by monotype. It is as necessary to know the cost per thousand ems as it is to know the hour cost.

The hour cost of composition is simply one of the factors for ascertaining the cost per thousand ems. Most of your work is done for a pre-arranged price based upon your estimate. The estimate for composition is usually based upon the number of ems; and the hour cost of composition divided by the average number of ems produced in an hour gives you the only safe basis for estimating the cost of composition.

There are many plants using two or three methods of composition and a few, if any, which are in a position to know the cost of each.

For instance, nearly all the plants using cost systems fail to charge the machine plant investment account with the imposing surfaces, galley cabinets, galleys, leads, slugs, chases, quoins, storage cabinets, letterboards, etc., which are used in taking care of the product of the machines on its way to the press and after it leaves the press. These are very generally loaded on hand composition.

Few plants debit a portion of the foreman's salary, or the wages of the errand boys, break-up men, or distributors and make-up men to machine composition, and yet the pay of all these is a part of the cost of machine composition.

Machine Composition Is Always Incomplete Composition. It always requires hard work to complete it. You cannot know the real cost of machine composition per thousand unless you charge in all this hand work.

If you are figuring on the cost of machine composition on the basis of merely delivering it on the galleys ready to make up, and throwing the cost of preparing machine composition into the hand composition classification, you are fooling yourself, by charging too little per thousand ems for machine composition and too much per thousand for hand composition.

A part of composing room efficiency that receives too little attention its preparation of forms for the electrotyper and press room. I know a concern in the East that spent 170 hours on a 300-page book in the electrotyping department correcting bad monotype composition after the plates had been made and while the book was on the press. This is extreme inefficiency, which could have been avoided by better preparation of the forms.

Printers are demanding better plates, while furnishing the electrotypers very inferior forms, and there is a general demand all over the country today by the electrotypers for higher prices to cover the inordinate amount of finishing required to make bad composition into good plates.

Forms well set and properly justified, with cuts accurate in height constitute an item of composing room efficiency which reduces cost and increases production in the press room.

The printers are entitled to more accurate work from the electrotypers and engravers than they generally get, especially in furnishing mounted work of equal type-height all over and accurately squared on all sides, but the printer on the other hand cannot expect good work from the electrotypers if they send them inferior machine composition, cheap in the setting maybe, but discounting that cheapness at every step from the galley until it is ready on the press.

A "saving" is not really a saving if it dissipates itself by increasing the cost of all subsequent operations to complete the product.

Better start on a good and sound foundation, rather than be fooled by cheapness at the outset, which increases the expense of all work built upon the "cheap" start.

REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 440 S. Dearborn Street, Chicago.

THE printer who has brains to put at the disposal of his customers will find that his gray matter will bring him good returns in dollars and cents. Let us draw a lesson from the department store. It is well recognized in the larger cities where these stores form an important factor in retail merchandising, that if one knows exactly what he wants, he can go to a department store, tell a poorly paid sales person the article desired, and get it, with usually a considerable saving on the price. On the other hand, if the shopper is not exactly sure of what he wants, and is anxious to have some competent suggestions from an honest and intelligent salesman before buying, he stays away from the department store and goes to a place which makes more of an attempt at specialization, willing to pay a higher price for the article because of the expert assistance in selection afforded him.

It is much the same with printing — except that printing doesn't come ready prepared, done up in bottles or cartons ready to be handed out across the counter, so that the cases in which brains can be dispensed with are comparatively rare. Of course, there are buyers of printing who think they know exactly what they want and will go to the shop with a completely prepared dummy; but even with these people a suggestion here and there will often be appreciated and will make for the betterment of the job. The large majority of people, however, are willing to "leave it to the printer," especially if he shows himself to be willing and competent to assume the responsibility; and they are, if they are the right kind of people, willing to pay for the "know how" as well as for the work.

✤ ✤ ✤

I am delighted with the sixty-four-page catalogue for Garford motor trucks which was designed, engraved and printed by the Robert L. Stillson Company, New York. The motor truck idea is emphasized in a dignified, intelligent, pleasing manner on every page — which is perhaps one of the best ways of reaching the height of efficiency in catalogue design. Three typical type pages are shown, though the larger part of the book is taken up with full-page illustrations of motor trucks in actual service. Heavy plate paper is used, and the plain black and white is relieved by a greater or less amount of buff tint on every page. The heavy cover of dark green stock is embossed in black and gold.

✤ ✤ ✤

I return herewith sincere thanks for No. 44 of a limited edition of a delightful little book published by Taylor, Nash & Taylor of San Francisco. It is an excerpt from Dickens's Christmas Tales entitled "What Christmas Is as We Grow Older," and really ought to have been put into general sale for the holiday trade. I refuse to let it go out of my possession long enough to have any part of it photographed, so a description will have to suffice. It is 4½ by 6 inches in size and comprises twenty-four pages all told; the stock is Shogun deckle-edge hand-made paper, uncut at the top; the binding is thin boards with white vellum back and olive green paper sides and end sheets. The printing is in 12-point Caslon, with an initial in orange, and appropriate drawings on the title and sub-title pages. The edition was limited to 450 copies.

* * *

How can you accommodate the ordinary type of blotting paper to the class of printing which can be done only on a smooth and dense surface? One Chicago printer has solved this question very satisfactorily by printing on a scrap of enamel stock and tipping it onto the blotter at one end. This provides for the man who prefers a smooth surface to rub his fingers over when he uses a blotter, while the one who prefers to use both sides can tear off the enamel paper. In this latter case the advertising value is perpetuated by a few lines of sales talk printed on the end of the blotter itself.

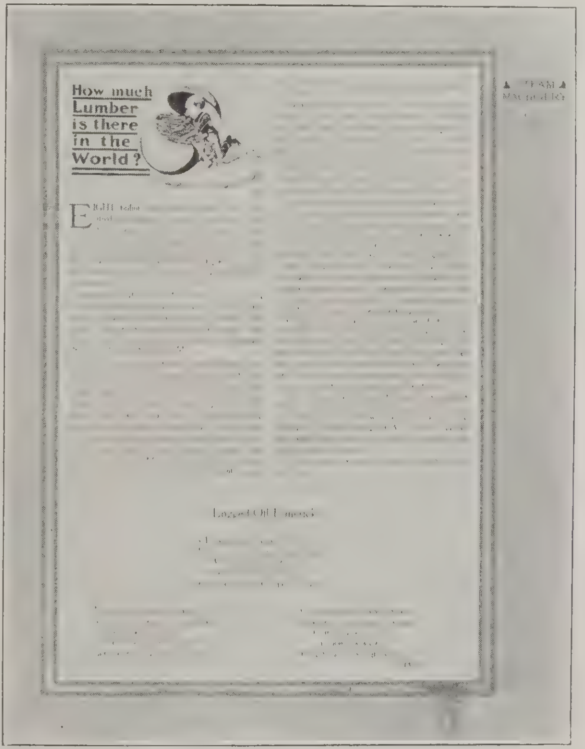
From D. P. Munn of the Sterling Daily Standard, Sterling, Ill., comes a very creditable and highly interesting booklet, printed by that office for the Business Men's Association of Sterling, and intended to boost that little city. While the statement forms no part of this typographic criticism, I want to say right here that I spent a day in Sterling a year or so ago and can attest to the general attractiveness of the town and the advantages as set forth in the little publication at hand. It is a most creditable piece of work, especially for a shop which is not handling this class of printing as an everyday matter. There is, to be sure, something of a lack of uniformity in the size and style of the illustrations used, making the pages of varying sizes; but doubtless many of these were stock cuts from various sources and not made especially for this job. The run-arounds in connection with the vignetted cuts have not been made as well as they might. Too much space has been given the cuts in many cases, and a rectangular run-around is used in some instances where it should be fitted more closely to the general contour of the illustration. This takes more time, to be sure, but is one of the things which makes for the best class of printing. If the printer did not care to go to this trouble, or the price would not justify it, then the cuts should have been reversed, with the square edge to the matter and the vignette to the margin. It is to be regretted that the type for the side heads did not hold out, so that the change to another face on the last two pages would not have been necessary. The advertising is, in the main, well taken care of, and the press work carefully done.

* * *

The man who edits a house organ has some advantage over the rest of us. While the "sure enough" editor has to limit himself by the varying and in many cases none too generous income of a publication, the house organ man isn't expected to show a profit and is limited only by the appropriation at his disposal, which is in most cases amply abundant, judging from the class of work they get out. Especially must this be the case with a publication called Steam Machinery which is now on my desk. It emanates from Duluth, Minn., and the promoters are the Clyde Iron Works of that city. The cover has an illustration in a richness of color backed by a broad expanse of blue which reminds one of Maxfield Parrish. The inside pages have the margins filled in with a tint plate, over which two heavy rules in a slightly darker shade are printed around the type matter, making three printings in all. And this in addition to the expense of hand-set body matter and a lavish use of illustrations. The work is certainly a great credit to the Pioneer Company of St. Paul, who are the printers.



How much Lumber is there in the World?

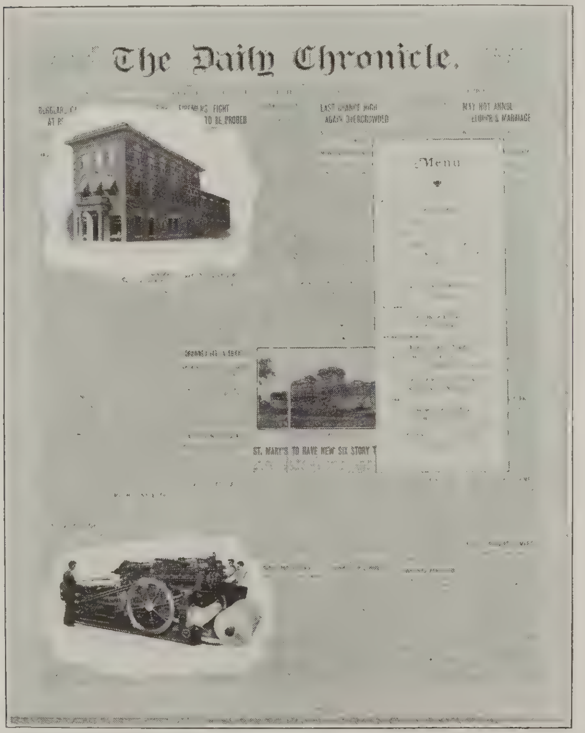
Speaking about richness of color reminds me of a little card which came in from Charles Eneu Johnson & Son, the Philadelphia ink makers, and I herewith hunt it out from my collection of samples. It represents an attractive young lady in a dress of dark green, over which is a purple street wrap. She is stepping out of a background of golden bronze brown, through curtains of green in two very constrasty shades. It shows at a glance the striking effects which can be produced with these inks.

* * *

The Walden Typesetting Company of Chicago believes in advertising its own wares. An occasional little circular tells of the new faces which have been added to the linotype and monotype equipment.

* * *

The Chronicle Publishing Company, Orange, N. J., recently added a large amount of floor space to its plant, and the growth was signalized by using the new room for the first time as a banquet hall, a dinner being tendered to the mayors, aldermen and clerks of the four Orange municipalities, of which The Daily Chronicle is the official organ. A souvenir of the affair is before me, and it assuredly is deserving of much praise. Inside a rough gray Brittany cover is a halftone print reduced from the front page of the Chronicle. Cut-outs in the sheet show the Chronicle building, the printing press, and the menu of the banquet. It's a clever print-shop idea; and, incidentally, that menu makes me so hungry that I shall have to hurry through and get home to dinner.



The Daily Chronicle.

Menu

ST. MARY'S TO HAVE NEW SIX STORY

I would suggest to F. E. Heiland, Delphi, Ind., that some of his customers are using a very low grade of stock, and that he might well spend a little effort with them now and then to show them the advantages of the better grades. While a good pressman can, of course, get passable results on a cheap paper, there is so much more satisfaction all around if a quality of paper is used to harmonize with the work in hand. Very many times the printer is blamed for poor work when in reality the fault lies entirely with the customer himself, who has tried to save a dollar or two on his job at the expense of the quality. I am afraid the printer in some cases too readily falls in with this idea of economy. He thinks that the money spent for paper does not benefit him, anyway, and that if a saving is effected on that item there will be all the more money to spend for printing. But this is a false view to take of the matter. The printer should insist, so far as he dares, on his work having the proper setting, or being worked out in the proper medium.

But this little digression is entirely aside, for I do not know that any of it applies to Mr. Heiland at all. The letter head for Dr. Banes is very well done, although the letters D. D. S. should not be quite so widely spaced. The head for the Yeoman Telephone Company seems to have been set for a note head and then switched to a letter size without alteration. This is sometimes done in a hurry, but the makeshift is always a lamentably transparent one. Where it is known beforehand that the two sizes are to be printed, the form should be set letter width first and then drawn in for the smaller sheet. The Sanderson & Sanderson head is a very creditable piece of composition, as is also the banquet menu. On the latter the impression is rather heavy, however.

* * *

The card of W. R. Webb of The Independent, Santa Barbara, Cal., makes a strong appeal to me as being almost without fault. With its clouded stock, its two colors well balanced, and its panels blind stamped, it is enough to give one an introduction to the user of good printing anywhere. The other specimens are not so strong, however. The heart-shaped dance program is well conceived, but the inside pages have been spoiled by heavy and careless presswork. The same is also true of the statement. The letter head for the Chamber of

Commerce is quite good, barring a few inaccuracies in the joining of rule. I feel sure, however, there must be some better work where this came from, and I am anxious to see it.

✣ ✣ ✣

I am glad to be able to show a few "first pages" done by Axel Edw. Sahlin at the Roycroft Shop, East Aurora, N. Y. They have the true Roycroft spirit — the close attention to detail in the working out of an ideal — and may well serve as examples to other typographers.

F. C. Bunn, foreman of The Baker Sentinel, Baker, Montana, sends a band concert program for criticism. It is composed of eight pages, cover and insert, and is devoted largely to advertising, which is set for the most part with very good taste. Baker is a small town, and considering the fact that the program was a rush job, and that the facilities of the office made it necessary to print one page at a time, I consider it a very satisfactory piece of work indeed. The cover, which is on a light brown bond stock, is here shown.

OUR SISTERS OF THE DOMINION OF CANADA TO MEET AT EDMONTON, JUNE 15

Compliments of August Wolf, 707 Tegler building, Edmonton, Alta.

Official announcement is made by Miss Marjory MacMurchy of Toronto, that the Canadian Women's Press Club, of which she is president, will have its triennial convention at Edmonton, Alta., the middle of June. The delegates, including women authors and newspaper writers from various parts of the Dominion, will be entertained by the Women's Press Club, the newspapers and the Ad Club of Edmonton. Mayor William Short will present the freedom of the city to the visitors.

Miss Anne Merrill, society editor of the Journal and secretary of the Edmonton Women's Press Club, which is headed by Mrs. Emily F. Murphy, (Janey Canuck), author of "The Open Trail" and several books descriptive of the North country, has received a letter from Miss MacMurchy saying that the delegates from eastern and central Canada will travel to Edmonton by way of Calgary in a special train over the Canadian Pacific railway. The tour will be under the personal direction of George H. Ham of Montreal, representative of the railroad, and honorary president of the Canadian Women's Press Club, the only man belonging to the last named organization.

The entertainment features in Edmonton include a series of receptions, banquets and theater parties, also side trips through the Yellowhead Pass in the Canadian Rockies and Athabasca, north of Edmonton.

"We'll give the girls the best time they ever had in their lives," Mrs. Murphy said, "and I know they will enjoy every minute of their stay in Edmonton and central Alberta."

Notes From the Headquarters of the Ben Franklin Club of America

The office of the secretary of the Ben Franklin Club of America was very active during the month of February with business pertaining to the amalgamation vote, taking care of the many requests for sample blanks and sending out blanks in large quantities for beginning installation of the Ben Franklin Cost Methods in many plants, giving information regarding the installation and use of the same in small plants, besides taking care of a vast amount of regular routine work.

Among other things that are of interest which came to his desk is the report of the organizing of three Ben Franklin Clubs. One at Elkader, Iowa, organized February 24, with Mr. H. L. Griffith of Elkader as president and Mr. C. Reinecke as vice-president and secretary-treasurer; the second at Gary, Indiana, with Mr. E. Wulfing as president and Mr. Charles Butler as secretary-treasurer, and the third, The Ben Franklin Association of Bell County, Texas, organized, February 24, at Temple, Texas, with Mr. R. O. Gresham, president, Temple, Texas, W. T. Carter, V. P. Killeen, Texas, and A. L. Liles, secretary-treasurer, Temple, Texas.

Secretary Sheasgreen requests that the secretary of every Ben Franklin Club communicate with the secretaries of the new organizations and extend greetings to the brethren in these different localities.

On March 6, Mr. Sheasgreen told the Chicago Ben Franklin Club "The Story of a Little Pink Tooth" a true story about which he wove organization and cost work. This little story appears elsewhere in this issue.

With President Hartman and other Chicago printers he attended the Milwaukee convention held the 7th and 8th of March, and has accepted an invitation to speak before the Omaha Cost Congress to be held April 7 and 8. His topic at the Omaha convention will be "Ben Franklin vs Gun Powder or Organization and Cost."

At a meeting at Temple, Texas, held on February 24, the Ben Franklin Association of Bell County, Texas, was organized. The leading spirit in getting the printers of Bell County together was Mr. G. Hunton who spared no effort to make the gathering a success. Election of officers resulted as follows:

R. O. Gresham of Temple, Texas, President.
W. T. Carter of Killeen, Texas, Vice President.
A. L. Liles of Temple, Texas, Secretary-treasurer.

Various committees were appointed and another meeting arranged for to be held March 10, at which time a Constitution and By-Laws will be submitted.

It is expected that the Bell County, Texas, will boast of a 100 per cent organization by the time the March 10 meeting has closed.

At the last regular meeting of the Chattanooga Ben Franklin Club, Mr. N. D. George Morgan of the Morgan Printing Co., Chattanooga, was elected president of the Ben Franklin Club of that city.

The printers of that southern city, according to Mr. Morgan's letter are like a big family of brothers, for he says: "I have had the pleasure of attending many of the Cost Congresses and it is indeed a pleasure to me to see how rapidly we are getting together, especially when you think of the past years when printers were so antagonistic towards each other. We have a real live organization in Chattanooga the members of which seem more like a big family of brothers than competitors."

Really brethren this is what the true Ben Franklin spirit will do when put to the test.

Secretary Sheasgreen received a letter from Mr. R. A. Austen-Leigh of London which brings the news that the printers of England recently held their first Cost Congress in London with over 1200 printers attending. This is certainly going some and if the brethren on this side of the water do not look out the printers from across the big pond will be drawing larger crowds in attendance to their Cost Conventions than we will at ours.

Mr. H. F. Bundy, for some time in the Typothetae and Board of Trade work and recently of the Denver Printers' Exchange has accepted the position as secretary of the Ben Franklin Club of Memphis, Tenn. It goes without saying that Mr. Bundy has the best wishes of his friends, and members of the craft at large, for success in his new field. Communicate with him, brother secretaries, it will do both you and him good.

Mr. Dee Allen of the Wichita, Kans., Eagle is the new secretary of the Wichita Ben Franklin Club. Brethren get out your paper and ink, and pen him a few lines to cheer him on his way.

Secretary Sheasgreen has received advice from Mrs. Anna F. Harmon, secretary of the Secretaries' Association, that his application to that organization has been accepted. He invites the secretaries of the newly organized Ben Franklin Clubs and secretaries of all other printers' organizations who are not affiliated with the Secretaries' Association to communicate with Secretary Harmon. This good lady is striving very hard to build up the membership of her organization, so that plans may be perfected whereby organization work in general will be strengthened because of information and suggestions received that will make it possible for all secretaries to work along the same general lines.

From the way Mr. C. I. Kagey, secretary of the Printing Trades Credit Association, has been coming and going from his office at all times of the day, it certainly shows, that the printers of Chicago at least, appreciate the efforts which this very important organization and its faithful secretary are putting forth in the interest of the printing fraternity.

Since Secretary Sheasgreen of the Ben Franklin Club of America and Secretary Brines of the Ben Franklin Club of Chicago have taken hold of their new work, the whole office arrangement of furniture, filing device, etc., has been changed. This change has been favorably commented on by all members who have called and it is no uncommon sight to now find one or more printers in and about headquarters at any time of the day, conferring about local and general matters, committee arrangements and appointments with customers, arbitration matters and even convening with customers to confer over some disputed account or job on which prices are to be given.

✣ ✣ ✣

TWO GOVERNORS TO TEACH NEWSPAPER MAKERS

James M. Cox, Governor of Ohio, and Elliott W. Major, Governor of Missouri, are on the program of Journalism Week at the University of Missouri, May 12-16. Governor Major will introduce to his Missouri audience Governor Cox, who has accepted an invitation to speak Thursday, May 15, upon "The Newspaper and the Public."

Governor Cox is the editor of two leading daily newspapers in Ohio, the Dayton News and the Springfield News. He has served two terms in congress and was formerly reporter and editorial writer on the Cincinnati Enquirer. He was elected governor of Ohio last November.

Day of the Home Weekly Is Here

Many of the thoughts and suggestions contained in the following article, appearing in Wheelock's Weekly of Fergus Falls, Minn., will prove interesting reading to all publishers of home papers.

Mr. H. M. Wheelock, the editor and publisher, is a wide-awake newspaper man, who publishes a live, successful newspaper. Possibly our interest is greater in his presentation of this subject from the fact that he commenced his newspaper work in the office of our paper in Red Wing, Minn., back in 1877.

He has been conducting his present paper for seventeen and a half years, but his experience covers more than three decades, though as we look backward, it does not seem that it can be so long a time. However, he has been continuously in the business and is entitled to write with authority.

In times past we have believed and taught that it was wiser for the local publisher to cultivate, thoroughly and persistently, the home field, than to bother about what is called "foreign advertising." Conditions, however, have changed, and it is certain that the home newspapers, through proper efforts, have been able to secure profitable returns from general or national advertising and to return full value.

It never pays to take any advertising of a doubtful character or that will lower the standard of the paper or lessen in any way its value to home advertisers. A great deal of what is known as foreign advertising used to be of a character that ought not to have been taken at any price. It was largely fraudulent and sometimes immoral.

It never pays a publisher to enter into partnership with frauds, whether at home or foreign, to deceive, mislead or defraud his home readers on whom he relies for support — this entirely aside from the questions involved, but there are now large and legitimate lines of general advertising. Many manufacturers and dealers can reach consumers more effectively through the home press than through any other means or medium. Manufacturers and wholesalers should be taught to co-operate with local merchants in home advertising campaigns.

Mr. Wheelock says:

Day of the Country Weekly

The day of the country weekly newspaper as an advertising medium is here. Those who fail to read the signs to show it, can't read signs or haven't tried. The country newspaper men will have themselves to blame if they do not plan to take full advantage of it.

The first general advertiser exploiting any article of universal use or necessity who has the confidence and boldness to get into the field ahead of the main pack will reap tremendous rewards. There will be ample profits for many, but the man of combined imagination and sagacity who can look into the future a few years and see what is coming will scoop the biggest persimmons.

All well and good, says doubting Thomas, but how do you prove it?

Fifty years ago the daily newspapers took most of the advertising appropriations of the big advertisers. The small fry ran what they could get of the leavings at absurdly low rates. The monthly magazines had a few advertising pages of "high class" goods — pianos, books, engravings, statuary, silverware and the like. Note what has come to pass since then. The magazine ads grew and grew, and local merchants gradually came to monopolize the space in the dailies. Both kinds increased tremendously, and still are increasing. The low priced monthlies arrived to cover the country, and the general advertisers filled their pages to double and treble their letter-press limit. The great weeklies of general circulation offered the next field, and the general advertisers took possession of it.

These three great avenues of publicity — dailies, monthlies and general weeklies — have reached their profitable limits. Their circulations and their advertising rates are alike gigantic. Each advertiser competes with hundreds of others, many in his own lines. The numberless pages of the daily newspapers are full of the announcements of the department stores; the monthlies publish hundreds of pages of ads; the great weeklies run ads on nearly every page. The point of saturation has arrived.

Let us consider concrete examples. The Saturday Evening Post, with two million circulation, charges from $4,000 to $5,000 a page. It prints so much advertising that not one reader in a score sees a quarter of its ads.

The American Magazine has enlarged its pages and runs ads alongside reading matter. McClure's has followed the plan of the weeklies, and "runs over" its stories to the advertising pages to entice readers into that jungle of high priced announcements. The returns to the space buyers "per thousand copies" or "per dollar" have begun to dwindle, that is why.

What next?

Obviously there is but one field of publicity not yet invaded, and that is the country weekly newspaper. It is almost virgin soil for the modern advertiser who buys big space. Its "foreign advertising" thus far has consisted mostly of small two, three and four-inch ads with plenty of "readers" usually demanded as a free gift; and patent medicine advertisers are the principal buyers.

The country weeklies, alone among the periodicals, still serve their small rural constituencies, and are still read as they were fifty years ago by the farmers of their own counties. Their pages have not increased and their general advertising has not swamped all their other features.

The purchasing capacity of their readers has enormously increased. The new parcel post has removed one of the chief difficulties in the way of serving these readers.

The next advance of the advertising brigade will be upon this vast unexplored domain of the country weekly, with its millions of potential customers, and its rates, higher than any of the others per thousand of circulation, but very small in the total required outlay, and — note well this pregnant fact — every unit of that circulation an interested reader of every page and almost every line of both its reading matter and its advertisements; nearly every one a potential buyer.

Does anybody ask a straw to show which way the wind is blowing?

The Curtis Publishing Company, which owns two periodicals of great circulation, the Ladies' Home Journal and the Saturday Evening Post, has recently bought one of the oldest, most respectable and most decrepit farm papers in the country, the Country Gentleman of Albany. Its new owners are proceeding to build it up much as they have built up the Saturday Evening Post, by printing in it the best agricultural reading matter that can be bought, and by lavish outlay to advertise it. They bought it to get their share of the ever widening circle of rural readers, and to fill it with advertising which will attract those readers. They are putting a new rival in the field of the country weekly.

They are advertising it in the country weeklies. Their half pages appear in hundreds of the best newspapers in this and other northern states. They wish to "get" the farmer, and in order to get him they are inserting their ads in the little country sheets which already have "got" him. Their knowledge of the field, their sagacity and their resources are very great. They know what they are doing. They could have filled the great monthly magazines and the widely circulated weeklies with their ads and thus "covered" the country, but instead are putting their thousands of dollars every week into hundreds of little papers, each with its thousand or two of subscribers. The Curtis people are among the first to see that the day of the country weekly is here.

The rural press has improved in all ways in the past half century. Its business end has been its weak point. Its rates have been 'most anything, and its lack of attention to its advertisers' interests and requirements has been grievous. It has been "soaked" by every fraud and fake that wished to get publicity for nothing. But the old order changeth, and these shortcomings are falling to the background. The average country weekly of today still makes a rate too low for profit, but it sticks to it. It does not print every ad that is sent to it from unknown concerns. It is more and more every day applying good business principles to its advertising department. It is, speaking in a large sense, fairly well prepared to take advantage of its "day," referred to above. The chief danger that faces it is that it will allow its advantages to be frittered away and stolen from it by "supplements" (always containing all the advertising they can get), by ready-prints, by various premium enterprises, each one grasping for the ear of its farmer readers, and each one making advertising rates which are much lower than it can accept in its own columns and live. If the country publisher has the sagacity to keep free from these shrewd schemers to get the ads that should go to him, he is morally certain to get a great increase in his receipts from foreign advertising in the near future.

Investigating the Making of Newspapers

The New Curator of University of Missouri Takes His Oath of Office and Makes First Speech to Seniors in Journalism

Sam Sparrow of Kansas City made his first speech as curator of the University of Missouri at a dinner given by the senior class of the School of Journalism in Kansas City Saturday night. The students were in Kansas City to inspect the newspaper plants.

Late Saturday afternoon after Mr. Sparrow had received his invitation to the dinner, he noticed his commission from Governor Major lying on his desk. He thought it wise to read it and find out the requirements of a curator of the University of Missouri. He learned that before he could be a full-fledged member of the governing board he must take an oath. He hurriedly called a notary public, was sworn in, and a few hours later appeared at the dinner as the newest member of the board.

Mr. Sparrow told of the university at the time he was a student and described the burning of Academic Hall as well as many other incidents of his school life. He referred humorously to the unlimited amount of knowledge possessed by graduating classes and the way the learning diminishes after the diplomas have been given out. In his speech, also, he dwelt on the mission and status of the newspapers of the present time.

J. A. Kurtz, better known as "Daddy Kurtz," president of the Kansas City Alumni Association, encouraged professional students who, he said, might become discouraged when they begin to practice.

A talk was made by William Southern, Jr., of Independence, editor of the Jackson Examiner. Other guests at the dinner were George Logan, city editor of the Kansas City Star, and Richard Smith, city editor of the Post. At the close of the dinner, "Old Missouri" was sung.

The senior journalists and members of the faculty went to Kansas City Friday afternoon. They visited the plants of the Star, Post and Journal.

Those in the party were: Dean Walter Williams, Prof. Frank L. Martin, Prof. C. G. Ross, Prof. J. S. Akeney, Misses Amy Armstrong, Ellen Foley, Sara Lockwood, Clarissa Spencer, Marguerite McGowan, Hazel Thornburg, Malvina Lindsay and Myrtle McDougal; E. S. Basket, H. E. Birdsong, Maurice Hicklin, W. E. Hall, S. A. Howard, H. J. Lamade, R. S. Mann, J. G. May, H. J. MacKay, F. W. Rucker, Ralph Pruyn and G. W. Turner.

Students in Journalism at Kansas City

The senior class this year includes twenty-two. It is twice as large as the largest graduating class of any previous year. Nine states and one foreign country are represented: Missouri, Illinois, Oklahoma, Nebraska, Ohio, Pennsylvania, Tennessee, Montana, South Dakota and Canada.

✣ ✣ ✣

THE PHILADELPHIA CLUB OF PRINTING HOUSE CRAFTSMEN

Philadelphia, Pa., March 19, 1913.

The Philadelphia Club of Printing House Craftsmen held its regular monthly meeting and dinner on Thursday, March 13, at the Continental Hotel.

The club was addressed on the subject of "Photo-Engraving, Its Fundamental Principles and Their Relation to the Allied Arts," by Mr. Howard S. Levy, a member of the famous family of inventors of the half-tone screen, the etching machine, etc., a man who has traveled in all countries and understands the subject from a theoretical and practical standpoint. He brought out many points of practical interest to the printer — told how the different countries of Europe did photo-engraving, and the many peculiar processes and methods in use in these countries — in fact, he gave a short history of photo-engraving from the time of its inception, to the present day. The talk was illustrated by prints, plates, and screens.

There was an exceptionally large attendance, and among the visitors was our former president, Mr. John Kyle, now in Chicago. He certainly was given the glad hand and everyone appreciated his coming all the way from the wild and woolly West to look us over.

Several good talks were given by our members — all of which led to the solving of some difficult subjects which had occurred in the shop during the past month.

The entertainment committee supplied excellent talent, and everyone seemed to have spent a most enlightening and pleasant evening.

Very truly,
N. E. HOPKINS, Secretary.

The Convention and Cost Congress of the Wisconsin Franklin Club

ONE of the most notable cost congresses held during the past year was that of the Wisconsin Franklin Club, at Milwaukee on March 7 and 8. The forenoon of March 7 was occupied in registration of members, an able address of welcome by Hon. Mayor G. A. Bading and an able response by Mr. Alonzo Fowle. President W. M. Castle followed with the annual address, full of valuable suggestions, and the secretary and treasurer made their reports.

The afternoon was opened with an address by E. E. Sheasgreen, secretary of the Ben Franklin Club of America. He spoke of his pleasant relationship with the printers of Milwaukee and two or three other Wisconsin cities, through installation of cost systems in their offices. He related a humorous incident with regard to a negro in the south who thought to solve the problem of cost of his wife's funeral through eliminating protracted visits of her numerous relatives by securing a round trip for the corpse to the old home and return.

One of the important things to consider is the way of eliminating unnecessary costs. The rule should always be, in conducting offices, first to ascertain costs, and then efficiency will follow through a fair understanding of conditions.

He related experiences in installing cost systems and overcoming objections. Some men have found it much harder than others to adopt any proposed change of methods. His experiences had been similar in both small and large offices. He worked all day in Fargo with a proprietor of an office who had been drawing a very small salary, but after the cost system was once installed and in operation, he found that he could raise his salary to $40 a week and at the end of the year the business showed a profit of $640 more for the year than for the previous year.

He spoke of the fact of cost being as great or greater in some small offices than in larger offices on account of the non-use of machinery, and told how, when the one-man shop was locked up and the proprietor went out to solicit jobs, the machinery stood idle and the rent and other expenses continued.

Idle machinery adds to the cost, and where a whole plant is idle some of the time, it will be at once seen that the cost is greatly increased. In the larger offices, though expenses may be higher, machinery is kept in more constant operation.

He related how two men working in an office were accustomed to drop their work at times and indulge in sparring matches. After installing a cost system, they realized how much time had been wasted, and instantly reformed.

He paid a very high compliment to William J. Hartman, president of the Ben Franklin Club of America, and referred to the splendid results of his work and his discovery that necessary lost time must go into the cost of work and be equitably distributed among the different jobs done. In all cases where a cost system is conscientiously carried on, greater speed and greater production have resulted.

President Hartman delivered a very instructive address, covering different points with regard to the new movement. The subject of his address was "From Wheelbarrow to Automobile." When Gutenberg commenced work, he used the wheelbarrow, as did also Benjamin Franklin, in securing stock and delivering jobs. There are too many printers who are still living in the wheelbarrow age.

When Mr. Hartman first commenced business he said that he had a partner who went out and purchased a push cart for the delivery of work, and he found that the push cart degraded the standing of the office and added much to the cost every week, and it was soon accidentally lost and an expressman hired. Deliver your goods in the most up-to-date manner and make your customers pay the cost of delivery.

He gave an incident of a visit to a country newspaper office, and while in the office of the editor a merchant brought in an advertisement to be inserted at ten cents an inch. Mr. Hartman interfered and informed the merchant that he was now advertising manager and the merchant would have to pay twenty-five cents an inch or take the copy back.

He reminded the merchant, whom he had known from boyhood, that he had started in business with $500, and now, in no small degree through the work of the local editor, he knew that he had a capital of $500,000, and asked him if he thought it was fair, to the man who had helped to make him and still remained poor, with his old machinery in the place of the new that he had installed years ago, to demand service at a rate that only meant loss and impoverishment to his real benefactor and friend.

The merchant, after some argument, admitted the point, and said that he was willing to pay the twenty-five cent an inch rate, and offered to go around among the other merchants and make them come to the same figure. He told the editor that if the merchants would not pay a fair price, if he were running the paper, he would lambast them until they came to their senses.

The securing of proper prices is a matter of courage on the part of printer and publisher. There is honor in the calling, and you should maintain that honor. The printer and the printer-publisher should be able to live as well, dress as well and keep up appearances as well as any other business man in the community, and should be able to go to the bank at any time and secure whatever accommodations he might need.

Put in a cost system, know your costs and demand right prices, and be able to ride in an automobile instead of pushing a wheelbarrow.

If you want to bring up this organization to efficiency, you must support it.

Some say that they cannot afford this, but I say you cannot afford to get along without organization, and if you are really not able to give proper support, you are not worthy to be a printer. The cost is of insignificant amount to small printers — under two cents a day — and it must be a very poor man that cannot pay that much in order to advance his calling and secure proper standing in the community and proper rewards for his work.

The movement is now on for uniting the two national organizations into one great organization, believing that in this way the numerous subjects, both as to maintaining prices and securing proper legislation, can be more easily and more surely accomplished.

He spoke briefly of the new laws of compensation, and how, under the new laws, the old companies had advanced rates one thousand per cent. The fact is, as is shown by statistics in Germany, that loss is less in printing than that in any other calling. A company had been organized in Chicago on the mutual plan, that shows great saving. It was required of each member to put up one-half of the rate of the regular insurance, at the end of six months the cost of carrying the insurance is found and the insured is required to add the amount to his original deposit, so each puts up his share. The losses so far have been very meager.

He spoke of the matter of equipment, and said that many office or printer was persuaded that he needed a new press when in reality all he needed was efficiency.

Make it an object to your employes to hold their jobs. He said that he now had under consideration a plan for profit-sharing. Every printer who is competent to be a master should realize that he and his workmen should have pay for brains. He has a house organ which he called "Brain and Ink." Brains is the one great ingredient to mix with colors in painting. The ingredient is not less necessary in the print shop. Good machinery can be bought, but machinery does not furnish brains.

He spoke of some of the earlier printers who had a price list of $7 for printing cards and added fifty cents for color. They charged for printing by the token, making the price per 1,000 as high as from four to five dollars.

The secretary of a western state asked him as to prices for state printing, and he gave figures of seventy cents per 1,000 ems for composition and $5 for first run of sixteen pages, 28x42, and $2.50 for each additional thousand. There is no reason for doing work for less than it is worth.

Printers do not get more than cost of composition on much public work.

He referred briefly to the two mutual fire insurance companies, one in Chicago and one in Philadelphia, stating the saving that had been shown to be possible. He advocated a national commission on Insurance rates. The mutual company had eliminated the fees paid to agents for new insurance and for renewals.

He spoke of the steps taken at Cleveland for one international organization, and called attention to the fact that ballots had been sent out to all members of the two organizations, and that each should express on his ballot his views and return the same at an early date. The plan was to have an organization entirely within the control of the membership, and if there is anything therein that is not liked, then each can exert his influence to secure such amendments and forms as will be satisfactory.

He advocated local organizations and stated that every organization should have an employed and paid secretary — a paid man who is all the time at work and prodding the members up to the performance of their duties to themselves and the organization, and a good man should be secured for the national secretary, one who is worth from $15,000 to $20,000 a year, whatever might be a liberal compensation.

President Hartman then referred to the efforts that had been made to do away with the government printing addresses on stamped envelopes. He said that the printers and local newspaper publishers had the power to secure the necessary change of law, but had been negligent in following up their efforts, and referred to the fact of the government envelopes being shipped as second-class matter at government expense, and then all loss being charged up to second-class matter.

There is no reason for changing the rate of second-class matter if the department is economically managed and the government charged with the services done for the different departments and for the shipments. Organization can right these wrongs. There are no monopolies in the printing trade, but through organization and education, printers can reach a point where they will not do printing for less than cost.

Lynn S. Pease, of Milwaukee, presented an able paper upon the subject of "Organization and Co-operation." He said, among other things, that the foundation of all business is intelligent co-operation. While self-interest is the foundation of business, to some extent, yet men need co-operation, and should be ready to advance the interests of the craft.

No man knows all that there is to be known of his own business, and no man can live in this age alone to himself. Successful business management must be reached through co-operation and co-operation must necessarily rest on legitimate organization. The securing of any method to get others to join with you is a point gained. What you make out of business is not all you get out of life. Money is not the whole thing. The man past fifty who has comradship, fellowship, confidence and good-will enjoys that which is above money.

There is no reason for antagonism in business or for cut-rate prices. The man who cuts prices does so either through ignorance or for some unworthy purpose. The great trouble is the want of knowledge, and the difficulty in doing business comes from those who are without the cost system, for they present unfair competition through ignorance. It pays those who have arrived to expend time and money in getting an understanding among their competitors. It pays to instruct competitors and to get those outside into organizations. There is no such thing as an absolutely correct basis for estimating, but by co-operation every system can be improved.

Salesmanship, mechanical, and all other departments are improved by comparing attainments. All expenses and time will be more than repaid by the improved condition. He related an incident of a merchant whom he had known as wealthy and prosperous, but who had dropped into a rut; did not keep up with the times, and, instead of clearing out the stock, left his shelves burdened with old goods. The result was loss of business and a condition of pessimism and a steady progress downward. Young men should get close to those who have succeeded.

Printers' organizations and editorial associations are the means of those getting together, and the result of the knowledge and co-operation secured means efficient and improved business, better citizenship and growing old with the respect and love of your neighbor.

Mr. W. E. Hobill presented a paper on "Sales Efficiency." He presented a chart showing two circles, one within the other, and explained how the value of the services that one is to render, represented by the small circle, should be expanded in the view of the purchaser to cover in the mind of the buyer what seemed to him the larger circle, representing his money in bank, which he would not expend without feeling that he was getting full equivalent.

To accomplish salesmanship, you must be honest with your customers and must also believe in your own products. You must understand your proposition thoroughly, believe that you have the best values and be able to convince the buyer from your own honest convictions. Always be a man; look neat and clean; put forth steady work; keep after your customers; get a man interested and then follow up; never misrepresent your products; never deceive a customer or make false promises. You should make good use of the journals of your calling. Study the whole system as presented by the best magazines. Do not spread out too much in seeking business. Call on a few customers and stick to them. Do plain, vulgar, honest work. Tell the truth. Do not sell to anyone an article that he cannot use.

This paper is presented in full elsewhere.

J. R. Bloom, of Wisconsin, read a paper on "How About the Junk," prepared by Jens K. Grondahl of Red

Wing, Minn., who was unable to be present at the convention. This paper is printed in full as the leader in this issue of the National Printer-Journalist.

In the evening the members were entertained at the Pabst theater by a popular play, designed to teach the value of cost systems and efficiency, "Revised Proof." The play was well presented.

On Saturday morning Mr. W. C. Kellogg presented his address on "Composing Room Efficiency," which is printed in full in this issue.

Prof. F. H. Elwell of the University of Wisconsin gave a most valuable and enlightening address on the topic "The Need of a Cost System from an Accounting Standpoint." He spoke of the necessity of good bookkeeping based on a thorough cost system. Among other things, he impressed the importance of taking into account the permanent investment and also the capital used in conducting the business, claiming that the printer should have interest on all money used and that he should see to it that his equipment is up-to-date.

He claimed that discount was a producer of profit, but had nothing to do with cost of products. An inventory should be taken of everything and all articles put in at real value. There is no relation between depreciation and new additions made to the office.

He gave an interesting synopsis of the system taught by the Extension Department of the University of Wisconsin. These systems are installed in Wisconsin on the payment of a fee of only $5. The customer has no right to a share in the discount that you get through cash payments.

He based his remarks largely on the outline of his book, entitled "Bookkeeping and Cost Finding for Printers," written by him for the Extension Division of the University of Wisconsin, presenting the same in six exhibits, of which one and four are given. Number 2 shows "The Department of Loss and Gain in a Small Printing Shop," and number 3 "Factory Account." The fifth is "Administration Account" and the sixth is "Outline of Costs Entering Into a Job."

From "Bookkeeping and Cost Finding for Printers," written by F. H. Elwell, for The Extension Division, The University of Wisconsin.

Mr. C. H. Crownhart, chairman of the Wisconsin Industrial Commission, spoke on the subject of "Workmen's Compensation Act." He stated that the laws covering workmen's compensation had been passed in fourteen states, and referred to the Wisconsin enactment, that recognizes the fact that man does not live to himself alone. He said that there can be in reality no individual personal liberty that does not take into consideration the rights of others, and showed the hardships of the old law, which required the worker to prove that he had not been negligent himself or had not suffered from the neglect of co-workers, or had not assumed, by accepting or acquiescing therein, the risks of business.

The law is upon a theory that a man has a right to live and that he has the claim on the business in which he is employed. The employer acts only as a distributor of the amount allowed for compensation, while the same should be charged to the consuming public.

He entered into the details of the law and showed, to some extent, its satisfactory working. The plan of compensation was united with the plan for safety and the safeguards for workmen will result in a very great decrease in the number of injuries. The employers are made the guardians of the employes, and must carefully organize the plan for safety.

EXHIBIT IV.

SELLING ACCOUNT

Cost of Jobs (brought down from factory account)	$2,407.51
Salesman's Salary	100.00
Advertising	20.00
Packing	10.00
Discount on Sales	24.68
Express	.35
	$2,562.54
Sales	$1,670.15
Gross Loss on Selling	892.39
	$2,562.54

He gave an instance where an arrangement had been made to the effect that every worker should have a day off each month to make an investigation as to safety. The suggestions from workers had resulted in much greater security.

Mr. C. L. Coward, of the Lodi, Wis., Enterprise, presented a carefully prepared paper on "The Cost of Producing an Inch of Advertising Space in a Country Weekly." On the basis of eighty cents an hour — cost in his office — he figured that advertising composition in his paper cost six cents an inch, and that it cost an average of four cents an inch to carry all ads in the paper when there was no new composition required. He considered eight cents an inch remunerative compensation for running advertisements and seven cents an inch for composition, making fifteen cents an inch every time an ad was set or reset, and he acknowledged that up to within four or five years, he had been charging six cents an inch flat for most advertising, and admitted that he had carried a half page of sixty inches for one firm for six years for $10 per calendar month, or $120 a year, or 3,120 inches for $120, which was less than four cents an inch.

He said that he had never heard of a cost system up to four or five years ago, and after a desperate struggle, decided to begin mending his ways. He advanced the half-page advertiser to six cents an inch, with the result that the advertisement was discontinued for about a year, but the advertiser finally came back and has been with the paper ever since, using on the average of 3,000 inches a year.

He stated that he had now decided to advance the rate on this comparatively large advertiser to eight cents an inch. His method for the past year had been to charge every advertiser ten cents an inch, unless they agreed to use space continually for a year, and, as a result, was getting ten cents an inch for practically half of his advertising and eight cents for the rest, with the exception of the one six-cent customer.

He said that the showing was not as good as he desired, but that it is 50 per cent better than he could have presented three years ago.

This paper resulted in considerable discussion, during which it was pretty generally agreed that composition cost over five cents per square inch on the average, making the cost of an inch of newspaper width at least ten cents, and the feeling seemed, in general, to have been that fifteen cents is the lowest charge that should be taken in a paper of 1,000 circulation.

The editor of this paper was made official reporter, and repeated the claims that have been published, over and over again, in the National Printer-Journalist for the last twenty-five years, that no one could have ever profitably taken advertising in a paper of even 500 circulation, for less than ten cents an inch, and that now fifteen cents an inch for running advertising in papers of 1,000 circulation, was as low a rate as would yield any profit, while, on short-time ads, the rate never should be below twenty-five cents an inch.

It may be appropriate to remark here, that had all our newspaper friends followed the teachings of this journal, very many would have been benefited much more than $100 a year, which some have estimated as the benefit. The gain to Mr. Coward, according to his statement as to quantity of advertising and the rates he has received, would have been over $163 a year up to six years ago, and would have been worth over $325 a year for the last half dozen years. In sixteen years, his gain in taking and following the teachings of the National Printer-Journalist would have been over $3,580, and the paper during that time would have cost him only $32.

Interesting discussion followed several of the other addresses, but the papers published herewith so fully cover the points, that it has not been thought necessary to give at length the discussions thereof.

A greatly enjoyed banquet, at the Pabst Hotel, was tendered the members of the Congress by the Standard Paper Co., the Milwaukee branch of the J. W. Butler Paper Co.

A resolution was passed favoring the uniting of the Ben Franklin Club and the United Typothetae of America into one great printers' organization. The sentiment, however, was very strong in favor of keeping up the State Ben Franklin Club of Wisconsin, and of demanding such a provision in the new constitution and by-laws, as shall secure the establishing and recognition of state organizations as a part of the national body.

Resolutions of thanks were passed for local entertainments and to those presenting the play of "The Revised Proof."

The whole trend of the convention was that of advancement and a better understanding, and the opinions expressed fully coincided with the following view, expressed by Paul Nahmens, Secretary of the Milwaukee Ben Franklin Club:

"Within ten years the printing business as it is conducted today will be extinct. It will be a case of the survival of the fittest, and many printers conducting their business on old-fashioned lines are already dropping out of the trade.

"Many printers sold only plain printing. But a new feature has come into the business. It is advertising which lies hidden in type. In the future he will no longer be called a printer, but a manufacturer of advertising literature. He will charge his purchaser not alone for the plain printing, as now, but for the brains that will go with the printing.

"The change is already coming. Several large concerns who formerly conducted only printing shops have added publicity, engraving and bindery departments."

The following officers were elected for the ensuing year: Thomas F. Lyons, La Crosse, Wis., president; M. C. Rotier, Milwaukee, vice-president; C. F. Dietas, Milwaukee, secretary; J. S. Hubbard, Beloit, treasurer.

PITTSBURGH TYPOTHETAE BANQUET

A Model Menu — The School of Printing of Carnegie Institute—What It Proposes

The annual banquet of the Pittsburgh Typothetae was held on Monday evening, February 24, 1913, in the English room of the Fort Pitt hotel. Almost three hundred guests were present.

The evening's program included speech-making, singing, music, and vaudeville. After a short prayer by Harry Miller, those present discussed the following most excellent

MENU
"Now stir the fire, close the shutters fast,
And let us welcome peaceful evening in."
Crab Flake Supreme
Celery Olives Almonds
Cream of Asparagus
Filet of Kingfish
Bercy
Chicken a la Maryland
Sweet Potatoes French Peas
Waldorf Salad
Fancy Ice Cream
Assorted Cakes
Cheese Coffee
Cigars
"Now that we have partaken, tarry a while,
And let us listen to what the speakers say."

At the conclusion of the supper, H. P. Pears, president of the Typothetae of Pittsburgh, announced that the evening's program was in charge of Wm. B. McFall. Mr. McFall, who has the happy faculty of saying much in a few words, reviewed the work of the Pittsburgh Typothetae during the year just closed and told of what we hope to accomplish in the coming twelve-month. He then introduced Dean Clifford B. Connolly, of the Carnegie Technical Institute.

Mr. Connolly's subject was "The Carnegie Technical Institute: What It Proposes to Do in the School of Printing." The Dean's talk was illustrated by stereopticon views showing the work of the great school he represents, and while he could as yet show no pictures of the School of Printing he could and did make public for the first time the plans of the institution in that matter. He asked the co-operation of the Pittsburgh Typothetae, and stated that if the master printers would help by furnishing students and with advice relative to equipment and the course of study, the "Carnegie Tech" would provide a complete equipment, the initial outlay for which would be about fifty thousand dollars. Dean Connolly was assured that he would receive the whole-hearted support of the Pittsburgh Typothetae, and it was announced that a committee had already been appointed to work with the Institute officials in the matter. The committee consists of W. B. McFall, chairman; T. D. Harmon, Eugene Carmichael, H. P. Pears, Chas. F. Warde, Chas. Eberts and A. E. Davis.

Short talks were made by several others, including Chas. F. McElroy, secretary of the Cleveland Ben Franklin club. The remainder of the evening was spent in conversation and in listening to singing and instrumental music of a high order of merit. It was near midnight when the guests, with hearty good-nights and sincere congratulations on the success of the banquet, departed for their homes. And there was passed another milestone along the road to a better understanding among printers—the road that leads to confidence, co-operation and success.

POPULAR MECHANICS MAGAZINE ASKS U. S. COURT TO STOP A CUT-RATE CLUBBING OFFER

Popular Mechanics Magazine has brought suit in the United States District Court of Massachusetts for $5,000 damages and an injunction against the School Arts Publishing Company of Boston. This company is the publisher of the School Arts Magazine, which has been offerin Popular Mechanics Magazine in a cut rate combination with its own publications.

The cut rate offer was made without consulting the Popular Mechanics people in any way, and in spite of the fact that Popular Mechanics Magazine has printed for years in large type on its front cover every month, the statement that "Popular Mechanics Magazine Offers no Premiums; Does not Club, and Employs no Subscription Solicitors."

This suit is said to be the first of its kind ever brought. Its outcome will be watched with a good deal of interest.

The chief claim made is that eighty-three per cent of Popular Mechanics circulation is on news stands, and Mr. Windsor, the publisher, has given his pledge to the newsdealers that he would not join in cut rate clubbing offers, and has advertised that fact in trade journals for newsdealers, and elsewhere. As a result of this policy, the newsdealers generally throughout the United States have shown their approval by giving Popular Mechanics good window and counter display, which of course is an asset greatly desired by every magazine. Hence to be advertised in a cut rate offer would naturally lead the dealers to believe that the Popular Mechanics had either changed its policy or was deceiving the dealers, neither of which is true. Mr. Windsor has sent out hundreds of letters to other publishers stating his position, and has tried in every way to prevent his magazine being clubbed. The subscription agencies without exception have respected his position and do not offer his magazine in their "clubs." Having apparently failed to protect himself by all ordinary means, he now invokes the help of the United States courts.

Note: The above statement is made by H. H. Windsor, president Popular Mechanics Co., Chicago, December 16, 1912.

SUCCESS WISHED FOR TWENTY-SIXTH YEAR

Iron River, Mich., March 12, 1913.

National Printer-Journalist, Chicago, Ill.

Gentlemen: Enclosed find check for $2 for one year's subscription to National Printer-Journalist. Couldn't keep house without it, so see that I get every number. With heartiest congratulations for your success and the hope that your twenty-sixth year in the harness may be more successful than all the others, I am,

Respectfully yours,
P. O'BRIEN.

Are the Differences Between the Printing Business and Others Real or Imagined?

By Edward U. Roper, Efficiency Engineer

[The article by Mr. Roper in our last month's (March) issue has created considerable comment, and many requests for further information along the lines as laid out, so we have made arrangements for a series of articles by him that shall explain his ideas of office management, salesmanship, and factory work, and the blanks necessary, and the manner of their use.—Editor.]

IN every discussion of management, cost, or efficiency in the printing business and attempted comparisons with other lines of manufacturing or business, one always meets with the reply: "The printing business is so different."

Is this true, or does the main difference lie between the men in the printing business and the men engaged in other lines?

I was largely of this opinion for many years, and, until forced to a study of other lines, in seeking information in cost accounting, did not see the striking similarity in all lines, and that the printing business only differed in one particular that is radical: In nearly all instances the article manufactured has no value except to the one for whom it is made, but as the financial loss in this line is no greater than other lines on the total manufactured product, this one difference may be disregarded.

As a verification of my statement let us look at the uncertainties (?) of our line and of those of other lines.

The manufacturer of shoes, while he may, to a certain extent, know that his factory will run steadily through a period of time, has no way of regulating the cost of his raw material; he has no way of telling, whether the patterns or styles that he has put on the market will be popular, and whether they will last one or more seasons or not. He has the same difficulty with wages, and the same exhorbitant overhead, and the same uncertainty in the volume of output of men and machines. How does he regulate this?

The same conditions are to be found in every other line of staple goods as in the shoe line, and parallel exactly with the publisher in the printing business.

If we take the general lines of jobbing business (carpenters, black-smiths or machinists) we find that they have all the identical uncertaintics and troubles that come to the jobbing printer.

The purchase of expensive machinery and tools; the uncertainty of a steady amount of business through a period of time; the unreliability of the value of the man and machine hour; and the uselessness of the goods manufactured, except to the party for whom they are made.

As a comparison see the similarity of conditions of the ordinary merchant and the printer:

	THE PRINTER	THE MERCHANT
Stock	In the final analysis consists of hours, and hours only.	Groceries, dry goods, meats, etc.
First Process	Get location and rent building and arrange to receive.	The same.
Second Process	Buy material and machinery to produce hours.	Merchandise of whatever character.
Third Process	Employ help to assist in making hours.	Employ help to dispose of merchandise.
Fourth Process	From items 1, 2, and 3, estimate number of hours he has on hand or sold, and how much the same cost.	From items 1, 2, and 3, estimate the amount and cost of merchandise he has on hand.
Fifth Process	Estimate how many hours must be sold on basis of investment and wages to pay expenses.	Estimate the amount of sales necessary on basis of investment to pay expenses.
Sixth Process	From character or class of service to be rendered, how much profit can be charged.	From location, or neighborhood, and class of goods to be carried, what can be the profit charged.

In the science of accounting, the most accurate (?) and dependable of all, we have a great diversity of opinion and manner of procedure. If you will read the various authors on this subject you will find an opinion for each one, or rather a difference of opinion, yet there is an underlying principle that is common to all, and a principal that is as immutable as the laws of the Medes and Persians.

"The total sales must exceed the total expenses, or there can be no profits."

Bearing this in mind, or having it put in a prominent place so that it is always before the management and salesmen is the first and most efficient help in the solution of the problem.

Studying the comparison between the printer and the merchant we can as easily figure the total expenses of the plant, and the total amount (hours) we have for sale. We can figure (estimate) the total amount of material from past experience that will be needed for so much work, and from these items we can figure the hourly cost of men and machines and the managerial and sales expense as accurately as we could from the statement in the books for any period of time.

The statement from the books would only be true if the conditions were to repeat themselves; the other is a condition based on business experience and acumen.

The merchant does not know, and does not try to find out, what his hourly, daily, or monthly cost is. He does not expect to make a profit every day or every month. He has the daily uncertainty of the weather, and the uncertainty of the seasons to contend with. He has had these conditions ever since man was in business, and he figures to cover them by a system (?) of averages.

The merchant does not expect to make the same profit on all lines of goods. Those lines that are in steady demand all the year through, and wanted by everybody are sold at a close price. And according as the demand diminishes either in length of time or volume, or the goods may be perishable or seasonable, the profit is raised.

And, also, if his total sales do not reach the amount he has established as necessary to pay his known expenses, plus the merchandise sold, he does not change his selling price, but strives for more business.

The most accurate and detailed cost system in the world would not help him to solve the problem, neither will it help the printer.

If you do not have an established cost of manufacture for each department, and the whole plant, that is reasonable; if you do not have an established managerial and selling cost; and if you do not have a knowedge of the minimum amount of business that your plant must do each year, you are in Stygian darkness, and all your efforts are merely shooting in the air and trusting to chance to get game.

These problems can all be solved, even on an hypothetical plant. You can distribute your expense to the men and machines on the basis of the amount of work you should do, not on what you can do, and the other expenses naturally follow in their proper places. When you have established this amount for department, plant, and sales, you have a standard to work to, and when you get your daily report, you know whether it is lack of work or lack of efficiency.

When you get your report of sales for each salesman, you know whether he is working up to the required standard or not, and, by showing this report to him, he knows.

All this does not mean to do away with the daily cost records. It gives you a standard to compare by, and is something definite, not like having composition one month 80 cents per hour and another month $1.80 and not knowing where the fault lies, or what the amount should be.

Can you afford to do without the help of an expert in your line, when other manufacturers and business men are employing them daily?

Have you a right as proprietor to ask the factory to carry a high selling expense if you do not sell the necessary volume of goods?

Have you ever estimated the volume and value of possible productivity in your plant, and the cost of labor under this "possible" condition, and the profit you might realize, also what would be the percentage of your managerial and sales expense, and how much this volume should be before you are entitled to any profit?

Have you a right to draw a salary of $10,000 a year if you do not sell a greater volume of goods than one of your men, even if you are the proprietor?

How much should a man sell and what proportion should be his salary? And should it not be figured on gross amount of sales or net profit?

Can you afford to pay a salesman $4,000 who sells $20,000 worth of goods?

Are your sales large enough in proportion to your investment and expense account to warrant you in expecting a profit?

Does your superintendent complain of having poor foremen under him?

Do your foremen make the statement that they have poor mechanics working under them, as an excuse for failure in carrying out orders?

Does your cost system show you (1) what your efficiency should be? (2) what each department should cost?

Have you an efficiency department in your shop? One that eliminates all guesswork on the part of your mechanics, and allows them to build a type page as easily as a carpenter would make a soap box?

✣ ✣ ✣

Arthur Capper, publisher of several farm journals at Topeka, has been appointed chairman of the department of agricultural publications at the annual meeting of the Association of Advertising Clubs of America, to be held at Baltimore June 10. This association is the largest and most active force in the country at the present time in promoting the movement for a higher standard of advertising, and Mr. Capper has been one of the prominent newspaper men interested in forwarding this reform. "The demand for a higher standard of advertising," said Mr. Capper at a recent meeting of the Topeka Advertising Club, "is neither visionary nor merely sentimental. All considerations of ethics aside, it springs from sound business sense, because in this practical age when the test of efficiency is relentlessly applied to everything that touches the human life, advertising must stand or fall by the measure of real service it renders the business world. To reach its highest degree of efficiency, advertising must inspire universal confidence, and of course this is impossible unless that confidence is deserved. Honesty and decency in advertising is not a question of policy — it is a matter of self-preservation."

Mr. Capper is publisher of the Farmers Mail and Breeze, Missouri Valley Farmer, Nebraska Farm Journal, Oklahoma Farmer, Missouri Ruralist, Poultry Culture, Topeka Daily Capital and Kansas Weekly Capital.

✣ ✣ ✣

So large has been the demand for the Desk Book issued by the School of Journalism of the University of Missouri that the first edition has been exhausted. A second edition has been published, however, of which copies may be obtained from Dean Williams, Columbia, Missouri, upon payment of two cents for postage. The book contains instructions for the preparation of copy, capitalization, punctuation, and spelling, valuable in any newspaper office.

CHICAGO, APRIL, 1913

It is a pleasure to witness the steady and broad advances being made each year in the understanding and applying of the essential principles of business conduct and efficiency production in the callings of printing and newspaper making.

The account of the recent Cost Congress of the Wisconsin State Ben Franklin Club and four of the most important addresses given in this issue of the National Printer-Journalist not only show gratifying progress in the two callings that have lacked thorough and systematic management, but afford new and most strikingly stated facts, given in an instructive and convincing manner.

No one, no matter how broad his experience, can read these without great benefit, while to many they will open ways to great prosperity and worthy success, where inadequate returns or actual losses and threatened failures have been the prevailing condition.

President Hartman, of the Ben Franklin Club, properly covered nearly all the subjects now before the organized printers of America for solution.

Mr. Grondahl impressed, in his paper entitled "What About the Junk?", most forcibly the human element, the deterioration by work through the years, of the man at the head of the business, the most costly machine of all, and showed how the human investment as well as all the others should be taken into account.

"The Uplift of the Printer-Publisher" by Frank E. Noyes, portrayed in strong terms, with convincing illustrations, the careless, indifferent and ignorant way in which printing and newspaper making have been conducted, putting many of the members of these honorable callings in a class with the workers in sweat shops in our large cities.

"Sales Efficiency," by W. E. Hobill, and "Composing Room Efficiency" by Charles W. Kellogg, were the two other addresses that covered the fields indicated by the topics, with wonderful completeness and ability. No one who reads and follows the suggestions contained in these able papers can ever fail for lack of efficiency, either in salesmanship or in the composing room.

It is not intended here to remark at length on these addresses, but only to enforce their great value so as tc induce the careful perusal and study of the same by every reader of the National Printer-Journalist.

* * *

One of the greatest benefits of the new spirit of investigation and the seeking after knowledge and making the callings matters of scientific study, is the new life that is infused into the followers of the useful, industrial pursuits. Man is a thinking being and it is the dull thoughtless routine, the working in old ruts, doing things without rhyme or reason, that dulls, ages and kills.

Every man's calling should be his inspiration, his recreation, and no other callings more than those of newspaper making and printing— these bringing the worthy workers therein in constant contact with men in all the affairs of life, with all progress and branches of business, to advance and build up and improve.

To perform and enjoy the requisite work men must be at their best, must reap proper rewards to lift them above worry or want and be in a position fully to understand, demand and enforce all that is their due, and also the honor, business and social recognition due them.

* * *

It may seem a little out of the ordinary to see a page in this issue devoted to a most interesting chart that strikingly sets forth some of the wonders of astronomy. This is, however, in entire accord with what has been frequently advocated in these pages, that every man should have a study or hobby outside of his regular occupation. While one's work should be a constant joy through worthy, useful accomplishment and the receiving of full remuneration and honors to meet the demands of a full well-rounded life for the worker and his family or dependents, every man needs change and variety, and has other faculties than those called into play in his business, that need cultivation and development through inspiration and use.

We know of no other study than that of astronomy that tends so much to arouse the imagination, awaken grandeur of thought, develop the higher faculties and enlarge the mind and soul. A study of the heavens, of the planets, suns and solar systems, in all their wonderful harmony, and contemplation of the wonders of design and all sustaining power shown therein, tends to uplift and to fill the soul with wonder, love and praise.

Mr. G. H. Benedict is wise to devote his leisure hours to the study of astronomy and we thank him on the part of our readers for giving us a glance into the wonders thereof.

* * *

There is only one cause of regret when witnessing the rapid improvements that are now being so generally attained and that is the long time that it has taken to get the members of the callings to realize and enforce their rights as to their business and publications.

Over twenty years ago we were accused by a representative of a large advertiser, of having added over a half million dollars to the cost of the advertising of certain proprietary medicines. He declared that the National Printer-Journalist ought to be suppressed. No one undertook that job and we felt entirely satisfied, for we realized that all that the advertisers had to pay in advance charges for advertising went into the pockets of deserving publishers who even then did not get full value for their services.

We had constantly sung the matter of advertising cost, as we have continued to sing for a quarter of a century, and advised publishers not to accept any other than living rates, even if they did secure the advertising, for the more they secured of this foreign advertising at losing rates, the poorer they would become, besides, their papers would be cheapened and rendered less valuable to home advertisers. We advised them rather to cultivate the home advertising field thoroughly and make the papers so valuable and popular that local business men could afford liberal rates and could not afford to stay out of the paper.

Not only in the National Printer-Journalist, but in addresses before the Illinois, the Wisconsin, and many other State Editorial Associations, we advocated these same ideas and showed why and how proper prices could and should be secured. Yet at the Wisconsin State Cost Congress, a publisher stated that up to within three or four years, he had been taking advertising at less than cost. However, there is satisfaction in knowing that many publishers and printers did take heed and reaped the benefit. It takes not only teaching, but direct personal appeals, in which are personal contact and experiences, like the old Methodist revivals, to reach and reform many otherwise good men. The printer-journalists are having the needed revival and may the good work go on.

✣ ✣ ✣

GEN. SMITH D. ATKINS DECEASED

Gen. Smith D. Atkins, one of the veteran newspaper men of the Nation, died at his home in Freeport, Ill., March 27. He was a member of the National Press Association and a frequent attendant on the annual conventions. He was also an active member of the Illinois and the Inland Daily Press Associations and rarely failed in attendance at meetings of these active newspaper organizations and was very frequently on the program for addresses. He was always entertaining, instructive and inspiring.

Mr. Atkins was born at Elmira, N. Y., on June 9, 1836, and moved to Illinois with his parents in 1846. He became a printer and established the Gazette at Mount Morris, Ill., in 1853. He was admitted to the bar in 1855, and he stumped the state for Lincoln in 1860.

In 1861, while trying a case in court as state's attorney, a telegram was received for the first call for troops. He immediately drew up an enlistment roll and headed the list with his own name. Later, for gallant service at Fort Donelson, he was promoted to a majorship. He became a colonel in 1862, and after that was brevetted brigadier general and major general.

Immediately after the war he commenced his work on the Freeport Journal and was appointed postmaster at Freeport by President Andrew Johnson.

From the days of Benjamin Franklin up to very recent years, the position of postmaster was considered appropriate to the calling of newspaper making, but the growth of newspapers, and of the post offices, also, has tended to change this. However, the services of General Atkins to the Government notwithstanding his duties as an editor, were such that he held the position from the time of his first appointment up to his death, except during the administrations of President Cleveland.

He was a conscientious and efficient official and his honesty made him refuse to be a party to any graft through the ordering of supplies not absolutely needed though such orders were urged upon him, as doubtless upon many others, with the plea that the supplies might as well be had, as they had been arranged for and would cost the post master nothing. How many resist such urging we do not know, but we hope and feel that the number of the conscientiously honest men who seek to guard the interests of the Government and to keep expenditures down, as they would in their own business, is numerous and increasing.

The Freeport Journal was established in 1848 and continued as a weekly paper until 1879 when the Daily Journal was established under the editorial management of Gen. Atkins, and has since so continued and has occupied the position of one of the leading Republican newspapers of the state.

Mr. Atkins was not only a clear and forceful writer, but an able speaker and was frequently heard in the conventions and campaigns of his party, of which he ever maintained the position of one of the honored leaders.

It was gratifying on the occasion of the silver anniversary of this paper last December, to receive a congratulatory letter from General Atkins, that showed that he was as deeply interested as ever in journalism and keeping close watch of all matters connected therewith.

He wrote under the date of November 18, 1912, addressing the editor of this paper. "We have long been personally acquainted. I know that you are doing a good work in publishing the National Printer-Journalist, and I am glad that at the end of a quarter of a century, you can look back on the good work you have accomplished, and I hope you will keep up the good work for another quarter of a century."

The long personal acquaintance with Gen. Atkins was deeply appreciated and knowing the sincerity of the man, his kind words, especially considering his age and the multiciplicity of his duties and engagements, were very highly appreciated.

One by one the veterans of the calling pass away — grand men who loved the calling and all worthily and earnestly engaged therein. These lines are written with the thought that more worthy tributes will follow.

✣ ✣ ✣

In our three score and ten years, we do not remember to have known of so wide a destruction from the elements as has resulted from the storms and floods that have reached in destructive forces so many of the great States of the Middle West. It is gratifying to know how prompt and generous have been the responses from human sympathy, even, in many cases, where no direct appeal has been made.

In sending an appeal to the members of the Ben Franklin Club for aid to brother printers in distress through the storm and flood, the Finance Committee, Messrs. A. J. Braunwart, E. F. White and Leslie Webb, state "Money has already come into our hands without solicitation."

This shows how the spirit of fraternity has grown up through organization and acquaintance during the past few years. The need is great and the appeal will be met with liberality.

Here is a card from Mr. L. H. McNeil, an honored writer for printers, who is well known to our readers, which will show how wide has been the effects of the flood:

Findlay, Ohio, March 29, 1913.

"Friend Herbert: Entire city flooded here Tuesday. Took wife and children out through window. Water in printing office thirty inches deep. Big loss; all safe. Loss in city one million.

L. H. McNEIL."

We had not even noticed Findlay mentioned in the dispatches as one of the flooded cities and this incident shows how much wider than has been realized have been the disasters.

✣ ✣ ✣

The Brookings, S. D. Register sends the following, flattering testimony, under the above caption, to the ability of the students of the School of Journalism of the University of South Dakota:

Several business men have enlisted the services of Prof. Starring's class in advertising and two or three of the ads in this issue of the Register were written by the college boys. The copy the boys send in looks like the architect's plans for the new post office building, but their ideas are excellent and original and the ads are as good if not better than we get from some of the high-priced eastern adwriters.

The National Press Association

Arrangements for the 28th annual convention of the National Press Association at Colorado Springs is progressing with promises of all that has been said of its completeness and productiveness. The leaders of the calling will be in attendance. Mr. H. S. Neal, of the Department of Journalism of the University of Kansas, has consented to take charge of the Cost Department. He has prepared a book on the subject and is in charge of introducing the cost system as a part of the extension work in the Kansas University and the printing offices of that state. The subject will be presented in a complete but somewhat surprising manner.

Secretary E. E. Sheasgreen has consented to be one of the speakers of this Department.

Department of Journalism

Those interested in the Department of Journalism will get some idea of the completeness and scientific treatment of this branch by reading the able paper presented by Mr. Henry Jackson Waters, of the Kansas State University, printed on page 247 of this issue of the Journalist.

Department of Daily Press

Geo. B. Lockwood, editor of the Evening Press, Muncie, Ind., is making splendid progress and will be ready with his full program for the May issue.

Department Weekly Newspapers

Mr. Edgecomb furnishes the interesting facts as to this important department.

President A. D. Moffett writes that he is working on the program for the general meeting and has it ready, with the exception of two or three important numbers which he has assigned and is waiting for replies. In a word, the President and the heads of all the departments are busy and have progressed so far as to guarantee a good program.

Secretary Schlosser makes a most gratifying report as to entertainments and transportation. He writes under recent date:

"At the conclusion of the regular session, we will become the guests of the Colorado Springs people and according to the program which the citizens have mapped out, will spend the entire time, for the following four days at least, in sight seeing trips by rail, motor, and other means of conveyance, in and about Colorado Springs.

It is then planned to lift our baggage at the hotels and spend several days with the citizens of Denver and other cities, under the supervision of the Press Association of Colorado.

These features of entertainment are supposed to be without cost, but it may be that there will be some expense that I am unable to figure on at this writing. You will receive, later on, full advice in regard to the program and every item of expense.

The citizens of Colorado are united in extending the National Press Association a royal welcome and will see to it that all have an enjoyable time while in the Switzerland of America.

All railroads will offer reduced rates, with final return limits to October 31, thus enabling you to remain as long as you may desire.

Round Trip Tickets

That you may have some idea as to what the rate for the **round trip** to Colorado Springs will be, I quote you the rate from central points as follows:

Chicago, $30; St. Louis, $25; Kansas City and Omaha, $17.50. Remember—these rates are for both ways; to Colorado Springs and return.

Connecting lines will use these figures for basing purposes in compiling their rates. These will probably be available in the course of the next thirty days, so that you will be able to ascertain upon inquiry at your local ticket office what the through rate will be from any point in the country.

Arrangements will be made with representatives from the various states to look after the arrangement of local parties within their respective states, so that sleeping car accommodations may be provided, and an arrangement will also be made so that we can come together at some central point from which special trains will be run.

These are all details that are yet to be planned but the information is given so you will be enabled to determine whether or not you will be interested in participating, and if so, it will be advisable to register your intentions with the undersigned at an early date.

Membership fee for the National Press Association of $2.00 is now due and should be paid at once. All inquiries will be cheerfully answered.

Yours very truly,
G. E. SCHLOSSER,
Secretary.

The members of the Minnesota Editorial Association are arranging to make the attendance upon the Convention at Colorada Springs take the place of their summer outing and will attend in a body. It is suggested that other Associations, like those of the Dakotas, Nebraska, Kansas, Iowa and Missouri will make like plans. It will be a splendid vacation for any company of editors and Colorado will receive gladly all who come.

No one should delay, however, to forward their names and the annual $2.00 Association dues to Secretary Schlosser. It is necessary to know in advance for how many to prepare. The full program will appear in our May issue, with many other facts as to arrangements, trips to be taken, etc. The pleasure and benefit of the trip cannot be overestimated.

* * *

CONGRATULATED

The National Printer-Journalist completed its first twenty-five years of publication by the issue of its December number, and Editor B. B. Herbert has been acknowledging bouquets from his numerous friends for many weeks. The silver anniversary number shows a wealth of favorable comment from all quarters. Cruel criticism has yet to come along — and probably will never get there — because there is no room for it in the office of Mr. Herbert's magazine, which has done so much for the printer-journalist during all these years by conscientious endeavor to hold to high ideals. If the reader hasn't seen a Christmas copy of the National Printer-Journalist he should send for one and profit by the mass of good material to be found therein. The address of the Chicago office is 4618 Ravenswood Park.—The Pacific Printer, San Francisco, Cal.

The Manchester (N. H.) Mirror recently issued a souvenir number of 76 pages in commemoration of its 62d birthday. It was profusely illustrated, gave a concise and up-to-date history of Manchester and her manufactories. Pictures of all the churches and school houses, other public buildings, principal streets, parks and scores of portraits were run. The publication was printed on special heavy paper. A large extra edition was quickly exhausted. The publication was the most elaborate ever issued by a New Hampshire newspaper.

Clean Journalism and the Duty of Newspapers and Other Lines of Business to the Community

From the Red Wing, Minn., Daily Republican, Feb. 3, 1913

The following editorial from the Minneapolis Journal will be of more than passing interest to readers of The Republican because of the similarity in the policy of the two papers with regard to objectionable advertising. The Journal has won the confidence and respect of the people of Minnesota and the Northwest by publishing a clean and fearless newspaper regardless of financial risk and brewery opposition. Says the Journal editorial:

We hear more today than we did a decade ago about "clean journalism." Newspapers are growing more particular. But the question has a side to it that the layman, who approves of a clean newspaper but does not count the cost in dollars and cents, rarely considers.

This newspaper sacrificed last year in round numbers a sum approximating fifty thousand dollars because of its position in refusing advertisements of whisky, beer and improper advertising.

No great point will be made of this matter, for there are compensations not of a financial order connected with a clean newspaper. In the first place, it makes more friends for the paper than it loses, and it makes the friends who are valuable to have and to retain. To some extent the financial loss is offset by financial gain in other quarters. Time will further equalize these losses and gains, it is confidently believed, when the situation is better understood in the community.

But if the policy still shows a financial loss, it will nevertheless be continued. For it has become a fundamental principle with this paper and it is a right policy. As Emerson phrases it: "Has not a man a calling in his character?" This is equally true of a newspaper, perhaps more so, for a newspaper reaches more people and its influence extends farther for good or for bad.

Taking it all around in satisfaction and everything, the sacrifice of the fifty thousand dollars last year was not an expensive luxury.

The Republican Has Same Policy

There is at least one paper in the Northwest which is making sacrifices every year, in proportion as large as those of the Minneapolis Journal, in order that its advertising columns may be clean and wholesome and be as welcome in the homes as its editorial and news columns. That paper is The Republican. Many years ago it was the ambition of those responsible for its business and editorial policy to publish a newspaper every line of which, advertisements included, might be properly read aloud by the fireside without feeling that the sanctity of the home had been violated by anything which appeared in their favorite home paper. Nearly every daily newspaper in the country accepted advertisements of every kind, clean and unclean, and the members of almost every house had flaunted in their faces every day in the year all sorts of objectionable announcements. Even in those days The Republican maintained a considerable higher standard than many of its contemporaries, as reference to our files will show. Although the newspaper standard at that time demanded by the public was not so high as that demanded today, there were thoughtful men and women, in business life, in church life, in private life, who looked with manifest displeasure on some of the advertisements, and justly so. The editorial and news columns of the paper had been scrupulously clean at all times but there was disharmony between that part of the paper and advertisements which were not always of the same quality.

When the public begins to demand something better in any line that demand is soon recognized and given attention by all thoughtful servants of the public, be they public or private. The Republican had already anticipated the trend of thought and the ultimate public demand for a paper scrupulously clean in its advertising columns as well as editorially and was in full sympathy with clean journalism. Realizing the responsibility of placing in the homes of thousands of people the reading matter that might shape the lives of its readers, The Republican decided to take the lead and cast out all questionable advertising.

Sacrifice Dollars for Principle

It involved considerable sacrifice to adopt such a policy, because there was then, more so than today, a large volume of advertising to be obtained at high rates which would have to be refused, and it should be remembered that a newspaper, the same as any other business, finds the difference between profit and loss very small and must count every dollar carefully to come out on the right side of the ledger at the end of the year. It meant the annual loss of a large sum of money, a sum amply sufficient to pay a profit on any business of ordinary size. How best to sustain losses was not figured out to a nicety, but it was hoped that as the process of purification went on, appreciative subscribers and advertisers would, by their increased patronage, largely make up for the loss.

In the improvement of a newspaper three elements are necessary:

1. A management that has an ambition and the courage to keep all its departments—news, editorials, and advertising—clean.

2. Readers that are taught to demand that the newspaper that enters their homes shall be clean in all its departments.

3. Advertisers of legitimate goods that will demand of a newspaper the kind of news, editorials and advertisements that are fit to go into the homes, thereby increasing the dignity and the value of their advertising.

It was apparent to the close observer that the day would come — and The Republican wished to hasten that day — when the fathers and mothers of the community would demand of their home paper that its advertising columns be as scrupulously clean as its editorial and news columns; that the time would come when no corrupt influences would be tolerated or permitted to steal in upon the boys and girls through the daily visits of their eagerly awaited evening paper; when those same homes would look upon a newspaper that brought an appeal to drink beer with the same disfavor as a brewer who would bring a barrel of beer in among all the members of the household.

Business Men Would Demand Clean Paper

It was equally clear that the time was not far distant when every business man who stood for the same clean principles in his business life as in his home life would also demand that the editorial columns, news columns and advertising columns of the newspaper which he patronized should stand for clean things — for the things on which good business, good morals and civic virtue are all founded — and be absolutely free from the corrupting taint of breweries and distilleries, including that long train of evils upon which such industries depend for their prosperity; when the business man would say to the newspaper publisher: "The influence of breweries and distilleries undermines the foundation upon which every legitimate business rests. I would as leave be in partnership with a brewer or whisky manufacturer as to advertise in your paper if it does not help to correct the evils due to intemperance and brewery domination. I would as soon invite a brewery and brewery owned saloons to build next to my place of business or my home, or to share space with them under the same roof, as to have my business announcements in so close proximity to brewery ads as to help lend respectability to them and bring reflection on mine. If you want my business, which is clean, keep your newspaper clean in all its departments. Your entire policy must be to build up what is good and break down what is evil, and above all, I must demand what every Christian gentleman in business should demand, that your newspaper must be absolutely free from the taint of whisky or brewery domination, if you want my advertising."

Pertinent Questions Good People Will Ask

Also, it was quite clear to The Republican, while it was strengthening and developing its policy of clean journalism, that the same newspaper reading homes that would frown upon papers which brought enticing invitations to drink this or that kind of beer, would eventually frown upon business concerns whose advertisements appeared in and helped support such newspapers. The many good people of the community bringing their influence to bear on business men would give them more courage — if they needed it — and would in a short time counteract and eradicate the influence of the comparatively few brewery adherents who always use their utmost influence to make business men fear the loss of their patronage. The question which the good people of the community will ask, not only of the newspapers which furnish the daily information, editorial opinions and business announcements, and of the public officials whom they elect, but also the business men and legitimate business institutions of every character is this: "How far removed from brewery and distillery influence are you, and what support, comfort and co-operation do you give to the forces that are attempting to destroy morals, sobriety, business integrity, law, order, justice, civic virtue and all that the church and the home and every honest enterprise stands for?"

These questions have in various ways in years past come to The Republican from many readers, from some advertisers and in thunder tones from the depths of its own conscience. Every issue of the paper that goes into the sacred percincts of your home is the answer. The independence of this paper in public affairs and on moral issues has made enemies which it does not fear and friends that are worth having.

Like Men, Judged by Their Company

Advertisements are like men — they are judged by the company they keep. The one of questionable character reflects unfavorably on its more elevated companion. The advertisement of a respectable business helps to lend respectability to the objectionable advertisement, when they appear together. It is the high class ad and the things it stands for that suffer by the companionship. If the leading church papers were to appear some week with an advertisement for a brewery, what would happen to their subscription lists and their editors, and why? If John Wanamaker, standing as he does for high ideals in personal and business life, were to carry advertisements in the Police Gazette, it would be the scandal of the business world. Why? Simply, because the code of ethics accepted by the best thought frowns on what is demoralizing and destructive to society, and demands clean things from clean men. Newspapers and advertisers must all sooner or later bend in obedience to this demand or pay the penalty. The day for sending opium, whisky, idols and missionaries on the same ship under the same auspices is about past. Society is becoming too intelligent and too discriminating to permit of its own destruction at the hands of those who profess to be its friends and who, for the sake of "business diplomacy" give aid and comfort to the outspoken enemies of law, order and morality.

Successful Men Stand by Their Convictions

Did you ever know a man in business or public life who was a real success, who lacked convictions and the courage of his convictions? Did you ever know a newspaper man or business man to succeed, who dared not call his soul his own for fear that he would lose trade? Did you ever meet an individual in any line of business, whose policy it was to compromise with wrong in a vain effort to gain a few extra dollars, who did not humiliate himself in his own eyes and in the eyes of those whose respect he valued? Never. The men and institutions that have been of real value to themselves and the community are those that have carried into business and professional life the same ethics and the same principles which stamp the real character of a man in his private life. The business man, be he a newspaper publisher, or a merchant, or a manufacturer, whose business standard is lower than his personal standard, is simply a modified type of Dr. Jekyl and Mr. Hyde, who eventually will be exposed by his own inconsistency. It is a fallacy, which disappears instantly in the light of reason and experience, that a business man, in order to reach his goal, must compromise his better self and toady to evils from which his moral nature instinctively shrinks, and from which evils he prays, at the family altar, that his pure sons and daughters may be safely protected.

The Republican Will Maintain Its Policy

The history of the futile and vain attempts to prevent The Republican from carrying out its policy of clean journalism will be the subject of a decidedly interesting article should conditions later on demand it. It is sufficient to say at this time:

That this paper will stand firm in its policy no matter what its losses may be and regardless of what appreciation may be shown it in a business way.

That this paper invites all who believe in its policy to co-operate with it in making the Desirable City more and more desirable.

* * *

DEVELOPING HOME AND FOREIGN ADVERTISING

Development of home advertising for Missouri daily newspapers; plans for bringing more foreign advertising into Missouri; circulation methods and problems; how to get a just advertising rate, and how to combat the press agent and charity advertising evil will be some of the questions discussed at a conference of the publishers of Missouri daily newspapers, to be held at the University of Missouri during Journalism Week, Wednesday, May 14. A call for such a conference will be issued in a few days signed by E. M. Watson, of the Columbia Tribune, W. J. Hill, of the Hannibal Courier-Post, H. S. Jewell, of the Springfield Leader, L. M. White of the Mexico Ledger, J. W. Johnston, of the Fulton Sun, Hal M. Wise, of the Webb City Sentinel, J. F. Hull, of the Maryville Tribune, and R. W. Mitchell, of the Nevada Post. The publishers of every daily newspaper in the cities of Missouri, outside St. Louis, Kansas City and St. Joseph, will be invited to the conference.

National Printing and Advertising Exposition

Much has already been written as to the great Exposition to open in the Grand Central Palace April 19. It is certain that the aggregation of exhibits connnected with the Exposition will prove of inestimable value to all who find it possible to attend.

VIEW DOWN BROADWAY
From City Hall Park to Bowling Green
Courtesy of Morse King, Publisher, New York

The list of exhibitors given herewith and of the exhibits that are to be presented furnish proof of the wonderful extent of the show and the marvelous interest that must be awakened.

As stated in one of the advertisements, there will be a "magnificent, marvelous multiciplicity of magical modern methods majestically mingled in the magnificent maelstrom of mechanical genius." The working of the great presses; of the up-to-date Linotypes; the mysterious folding machines; of the wonderful monotypes and all other classes of modern machinery, will afford a living, moving show that will be enchanting as well as instructive and entertaining.

In addition, the conventions of the American Newspaper Association and of the Printers' League of America, together with attractive and instructive lectures to be delivered in the Auditorium of the Palace will furnish a complete course of instruction in all lines of newspaper making and printing.

The wonderful showing of the advertising samples and methods will add no small part to the interest and practical value of this occasion.

Among those who are to deliver addresses on this occasion are the leaders of the callings of printing, newspaper making and advertising in the whole nation. Our list of exhibitors and the plat of the floor accompanying the same will enable visitors to readily locate those exhibits in which they are most directly concerned. All that remains now is to go and see and learn.

LIST OF EXHIBITORS
(With Exhibits)

Space 42—Advertisers Paper Mills, 200 Fifth Ave., New York; Paper.
Space 2—Autoplate Co. of America, 1 Madison Ave., New York; Autoplate Machines.
Space A and B, Entrance—Autopress Co., 299 Broadway, New York; Printing Presses.
South half Space 74—The Ashcroft Mfg. Co., 85 Liberty St., New York; Paper Testers.
Space 42—Andrews & Lewerth, 72 Duane St., New York; Pictures and Books.
Space 1—Austrich Arc Lamp Co., 209 W. 38th St., New York; Electric Arc Lamps.
Space T—Cowan Truck Co., Holyoke, Mass.; Trucks.
Space 92—O. R. Carver Co., Philadelphia, Pa.; Die and Embossing Presses.
Space A—The George P. Clark Co., 13 Park Row, New York; Trucks and Casters.
Space 65—A. M. Collins Mfg. Co., Philadelphia, Pa.; Paper.
Space 72—George W. Damon & Sons, 44 Beekman St., New York; Printing Presses.
Space 44—C. H. Dexter & Sons, Windsor Locks, Conn.; Papers.
East half Space 93—Diehl Mfg. Co., 90 Prince St., New York; Electric Motors.
Space 3—Duplex Printing Press Co., Battle Creek, Mich.; Printing and Stereotyping Machinery.
North half Space 14—Duryea Mfg. Co., 69 Wall St., New York; A Type Wash.
Space 99—DeBoise Bresnan Co., 23 Park Row, New York; Automatic Feeder and Electroplater.
Spaces 80 and 81—Dexter Folder Co., 200 Fifth Ave., New York; Cutters, Folders, Bundling Press, Feeding and Sewing Machines.
Engraver & Electrotyper, Chicago, Ill.; A Publication.

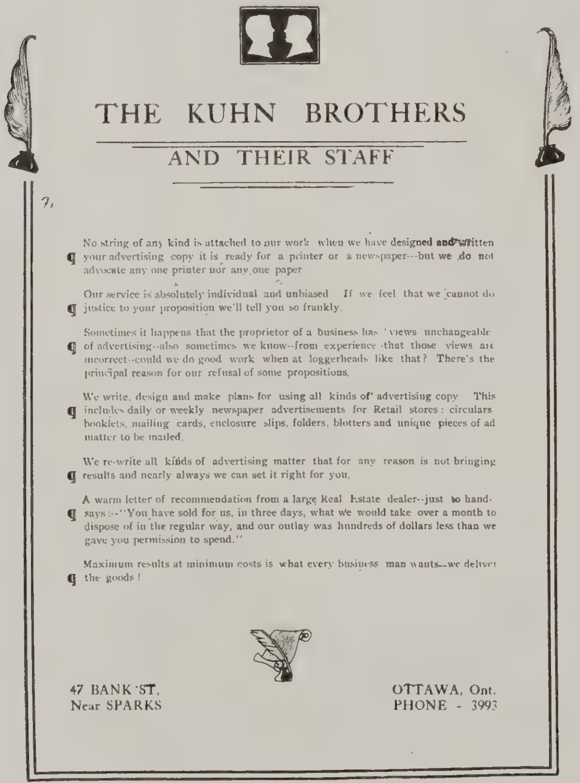
ON THE BACK OF THE LETTER HEAD

KUHN BROTHERS, Ottawa, Ont., write letters on letter head of linen finish stock, with no printing on the side of the sheet where the writing is done. But the paper is thin, and so the printing on the other side does not pass unnoticed. And this is not ordinary, as this reproduction (1) shows. The rules, ornaments, and paragraph marks are red; the remainder is purple. Note that the paragraph marks are placed in a different way than the usual.



THE KUHN BROTHERS

AND THEIR STAFF

7,

¶ No string of any kind is attached to our work when we have designed and written your advertising copy it is ready for a printer or a newspaper---but we do not advocate any one printer nor any one paper

¶ Our service is absolutely individual and unbiased If we feel that we cannot do justice to your proposition we'll tell you so frankly.

¶ Sometimes it happens that the proprietor of a business has views unchangeable of advertising--also sometimes we know--from experience that those views are incorrect--could we do good work when at loggerheads like that? There's the principal reason for our refusal of some propositions.

¶ We write, design and make plans for using all kinds of advertising copy This includes daily or weekly newspaper advertisements for Retail stores: circulars booklets, mailing cards, enclosure slips, folders, blotters and unique pieces of ad matter to be mailed.

¶ We re-write all kinds of advertising matter that for any reason is not bringing results and nearly always we can set it right for you.

¶ A warm letter of recommendation from a large Real Estate dealer--just to hand-says:--"You have sold for us, in three days, what we would take over a month to dispose of in the regular way, and our outlay was hundreds of dollars less than we gave you permission to spend."

¶ Maximum results at minimum costs is what every business man wants--we deliver the goods!

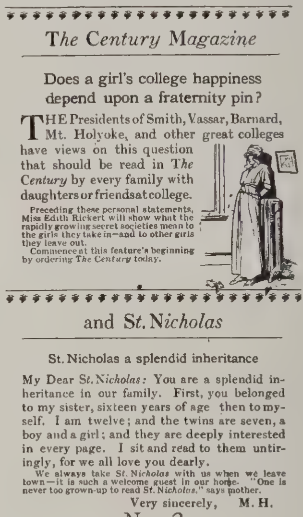
A JOB SPOILED BY FREAKISHNESS

Sometimes even the freakish is allowable in typography, when it is artistic. But surely there is no excuse for the use of Roman caps and Italic lower-case in nearly all the many places where the words "The Century" and "St. Nicholas" appear on a ten-page folder issued by the publishers of these two high-class magazines. It is a crime against the wandering spirit of Wynken du Werde. On this page (2) there is a heading in which "St. Nicholas" appears without the Italic, but that is presumably because the antique has no italic. Hence another lack of harmony. Wrong-font freakishness is usually to be deplored, though the italic capital with Roman lower-case is less objectionable.



The Century Magazine

Does a girl's college happiness depend upon a fraternity pin?

THE Presidents of Smith, Vassar, Barnard, Mt. Holyoke, and other great colleges have views on this question that should be read in *The Century* by every family with daughters or friends at college.

Preceding these personal statements, Miss Edith Rickert will show what the rapidly growing secret societies mean to the girls they take in—and to other girls they leave out.

Commence at this feature's beginning by ordering *The Century* today.

and St. *Nicholas*

St. Nicholas a splendid inheritance

My Dear St. *Nicholas*: You are a splendid inheritance in our family. First, you belonged to my sister, sixteen years of age then to myself. I am twelve; and the twins are seven, a boy and a girl; and they are deeply interested in every page. I sit and read to them untiringly, for we all love you dearly.

We always take St. *Nicholas* with us when we leave town—it is such a welcome guest in our home. "One is never too grown-up to read St. *Nicholas*," says mother.

Very sincerely, M. H.

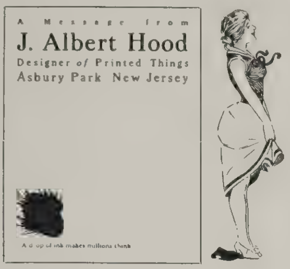
FROM ASBURY PARK

I have received a good letter from J. Albert Hood, of Asbury Park, N. J., which is enclosed in the envelope herewith reproduced (4). The rule is green, the girl is golden, and the remainder is black, all but the drop of ink, and that is red, which is appropriate enough for a color-printer or one who writes with his heart's blood, even if not for a newspaper. The disposition of the white space is attractive; so is the girl, who appears also to have an attractive disposition. But this is not the season for the bathing girl, even at Asbury Park.



A Message from

GOOD WORK IN A COLLEGE TOWN

The Tribune Printing Company, Limited, of Sackville, N. B., is in a town where there is a university, a ladies' college, a male academy, and other high-class educational institutions that demand high-class printing. The Tribune has lately turned out work for both the institutions and the students that is deserving of the highest praise. The invitations, programs, etc., lately designed and printed for some of the students' entertainments by this establishment are very tasteful. A program for such a classic production as the play, "She Stoops to Conquer," by the students, justifies study and time in the design, for it will long be preserved. Such a program, with the imprint "Tribune Presses," has lately been printed on one of these presses, and constitutes a standing advertisement for the printery, of which C. C. Avard, a graduate of the university, is manager. It is in aluminum ink and black and bronze on dragon-blood deckeled-edge cover stock, with a rough but hard surface, which takes the white ink and the sizing so well that though much of the matter is 6-point (albeit of a strong face) it is very legible. Many a program of this nature that is sent to this office is printed on camel's-hair or porous stock, and that makes them, if not exactly an eyesore, a provocation of eyestrain. An outline Old English, such as this printshop uses on its programs, is pleasing, especially on white stock. Here (5) is an envelope design by the firm. It would seem that the ornament in the left-hand panel would be hidden by the stamp, but the effect would still be good. The rules in the upper part of the job (with the exception of those of the panel) are rose lake, as are the paragraph marks; the remainder is black. There is as much alliteration as in "The Witch of Wizandry," but there is a sort of wizandry in the wording and the design. The omission of hyphens is a freak of the square style of modern typography, which I do not particularly care for when words are made from syllables, as in "Pleasing," but the general effect is so pleasing that the advertisement presents publicity-pulling pleas.

✣ ✣ ✣

A "COST SYSTEM" PAPER

The Ben Franklin Witness is the name of a four-page six-by-nine paper with the laudable ambition to help printers to have a modern cost system. And "the word printers," says the Witness, "is meant to cover all branches of the allied trades." This bright paper is published by the Cincinnati Ben Franklin Club. One number is called "Volume Number," but its leading article is entitled "Volume Doesn't Count." Then there is a "Club Work Number," a "Surprise Number," a "Business Number," and a "Success Number." These are very appropriately named, the "Surprise Number" (which has eight pages) being especially so. The last paragraph in the article, "When the Surprise Comes," is as follows: "Printers will have to become accustomed to surprises as to costs, and while the first shock is startling, it awakens the intellect and helps to put you on the road to real progress and profits."

ADVENTURES OF HANK SLUGGS, PRINTER.

JONES PAPER CO.

Hank Springs a Surprise.

No, dear Reader, this is not a riot. Hank Sluggs has merely discounted a bill, and the office force at the supply house greet the event with considerable astonishment.

No. 6

One of the pleasing features of the paper is a series of cartoons entitled "Adventures of Hank Sluggs, Printer." One of these is shown as No. 6. These pictures appear in the first column of the first page. A paper firm runs a display ad with this remark: "Hank Sluggs has reformed and now uses our papers. All are designed to be an aid to the cost finding printer." A firm advertises their rollers in an ad which begins: "With a cost system in your plant and our rollers on your presses you have two most important factors of success." Such advertising as this in such a paper is worth the trouble of writing.

There is a human interest in the series of "High Lights from Printers' Lives," in the "pure reading" columns of the paper. I should like to see originated some better term for what is known as "pure reading," now that the "blind ad" has deservedly lost its popularity, and most advertisements in reputable papers are as absolutely pure as a much-advertised brand of baking powder. Here is a specimen "High Light:"

1—Johann Gutenberg

In 1427 the inventor of printing was sued for breach of promise. In 1425 he borrowed some money, with Andrew Dritzhen as security. In 1440 he mortgaged his house property to raise 80 livres. In 1442 Martin Brether loaned him some money. In 1446 Arnold Gelthus loaned him 100 guilders. Then he took a partner and got into difficulties. After that he borrowed 800 guilders from Johann Fust, giving a mortgage on his printing plant; later he borrowed another 800 guilders . In 1455 Fust foreclosed the mortgage on the plant, and on February 2, 1468, Gutenberg died, poor, and almost friendless, after laying the foundations of an art which was soon to dominate the world.

Ever since Gutenberg's day printers have been following the same financial methods. Isn't it about time we faced about, and, by following the Ben Franklin Club's advice, got into a different class?

Ben Franklin, printer and practical economist, would have enjoyed the Ben Franklin Witness.

The Byron of the Birds

I have known (as have you all) that Friend Copper of newspaper criticism fame was a gifted and graceful prose writer, but was unaware that he wooed the poetic muse — though I might have "suspicioned" so. Beneath the address on a wrapper containing the poem "Feathered Friends of Childhood," by O. Byron Copper (there! I did not appreciate before that he had to be a poet, with that name), are the lines, thus displayed:

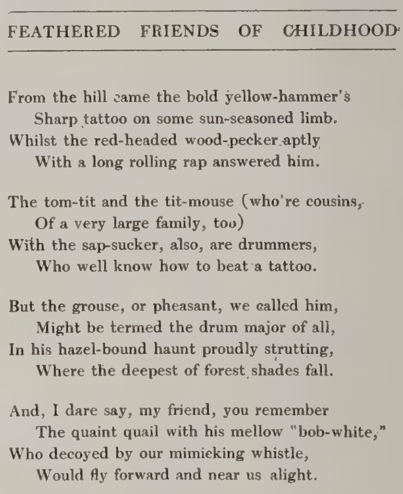
As a courtesy;
but not for criticism,
because it won't stand that.

But I cannot forbear to tell of the pleasure this poem gave me as it was "done into a booklet at the Argus Press, De Soto, Wis., on Friday, May 13, and dedicated to my father and sister, who with me have studied the native birds of Wsiconsin." And such a list! — blackbird ("Goggle-lee! is the song that he sings"); the fleet humming bird; "the little tip-up snipe" which I know by a ruder name; mocking-bird, meadow-lark, "dark-crested peewee," kingfisher, bobolink, cuckoo, red-throated warbler, swamp-robin, chipburr, cheewink, bluebird, bluejay, king bird, robin, oriole, indigo bird, wren, catbird, "the brave English sparrow" (which, however, even the poet "witnessed with sorrow, since our song-birds to him must give way,") yellowhammer, tomtit, titmouse, grouse, quail, chippie, dirtbird, cow blackbird, canary, chickadee, tame-pigeon, hawk, crow, and the birds mentioned in the last verses, which show, too, that the fisher has had success in his fishing:

And at last when Apollo is driving
His bright chariot low in the west,
And Minerva's old favorite's planning
On deserting his day-haunted nest;

When the fisher has set his face homeward,
And goes tripping up brake-bounded hill,
The one friend left to bid him good-evening
Is the night-hawk, or lorn whip-poor-will.

One of the pages, (No. 7), is reproduced, both to give you some more of the poem, and to show the neatness of the pages, which have an upper margin of three-quarters of an inch, and a lower margin twice as deep.



FEATHERED FRIENDS OF CHILDHOOD

From the hill came the bold yellow-hammer's
Sharp tattoo on some sun-seasoned limb.
Whilst the red-headed wood-pecker aptly
With a long rolling rap answered him.

The tom-tit and the tit-mouse (who're cousins,
Of a very large family, too)
With the sap-sucker, also, are drummers,
Who well know how to beat a tattoo.

But the grouse, or pheasant, we called him,
Might be termed the drum major of all,
In his hazel-bound haunt proudly strutting,
Where the deepest of forest shades fall.

And, I dare say, my friend, you remember
The quaint quail with his mellow "bob-white,"
Who decoyed by our mimicking whistle,
Would fly forward and near us alight.

No. 7

I think all who have been printers in the country are lovers of nature; and many of them have put their wood-lore into verse. This poem mentions more birds than any I ever read; and it shows an intimate acquaintance with these birds in their native haunts. I too am a lover of the woods and so of the birds; am well acquainted with many of those whose ways are told in Copper's song, although there are others I have never heard, or know by other names; and I have written verses in their praise.

Many of the best disciples of the Isaak who spelt his name with a "K" have been the best whippers of streams I ever knew, and much of the charm of a fishing trip is lost without the charm of the birds that Mr. Copper has caught in his song.

The Ink Eater and Others

The Roller Printing and Paper Company, of Canton, Ohio, are original advertisers; there can be no doubt of that in your mind if ever you have seen their Roller Monthly. Here (8 a and b) are two of their printing-advertising stunts that are all a little bit different from the ordinary; and each of them are a good big bit different. It is quite pleasing to give to the monthly edition of a blotter the name of Ink Eater. The happiness displayed in selecting this name will be rewarded. Undoubtedly many questions such as "Is this month's Ink Eater out yet?" will be heard in many offices, and this will advertise the Roller concern to people who have always heard of them and people who have never heard of them. And do not think for an instant that there is not a great deal in advertising to people who have heard of you before. They may have heard of you — but do they think of you? And do they think of you with a smile on their lips, as does the recipient of the Ink Eater — and that smile one with you, not at you?

No. 8a.

The Ink Eater has the seven-inch rule and the other rule-work, and the words "A Business Scout" in red; — the remainder in blue. And it is red and blue that does not clash, as do these colors so frequently when used together. No. 8 b is a slip on gray cover stock, in black and red, the lobster and the border are red, outlined in black, and are surely harmonious, there being something very lobster-clawy about the border. Such things as this might be considered poor advertising by many, but is an example of good printing, and such is always a good printing advertisement. And they are kept, and they are not merely hung on Memory's wall, where they are seen dimly but once in a while, but on the wall of many an office, and on desks where their little jokes or bits of wisdom often furnish a momentary relaxation from the serious thinking that has to be done in most offices these days.

No. 8b

The following refers to the persiflage I indulged in a good while ago, while commenting on a number of the bright flyers sent me from Lookabill's Printing House, Roanoke, Va.:

> Dear Mr. Woodworth: Thank you for the "bouquets" which you so liberally distributed through the columns of the National Printer-Journalist." They will help some.
>
> Your thoughts in passing are "out of the rut"—to say the least. When I would enter the orders (all in 5,000 runs) for these little "slips," the job ticket envelope simply called for "flyers"—in every instance. I did not realize that they would ever be noted as "jiggers," "spankers," and "drivers." Ha! Ha!
>
> What you think of the "Perpetual Pass"? We have results from it.
>
> With regards,
>
> Roanoke, Va. L. E. LOOKABILL.

The pass (9) is one of those things that are certainly appreciated by the public, and that are passed around for inspection. And no doubt if definite results can be traced to such an ad, it has done and will do much more for the printing house.

No. 9

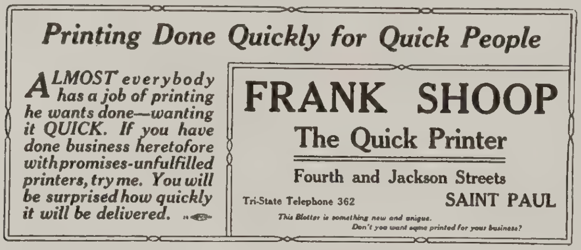
Strange the affection railroads have for the cuts with old smokestacks, is it not? Same way with steamers; some of the most up-to-date lines use cuts of side-wheelers in their ads and on their printed matter. So Mr. Lookabill's job doubtless looks like a pass used in his vicinity, even by a modern railroad.

Since writing the above, I hear that Mr. Lookabill is being mentioned for the important office of fourth assistant postmaster general. Brightness and alertness such as Mr. Lookabill has displayed in his printing advertising, should be good qualifications for this position, and Mr. Lookabill has many more.

A Country Office's Color Triumph

The Post of Princeton, Missouri, sends me a circular 14x4 inches, which contains three humorous cuts colored after the style of such popular papers as the Chicago Blade and Ledger. The printing is in yellow, red and blue — all the primary colors in their primary loudness — but nevertheless there is something wonderfully attractive about this job. And the wording is distinctly clever, and I feel sure good money was made out of this circular which must have taken considerable time, for it was "designed, plates made, and printed in this office. Do you know of another country office that can do it?" The artist is quite as good as any the Blade or Ledger employ.

Frank Shoop, of St. Paul, Minn., talks quickness on a blotter (10) that can be read quickly, on stock to which attention is evidently called in the line, "This blotter is something new and unique." It is a blotter soft on both sides which does not soak through so as to spoil the reading. This fact might be brought out more clearly on the blotter. Perhaps I do too much coining of hyphenated adjectives myself, but "promises-unfulfilled printers" is an expression, which could probably be much improved.



Printing Done Quickly for Quick People

ALMOST everybody has a job of printing he wants done—wanting it QUICK. If you have done business heretofore with promises-unfulfilled printers, try me. You will be surprised how quickly it will be delivered.

Arguments for Home Printing

The Recordette, the bright house-organ issued by the Canon City, Colo., Record, contains some particularly pointed paragraphs, and none more so than the ones which show the foolishness of sending out of town for printing. These money paragraphs should prove suggestive to other printers who are up against outside competition:

> The very best town booster Canon City has — no need to mention his name — got his hat cleaned and pressed one day last week by an out-of-town man. He didn't know anybody in Canon City was prepared to do that sort of work. The business isn't advertised.
>
> ---
>
> The printing business is principally a labor proposition. Practically every dollar you pay for a job is paid out for labor. The money you pay for your printing gets back on Main Street, almost before your check is cleared at the bank. It is false economy to send any printing money out of your town.
>
> ---
>
> A Canon business man paid a Denver firm $100 for printing a job the other day, because a smooth salesman talked him into the job. The Record's price for that particular job would have been exactly $30. Unfortunately The Record has no "smooth salesman." We charge only for the printing.
>
> ---
>
> Hodgin & Sharman got a job of letter head embossing done in Denver the other day. They say they didn't know we handled that sort of thing until they read the last Recordette. They were not to blame for not knowing. It was our own fault. We had not advertised the fact sufficiently. Perhaps people are sending away from town for something you sell because you haven't advertised enough.
>
> ---
>
> The Record job plant is as perfect as money can make it. It prints anything from a business card to a 500 page book as well and cheaper than it can be done in Denver.

Some advertisers would not mention the name "Denver" at all, but would simply have the phrase read "than it could be done outside." Perhaps they are right; but such a broad statement is seldom convincing. "Denver" is more definite, and probably everybody in Canon City knows just where the competition comes from.

Here is another Recordette suggestion:

> When a new resident comes to town, Mr. Business Man, advise him at once to subscribe for The Daily Record. Thus he will become a new reader of your ad, and The Record will help keep him in Canon City, so that you will have a constant customer.

That is a good item. It is a good suggestion for the business man, and it is a good ad for the paper. It should be a benefit to all concerned, including the new resident and the city.

✣ ✣ ✣

A NOVEL ORGANIZATION

In this day of advancement one scarcely has time to recover from one surprise before he meets another. Perhaps one of the most surprising sensations are those which result when the evolution has developed from the simplest causes, often resulting from some such typical exclamation as, "Why didn't I think of that?"

Many a writer, editor, publisher and business manager has had occasion to carry on some research work, and how toilsome has been the process, often, because of a lack of sources, resulting in an unsatisfactory and perhaps unreliable conclusion.

Thus was The Business Bourse evolved. It had been realized that countless gropings in the dark were going on. Questions of the most vital import were being asked of those from whom reliable information was thought to be obtainable. Error often resulted.

The Business Bourse, international in scope, and incorporated, makes its pursuit that of selling information, of an absolutely dependable character. The main offices are at 260-261 Broadway, New York, N. Y.

The basis of The Bourse's reports is inter-investigation, consensus of opinion — the assembly and analysis of the experiences and practices of many firms and constructive suggestions by a special staff.

The Bourse is constantly engaged in study and investigation of methods, mediums, devices and systems, getting confidential opinions and reports of results from clients, as well as sifting and experimenting through its own staff.

For the convenience of clients it permits responsible concerns to register at The Bourse, keep literature on file, and to put their goods under test in The Bourse laboratory.

The Bourse has no monetary interest, directly or indirectly, in anything it recommends or reports upon. Its interest is purely scientific and analytical, for the benefit of its clients, who pay for all services rendered.

By this plan of operation The Bourse is earning, and maintains, the confidence of the principal executives of the country's livest business concerns, because of the money, time and energy it has saved and the efficient counsel it has provided through the peculiar and fortunate central position it occupies, and the data and staff it has assembled.

The Bourse is acknowledged to have the most complete data in existence on a wide variety of business subjects. It has spent thousands of dollars in the past four years developing its files and its sources of information.

Special researches and commissions for securing difficult information are being undertaken constantly by The Bourse with considerable profit and success.

On The Bourse staff are a group of specialists who are acknowledged to be first authorities in their respective lines. The most efficient and progressive firms in the country are in the habit of paying these men fees for consultations and special personal opinions and examinations on various subjects. The Bourse does not install systems and accepts no commission on anything recommended; its work is purely analytical and professional.

On business efficiency and scientific management in the office, H. S. McCormack, president of The Bourse, and an international authority on the subject, is counsel.

On the subjects of sales and advertising, J. George Frederick, vice-president of The Bourse, formerly editor of Printers' Ink, and previously thoroughly trained in selling goods on the road, also with department store, advertising agency and publishing experience—is counsel.

Other able men are counsel on financial, accounting and special subjects.

CUTS THAT INFLUENCE AND ADVERTISING NERVE

A. Hoyt Levy, in years past, furnished many illustrations for the National Printer-Journalist. It is now A. Hoyt Levy & Co., 239 Broadway, New York City. The business carried on is that of furnishing advertising advice, cuts and designs. Some of the illustrations contained in a recent pamphlet were so pointedly impressive that we wrote for a couple of samples in order to enforce upon our readers as to how attention-attracting and telling advertisements could be made by appropriate illustrations. A little vest pocket booklet, illustrates how Mr. Coldfeet feared a plunge in the ocean and shivered on the shore after merely putting his foot in the water, while Mr. Nerve plunged into the surf and after a glorious swim, came out invigorated, his nerves tingling and his body aglow with the warmth of health.

The "paraphrase" enforces a moral for timid advertisers who are well known to all publishers and printers:

"People often call on us, fully convinced that 'it pays to advertise.' We offer them sound advice based upon our experience. They admit the logic of our advice, 'but,' they say, 'we want to feel our way first — we'll just try it out on a small scale and if it works all right, we'll go in stronger.' They place one or two inconspicuous ads, send out a circular or two, find the returns apparently poor, get 'cold feet'— and quit.

"And then they wonder why another fellow, with the same sort of a proposition, makes good from the very start.

"The answer is easy:— The other fellow is Mr. Nerve."

FIFTEEN YEARS' STUDY OF MAGAZINE PROVES ITS WORTH

Royal B. Child, Practical Newspaper Man and Artistic Printer

Orlando, Fla. March 3, 1913.

Mr. B. B. Herbert,
Chicago, Ill.

Dear Sir: Enclosed please find check for $2.00 in answer to the summons recently sent out.

I don't believe I could pay your journal a higher compliment than this, for I believe this makes the fifteenth contribution of a like nature that I have sent your way, and fifteen years of regular reading and study of a magazine means more than mere words in speaking of the regard in which you hold it.

Many more years of the success in doing good to the publishers and printers, that you have had in the past is my wish for your future.

Yours truly,
ROYAL B. CHILD.

* * *

"The new leaders in journalism will be worthy successors to Dana and Greeley, Kendall and Prentice, Grady and Watterson," said Dean Walter Williams of the School of Journalism of the University of Missouri, in an address at the University of Texas. "Personality, trained, equipped, experienced, is now, will ever be, dominant in journalism. That journalism has become impersonal is frequently said in way of belittling comment. Journalism is less personal in the sense that it has become co-operative rather than individual. How much, it may be asked, does it differ here from the changed conditions in other callings. The successful practice of journalism demands now more than ever before trained personality and to such brings its highest reward. Journalism, the journalism that is worth while, is personal journalism. 'Whenever in the newspaper profession,' wrote Charles A. Dana in the New York Sun, 'a man rises up who is original, strong, and bold enough to make his opinions a matter of consequence to the public, there will be personal journalism; and whenever newspapers are conducted only by commonplace individuals, whose views are of no consequence to anybody, there will be impersonal journalism.' "

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

HOW TO ESTIMATE ON PRINTING

As long as printers are compelled to make estimates and give figures on printing, there can be nothing more necessary to success in the art than that of proper estimating. In view of these facts the Oswald Publishing Company, of New York, have wisely issued a book bearing the above title. The work is by Harry M. Basford, who is well known to the readers of our paper as having conducted one of our departments. He is a practical estimate man, and learned his lesson by actual experience at the estimator's desk. The need of such a book has been made more apparent of late years through the introduction of cost-finding and other innovations in the business practice of printing offices.

The work is not only intended for the estimate man in large offices, but just as much for the employing printers in the smaller sized shops and for superintendents, foremen, journeymen and all the men in the business office who may not have a technical knowledge of the trade.

The following titles of the twelve chapters sufficiently indicate the wide and useful scope of the book: What Is an Estimate; Theoretical and Actual Cost; Profits from Printing; Estimating on Stock; Estimating Composition; Costs in the Pressroom; Costs in the Bindery; Miscellaneous Items of Cost; Advice for Young Estimators; Estimator and Salesman; Forget-me-nots for Estimators; Tools and Tables.

The above topics have been assembled and discussed in a business-like manner without waste of words. An estimate form is inserted in the front of the book, and it would be well for users of the work that this estimate blank should correspond with the cost-finding system in use in the plant.

The author has kept in mind throughout the book the matter of cost and has endeavored to tell how to estimate on a job so that a price above cost may be secured, yet one not so high as to lose the order. It will be found a useful book and we hope, at an early date, to give a more extended review of the same.

✤ ✤ ✤

To anyone who has a large quantity of Gordon presswork, an examination of the Kirkman Automatic Press Feeder should be interesting.

The firm has made the following proposition as an inducement for printers to "prove their puddin'": "We'll put a Kirkman Automatic Feeder in your plant—let you use it for a long enough time to compare quantity, quality and cost of work it does with work you've been doing—then, if you're not satisfied with the 'Kirkman' and the profit it makes you, say so and we'll take the feeder away and the trial won't cost you a cent."

These are talking points advanced by salesmen of the Kirkman Feeder: "It gives perfect register; the platen is stationary; it handles French folio or heavy ledger; gives continual feed; all parts are interchangeable."

✤ ✤ ✤

"The ideas contained herein have helped others, they may help you," are the words appearing upon the cover of a paper-bound booklet recently issued by the Keystone Type Foundry. Much of the information contained within the pages was admittedly obtained from numerous sources, and it embraces everything that can be stated briefly concerning many subjects of interest to anyone in the printing "game."

An enumeration of a few of the paragraph-headings will convey an idea of the practical usefulness of the booklet: "How to Estimate Body Type"; "How to Order Sorts"; "Number of Ems in One Pound of Type"; "Joining Brass Rule"; "Imposition of Forms"; "To Emboss Without Cracking"; "For Cleaning Halftones," etc., etc.

The booklet has been distributed gratuitously and the publishers very naturally have embraced the opportunity of saying something about "Nickel-Alloy, Universal Line Type," and other printing material.

Mr. C. W. Smith, superintendent of printing, and compiler of the information, has made the following observations in presenting the booklet:

"I have worked alongside of men who seemed perfectly content and happy because they had a steady job and plodded along doing just what was necessary to "hold down" their jobs. If still alive, they are probably working in the same old rut because they hadn't ambition or enthusiasm enough to better themselves.

"There were others, however, and you are doubtless one of them, who used their brains along with their hands in increasing their efficiency and, as time went on, added to their wages and advanced out of the ranks to places of responsibility. Some own plants of their own and their names are known wherever printing is done.

"It has been my experience that a man must educate himself. Books and instructors, however, are necessary helpers. We all have something to learn, even about our own business; therefore, it is well to keep in touch with the other fellow, so that, if in a position of authority, you can give to your men the benefit of any knowledge that would increase their efficiency, and thereby better your output and your position.

"In compiling this booklet much care was taken to insert only ideas that had been used successfully under my direction or that had come from reliable sources, but knowing that you are practical and probably meet with troubles and remedies that never come under my observation, I would be glad to have anything additional you can send me that would make it better. Any such information is good enough for the craft and will tend to make your position and mine proportionately better. I aim to make this booklet a "clearing house" for practical information and ideas which ordinarily are not found in print—the good "stunts" and "short cuts" used by "live ones." I shall be pleased to send any additional books you may desire for your workmen.

✤ ✤ ✤

One of the most interesting exhibits at the National Printing and Advertising Exposition in New York is to be that of a large size steel die and plate stamping press.

To the first observer, the machine, when in operation, excites awe and wonder. It greatly surpasses the ordinary hand plate stamping press in excellence and quantity of output and exhibits a certain dexterity of movement, which, though resembling the human, compels greater admiration, perhaps because of the preciseness of action.

As one faces the press, he observes the slow, quiet revolution of the mechanism, the merciless crunching of the pitiless jaws, with a "squeeze" so powerful that every line and scratch in the plate appears distinctly. The impression trip is interesting. It is located in front and a little to the right of the operator, and responds instantly, leaving the rest of the machine in operation. The wiping apparatus, which may be seen from the rear of the machine, is effective and human-like in its work.

This "Modern Die and Plate Press" is made in Belleville, Ill.—a town which the press will probably place on the map.

* * *

If a hundred per cent saving can be made by the installation of a machine most people who come under the classification of business men would not hesitate long in making the decision which would result in so happy a culmination. The New York Machinery Company claims that electrotypers will save more than 100 per cent by installing their Improved Wet Black-Leading Process Machine, and the warm endorsements by present users of the invention certainly bear out all the claims made for it.

The machine is simple in construction and operation, and yet by its use an electrotyper can prepare three hundred or more cases a day. No coating of cases is required, which means a saving of bluestone and iron filings.

Plumbing bills, often resulting from clogged sewers, are said to be practically eliminated and repair expense becomes only a memory — a black nightmare — after the Improved Wet Black-Leading Process is made a part of the enterprising electrotyper's outfit. The address of the firm is 101 Beekman street, New York, N. Y.

* * *

The Wetter Numbering Machine Company will have a very interesting exhibit in Space 98 at the National Printing and Advertising Exhibition, held in New York, April 19 to 26, 1913, in the Grand Central Palace, and in addition to showing a full line of regular type-high numbering machines, they will also exhibit several different styles of special machines for rotary printing presses.

These will be in operation; something that has never been attempted before, and will afford many printers an opportunity never before offered in this line.

Many concerns no doubt would be interested in this particular style of machinery.

Another interesting part of the exhibit will be a special apparatus for use on the ordinary type-high platen press for numbering trading stamps, coupons, etc.

This particular apparatus prints one hundred sets of numbers at each impression, all locked in one chase, with mechanism at two corners for operating all of the machines, that permits of making many different combinations of numbering.

This concern will also exhibit a machine that prints figures without the word "No." or other mark to precede it. This is the only machine of this kind that is made in the world, and we understand is used by the government printing office at Washington, the Australian government printing office, and the Manila government printing office at Manila, P. I.

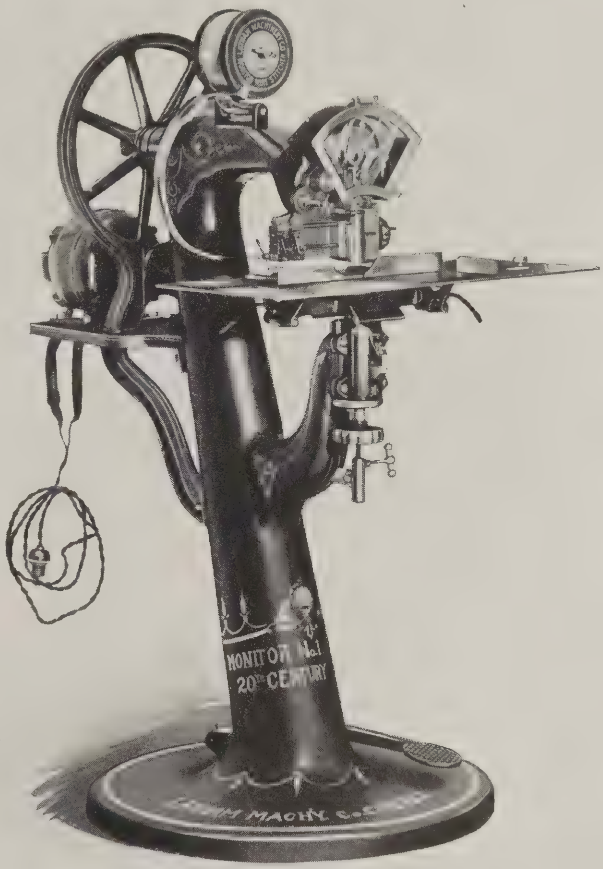
Another feature that will no doubt interest many printers will be a chase with a special "lock-up" for numbering machines and electrotypes, where the chases are used upside-down in the fast running presses, insuring against the numbering machines or electrotypes falling out of the chase.

We are sure that this particular exhibit will be of much interest not only to the printers who are now using numbering machines, but also to printers who have never taken up this line of work.

* * *

A fact of no small significance has been forcibly brought to light by the introduction of the late style stitcher, built by the Latham Machinery Company, which has met with much success since they put it on the market about six months ago.

This company advertises the fact that the improvements on their stitchers, while necessarily worked out in their own factory, and by their own experts, were largely suggested by their many friends throughout the United States.



It is very pleasing to see the printing and bookbinding trades are benefiting themselves as well as the manufacturer by making suggestions which improve their machines. There ought to be more of this done.

Latham's Latest Style Monitor Stitchers embrace the following improvements:

A positive feed, which feeds the wire straight and evenly, and does not scrape or kink it; a short stroke

CAN YOU SELL ADVERTISING NOVELTIES? Our line is the largest and most complete of its kind in the United States. We have an excellent side line proposition for printers. All your illustrated circulars will carry your imprint. Address for full particulars
E. W. FRENCH CO., 10,000 "Ad" Novelties, 1 BEEKMAN ST., NEW YORK

cut-off only traveling 3-16 inch; a solid heavy former and driver, and an enclosed supporter.

The Latham Machinery Company have worked out these improvements in their stitcher in a very clever way and not only a great many of the new concerns using the Monitor Stitcher for the first time, but principally the older concerns who have used Monitor machines for twenty years, go so far as to state that the Improved Monitor Stitcher is not only the best that the Latham Machinery Company ever made, but the best wire stitcher they have ever used.

The Monitor Stitcher has always been a leader in the stitcher field and has always given good satisfactoin. The late style Monitors are said to be giving as near perfect stitcher satisfaction as possible.

* * *

We call our readers attention to page — on which you will find the ad of John Haddon & Co., London, represented in this country by H. Hinze, Tribune Building, New York. While the former ads contained description of the high-grade platen press, "The Art Caxton," Mr. Hinze is now ready to introduce the Haddon Safety Platen, a press which will be well appreciated by each printer. Several of these machines have been sold already in this country and are giving great satisfaction to the trade, besides we beg to announce that Mr. Hinze will have a full line of these machines on exhibition during the month of April, during the National Printers' Machinery Show.

* * *

A handsome six page circular is being sent out by The Mergenthaler Linotype Co., entitled "Kind Words About the Multiple Magazine Linotype." Incidently, it contains many practical hints, as well as establishing the facts as to the value, the popularity and the numerous uses of the Multiple Magazine Linotype. It is a circular which will pay for careful reading.

* * *

The Wanner Machinery Co. have issued a list of their rebuilt machinery covering eight pages, illustrating some seventy different cylinder and job presses, paper cutters, folders, etc., that they will mail free upon application. Address them at 703 S. Dearborn St., Chicago, Ill.

* * *

FROM ONE WHO HAS RETIRED FROM BUSINESS

Paterson, N. J., March 19, 1913.

Mr. B. B. Herbert, Chicago, Ill.

Dear Sir: As regularly as the months come and go, so does the post bring to me the National-Printer Journalist. I see, at times, objects of special interest to me, but not to the extent as formerly, because for many years I have been "outside the lines" of printerdom in which for so many years I bore a part. Besides, the years are telling against me, for 1835 and 1913 are far apart, as I have reason to realize.

Occasionally I see your "phiz" as the camera shows it, and I am glad to see you are far from feeble.

With the kindest of regards and good wishes,

HEBER WELLS.

Mr. Wells, who was for so many years a manufacturer and dealer in printers' supplies along the line of cabinets, type, and other wood goods, is now, at seventy-seven years, inspector of factories for New Jersey.

IMPORTANT NOTICE

Please observe that Laureate and Model-C Machines, or any and all presses manufactured by the John Thomson Press Co., or known as "Colt's Armory" Presses, mentioned on page 243 of this issue, are in stock at Chicago for immediate delivery.

Kindly forward all communications in regard to these presses and parts thereof, to this office which will insure best and personal attention. Copy of new catalog will be cheerfully forwarded upon request.

THIRTY YEARS AN EDITOR, TWENTY YEARS A SUBSCRIBER

Elmwood, Ill., March 13, 1913.

B. B. Herbert,
Chicago, Ill.

Dear Father Herbert: Herewith find M. O. for $2.00 for the National Printer-Journalist. I believe this makes about twenty years I have been a subscribers to your Journal. For thirty years I have been connected with the Elmwood Gazetter. On April 1, I will close my work on the Gazette and give up the printing business, having sold the paper. Other interests occupy my time.

With kind regards to yourself and the good wife. I remain,

Yours truly,
M. H. SPENCE.

* * *

Mr. W. M. Van Cise has been appointed sales agent of the New Era Press, manufactured by the Regina Company. Mr. Van Cise is a graduate of Columbia College and School of Mechanical Engineering and has had a practical experience with the Winthrop Press of New York City.

Mr. Van Cise is a man of engaging personality and has all of the qualifications necessary for success in securing sales of the wonderfully versatile press, which, as yet, is unknown to most of the readers of the National Printer-Journalist.

The New Era press is a bed and platen press with an intermittent, web feed, that is, it prints with flat plates or common type, printing from the roll.

It is built in units or sections, each section printing a color on either face or back and can be assembled to print in any number of colors.

The press has attachments for perforating, slitting, punching, die cutting, folding, rewinding or cutting.

* * *

We call our readers' attention to page 294, where the H. Hinze Machinery Company, New York, advertise their line of machinery, especially the ART CAXTON PRESSES made by the John Haddon & Company, London. Mr. Hinze announces that he will have an exhibit at the coming National Printers' Show and that he will exhibit one large size Caxton Press, a Caxtonette and also the automatic Haddon Safety Platen Press. We invite our readers to call at their exhibit to look over their latest line of printing presses.

* * *

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . .

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

OLD TYPE WANTED—Cash or exchange. Empire Type Foundry. (Not in the Trust), Buffalo, N. Y.

MONOTYPE WANTED—Second-hand. C. L. Darte, 306 Lexington avenue, Buffalo, N. Y.

THE PACIFIC COAST offers some splendid opportunities for live, wide-awake printers and newspaper men with some capital who desire to go in business for themselves. The Printing Trade News

The Printing Trade News, 64 pages, is published weekly and has a very comprehensive business news service from all sections of the country. It deals entirely with the affairs of the business office and the executives. It collects weekly beside printing house news, that of the binders and rulers, the electrotypers, engravers, trade composition houses, the supply trade paper houses, lithographers, etc., has a business fiction story each week, patents of interest to printers, and editorially reviews important doings of printers and publishers during the week.

The Printing Art Suggestion Book

This is a monthly publication issued by the University Press, Cambridge, Mass., containing examples of typographic and other designs intended to assist the printer and those who are printing in the choice of color schemes, inks, and papers. It contains samples of standard papers, as well as novelties which are brought out from time to time by the various mills. It is full of ideas and suggestions for typographic design, display, and color schemes.

The Significance of "A Warren Standard"

Standardization is the great idea in modern business. It is practiced in almost every line of commercial activity, to the decided advantage of both the producer and the user.

But it remained for the progressive firm of S. D. Warren & Company to introduce it in the business of manufacturing Book Paper. Hereafter the combined efforts of the Warren Mills will be concentrated on certain fixed standards of moderate priced Book papers in the three general classes—Machine Finish, Super and Coated. The lines have been carefully graded and selected after much thought and analysis, and the standards determined upon will be deviated from only as opportunities for improvement offer.

The principal output of the Warren Mills has, until recently, been consumed by a number of the largest publishers of national magazines, de luxe editions, etc. This is ample proof of the ability of these mills to maintain uniformity in their product and meet the exacting demands of service which is essential in the printing business.

We doubt whether there is a paper manufactory anywhere as well equipped, in experience, machinery or the natural advantages of location as the Warren Mills. A large stock of "Warren's Standards" is carried in our warehouses, enabling us to make prompt shipment on even exceptionally large orders, and we solicit inquiries on either out-of-stock or mill business.

"The Paper Buyers' Guide" heralds an epoch in the merchandising of paper. A copy should be in the hands of every extensive buyer of book paper. The book is not merely a collection of samples, but contains a fund of information about engraving, type, ink and paper.

every one who purchases anything from this house to feel as these parties do

The Tintah (Minnesota) Journal

"Our entire printing office equipment was purchased from C. I. Johnson Mfg. Co., of St. Paul, an independent house with whom it is a pleasure to deal."

The Crosby (Minnesota) Crucible

"The entire printing outfit including the presses and everything in the shop was purchased from the C. I. Johnson Mfg. Co. of St. Paul. The Company's plant was partially destroyed by fire only a short time before this order was placed but there was no hitch in the proceedings, everything came along as ordered and promptly and there was no complaint to make anywhere. The Johnson people have the thanks of the publishers for the splendid manner in which the order was filled and the speed shown, notwithstanding the fact they had just come through a distressing fire loss."

Barron County (Wisconsin) News

"The entire plant except the linotype was purchased from and installed by the C. I. Johnson Mfg. Co. and every machine is working perfectly and smoothly."

THIS ADV. SET IN HANSEN CASLON FULL FACE AND CONDENSED

GREY TONE RULE BORDER

HEAR THIS TRUE STORY
of a
CHICAGO PRINTER

A CHICAGO PRINTER wanted a new face of type. This was several years ago, just as our Cheltenham faces were being developed; and his choice lay between Cheltenham and another type which was then coming into vogue. Cheltenham was finally adopted and proved instantly popular with the customers of the shop—so much so that fonts were duplicated, other sizes ordered, and the additional faces purchased as fast as we were able to design and cast them.

This shop is still using Cheltenham—and the customers are still satisfied with it. The other face, which the printer very nearly bought, has disappeared from service—except in such shops as cannot afford to replace it. It didn't have the necessary "staying qualities" and the public soon tired of it.

This is a true story; but it is not an uncommon one and could be duplicated in scores of instances with reference to many of the type faces we are making.

Just Keep Tab, Mr. Printer—

on the type which your discriminating customers ask for. Nine times out of ten—if not oftener—you'll have to take down your "American" specimen book to find it.

A book which is so popular with the public is a good book to order from. If you were going to hire a type designer to work for you, you would want the best you could afford, wouldn't you? When you buy American type you get the best designing ability to be had at any price, though you pay no more for it.

OUR BODONI SERIES

has been picked for a winner by some of the best type artists in the country—men who are willing to stake their reputations and their standing with their clients on their judgment of type faces. It can be ordered in large quantities with the full assurance that the public will not tire of it.

Ask for our Bodoni Booklet, giving portrait and life story of this master printer.

The Babcock Optimus
The Babcock Optimus

The driving mechanism is the life. This heart of the press must be sound.

When it is frequently changed it is not sound. It is often changed in others.

Years are needed to prove sterling worth in a bed drive.

The Optimus ball and socket bed motion is exceptional in being correct, exclusive in being simplest.

It is compact; a rotary, primary motion, without appreciable wear after years of use.

It is the finest application of power ever made.

It is the simplicity of a short shaft with driving pulley on one end and star-gear on the other.

There is not much more. A device of balls and sockets inserted in the shaft makes one end deflectable so that it drives the bed above the rack in one direction and is below it in the other.

In action its matchless precision gives unvarying register between bed and cylinder. In fifteen years not an Optimus has failed in this.

The same exactness produces runs of three-quarters of a million with the plates still good.

One rack admits but one point of thrust—a simple thing, meaning much.

At each end of the rack a large steel ball engages a corresponding socket in star-gear. The broad, slow-wear contact covers half the ball's surface. Reverse is made while these are together, and bed stopped and started by perfect crank action.

There is no looseness or lost motion; reverse is smooth and easy.

Old machines reverse as quietly as new.

Balls and sockets are hardened steel, ground to fit.

The star-gear shoes are hardened steel, small, and accurately curved to fit roll. They are bolted in position and wear for years.

Shoes, balls, sockets and rack are made by specially invented machines.

The star-gear rack is at center of load. It is high above the floor; gives space for the strongest impression girt, and keeps bed low.

The air-spring is adjusted without tool. Its piston can be expanded or contracted, and is always round. Air valves offer no resistance when press is turned slowly, as in make-ready.

Press can be backed up from feeder's platform, and the same treadle used for quickly stopping.

Self-oiling boxes are on all main and out-of-the-way bearings.

Direct attached electric motor can be placed within the press, out of the way.

The Babcock Optimus—a superb printing press no matter what point is considered; no weaknesses; no shortcomings.

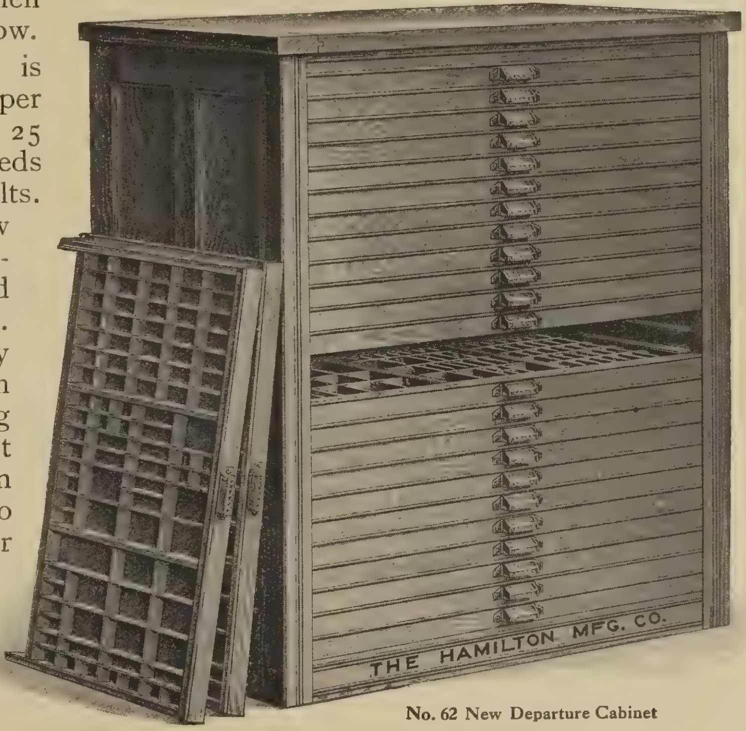
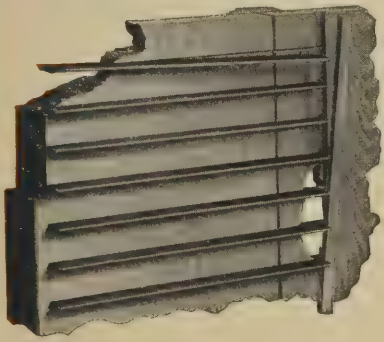
Hamilton Wood Furniture

COST finding and cost reduction are elements in the printing industry now foremost in the minds of thousands of progressive employing printers who are striving to break away from the hide-bound methods and traditions which have beset the printing industry. It is conceded that the cost of printing lies largely in the composing room. That is our own particular field of action. This is the day of the efficiency engineer. He is the doctor that prescribes a cure for the ailments with which thousands of composing rooms have been sick unto death. Hundreds of printers have been quick to appreciate the situation and advantages to be gained and have re-equipped their composing rooms with modernized furniture and equipment. Hundreds of others will follow as quickly as the material can be manufactured and installed. These up-to-date plants will control the situation and set the pace in price and quality. The laggards will fall in line later on when the picking is not as good as it is now.

In most composing rooms it is possible to save from 25 to 50 per cent of floor space and from 10 to 25 per cent in cost of labor. Hundreds of printers testify to these results. These modernized plants are now so numerous and so widely scattered as to be easily reached and inspected by those who doubt. The facts would seem to justify any printer in giving this question of re-equipment in the composing room serious consideration. Let an expert demonstrate what can be done. A simple application to us or to any dealer handling our goods will start things going.



No. 62 New Departure Cabinet



Showing Steel Run Construction of New Departure Type Cabinets

Note Steel Runs are held in position by lips on the end which are mortised into wood. They cannot become loose and fall out. No screws or nails to become loose.

The New Departure Cabinets

This line of Cabinets has come to be standard in the fullest sense of the term. Built of selected hardwoods, beautifully finished and equipped with flat steel runs in the manner shown by the detailed illustration on this page. They are pleasing in appearance as well as substantial in construction, and are sure to give perfect satisfaction to the customer wherever installed.

The No. 62 Cabinet illustrated on this page is without question, the best selling Type Cabinet ever offered to printers. In fact, the sales of this Cabinet are almost as large as all other Cabinets combined. New Departure Cabinets are 43 inches in height. Brackets and Cases can be put on cabinets of this height to good advantage. Single cabinets can be placed side by side or back to back.

Ordinarily New Departure Cabinets are supplied with California Job Cases in standard depth. On special order they can be fitted with cases of extra depth or with cases other than the California Job pattern.

There is no Cabinet better for general use than the No. 62 New Departure, as to appearance, workmanship and economical features.

Complete descriptive circulars showing the New Departure line of Cabinets will be supplied on request.

Ask for a copy of "COMPOSING-ROOM ECONOMY," showing floor plans of thirty-two modernized composing-rooms in some of the leading printing-plants in the United States.

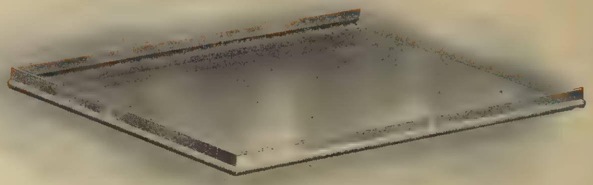
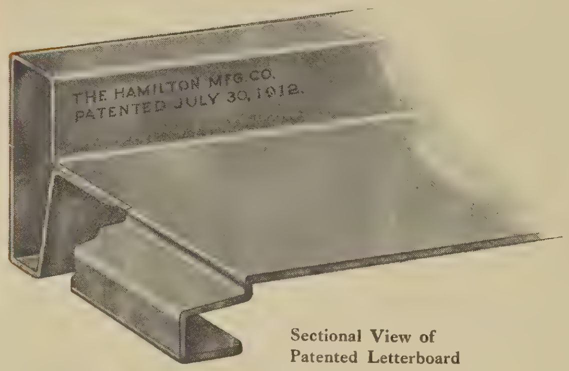
Hamilton Steel Furniture

One Piece Construction



One-Piece Steel Galley

is of great importance in the building of Steel Furniture as every flange or bend strengthens a sheet of steel. To make the necessary shapes all from one piece of steel is not an easy task and requires skilled designers of dies. The results warrant this, however, as the piece thus formed is much stronger than the same shape made up of several pieces riveted together possibly could be, and, better still, the ultimate cost of production is reduced. The accompanying illustrations show a few of the good results we have been able to obtain along this line.



THE HAMILTON MFG.CO.
PATENTED JULY 30, 1912.

Sectional View of
Patented Letterboard

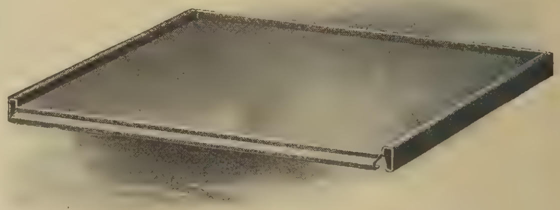
Hamilton One-Piece Storage Galleys

Patent Applied For.

To produce this galley, which is made of one piece of metal without a joint or seam, required a special galley machine, built and designed in our own shops, but it was worth while. The galleys are without an equal, as any practical printer will agree after seeing the sample. They are made of either bright steel or galvanized steel, as desired.

Hamilton One-Piece Letterboards

Patented July 30, 1912



Patented One-Piece Letterboard

The Construction of these Boards is the logical one for production in steel. To obtain this result, however, was very difficult, necessitating some unusual die work. The advantages of the Hamilton "Board" are rigidity and durability. The lip of the "board" where matter is pushed on and off galleys is not only stronger than it would be if made of two pieces, but better still it is there to stay. No unusual strain will tear it away, as might be the case with a two-piece lip.

There are many original and desirable features found only in Hamilton Steel Furniture that will be gladly explained by your dealer. To get the benefit of these features, insist on HAMILTON FURNITURE. Every piece bears this trade-mark—

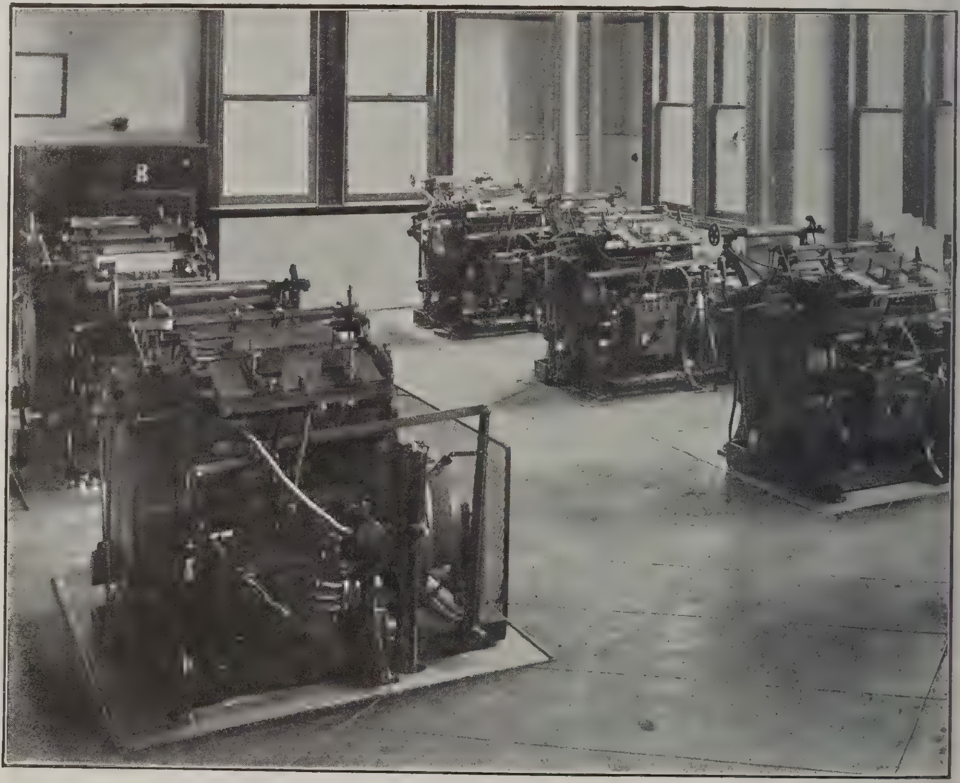
Important Announcement

FOR the past two years we have been marketing the STANDARD HIGH SPEED AUTOMATIC JOB PRESS in an unostentatious way, building up a healthy business, and confining our sales to a restricted nearby territory.

Our orders have been constantly ahead of our factory output, and our dealings have been confined to the best houses, to responsible and progressive printers. In New York City alone we have over fifty STANDARDS in operation.

The STANDARD is the best—the only practical—automatic job press that has ever been devised; it will make a printer more money than any piece of machinery he has, not excepting his most profitable cylinder press. It is designed to handle all ordinary classes of work that are usually done on a job press.

Any printer with enough work to keep three hand-fed job presses running can earn immense profits with the STANDARD.



This battery of STANDARD machines is operated by the METROPOLITAN LIFE INSURANCE COMPANY, NEW YORK.

Note the character of these houses, who have purchased the STANDARD. Were our claims not justified their names would not be here.

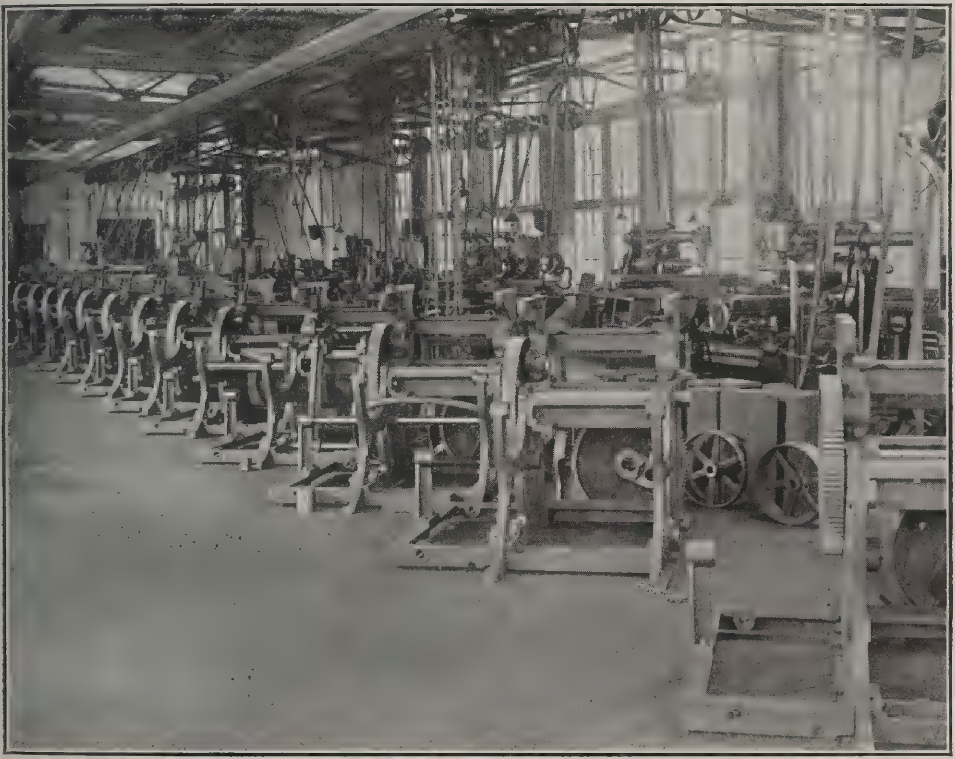
Chicago Legal News, Chicago, Ill.	1

The STANDARD wholly revolutionizes the printing of job work, and places it upon a better paying basis than any kind of cylinder work. And the shops that have the STANDARD make extraordinary profits at the little printers' own prices. With this machine once installed the small end of the printing business becomes the big end.

The STANDARD is a beautifully designed and constructed machine. It is in all respects made of the best materials, its workmanship throughout is first-class, and its proportions are correct and substantial. Its possession gives a mechanical standing to a printing office that cannot be got in any other way. It is the last word in high class mechanism.

Notwithstanding its superb construction the STANDARD is the reverse of a burdensome investment for the printer; on the contrary it insures him the ability to get out a large product with perfect regularity and at a cost below any he has ever known.



This assembly room of the shops where STANDARDS are made shows the scientific manner in which they are constructed. The STANDARDS shown are but a part of a lot of 100 which were in the course of completion.

Its price is but $1,750; a discount of 5 per cent is allowed for all cash upon erection.

Or, it may be purchased on time for $250 cash, with the balance in consecutive monthly payments, covered by interest bearing notes, of $100 each.

This machine should NOT be confused with other so-called "automatic" job presses, or with self-feeding attachments. It is in a class of its own, and it has no competitors. Furthermore, it is not a cylinder, or semi-cylinder, press, but an extremely practical bed-and-platen machine, arranged to operate automatically at great speed, and able to cover the wide necessary range of work to be found in the general printing office. No other machine can be compared with it in any of these respects.

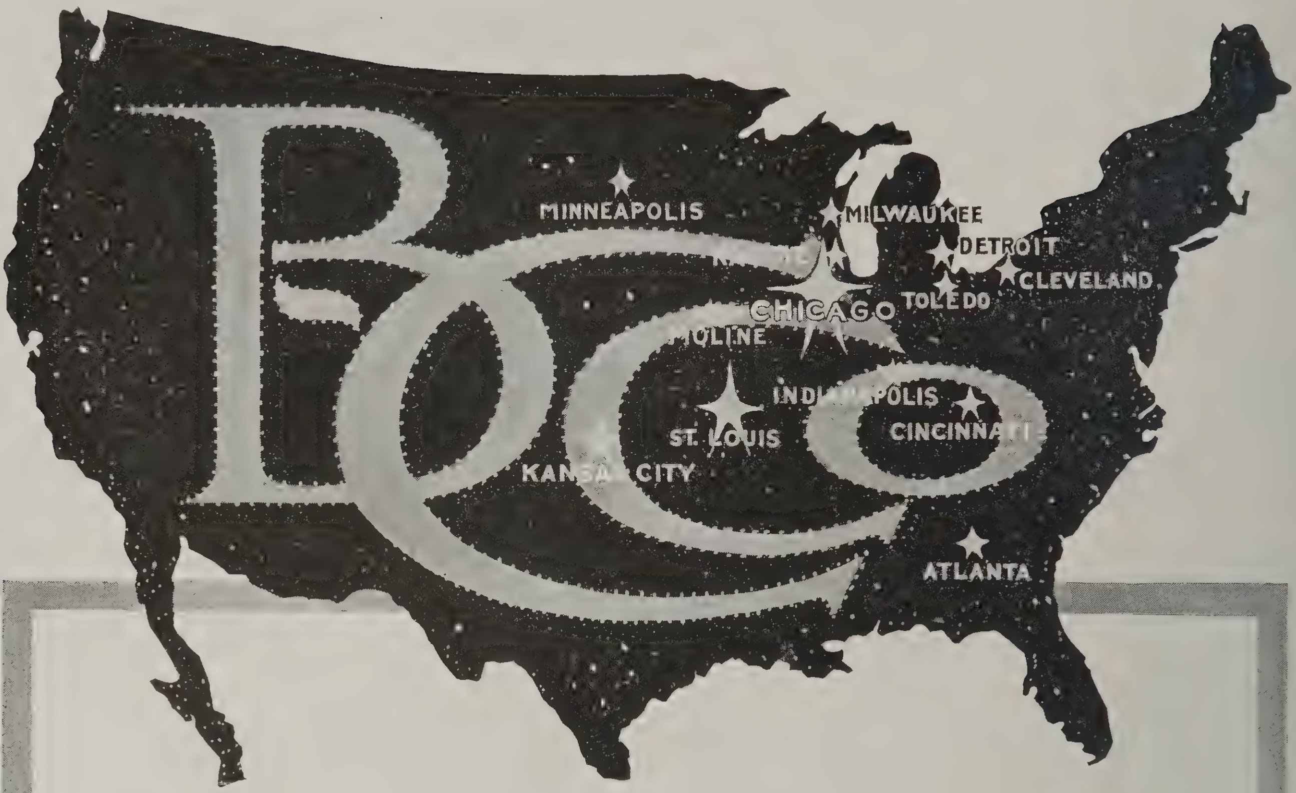
WOOD & NATHAN COMPANY

Sole Selling Agent

1 MADISON AVENUE, NEW YORK CITY



Selling Engravings to the Nation

Because of the detail and the individual attention involved in the production of illustrations and engravings it was long supposed that no engraving concern could satisfy more than a local demand.

Back in 1902 ***Barnes-Crosby Company*** took the first step in shattering this fallacy by installing a branch office at Detroit. Since that time not a year has passed that has not seen a new B.-C. office established.

Today, with two immense manufacturing plants located in Chicago and St. Louis, eleven permanent branch offices and a force of traveling salesmen, Barnes-Crosby Company stands as the highest type of business organization.

Our experience in meeting the varying needs of so many customers is part of the intrinsic value you secure in dealing with us. The above map will help you to locate our nearest branch office.

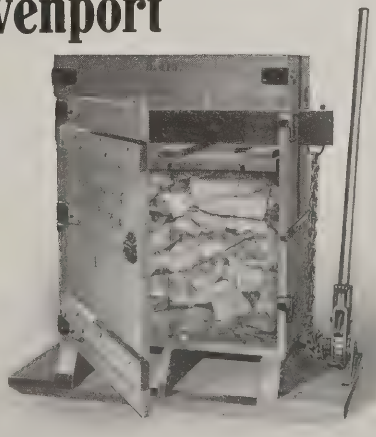
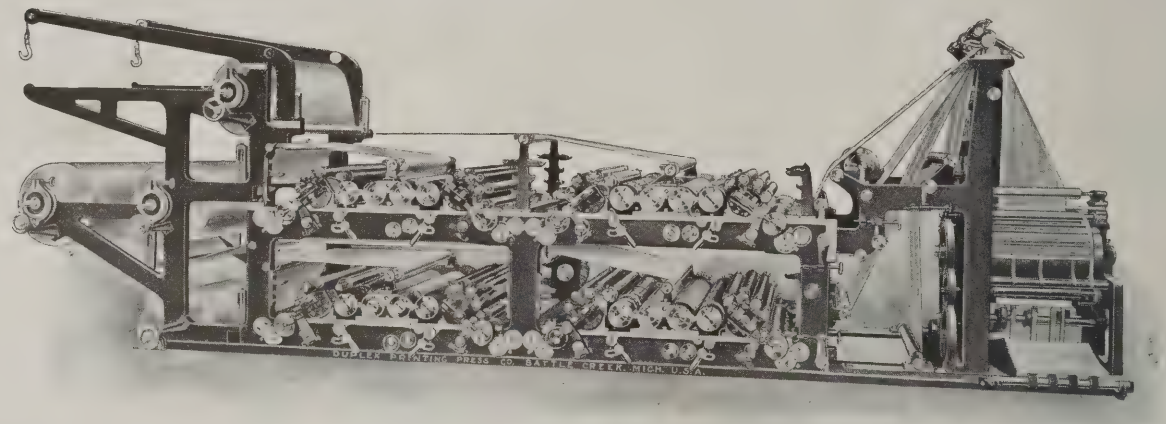
Davenport Manufacturing Co., DAVENPORT, IOWA



To The Publisher:

WE GUARANTEE the DUPLEX TUBULAR PLATE ROTARY PRESS to be capable of giving DOUBLE THE PRODUCT obtainable from the other styles of stereotype presses on the market, carrying the same number of plates and running at the same peripheral (web) speed.

This production of two papers on the Tubular Plate Press for one on any other is because of the fact that on the Tubular every plate is in contact with the web and printing ALL THE TIME. On other presses every plate is printing ONLY HALF THE TIME, being out of contact with the web the other half.



DUPLEX TUBULAR SINGLE-PLATE 16-PAGE PRESS

Speed 30,000 per hour of 4, 6, 8, 10, 12, 14 and 16 page papers. All with single-plates, straight run and book fold.

The Tubular is more simple and convenient.
It is more cheaply operated.
It has no half-speed mechanism.
It is absolutely single plate.
It delivers 25,000 or more papers per hour.
It prints all even numbers of pages at equal speed.
It delivers them all book fold.
The plates are as quickly made as any.
They are as quickly placed upon the press.
Its durability is proven by more than four years constant use without appreciable wear.

The TUBULAR Doubles the Product

and, because of lighter plates and greater convenience, does it

NATIONAL PRINTER JOURNALIST
A JOURNAL FOR PRINTING AND ALLIED TRADES

Volume Thirty-One | Chicago, May, 1913 | Number Five

"Clean Journalism"

(From Paper read before the Illinois Woman's Press Association, March 6, 1913, by Mr. George Shaw Cook, Chairman Christian Science Committee on Publication for Illinois).

Many very practical and wholesome facts will be found in the following extracts from the address of Mr. Cook.

Mr. Cook's work during the past seven years has thrown him into close contact with publishers and editors, and he declared great respect for newspaper workers and to whom he claimed to be indebted for many courtesies shown. He stated that his acquaintance with newspaper people had convinced him of their desire to be of service to the public and had given him some knowledge of the difficulties which attend their work. He continues as follows:

"Being obliged to scrutinize many daily, weekly and monthly publications, I may say that in my judgment our local papers are, comparatively speaking, good. That is not to say that they can not be improved. Indeed there is, I believe, great opportunity for improvement. This also is true, in a degree, of the paper about which I am particularly to speak — The Christian Science Monitor. While it is now a remarkably good exponent of clean journalism, its editors are aware and readily admit that it can be greatly improved. It has only begun to be what it should and ultimately will be.

"Some publishers of so-called "yellow" journals, those papers which feature sensational matter — crime and scandal — the evil that men do, have claimed that their reason for publishing such matter is that it is demanded by the newspaper-reading public. Now I am inclined to think that to a certain extent, perhaps to a considerable extent, that is true. This view is evidently shared by Dr. William Coleman Bitting of St. Louis, who recently spoke before the Sunday Evening Club as follows:

"'The temptation to give the public what they want — especially if they demand sewage — is hard to resist. To those editors who are conscientiously performing their duty and are keeping their journals clean, every credit should be given. But do you suppose that the "yellow journals" could exist for a moment if you and I should withdraw our support?'

"Even so, the editor is not entirely relieved of his responsibility. Is the demand for sensationalism a legitimate demand and is the business of supplying it, in the best sense of the word, a legitimate business? We all know that there may be a great difference between a demand and a necessity. Sometimes, very often in fact, a demand exists or is created for that which is not at all necessary. For example, there may be a demand for liquor, opium or tobacco but with little or no necessity therefor. So with the demand for sensational news it may be and, in my opinion, generally is a false appetite. Is it not clear then that this appetite should not be indulged and encouraged but should be restrained and discouraged? Better still, it should be entirely destroyed by cultivating the desire for, and supplying that which is wholesome and beneficial.

The press may be likened to a great moving picture show to which the world goes daily to see its current history flashed upon the screen. The show is generally interesting and sometimes instructive. The principal trouble is that too many "yellow" films are used. I am aware that some publishers will tell you that it is their duty to expose crime, graft, public and private scandal, and the like. Possibly so, but is this sufficient justification for featuring that sort of matter? I am inclined to believe that exploitation of criminals and grafters by the press has tended to increase rather than to diminish crime. Is there less crime today as the result of sensational newspaper exposures? My friends, the publishing of the evil that men do will not destroy evil. Publicity and legislation may serve in some degree to restrain the evildoer but only education of the right sort will reform him.

"Deploring the tendencies of the press, John Strange Wintor said: 'The indecencies of journalism, I think, have impressed me more during the course of my life than perhaps anything else has ever done. There are times when one feels proud of one's press, when one feels that it is an organization on which we may justly pride ourselves. But there are other times when I am bound to admit and confess that its indecencies turn one's very soul sick." Here is a recognition of a need for better things. Mrs. Eddy evidently saw this long ago, for I am told that she recognized the need for a clean daily newspaper many years before the time when she felt ready to found and establish such a paper. A little more than four years ago, however, she thought the time had come for launching the newspaper enterprise that is destined to gradually revolutionize the world of journalism. At that time she and her associates enlisted the aid of Alexander Dodds, a Pittsburg editor. He quickly organized a staff of trained newspaper workers. In sixty days after Mrs. Eddy announced her intention to start a daily paper that was 'to injure no man but to bless all mankind' the first issue of the Christian Science Monitor appeared. It has since been issued daily except Sundays and holidays and now has without doubt a wider circulation than any other daily newspaper. While the circulation of the Monitor is not as large as some of its contemporaries, it undoubtedly goes into more homes in different parts of the country and to more places in different parts of the world than any other daily paper. The Monitor is not a local paper. It is a world newspaper published in Boston. It is read in Honolulu and Hong Kong, in Melbourne and Cape Town. It has as many readers in London as it has in New York.

"Most of you have seen the Monitor and are more or less familiar with its character. For the information of those who have not seen it I shall quote briefly from the Independent (N. Y.):

"'Though having Christian Science in its title and though it is absolutely owned by that Church, it is not an organ in the ordinary sense. Nor does it print Christian Science news or attempt to further a sectarian propaganda. There is each day in specified position, one short article bearing upon the principles of the denomination. All the rest is just newspaper. It is a clean, dignified, able, interesting, well-edited paper.'

"The circulation of the Monitor outside of Boston is largely, though by no means entirely, among Christian Scientists. In Boston and New England it has its largest circulation among those who are not interested in Christian Science. There are four editions daily, called the International, the New England, the City, and the Last Edition. Of the circulation in Greater Boston the Independent says: 'Its circulation in Boston is already larger than the best Boston evening paper.' That this pioneer of improved journalism has created a demand for itself is shown by what has just been said. That this demand for clean newspapers will quicken and increase until it becomes imperative and universal I have no doubt. Already it has impressed many newspaper readers and some newspaper makers. Were this not so I would not be speaking here tonight. The following is from an address before Council of Jewish Women in Denver:

"'A taste for clean wholesome news and other reading matter must be acquired if it is not already ours. Mankind must be weaned from the unnatural appetite for sensationalism. And this is the task for the papers to take hold of — the education of the popular demand, the getting up of ideals for the common people, not waiting for the people to make the first move. This idea is not utopian but most practical.'

"Newspaper editors have frequently been most appreciative in their references to the Monitor, showing that they believe it is supplying a need and that they are glad of it. The editor of the Elgin Daily Courier, writing on the possible establishment of a state newspaper in Massachusetts, says: 'The Hub is now the home of one ideal newspaper, The Christian Science Monitor, and for a bright, progressive, interesting, and entertaining daily, with all the questionable news and features eliminated, the Monitor is a standard difficult to equal.' This is only one of many similar comments. A woman editor in this city, possibly a member of your association, has said: 'The Christian Science Monitor is a truly exemplary model for a medium of current events and clean reading. I wish there were more such.' The chairman of this meeting has been kind enough to express her admiration for the paper and her thanks to its editors. Some time ago a medical journal said of the Monitor: 'While it follows the general plan of other dailies even the casual observer is struck at once by the character of advertising. The "patent medicine" display and "quack doctor" advertisement are absent. So are the alluring promises of the get-rich-quick schemer, the promoter and the faker.' Clean journalism necessarily includes clean advertising, and the patrons of the Monitor are beginning to understand that they are protected from imposition by its clean advertising policy.

"You may ask whether such a paper could have become successful from a business point of view if published under other auspices. I do not know. The fact remains that the Monitor is succeeding. Whether it could have succeeded without the kind of support given it, I cannot say. What has been done once can be done again. There are other and older religious denominations. If they chose to do so they could follow the example of Christian Scientists in this respect. There are individual publishers whose capital is large, whose ability is great, and whose ideals are high. They could try the experiment of publishing a clean paper if they felt so inclined, and I am optimistic enough to believe that they would succeed. Already there are many signs of improvement in the making of papers, and for these we should be grateful. One of our Chicago morning papers now bears the legend, 'All the news that is clean.' One of our evening papers has recently excluded from its columns a certain line of objectionable advertising. These are good signs, and there are more to follow. The movement in the direction of improved newspaper methods has begun and will continue until the public will not tolerate anything but a clean paper. In leading the way to better things, the Christian Science Monitor stands not as a reproach to newspaper editors, but as an encouragement to them.

"Members of the Illinois Woman's Press Association, the Monitor is your friend. It stands for equality of the sexes in politics, in the home, and in the press. I quote as follows from a recent Monitor editorial on the subject, 'Journalism in the Schools,' about which we are hearing so much of late:

"'The new school of journalism at Western Reserve University is to know no sex line. This is sensible. The sooner sex equality in suffrage comes, with all that it implies as to woman's civic service, the more immediate the demand for a better equipped type of woman journalist.'

"In closing, let me ask of you one thing. I need not tell you that the press constitutes the greatest single agency for good or evil in the world. You all know that its message reaches millions where that of the pulpit reaches thousands. Just think of the responsibility that fact implies. You are helping to make newspapers. You are either helping to make them good or to make them bad. Let me ask you to do what you can to at least make them better. Consider for a moment that your effort, though it may seem small, is like the pebble dropped into the placid water of a mill pond. The ripple it causes touches every shore. Consider for a moment that the effect of your work is universal. Think of its possibility for good. Remember that the effort that you make to improve the condition and lighten the burden of humanity reaches in its effect the earth's remotest bounds. Let your thinking and your writing be along lines that are constructive. Let your work be for the uplift and advancement, the education and enlightenment of mankind. This will make your work worth while."

Editor Keeley Talks

"Suppression of news is the high treason of journalism. When a newspaper starts publishing, it makes an implied contract with the people of that community to print all the news and not to suppress any. A paper which holds back the news cannot be a respected paper. It is usually owned or controlled by politicians who use it for their own individual interests."

So said James Keeley, editor-in-chief and general manager of the Chicago Tribune, in an address on the modern newspaper last month at the University of Wisconsin, in which he told of the new field being filled by the newspaper of today.

"Many maintain that publishing crime makes more evil doing, but I think that publicity is the greatest deterrent to crime. Many who do not fear the law, have a wholesome dread of the publicity of their crimes and of public opinion. Some have come to me and begged me not to publish their crimes, but I feel that an editor's duty is rather to the community than to the individuals.

"This is not heartlessness, but the man in charge must be an impersonal judge and perform his duty to the people as a whole.

"Social service is the chief aim of a successful newspaper of the present day. An enterprising paper tries to print what people want, and this personal service is the keynote of success.

"There are some old, firmly established papers, especially those of Boston and Baltimore, which are limited by custom, and are content to act as merely mirror, photograph and camera. These papers are successful financially, because they have the same unwavering subscription but they are a mere shadow of what a paper should be.

"A real newspaper has outgrown the looking glass stage; it ceases simply to reflect the public or the individual. Its work now is social service. Its real mission is accomplished when it exerts the same influence over the public that the priest does over his flock. The paper helps fight for a clean city and home; it urges people to swat the fly as well as the crook.

"When I engaged Laura Jean Libbey for a sum greater than that paid a cabinet minister, many thought I was crazy, and letters of protest came pouring in from women's club's and friends of the working girl, all stating what an evil influence her articles would have.

"But working girls who had no one to whom they might go for advice, came to Miss Libby. In a little over two years she has received about 50,000 letters which deal with many human problems. Through her, girls have been prevented from taking false steps, and many homes have been saved. Miss Libby makes many readers and goes ahead doing good."

Mr. Keeley then explained how he had hoped to prevent women from using harmful cosmetics by having a "beauty department" where Lillian Russell might advise them. "Her advice is that the cleanliness of body and the cleanliness of soul are the very heart of beauty," he said.

"How to fight the increased cost of living," and "How women may earn money at home" are other social problems with which Mr. Keeley's paper deals.

"A health department, conducted by Dr. Evans, has been installed also," continued Mr. Keeley. "Here Dr. Evans explains the evils of unsanitary alleys, garbage piles, and unlighted hallways. This department has become so popular that other newspapers are now crusading for medical editors.

"But there is another side to the newspaper business. No man can serve two masters; so it is hard for a newspaper to serve people with divergent opinions. The newspaper motto should be: 'No prejudice in religion, politics, organized labor or wealth.' Private opinions from accounts of public meetings and discussions should be barred. But this is not always the case, because human frailty and infirmity enter here.

"Honesty should be as much a part of the newspaper business as of any other. Dollars should not supersede duty. A paper cannot pose as a leader of public opinion if it is owned or controlled by politicians. The day of political control is passing. Honesty is the purpose and backbone of the present day newspaper. People want the truth. A paper's reputation for reliability is really what makes it.

"A good newspaper man must be a trained observer and a human phonograph so he may reproduce what he hears correctly. The main trouble for the reporter is that his obvervations are usually based on what people say and there is always a great divergence of opinion. Each piece of news calls for some decision. A successful newspaper man must have a prophetic sense and weigh circumstances.

"Publicity is essential to make a success in any kind of modern business. The value of advertising has been tested many times. The greatest newspapers not only gather and disseminate the news but exercise great care over their advertising. Certain kinds of advertising are not accepted, such as those of loan sharks and of patent medicines. This is another step toward social welfare. Large space is given to community advertising. Advertising is really nothing but news.

"A real newspaper man sticks to the business because he loves it. It gives him a chance to see life in all its phases. His pen, when wielded rightly, can become a sword for good.

"For anyone to become a successful newspaper man, he must cultivate the art of observation and express what he observes with accuracy. He must be impartial and honest, and then, if he has any aptitude for the business, he will make a success. He need not be a fine writer, but this does not mean that his writings must lack life and color.

"Brevity is an art of the paper trade. There is no space to waste words in a paper. Besides the present high cost of white paper, as well as the fact that people have no time to read much, both argue for brevity. A reporter should suppress his opinions; no one cares for them. All confidences must be regarded as sacred.

"Accuracy is the keynote. No newspaper cares for historical or literary allusions, but it likes to say in its headline, 'If the So and So prints it, it's so.'"

* * *

A folder in German by an American railroad is quite out of the ordinary, but such a one has been issued in recognition and appreciation of the 31st Bundesturnfest to meet in Denver in June.

This folder not only describes the city and enumerates the points of interest but contains also a map of the city of value to all Turner delegates and visitors. A description of many of the resorts and scenic attractions, beautifully illustrated, is also featured in the souvenir folder. Coats-of-arms of the United States and Germany go to make up a most striking cover. The enterprise of the railroad company in getting out a folder in German will be greatly appreciated by the members of the American Gymnastic Union.

Newspapers Only Source of Information for Average Voter

"Colored" News More Harmful Than Adulerated Food, Says Prof. W. G. Bleyer

"The newspaper, in reporting the events of the day, constitutes practically the only source of information for the average voter concerning the various social, economic, and political questions upon which he must vote. The rapidly increasing tendency of citizens to vote regardless of party affiliations, and the extension of methods of direct law-making, by means of the initiative and referendum, demand that citizens have accurate information on men and measures. Any influence that tends to affect the accuracy of the facts concerning current events thereby tends to affect the basis underlying the opinions and decisions of the voters. Upon the accuracy of the newspapers in matters of news, therefore, depends to a great extent the character of our government. The suppression or distortion of news by newspapers for any reason whatever ceases, therefore, to be a private matter and becomes a question of public policy."

So said Prof. Willard G. Bleyer, head of the course in journalism at the University of Wisconsin, in an address on the "Function of the Newspaper," recently, before the students of Beloit College.

"Like common carriers, such as railroads, the newspapers have a public function as well as the private one of making money, and that public function is to furnish news, the commodity in which they deal, in complete and accurate form.

"News adulterated and colored is as harmful to the opinions of newspaper readers as impure and poisonous food is to their physical constitutions. Before pure food legislation prohibited the adulterating, coloring and misbranding of food, the buyer was at the mercy of the unscrupulous manufacturers, just as the newspaper reader now is at the mercy of the few unscrupulous newspaper makers. Although public sentiment has demanded laws to prevent impure food, it has not insisted that its food for thought on political and economic questions be furnished uncolored by the newspapers.

"A generation ago government regulation of railroad rates, food stuffs and competition in business was regarded as unjustifiable interference with personal liberty. Today any government interference with newspapers is considered as an attack on the freedom of the press. Is it not possible that the next generation may see every newspaper in this country compelled by public sentiment, if not by legislation, to give the complete and unbiased report of every event of general interest?

"Newspaper faking often appeals to the young reporter as clever and commendable, particularly when he hears old newspaper men tell stories of successful 'fakes.' But every fake, whether it deceives many or few, lowers both the newspaper that publishes it and newspapers generally in the estimation of all who know that it is false. Thus the value of the press as a source of reliable information is seriously impaired. From whatever point of view faking is regarded, it is indefensible. It hurts the guilty writer; it hurts the victim of the fake; it hurts the newspaper that publishes it; it hurts journalism generally.

"If reporters and correspondents realize that every story they write not only affects themselves, their newspapers, and the persons they write about, but also contributes toward forming the readers' opinions, they will consider carefully whether or not they can afford to permit haste or carelessness to impair the completeness and accuracy of their work."

Profit Sharing

Plan Adopted by the J. W. Butler Paper Co.

IT is wise and just that employes should share, with owners, in the profits of a business, but it is difficult to ascertain just what ought to be counted as actual, permanent, net profits to be divided. In the natural order, all cost, including wages and salaries, all overhead expenses, interest on capital, risks, losses, compensation to owners for management of business, insurance, wear and tear and depreciation on cost of replacement, necessary increase of capital to keep up with the demands of an expanding business, must be met or provided for, otherwise the business itself would soon be destroyed or its healthy development, equally important to owners and employes, would be checked. Every business must grow, or else depreciate, to the loss of both capital and labor or employment. The business must be protected. Some of these matters are difficult to deal with, when it comes to the dividing of profits of one year — while there may be a loss the coming year — with employes who are never expected to share in the losses of the invested capital, only so far as, possibly, as through non-employment or a decrease of wages; the first involving further loss of capital to the investors, but possible of being saved to employes by other employment, and the latter, the decrease of wages, nearly always being looked upon by employes as an injustice or a very great hardship.

However, after long consideration, Frank O. Butler, president, and J. Fred Butler, vice-president, of the J. W. Butler Paper Company, worked out a plan, based on allowing six per cent interest per annum on the capital invested, and divided $60,000 among employes.

The National Printer-Journalist, recognizing the importance and interest of such an arrangement, sought information, and in an interview with a representative of the J. W. Butler Paper Company, secured the following as the ideals and plans and objects had in mind and taken under consideration, in entering upon this new profit-sharing plan:

"Our corporate owners, desiring to make this business a mutual association of workers in fact, have for some time directed their efforts towards the profit-sharing plan under which we are now operating, and while in its last analysis it seems simple enough, a good many years of thoughtful consideration have been given to this question of a closer and more co-operate relationship between employer and employe.

"Every thinking business man knows it to be a vital issue and one that can be solved only by approaching it in a spirit of absolute sincerity and justice. Various plans have been conceived throughout the commercial world for the accomplishment of these greatly desired results, some we believe in successful operation, others found wanting in certain essential features. It is unquestionably true that no one general plan can be made to fit various businesses. In its last analysis the great question to be answered is whether or not a concern is sincerely willing equitably to share its earnings with its employes. Assuming that it is, the only difficult problem will be found to lie in grouping men according to their relative importance to the institution, through position, years of service, etc., and this grouping is best accomplished or arranged by a competent committee, each one of which committee should be himself a worker. Herein is where no two businesses are exactly alike, there being such a vast difference between the various lines of trade as well as different systems within the same line of trade. For instance, some depend upon advertising as their chief sales medium, others on personal solicitation, others again on varying degrees of a combination of both. We regret that your inquiry should have come to us before a complete development of our idea, but, summarized, the real pith is simple enough in the points named, viz: First, the sincere wish of the institution on the profit-sharing question; second, a proper grouping of all workers from the president down. These points being satisfactorily covered, there are many different plans that will be found practical for a work-out of the details, and the amplification of the idea, to the end of covering lean years, pension and sick funds, etc."

The plan had been carefully worked out under these principles, with no notice to employes, then, letters were sent to all employes, at their several homes, stating that their respective shares of last year's profits would be placed in their pay envelopes the following Saturday. The amounts were distributed and there was joy in the home of every employe of the J. W. Butler Paper Company.

Any employe who had been in the service for at least one year was made eligible for one-third of a share. An employe of three years was given a full share.

Assuming that at the end of three years' service the employe's salary has been substantially increased, the officials have decided that one share shall be the maximum to which any worker is entitled in order to do justice to new employes. The amount given to each employe is based upon his salary, length of service and the expense incurred in maintaining that individual's department.

The Chicago Record-Herald, in commenting on this new and commendable plan of profit-sharing, said:

> The Butler Paper Company, located at 221-229 West Monroe Street, was established in 1841. Ever since that time it has gained a reputation for its loyalty to employes. Eight years ago nearly fifty of the employes became entangled in the clutches of "loan sharks" and their salaries were attached. Instead of aiding the "loan sharks" by discharging their victims, the officials of the concern summoned the unfortunate men, heard their stories and then effected a settlement of the loans.
>
> **Good for All**
>
> "I believe that this profit-sharing plan should be adopted by every business establishment," said J. Fred Butler at his home in Oak Park. "It curtails expenses, creates higher efficiency among the employes and increases the volume of business. Everyone in our employ will take up work knowing that he is a partner in the business, that if he is economical the expenses of his department will be lowered and that if he builds up the sales his pocketbook will receive a proper share."

ILLINOIS PRINTERS' COST CONGRESS

The printers of Illinois are going to hold their second annual cost congress and convention at Springfield on June 13 and 14. This was decided upon at a meeting of the Illinois Ben Franklin Club on the 19th instant, at the Sherman House, Chicago.

President Frank B. Brown of Peoria, Vice-president G. C. Cockerton of Danville, A. J. Barnes of Springfield, E. C. Finch of Aurora, Gerald B. Franks of Peoria, Julius C. Kirchner, Henry Allen, Secretary Ed E. Sheasgreen of the Ben Franklin Club of America, and Secretary Frank R. Brines of the Chicago Ben Franklin Club, were present and discussed the question of the advisability of holding a congress. The success of the first convention at Peoria last May prompted the meeting to unanimously decide to make an effort to eclipse, if possible, the achievements of 1912.

A. J. Barnes, representing the printers of Springfield, tendered on their behalf an invitation for the congress to be held in the capital, and it was unanimously decided to accept the invitation.

It was resolved to invite the Ben Franklin Club of St. Louis and all other printers' organizations in Illinois to unite in making the convention a huge success from every standpoint, irrespective of party affiliations.

A committee on arrangements, consisting of President Brown, A. J. Barnes and Henry Allen, subsequently met and outlined a programme. Governor Dunne will be invited to open the convention, and State Superintendent of Public Instruction, Francis G. Blair, will be asked to speak, as also Earl R. Britt, St. Louis; R. T. Duncan, of St. Louis; President W. J. Hartman of the Ben Franklin Club of Chicago; Harry Knotts, of Illiopolis; Dan Baker of the United Typothetae of America, and other prominent organization men.

A School of Estimating and Instruction in Cost Finding will be given, in charge of Secretary Ed. E. Sheasgreen of the Ben Franklin Club of America, assisted by some well-known cost experts.

There will be a short social programme arranged, and on Friday night a banquet will be held at the Leland Hotel, which will be the headquarters of the convention.

* * *

The Missouri, Kansas & Texas, Wabash, Frisco, Missouri Pacific, and Chicago & Alton railroads will issue transportation, payable in advertising, this year to Missouri editors and members of their families to attend Journalism Week, May 12-16, at Columbia. Application for such transportation should be addressed to the general passenger agents of the railroads.

THE SMELL OF PRINTER'S INK

You may speak of all the spices
From the Islands of the Sea;
Of the fragrance of the lily
Or the sweet magnolia tree;
Of the banks of sweet wild flowers
Growing by the river's brink,
But to me, they're not so pleasing
As the Smell of Printer's Ink.

From the printed page before me,
Comes that odor known so well,
Bringing memories of pleasures
And of tales I love to tell;
Of the days of stick and apron,
(Of them still I love to think)
And the friendships then begotten
Midst the Smell of Printer's Ink.

From the ever-busy "news-room,"
Where the "lino" slugs were cast,
To the hot and noisy press-room
With its wheels all flying fast,
Through the editorial precincts,
Where the "cub" reporters winked,
To the counting room and office,
Came the Smell of Printer's Ink.

Thus, through every nook and cranny,
Was it wafted to and fro,
And for years I lived and breathed it
And I learned to love it so,
That with open page before me,
Now, I'm drawn by memory's link
Back to scenes long since deserted,
By the Smell of Printer's Ink.

—Roscoe E. Haynes, Fairport, N. Y.

REVIEW OF JOB PRINTING

Address All Communications to E. S. HANSON, 440 S. Dearborn Street, Chicago.

MANY a printer will go to the boss to ask for additional equipment and up-to-date supplies and will be told that the business does not warrant purchasing them. Of course, there are some printers who ask for more than a business will justify; but many of these things could be secured and easily paid for if more businesslike methods were used in the administration of the office. I have at times rather resented the implication that printers are poor business men, but am inclined to believe it since hearing a story of one of them the other day. This man, while he had his shop full of work all the time, and at fairly satisfactory prices, felt that his equipment was not sufficiently modern, and spent $1,500 to bring it up to date. This enabled him to turn out his work at a lower cost than had been possible before; and as his customers were very evidently satisfied with his prices, as shown by the fact that they kept him busy most of the time, he would certainly have been justified in keeping his prices up to his present schedule, at least until he recovered the $1,500 which was spent in the improvements. This he did not do, however, but immediately reduced the selling prices of his product, evidently on the assumption that the employing printer was entitled to only a certain percentage of profit above the cost, no matter how he might be able to reduce that cost by improved methods and equipment. Of course, where new equipment is put in in order to allow the printer to meet competition, the case is entirely different; for in such a case it is presumed that the printer is not able to keep his shop busy at the prices which he is compelled to charge, and the return on his additional investment comes to him in the shape of increased work when his prices are lowered.

✣ ✣ ✣

I am glad to receive the portfolio of illustrations from the Barnes Crosby Company showing the various methods of half-tone treatment which can be utilized by printers. I shall keep these illustrations in my desk to refer to occasionally when I am in doubt as to the correct treatment of a half-tone, and would suggest that other printers who have much illustrating to do might well do the same.

I have devoted much more time than was necessary for the purpose of this review, to reading a booklet sent out by A. Hoyt Levy & Company, 239 Broadway, New York. These people are in the business of writing and placing advertising, and have proven their fitness for the work by this most interesting and attractive piece of publicity matter for themselves. The book contains reproductions of advertisements which this firm has designed, also letters from the clients thus served, together with

I want to call attention to a little folder sent out to advertise the Cleveland folding machine as being an especially effective piece of printing as well as ad writing. The long panel illustration is a halftone, with the arrows and circles printed in orange over it. This is a method which can frequently be adopted by many printers, the circles, arrows and rule all being foundry product.

This Tells How The Cleveland Folding Machine Can Handle This Week's Work To Such Advantage.

The Cleveland Folding Machine is Backed by the Absolute Guarantee of the Makers

✣ ✣ ✣

Ernest Edwin Adams sends another lot of beautiful work from the printing department of the Toronto Y. M. C. A. This work is so well designed, so clear cut, so thoroughly craftsmanlike, that I am delighted to see it. I am reproducing one of these separately and a number of others in a group, the Johnson & Smith card being shown by itself in order to emphasize the method by which the border was worked out in two colors. Many printers believe that if they want a two-color border they must secure one which was designed for two colors from the type foundry. This is not always necessary, as Mr. Adams shows. He has taken an ordinary plain 12-point rule and worked his color with that, first running his border over it in black with the type matter. Some of the other jobs are worked in the same manner, but the method of doing it can be seen to better advantage on this Johnson & Smith card.

I have received some more delightful work from Axel Edward Sahlin of the Roycroft Shop, East Aurora, N. Y. One of the pleasing things about this work is the admirable selection of stock for each job. I was going to call particular attention to one or two of the pieces, but there seems to be scarcely one of them deserving of praise above another, they are all so eminently satisfactory.

It is usually the custom for charitable and philanthropic societies to get out their printed matter in as plain, uninteresting and inexpensive type as possible. I am glad to notice that the United Charities of Chicago has departed from this custom in a little booklet before me. It is on a handsome white rough book stock of the Fairfield type, printed in black and red and in a double deckle-edge cover. A specimen page shown herewith will give an idea of the typographic excellence of this book.

* * *

A little leaflet has just come to me from Barnhart Brothers & Spindler describing a chase and form rack. I have not as yet looked into the merits of this rack, which is doubtless all right; but the first page of the leaflet has caught my eye and appeals to me as being a first-class piece of composition. I am therefore, showing it for the benefit of other printers. This little incident, by the way, illustrates how a good piece of printing will attract and hold the attention while otherwise the advertising matter might go immediately into the waste basket.

* * *

I have been glad to look over a booklet containing a little sermon entitled "What Shall It Profit You?" by Mr. Edward P. Mickel, secretary of the Nashville Typothetae. Aside from containing some first-class philosophy on the subject of the selling of printing, it is a handsome piece of work in itself, being on buff Fairfield stock printed in brown, and in a most attractive double cover.

* * *

I am showing the letterhead of the Tarkio Avalanche, of Tarkio, Mo., which appeals to me as being very satisfactory. The only suggestion I would make would be to draw in the line "John Frazier, Publisher," instead of having the words so widely separated.

I have two lots of work from W. Arthur Cole, with the Wm. F. Fell Company, Philadelphia. One of these is a membership certificate of the Boy Scouts of America, which is exceedingly well done. The same comment, however, applies to all of the work. I like especially the little booklet entitled "How Fell Service Works," being a little advertisement for Mr. Cole's own firm. The Masonic program and menu is also unusually good, and the bill head for the Fell Company is without fault.

Hon. Frank Oliver, M.P.

Managing Editor

John Howey

Business Manager

Secretary-Treasurer

Telephones

Newspaper

Job Department

This particular luncheon seems to have been devoted entirely to the entertainment of the staff of the Edmonton Bulletin, and two miniature reproductions of early issues of the Bulletin are enclosed with the program. A specimen page of this program is here shown.

A recent booklet sent out by the J. W. Butler Paper Company advertises their justly celebrated Snowflake enamel. This booklet shows the adaptability of this paper to text pages and various classes of illustrating, both in black and white, and colors. It is inclosed in a cover of heavy Advertisers cover stock, and this cover is reproduced herewith. It is a facsimile of a water-color painting and was reproduced on this rough cover stock by the photo-offset process in nine printings, the colors being yellow, orange, brown, black, light blue, dark blue, pink, purple and gray.

The Keystone Type Foundry has just sent out a specimen book on its Artline series, showing various sizes in extremely agreeable combinations. The page here reproduced will give an idea of the adaptability of this type to commercial work.

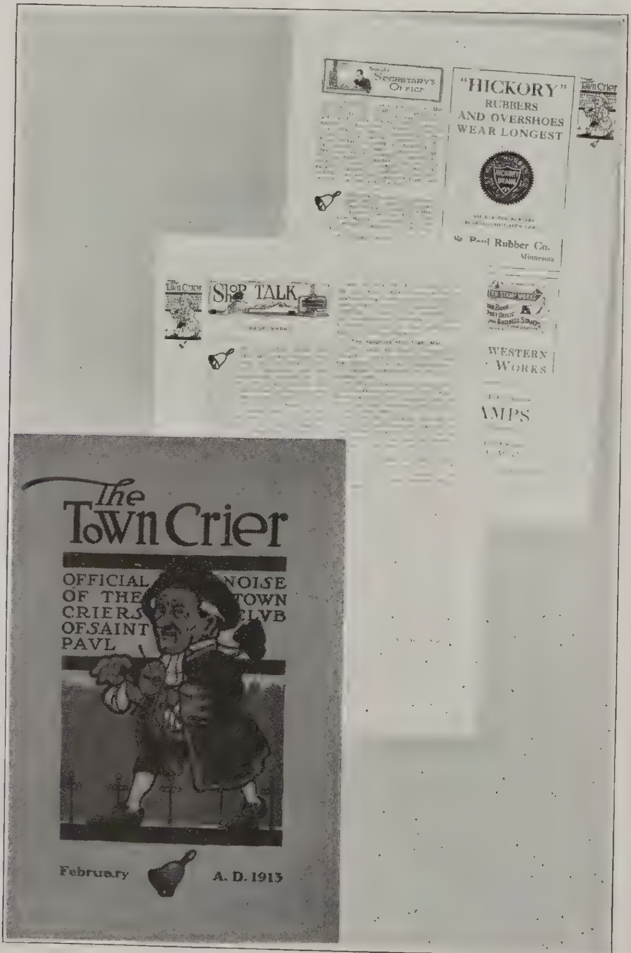
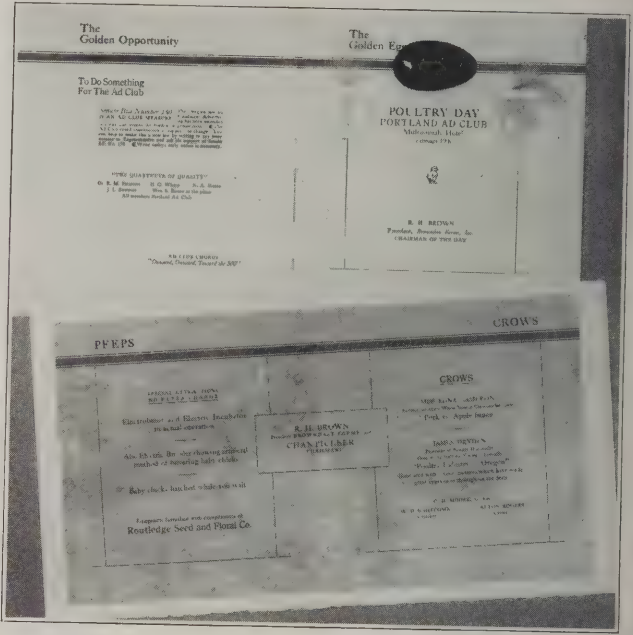
A most attractive piece of work is a publication called The Town Crier, which emanates from St. Paul and is designated as the "Official Noise of the Town Crier's Club" of that city. The February number is on my desk, and while it carries a number of very well designed advertisements, the style of printing is so admirable that I doubt if the publication is really paying for itself. A couple of sample pages will show the satisfactory manner in which it is produced.



✣ ✣ ✣

H. R. Hayek, manager of the C. C. Chapman Company, Portland, Oregon, sends a program and menu produced in that shop recently for the Poultry Day of the Portland Ad Club. The letter-head of the Chapman Company states that its specialty is high grade printing, and this I can well believe.



The cover of this program has a representation of the Golden Egg — done in gold bronze, of course, and the insert is fastened in with two feathers. The reproduction will help to show the high class of this work.

C. J. Carlson, Ackley, Iowa, sends in a number of specimens from his office, that of the Inter-County Journal. Mr. Carlson seems to have a decided preference for two-color combinations. I trust he is getting what this kind of work is worth; though my experience has been that where two colors were used on a large majority of the work turned out of an office, especially the smaller work, such as envelopes and the like, the price was not made commensurate witth the work required. One of the best pieces of work is a letterhead for Roosevelt Brothers, although I do not particularly like this face of type for stationery. The letterhead for the Inter-County Journal is also very satisfactory.

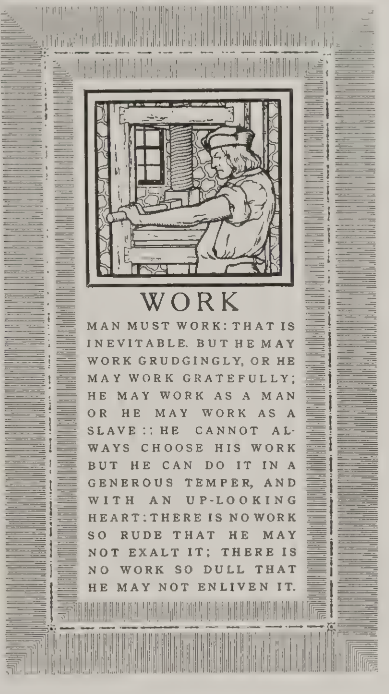
In almost every issue of The Apprenticeship Bulletin, published by the School of Printing of the North End Union, Boston, I find something which I am anxious to reproduce. This time it is a first page design with a heavy border of lithotint rule and conventional printing illustration, and an uplift paragraph on the dignity of labor. The word "Work" and the small line border between the two rules are in red; the rest is in blue black.



WORK

MAN MUST WORK: THAT IS INEVITABLE. BUT HE MAY WORK GRUDGINGLY, OR HE MAY WORK GRATEFULLY; HE MAY WORK AS A MAN OR HE MAY WORK AS A SLAVE :: HE CANNOT ALWAYS CHOOSE HIS WORK BUT HE CAN DO IT IN A GENEROUS TEMPER, AND WITH AN UP-LOOKING HEART: THERE IS NO WORK SO RUDE THAT HE MAY NOT EXALT IT; THERE IS NO WORK SO DULL THAT HE MAY NOT ENLIVEN IT.

✣ ✣ ✣

A booklet regarding printing plant appraisals is sent out by the Manufacturers Appraisal Company, with offices in a number of the large cities. This is an excellent piece of printing, the title page, which I am showing, being the only one which seems deserving of criticism. In my opinion the addresses at the bottom should be set in very much smaller type, allowing the name of the company to stand out more prominently and not overbalance the small amount of type at the top of the page.

✣ ✣ ✣

The American Type Founders Company has embodied its Bodoni family of type faces in an elaborate piece of printing which it has recently distributed to the trade. We predict that this face is destined to become as popular and as widely used as some of the other faces which this foundry has sent out. A page from this book is shown, this page being especially selected because it contains so many different sizes of the type face, as well as showing its adaptability to different kinds of work.

B. H. Todd, Louisville, Ky.—I am pleased to see the specimens of your advertising composition and wish to comment upon them as being good strong display. I like especially the one having the large circle in the center, this circle filled with black Gothic type, "Two Trains Every Day to Florida and Cuba, etc." I believe this class of display is especially well fittted for railroad advertising. You have used the same type on a smaller ad headed "Superior Service," but I believe there is rather too much of rule work on this advertisement to be most effective.

EIGHTY THOUSAND! This was the total number of individuals in the seventeen thousand, four hundred and forty-nine families who received the attention of the United Charities in the fiscal year ended September 30 1912. It equals the combined population of the cities of Springfield, Freeport and Canton, Illinois! It represents a volume of tragedies, a grim record of suffering with only here and there a rift of sunshine.

The United Charities is not proud of the figure, nor should the City of Chicago be. That one-twenty-seventh of the population of the city which in 1911 had bank clearings amounting to nearly fourteen billion dollars should in one year need the attention of this one charity organization is nothing less than deplorable.

families in the districts and kept at the camp for the entire season in an effort to check or eradicate the disease.

LECTURES on topics covering poverty conditions and their solution, can be provided for churches, clubs etc.

How to Use the United Charities

APPLICANTS FOR ASSISTANCE should be sent to the district office nearest their home or their names and addresses telephoned to the district superintendent. Give no alms at the door or on the street. If you desire to assist a family that has been referred by you and found by the district workers to be in need, confer with the district superintendent as to the best way of doing so.

This group includes reproductions of title page of Booklet for Manufacturers' Appraisal Company, first page of leaflet from Barnhart Brothers & Spindler, and two pages of booklet sent out by United Charities of Chicago.

W. P. Lemmer, Belgrade, Minn.—I have your two letterheads and want to say that I consider No. 1 by far the better head. This might be greatly improved, however, in a number of ways. For instance, the rules ought to run off the side of the sheet, and the type matter between the rules could be indented somewhat more. That line should also be in a smaller type, as you suggest, and either in a small black face or an italic. You should have between the two words "Winner" and "Schmitz" a single hyphen rather than three hyphens representing a dash. The colons which are used for ornaments in the line below it could well be dispensed with, and the two lines following should be dropped down another lead or two and set in a style of type with somewhat more individuality, such as a heavy face italic.

* * *

The organization of the Association of Secretaries of the printing organization, of which Mrs. Anna Harmon, of Leavenworth, Kan., is the Secretary, should have at least two meetings a year. Practical plans of doing organization work should be discussed, the "Tricks of the Trade" of being a successful secretary made known, plans laid so all local clubs could work along the same general lines, and a general boosters' meeting held.

Let every local Secretary write to Mrs. Harmon for information along this line and boost for at least one good meeting to be held at New Orleans this fall.

Secretary McElroy of Cleveland has the work of getting the mechanical pay roll information well in hand and will be all ready to report when the amalgamation of the two organizations is perfected.

Notes From the National Headquarters of the Ben Franklin Club of America

PRESIDENT W. J. Hartman, President of the Ben Franklin Club of America, and John Hastie, Vice President of the Chicago Ben Franklin Club, spent ten days at West Baden, Ind., where they put themselves in fine mettle for the spring's business.

President W. J. Hartman and the Secretary attended the Milwaukee Convention, March 7-8. Both had a part on the program. This convention was a fine one from the standpoint of educating the printer, and has been reported fully in these columns.

The Secretary of the Ben Franklin Club of America has been doing some traveling lately, having visited Minneapolis, Cleveland and St. Louis on organization business.

March 23 was spent in Minneapolis in conference with the committee in charge of the North-Western Cost Congress, which is to be held in Minneapolis, May 1, 2 and 3. This Congress is to be a COST congress only. It will be as near a school as it is possigle to make it. The program as made up will include only those subjects that have to do with COST. Among other things there will be two stereopticon lectures, one by the National Secretary, and one by Roy T. Porte, Secretary of the Cincinnati Ben Franklin Club.

The officers of the North-Western Cost Congress are: E. K. Whiting, Owatonna, Minn., President; F. H. McCulloch, Austin, Minn., Vice President; F. J. Scott, Minneapolis, Minn., Secretary; Clare Blakely, Rochester, Minn., Treasurer; Gilbert Byron, Minneapolis, Chairman Program Committee; E. M. Spencer, Minneapolis, Chairman Publicity Committee; Paul N. Myers, St. Paul, Chairman Finance Committee, and Gustave Monasch, Minneapolis, Chairman Entertainment Committee.

Tuesday, the 26th, conferences were held with the directors of the Cleveland Ben Franklin Club during luncheon hour at the Fellowcraft rooms. Business of importance regarding the amalgamation of the two great printers' organizations was discussed and favorably disposed of.

With Secretary McElroy a tour of the flooded districts was made. The wreck and ruin that the water had wrought in a very short time was beyond description.

The 27th was spent in the Chicago office and the 28th and 29th with the St. Louis Club. Here also business relative to the amalgamation question was taken up and satisfactorily settled.

Snow instead of water, was the topic of discussion among St. Louisians, for they had had their greatest snowfall of the year the night of the 27th.

At the Saturday luncheon of the Minneapolis Typothetae on the 23rd, J. D. Mullowney, of the Mullowney Printing Co., was elected to succeed "Mort" Spencer, who for so long has served the printers of the Flour City as Secretary. "Mort" has made a record to be proud of in the capacity of secretary, and served as secretary of the national meet of the U. T. A. held in Chicago last summer.

In answer to a wire from this office to Secretary C. E. Corey, of the Tri-City Ben Franklin Club of Omaha, as to the situation there among the printers, after the terrible cyclone that so nearly wrecked Omaha Sunday, the 23rd of March, word was received that all escaped except President Tostivan and wife, who were slightly injured, and whose home was damaged. No delay in the program of the Missouri River Valley Cost Congress will result.

The members of the Fellow-Craft Club of Cleveland have, in their club rooms, something to be very proud of. It is a most enjoyable place to visit and to pass away a little time visiting with printer friends or playing a game of pool. From seventy to eighty every day take their lunches there and talk shop.

The Des Moines printers are the first to perfect an amalgamation of the U. T. A. and the Ben Franklin Club of America. At a meeting March 10, held at the Chamberlain Hotel, a committee from both organizations met and decided on a plan which was accepted. The new organization is known as the Des Moines Printer Club. The officers of the organization are as follows: H. C. Meline, President; Carl K. Smith, Secretary; B. S. Harrison, Vice President; and Roy Black, Treasurer. A board of five directors was elected, the constitution of the Ben Franklin Club adopted until such time as they receive the Constitution and By-Laws of the new National organization, and the local dues set. Members who belonged to either of the National organizations are to pay dues to these organizations until the national organization shall have been perfected. A bulletin is to be published each month. All present at the forming of the new organization decided "That one local organization would be more efficient, more economical and would serve the interest of Master Printers of Des Moines better than a divided effort."

The St. Louis Ben Franklin Club would maintain a Club Room like the Fellow Craft Club of Cleveland if a suitable place could be found. Secretary Magers has tried for a long time to find a suitable place, but the kind of a place they want seems not to be had. A club room for the St. Louis printers would put them in the front ranks, and the assertion is ventured that in some way that hustling bunch will succeed in finally getting the kind of place they want.

Speaking of Club Rooms arranged after the fashion of the Fellow Craft Club of Cleveland. They are the sure thing with which to handle conditions in the large cities. It is a pleasure to find smaller cities like Columbus, O., trying out the scheme. Such places bring out the better side of men, bring them closer together, give them a better knowledge of each other, and a fellowship and confidnce is built up that can be obtained in no other way.

Fellow-craft Club Rooms are good things — push them along.

The new plan of organization that Secretary Magers of St. Louis has set in operation there is proving a winner. Each of the several divisions are working very nicely for so short a try-out . He has his mechanical pay roll information all in, having recently finished.

Monday night, the 23rd, Mr. J. Clyde Oswald, of New York, editor of The American Printer, gave his stereopticon lecture on "In the Footsteps of Guttenburg." The printers turned out in goodly numbers and were of one accord that the meeting on that night, in spite of the terrible storm that was raging, was the best held in a long time.

Word comes to this office that the Omaha Spirit is a Great Spirit that will not down, while, from Ohio, from Indiana, from Kentucky, from Virginia — from all the great flooded district of the South, the same brave, proud, honest AMERICAN spirit rises up strong — a spirit that under the very worst conditions, in the face of the most terrifying dangers — has proven time and time again that it will always win.

But the sad part of it all is — THAT OUR GOVERNMENT CANNOT, OR DOES NOT, SO PROTECT THE PEOPLE FROM THE RAVAGES OF FLOODED RIVERS THAT THIS TERRIBLE LOSS OF LIFE AND PROPERTY MAY BE A THING OF THE PAST.

Cannot the Great AMERICAN SPIRIT rouse itself to a point where IT will compel the Government to protect the people and property from engulfing floods?

When a Club gets up some announcement, or menu card that is specially fine, send copies to other secretaries. An exchange of ideas of all kinds should take place between secretaries. No one man has all the good ideas, and from some unknown source often comes an idea that will set the whole world agog.

This office received a call from Frank E. Jenks, Manager of the Master Printers Association of Calgary, N. W. T. He reports that in that young and growing Canadian city of 70,000 there are 14 plants, 8 of which are running Cost Systems. His association has an 80 per cent membership. Mr. Jenks reported that there are very good trade conditions there, but that it is hard to get first class help, even though wages are high. The Canadian printers in that part of the country have what they call the Interprovincial Master Printers Association, comprising those printers in Alberta and Saskatchewan. The cities of Calgary, Edmonton, Lethbridge, McCloud, Regina, Moose Jaw, Prince Albert and Saskatoon, are among the principal cities represented in the Inter-Provincial Association.

Mr. Jenks has been in Buffalo for four weeks with his wife, who had been taken there for a serious operation. She has recovered, and returned to their Canadian home in April.

This office is glad at all times to welcome not only Secretaries and Board of Trade Managers, but the printers themselves as they pass through Chicago on their travels about the country.

The following idea from St. Louis would be a good one for the printers of other cities to take up — boost their own city.

A neat little folder from the Ben Franklin Club of St. Louis to the buyers of printing in that territory says:

"The charge is frequently made that St. Louisians do not appreciate their city; that we are not Boosters. The first essential to civic pride is knowledge. The reason St. Louis is not valued higher elsewhere is because there is too little knowledge of its advantages at home.

"The Printing Industry has never been properly exploited. According to the last census, it employs in all its branches, including publications, one-twelfth of the total employes of the city. It has invested one-twenty-fourth of the city's total business investment. It pays one-eleventh of the total of salaries and wages paid, and the value of its output is one-sixteenth of the total of the entire city.

"The Printing Industry is represented by 382 establishments, employing 8,759 people, with an investment valued at $11,155,000, paying salaries and wages amounting to $6,240,000, and its output is valued at $17,656,000."

This is a strictly made in St. Louis proposition. St. Louis is one of the greatest cities in the country, except for the fact that we are afraid to acknowledge it. Buy all your printing in St. Louis, and help make ours an even Greater St. Louis."

* * *

DOES IT PAY TO ESTIMATE?

Mr. B. B. Herbert, of the National Printer-Journalist, delivered a brief address before the Ben Franklin Club of Chicago, Thursday, March 13, on the above topic. He prefaced his remarks by saying that he presumed that he had been called upon to talk on this subject by reason of extemporaneous remarks that he had made at the discussion at the Wisconsin State Ben Franklin Club and Cost Congress in Milwaukee.

A discussion was up as to estimating and cost of composition of newspaper advertisements and of the regular run of job work. It had been stated by one gentleman that a record had shown that the cost of composition per square inch was 5¼ cents or 10½ cents for a running newspaper column.

It developed that the actual cost varied materially and Mr. Herbert had remarked that it hardly seemed fair that one customer or advertiser should pay the same rate per square inch for composition as did his competitor, whose composition really cost three or four times as much. He then claimed that the cost of composition should always be a separate charge and that each customer should pay in addition to the other charges, or the real value of the space in the paper, the actual cost of the composition, with added profit, and that justice could not be done to either the advertiser or customer, as a rule, by advance estimates.

Someone has truthfully said that printing is the most enchanting calling, because of the variety it affords. No jobs are alike and "variety is the spice of life." However, under the old system, when losses were found to take the place of profits, the enchantment lost something of its charm and the "spice" was found to be bought at too high a price.

He showed how varied had been the estimates on jobs presented in the estimating classes where the specifications had been studied and were plainly stated. The fact is that under the most favorable circumstances, estimates of time of composition were frequently a matter of guess and the figures secured were either an injustice to the printer or to the purchaser.

Conditions of competition and the anxiety to secure work and to please the customer, especially in the case of a small office, where the customer stands over the estimator and waits for the result, are unfavorable to securing correct results, to say nothing of the psychological situation if the printer be overmastered by the anxiety and the desire of pleasing his friend and securing the work.

It has been proved over and over again that estimating, under the best conditions, must be largely a matter of opinion or guess. The true and honest way of charging for printing is to charge for the work after it is completed, a complete record having been kept by cost system.

When printers have won the entire confidence of their customers and have secured a general public reputation for honorable dealing and conscientious honesty, this method will be possible. The Stillings Printing Company of Boston have already reached this high level, as have, to a degree, other well-established plants.

Under present practices, the whole time of estimating is a loss to each office and frequently where ten or twelve offices figure on the same job, the aggregate loss is equal to the cost of the job when it is completed. So far, it has been found almost impossible to secure pay for making estimates and furnishing the necessary dummies or layouts, in fact, he said he had known of only one printer in Chicago who had been able to accomplish this.

Cyrene H. Blakely, of Blakely & Rogers, had, at one time, made out a bill for estimating, amounting to some four or five dollars, for a job on which some twelve estimates had been submitted. Of course, he did not get the job. He presented this bill to the customer, who asked for explanations and objected to the charge.

Mr. Blakely, in his bluff and good natured way, insisted that payment must be made, and secured the money.

Not only is there great aggregate loss in estimating, but the fact is that printers furnish estimates and prices, giving the prospective customer ideas as to how the work should be done with which to go forth and beat down the prices of the printer's competitor. The printer furnishes the knowledge and the brains and thus arms the customer with the means of securing lower bids.

It is dishonorable for any customer to give the prices made by any printer from whom he demands figures, yet, we all know that it is the custom to at once quote these prices in order to secure lower ones.

Estimating is a delusion and a snare and if printers would stand together on their rights, the time would soon come when work would be intrusted, with no expectation except paying a fair cost, with added profit, when the work is done. This can be done largely now with honorable men if the printer has the courage of his knowledge and convictions to stand out for what is right.

✣ ✣ ✣

THE PRINTER'S "DIPLOMA"

Mr. S. A. Gardner, of the Gardner Office Supply Co., Springfield, Mo., recently sent to the office of the Secretary of the Ben Franklin Club of America, the summary of costs of their 1912 business made out on Form 9-H of the Standard Cost System. For this report he received in return a highly engrossed Printer's Certificate. This beautiful document states that the holder of the same is a member of the Ben Franklin Club, has a Standard Cost Finding System installed and working thoroughly in his plant, that his business record for the year has been checked by this organization and is to the minute in every way.

On receipt of the Certificate Mr. Gardner wrote the Secretary as follows: "We have received the Printer's Certificate and have it framed and on display in our office window. We expect to place it in a prominent place in our office and value it very highly."

And why shouldn't the Gardner Office Supply Company value this Certificate — this printers' "diploma" — very highly? And why should any printer who can make good in the same way be ashamed? Nothing to be ashamed of is there? Nothing different than the doctor or lawyer or teacher does after they get their diploma, is it? or different, is it, than the bankers, hotel keepers, or druggists or other tradesmen do when they hang out signs to show they are members of a local or national commercial or trade association?

The Printer's Certificate is a mark of standing — HIGH standing in the trade, and of honest business progression. Every printer who is a member of the Ben Franklin Club of America, or of a local Ben Franklin Club, and who is operating his plant according to the dictates of a recognized modern cost finding system should have, and can have, one of these Printer's Certificates — printer's "diplomas" — hanging in the window or on the wall of his office.

For further information regarding Printers' Certificates write to Secretary Ed. E. Sheasgreen, 1110 Harris Trust Building, Chicago, Ill.

✣ ✣ ✣

STEPS AND MIS-STEPS IN HOME NEWSPAPER MAKING

One of the reasons why some newspapers do not prove successful is that the publisher fails to realize the need of producing a real local paper.

A generation ago, the home weekly was the only newspaper received into the home of the average suburban resident and its coming was looked forward to with as much interest as a good supper after a hard day's work or the week-end trip to the village to hear the band concert.

The coming of the rural mail delivery and the reduced rates on dailies from the larger towns and cities, has brought about a decided change and the country publisher must meet these new conditions or ultimately be forced out of business. Not only must he provide his readers with "news while it is news," but he will find it necessary to study the columns of his urban competitor's daily, making constant effort to give his readers matter with decidedly more "local color." This he should be able to do easily, for being right upon the ground, his accounts of accidents, fires, weddings, etc., should in all cases be of greater value than those of the untrained local correspondents of the outside paper, and also his sources of information may be of a more reliable character.

Many times a local paper which is "run down," to use a common phrase, may improve its circulatory system by running a series of half-tones of local scenes or people of the town or vicinity. Notices requesting subscribers and others to send in suitable photographs might be printed occasionally and much interest stimulated in this way.

One of the ways in which some country publishers unmake their newspapers is by indiscriminate criticism! If there is one tool which the printer and publisher alike should use sparingly it is the mallet. Printer-publishers well know that this tool is very useful in certain cases, yet there is nothing in the office which will do more damage when improperly or too frequently used.

Just so in the newspaper field. Some publishers have the unhappy knack of bestowing a tap here and a "knock" there, until it is a wonder that they have a friend or subscriber left. Sometimes a daily can do this and "make good" through the support of some element or political party. The country newspaper, however, with its limited field and readers, most of them personal acquaintances of the editor, is entirely out of its element in the "anvil chorus."

By laying aside the metaphorical mallet and making every item of news accurate and of real interest to his readers, any publisher who has a love for his calling, should be able to make his way against all outside competition and continue to maintain a place in the community for himself and his paper.

—Roscoe E. Haynes, Fairport, N. Y.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

Elliott, Iowa, Feb. 3, 1913.

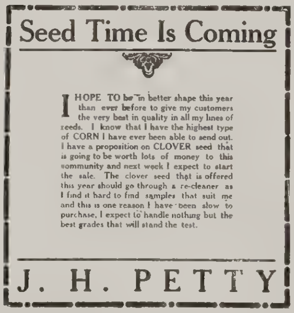
O. Byron Copper, De Soto, Wis.

Dear Sir: I am sending you with this letter a few samples of my ad-setting, which I would like to have criticised in your department in the National Printer-Journalist.

I have worked only three years in a printing office, and, of course, I do not know all in regard to the work. Any suggestions you may offer will be thankfully received.

Very truly yours,
O. E. BOOTH.

As a printer of only three years' experience, Brother Booth's ads are creditable. Contrary to the rule of novices, this contributor's work discloses its author's full appreciation of adequate white margins and masses and the simplicity of his specimens shows that he is on the right track. Four of his specimens accompany this paragraph. As regards the first two, nothing adverse need be expressed. In the main, the third is even more pleasing than the first two, although it offers an opportunity to bring out a thought valuable for all compositors to learn, and especially for beginners. The idea of dropping the rules in between the two short lines toward the top of this specimen is one common among compositors; but surely not one can give a logical reason for the act. To my way of thinking it is entirely wrong to thus separate two lines so closely related as the name of the dealer and his line of goods. Inasmuch as these two lines are not directly connected in thought with the balance of the ad, neither with that going before them, nor with that following, however, it would have been wholly right and proper, if they had been cut off with rules above and below, or by a complete border of rules. Also another little thing, which amounts to much in the appearance of composition where initials of a larger face are employed, is to see that the top of the initial and the type following them are perfectly aligned. And the fourth specimen (Exhibit 4) I am reproducing merely to illustrate the error of using too many rules in a single specimen. By studying this last ad closely, I believe Brother Booth can now clearly see that it would have been more pleasing and more forceful, had the rules below the principal display line and that above the signature been omitted.



Seed Time Is Coming

I HOPE TO be in better shape this year than ever before to give my customers the very best in quality in all my lines of seeds. I know that I have the highest type of CORN I have ever been able to send out. I have a proposition on CLOVER seed that is going to be worth lots of money to this community and next week I expect to start the sale. The clover seed that is offered this year should go through a re-cleaner as I find it hard to find samples that suit me and this is one reason I have been slow to purchase, I expect to handle nothing but the best grades that will stand the test.

CORN DAY

Saturday, December 21, '12

THE TIME is short to make arrangements for our Corn Show and I want to ask everyone to have a part in this 10th Annual Show. Now don't say I don't know as I have anything that will win a prize and quit at that. The man that has gotten the most out of those Corn Contests, is the man that has brought in the best corn he has and if it did not win he was right here to know what was reason and the next year he put in practice the things he learned and he has kept at it every year That is what brings success. Can we not depend upon you for a sample of corn and when the show is open to the public we want one of the best shows of good corn in Iowa. Elliott has that name all over the state, let us keep it.

✣ ✣ ✣

Newton, Iowa, Feb. 15, 1913.

O. Byron Copper, De Soto, Wis.

Dear Sir: I just started reading your department in the National Printer-Journalist this week. It is great. I am a new subscriber and think the paper the best ever.

Am sending you two papers under separate cover for review. We have a nice little shop here. Some good material and some junk.

All ads in the Christmas number were set by myself and one other man, with some assistance on the machine, it being necessary to distribute one side of each section before running another four pages. However, we got it out in two weeks' time, in addition to our job work and one other issue, so you can see we were certainly rushed.

Hoping to see your criticism soon, beg to remain,

Yours respectfully, J. G. EYERLY.

The regular edition of the Newton (Iowa) Record is a six-column, ten-page, all-home-printed paper. That it is a very creditable sheet can be seen from a glimpse at the reproduction of the delightfully clean and modest front page herewith reproduced as Exhibit No. 5. Nor is the Record's goodness confined alone to this first page. It possesses an abundance of good features, including besides an unusual amount of local news, a liberal aggregation of country correspondence and a pageful of short personal mention. In fact, this is so generally an excellent publication, that I am left with but one point anent which to find fault: the mechanical makeup (aside from the fine front page, as previously praised) is hardly in accordance with the "hoyle" of this department. As this contributor, on his own confession, is a new reader of this journal, it is no more than fair to explain what is meant by the language of this complaint: This department holds that the only correct way to make up a newspaper page is systematically, with all displayed matter arranged to the right hand side of each page, and graduated, beginning with the largest space in the lower right-hand corner, placing above this the next largest ad, and so on until the last column-top is reached with the smallest ad that is to appear on the page. Thus the maximum number of ads is brought into a position next to pure reading matter, without strained effort or cluttered, accidental effect. The ad-work on the Record is strong and forceful and the print a clean one. The holiday edition referred to by Brother Eyerly in the foregoing letter, consisted of three quarto sections, very creditably gotten up and replete with much good stuff, including many up-to-date advertisements, of which I select a number for reproduction (Exhibits 6, 7, 8), each of which shows clever workmanship.

Robinson, Kan., Feb. 7, 1913.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir: Under separate cover I am sending you a few samples of ads which I set, and were run in The Index.

Would like to have you criticise them if you think they are worth the space. Yours respectfully,

The dear brother printer who wrote the foregoing forgot to sign his name to it, but the ads are before me and I hope to do them justice even though I labor in ignorance of their author. But, I want to reiterate a word of warning right here to patrons who send me ad specimens or newspapers rolled. I have a dickens of a time getting such contributions reduced to a sufficient state of flatness for inspection, and as (like most men) I have a terrible temper, such specimens must be very pleasing, indeed, if I am dissuaded from landing upon them with expressions more or less bad and vehement. It sometimes happens, too, under such trying circumstances that my brain gets afire with vexatious thoughts, some of which are apt to be imparted through my finger tips to the paper upon which I am writing. Surely that's a fair warning and I sincerely hope that all who read may benefit. These specimens from the Robinson Index office came

Up-to-the-Minute Clothing for Men, Women, Misses and Children

MAY WE SAVE YOU DOLLARS?

HOW MANY CENTS MAKE A DOLLAR? "Why," you say, "one hundred cents make a dollar—always." That is the usual opinion. Yet we say that eighty cents can and often does equal a dollar. And that very frequently one dollar and twenty-five cents only equals a dollar. Of course, if you were to take a dollar into the bank for change you would get one hundred cents, but if you wish to change your dollar into merchandise you might get more or less than one hundred cents. Your dollar might become the equal of only eighty or ninety cents, or it might become the equal of one hundred and twenty-five. So, one dollar's worth is not always equal to another dollar's worth, and the difference is *where* you spend the dollar. Your dollar spent in buying Golden Rule Merchandise this fall will in many instances become more than a dollar. Every dollar you spend on a lady's coat or suit, for instance, buys you more than a dollar's worth, as exemplified by the following

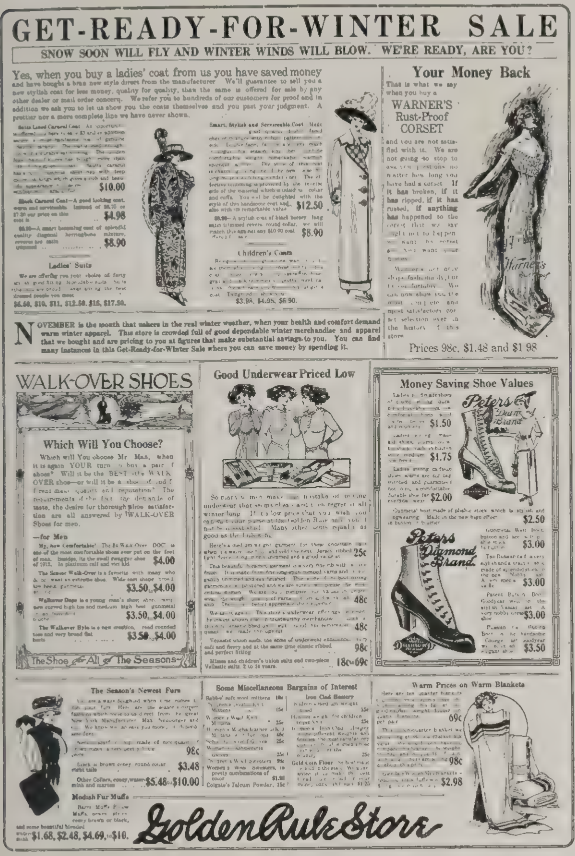
through the mails rolled, but, in spite of my exasperating struggle to flatten them, I am still unable to offer anything but flattering language, so overpowered are my senses with admiration. They say "music hath charms," and I believe real art — even the art of printing — hath its charms, also. I doubt if a past master of the art which this department aims to represent (much less my humble self) could suggest an improvement in the four or five beauties I am showing here (Exhibits 9 to 13). They resemble the ads in high class magazines more than those commonly met with in the country press, and their maker has my sincere congratulations upon his fine taste and skill.



GET-READY-FOR-WINTER SALE

SNOW SOON WILL FLY AND WINTER WINDS WILL BLOW. WE'RE READY, ARE YOU?

Yes, when you buy a ladies' coat from us you have saved money and have bought a brand new style direct from the manufacturer. We'll guarantee to sell you a new stylish coat for less money, quality for quality, than the same is offered for sale by any other dealer or mail order concern. We refer you to hundreds of our customers for proof and in addition we ask you to let us show you the coats themselves and you pass your judgment. A prettier nor a more complete line we have never shown.

$10.00

Black Caracul Coat—A good looking coat, warm and serviceable. Instead of $6.75 or $7.50 our price on this coat is $4.98

$10.00—A smart becoming coat of splendid quality diagonal herringbone mixture, reveres are satin trimmed $8.90

Ladies' Suits

$6.50, $10, $11, $12.50, $15, $17.50.

Smart, Stylish and Serviceable Coat. $12.50

$8.90—A stylish coat of black kersey, long satin trimmed revers, round collar, we will match this against any $10.00 coat $8.90

Children's Coats

$3.98, $4.98, $6.90.

Your Money Back

That is what we say when you buy a

WARNER'S Rust-Proof CORSET

and you are not satisfied with it. We are not going to stop to ask you questions no matter how long you have had a corset. ✣ ✣ ✣

Baker, Mont., Jan. 22, 1913.

O. Byron Copper, De Soto, Wis.

Dear Sir: Under separate cover I send you copy of Baker Sentinel, with which I have been employed for three years. You will remember me as the "chief bottle washer" of the Westby (Wis.) Times for seven or eight years.

The copy of the Sentinel has an ad regarding the parcel post. We are trying to get the merchants to use the parcel post in their business, and I have succeeded in getting one of the leading stores to advertise that they will deliver by the parcel post, as the ad will show. What do you think of the scheme? Have been getting the National Printer-Journalist, and your articles are O. K.

Have a fine ranch near here, taken as a homestead under the five year law. The new three-year law gives me option of proving up now, or any time within the next two years. The West is O. K. Would like to see you quit the effete East and come out where the ozone is real elixir of life, where the coyote and the jack rabbit have their own way, where the politicians are "green" at the business, and where you can get a dollar easier and spend it quicker than any place on earth. Regards and yours truly,

F. S. BUNN.

I can say to dear Brother Bunn, who used to be one of my "esteemed Vernon county contemporaries," that there are few places in the great west, from the rocky canons of Colorado and the vast deserts of Utah, across country through the great irrigated fields of Idaho, through the immense pine forests and bleak plains of northern Montana to the deep wind-swept snow drifts of North Dakota, and thence to the parched, but fertile, valleys of Washington, between the Cascades and grand old Rockies, clear over the range to the verdant sun-kissed slopes of the Pacific coast country, that I have not dwelt in for a time. I have drank in there some of that ozone "which is the real elixir of life," according to Brother Bunn, but which I found sometimes mixed with choking dust, again so far below zero in temperature that I had to turn my back upon it in order to get my breath at all, and still again so thick with fog and moisture that one could cut it with a knife. As to coyotes and jack rabbits, they little interest me, and in North Dakota and Washington and Idaho I found the politicians quite as adept at graft and deceit as I have found them anywhere. He is right, though, about the dollar. As for the Baker Sentinel, I note it has a distinctive heading, carries a lot of nice, clean ads set in ideal faces, and contains also a decent quantity of good reading matter. The print is commendably good, too. But there are some things that ought to be changed for the better. One of these is the deplorable practice of running displayed ads on the front page. Another is the absence of an editorial department. Still another is the somewhat unsystematic method of makeup which is being followed. Brother Bunn's expressed scheme to induce local merchants to use the new parcels post privileges, and to advertise it to their customers, strikes me as very sensible, and surely aligns with the government's intent and purpose. It seems to me that during the busy seasons in the rural districts the farmer people will readily resort to the mails and the telephone and the parcels post as means of doing their shopping, provided they are assured by their local dealers that such orders will be carefully taken care of. And, of course, it naturally follows that, the merchant's most economical medium of information is the local newspaper, through which he may not only announce his willingness to fill such orders, but may also (as this Baker merchant has done) give the parcels post rates and from time to time the new arrivals at his store. Thus the parcels post may become indirectly a benefit to newspaper men, because it will render the store's advertising a necessity; but, inasmuch as nothing among the country printer's products, except stationery, is mailable under the new method, parcels post is not directly much of a boon to the great mass of printer-journalists. It is a pleasure, indeed, for me to hear from Brother Bunn, especially so since the word is favorable as to his success and happiness. And I wish to make myself clear on the point that I heartily approve of his scheme to get local merchants interested in the parcels post to the extent of inducing them to do more thorough and persistent advertising in the newspapers.

* * *

Nampa, Idaho, Feb. 21, 1913.

O. Byron Copper, De Soto, Wis.

Dear Sir: I am sending you under separate cover one copy of our New Year's edition, also a copy of February 14. Although I am late in sending the copies in, I hope you will find time to glance over same and give us your criticisms in the next issue of the Journalist.

In getting out the New Year's edition we endeavored to give our readers and patrons something different from the regular holiday colored supplement.

Thanking you in advance for any and all pointers, we are,

Very truly yours,
THE NAMPA RECORD,
Per J. A. Pollitt.

The annual New Year's number of the Nampa (Idaho) Record is, indeed, something different from the ordinary special edition. It is a large pamphlet, each page containing four columns of regulation measure. The cover is neat and attractive, having been produced by two printings, brown and green. Many important subjects were specially featured in this issue, without detriment to the regular weekly grist of news. Such subjects as Nampa's growth, development of the dairy industry, correct methods of pruning trees, Idaho creamery business, new railway projects, flourishing condition of local schools, etc., served as material for the special features in this souvenir edition. I mention them thus briefly, as a hint valuable to other publishers who may have a special edition in view. The typography of this number of the Record was tasteful, every head and the makeup of every page showing the touch of a master printer. The ads, too, were very nicely treated, in general, and good presswork made the high degree of perfection in this job complete. Exhibits 14 and 15 are a couple of the most creditable examples from this edition. In the last of this couple I am afforded an excellent exemplification of the exquisite effects possible by following the extreme of simplicity. Brother O. E. Booth, with the review of whose ad work this installment begins, will find in Exhibit 15 a striking contrast (despite the similarity) to his Exhibit 4, the beauty of which is killed by rules. That the regular editions of Brothers Hill & Pollitt's paper are quite as extraordinary as this special edition on which I have been commenting, is plainly in evidence from the first page, herewith reproduced as Exhibit No. 16. The makeup man has a very agreeable appreciation of typographic beauty and balance. And, what is becoming more gratifying to me every day I remain a printer-journalist, is the fact of the evidence that the ideal in makeup of the Nampa Record is not confined alone to the front page, but permeates the whole sheet, each and every page being made up right in accord with the ideas of this department of the National Printer-Journalist. Somewhere I have read that a well polished heel is a better mark of character than a well polished toe, and I've begun to see that this will apply to a newspaper, too. A well-made-up paper throughout all of its pages is a truer indication of ability, interest and conscientiousness on the part of its maker than is a well-made-up front page only. What fine results are attainable by following out this system of makeup is cogently demonstrated by the reproduction of another full page from this publication (Exhibit 17). The print of the Record (that crowning glory of any good newspaper) is superb, and the ad-work (as may not be wholly evident in the page repro-

duced as Exhibit No. 17) is really at times daintily perfect, as I will aim to prove by reproducing another couple of specimens (Exhibits No. 18 and 19). This perfection so apparent in these examples is achieved through adherence to three prime essentials in modern ad composition, namely: First, correct display (which is giving prominence to the most important thought). Second, simplicity of style and design (which is pursuing at all times, the course that offers the least resistance, thus conserving time, energy and materials). Third, the reserve and proper distribution of enough white space to relieve congestion and by the contrast between black and white (or, in the masses of type and white paper, it is really a contrast between gray and white) lending a maximum of force to the various masses. It would be an unpardonable oversight to close this review without commenting upon the excellence of the contents of this sheet, and the work of its editor, M. D. Polk, whose proficient pen probes a multitude of subjects, none of which seem to dull its point nor retard its smooth progress through the paragraphs. In other words, Brother Polk writes as from a broad store of knowledge, gathered through rich experience and deep thinking. I congratulate him on the goodness of his editorial page.

Keep Your Money In Idaho

Buy Your SEEDS from an Idaho Firm who are specializing on Home Grown Seeds.

Why Send Your Money East For Seeds

When You Can Get The Cream at Home?

Carloads of different varieties of seeds are grown in Idaho for Eastern Seed Houses—We select the cream of this for our home trade. This is the quality you get when you place your business with us. We are here to assist the Idaho Farmer in building up Idaho. If we could not do as well as Eastern Seed Houses we would not ask for your business.

We can and do meet all Competitors. A trial order is all we ask.

We specialize on pleasing our customers.

SEED WHEAT

Have you a good strain of Spring Wheat? We have a limited supply of Saskatchewan Red Fife wheat. Seed shipped direct from Canada two years ago, raised here last year, yielded 70 bushels per acre. Can you beat that?. ¶We advise all farmers to get a start in this seed.
Price per hundred pounds $3.00. Larger quantities special price.

NEW KERSHON OATS One of the earliest oats grown and is sometimes called 80 day oats, as it has ripened in 70 to 80 days. It is the very best variety to grow in the mountain or short season districts. The plant is vigorous but of a dwarf habit, short straw. Our oats are Idaho grown, maturing in 70 days last year and yielding 65 bushels per acre. Price per pound 10c; 3 pounds 25c, 100 pounds $3.00, f. o. b. Boise.

OUR SPECIAL OFFER TO READERS OF THIS PAPER.

For every Dollar order for garden or flower seed, we will include:

Our Stock is all New and Fresh and Tested for Germination.

No. 19

✢ ✢ ✢

To James Wells, author of those creditable verses in the North Georgia Citizen of Dalton, Georgia, am I indebted for the receipt of several copies of that excellent publication, together with a two-color slip, being a reprint of my late review of the Citizen, which has been wisely put to use as an advertisement by the Citizen makers. My attention is called to an innovation in the setting of the editorial page, which is now made up in five columns of about twenty ems in width, I should judge, and the entire great page of regulation seven-column size is filled exclusively with editorial matter, including Brother Wells' column of pleasing verse. T. S. Shope is editor of this good sheet, with T. S. McCamy associate. Their work is extraordinarily fine. I imagine that the forebears of at least one of these editors must have sprung from the Emerald Isle of Wit, for who else than an Irishmen could write such gems as these:

> The Rome Tribune-Herald says there is no postoffice in Hades. Well, then, where in the thunder will the republicans get their mail?
>
> The Macon Telegraph asks if there is anything real new? If there is, we know of no one more afraid of it than the esteemed Telegraph.

But just because I have quoted only these, it must not be concluded that the North Georgia Citizen's editorials consist exclusively of short paragraphs. Quite to the contrary, there are always effusions of considerable length (and depth) on subjects of gripping interest. One of these subjects is "Capital Punishment," and I am gratified to note that this live southern newspaper is against this disgraceful relic of the days of savagery, which some states of this glorious old Union still allow to be enforced within their borders.

* * *

Without intended sacrilege, I want to explain that this department is somewhat like the Master's idea of the Kingdom of God —" the last is sometimes first, and the first last," in receiving my attention. This condition arises through no fault of favoritism, but merely by accident. And so, sometimes, as at present, as I pick off a specimen from the pile of papers waiting my attention, and find the date thereof four or five months old, I am filled with an apologetic inclination. Now, here's this copy of the Iron River-Stambaugh Reporter (Iron River, Mich.) dated December 27, 1912, and containing information of a matter so important that it should have received timely notice here, but which by chance has been unnoticed until this month. I am glad to say that the matter of which it bears tidings is of sufficient importance, however, to warrant fitting comment even at this late date, and that is the fact that the Reporter's editor, Patrick O'Brien, has occupied the editor and publisher's seat in the same office for a full quarter of a century, and many were the kind tributes showered upon him as a mark of the celebration. One of these, in verse, and from the pen of a contemporary, I cannot forego repeating:

Christmas Greetings to Ye West Side Editor

(Contributed)

Twenty-five years a journalist
And pushing the same old pen,
For the same old weekly quarto,
For the good of the world. Amen.

'Tis a record for Iron County,
A knock-out blow, forsooth;
No wonder the silver tinges your hair
Tho' you came in the bloom of youth.

Tho' you came with ambition written
Upon thy smooth, fair brow;
Tho' you came the world to conquer,
And you conquered—God knows how.

Your fight has been hard, dear Paddy,
An uphill fight, 'tis true,
But you dared to do or die, Pat—
And you've always been true blue.

We've bandied words with you, Paddy,
Through many a column's space;
We've quarreled, and fought, and scratched,
and bit—
But you've always been an ace.

You ever came back one better,
And you never cried "enough,"
Tho' we handed you many a bitter pill
And many a "pie" that was tough.

So, now that you have endured us
For this score of years and five,
We're thankful to say it, Paddy,
We're glad that you're still alive.

May the useful years before you
Hold better things still in store,
And "God be with you," Paddy,
Till we meet in the lists once more.
—Crystal Falls Diamond Drill.

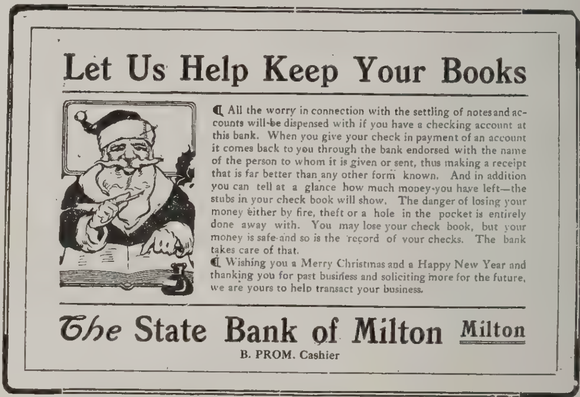
A copy of the Milton, N. D., Globe brings abundant evidence that the blessings of correct makeup, good impression, up-to-date material, clever editorial work and thorough newsgathering continue to be enjoyed by this good, long-time friend of "Newspaper Criticisms." One of the pleasing bank ads in this publication is being shown herewith as Exhibit No. 20.



Let Us Help Keep Your Books

¶ All the worry in connection with the settling of notes and accounts will be dispensed with if you have a checking account at this bank. When you give your check in payment of an account it comes back to you through the bank endorsed with the name of the person to whom it is given or sent, thus making a receipt that is far better than any other form known. And in addition you can tell at a glance how much money you have left—the stubs in your check book will show. The danger of losing your money either by fire, theft or a hole in the pocket is entirely done away with. You may lose your check book, but your money is safe and so is the record of your checks. The bank takes care of that.

¶ Wishing you a Merry Christmas and a Happy New Year and thanking you for past business and soliciting more for the future, we are yours to help transact your business.

The State Bank of Milton Milton

$4.50 to $40.00

No. 24

✣ ✣ ✣

In point of good contents, a clean front page and a creditable print, the Tomah, Wisconsin, Monitor-Herald proves itself a worthy newspaper. If its makers will read instructions as regards the proper makeup of all pages of a newspaper, as offered elsewhere in this installment, and apply those suggestions in their own work, the improvement will be appreciable.

✣ ✣ ✣

The Humboldt (Iowa) Independent is regularly an all-home-print six-column quarto, and is, in the main, a fairly creditable weekly. In one of its early January issues a four-page advertisement was issued by the Independent, not divided into four separate pages, as is generally done, but complete in one gigantic four-pager. For such a ponderous thing, the composition on this big ad was well done.

✣ ✣ ✣

The upper portion of the first page of the Thief River Falls (Minn.) Times shown here (Exhibit 25) will suffice to demonstrate its beauty. Its editor and publisher reverts to a once popular practice by writing alliterative head-lines for two stories in this issue. A freakish, but none-the-less attractive, advertisement from this paper is reproduced in Exhibit No. 26.

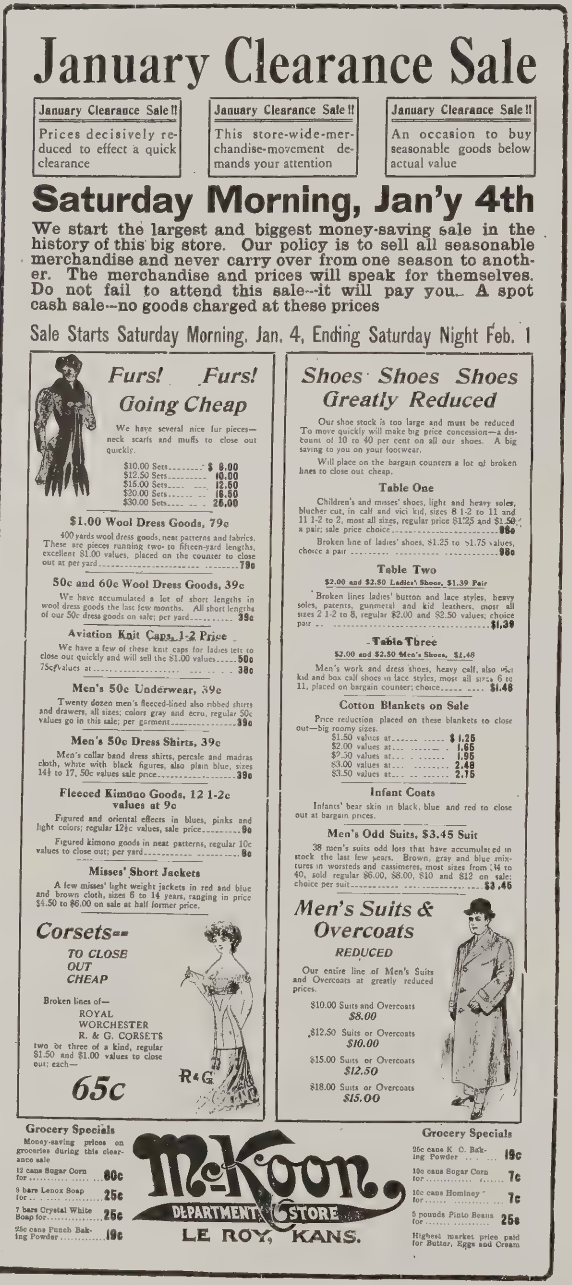
home-print, but it contains even more reading matter worth while than some larger sheets. Editor George H. Rhea is evidently a devout man, judging from the tone of his editorials and the publicity given generally to local religious work — and this is not written against him, I assure you.

✣ ✣ ✣

Nowadays Kansas is becoming universally recognized as a great state. And, as is befitting to such a distinction, Kansas is the home of some great newspapers. Some of these are so well advertised that they need not be mentioned here to be remembered. One of the latest contributions to this department from Kansas is this Le Roy Reporter, a six-column quarto weekly with ready-printed interior. Notwithstanding that the mechanical makeup of the Reporter is almost entirely wrong in every detail, from its displayed-ad-littered front page clear through to the back page, yet I'm not going to exclude it from the list of great Kansas papers. The contents are excellent, typography modest and highly pleasing, presswork good and the work of Editor Glick Fockele eminently creditable. His handling of a news-story is able and his short editorial paragraphs veritable gems, as the following few quotations will prove:



January Clearance Sale

January Clearance Sale !! Prices decisively reduced to effect a quick clearance

No. 29

It is our notion that common sense is not so common after all.

To see yourself as other see you, don't look in a mirror. Run for office.

The place where women always have perfect figures is in the popular novel.

Go into any printing office where there is a gasoline engine and you will find a crank.

It is a nice fiction to say that a spinster has been disappointed in love, but many a married woman will deny it is possible.

Another thing the printers in this office are thankful for: Both preachers and the school superintendent furnish copy that can be read.

Contrary to the general church idea, kneeling at the altar does not necessarily alter a man's habits.

An honest confession may be good for the soul, but it is mighty hard on the reputation sometimes.

Says Uncle Gav: Fine feathers do a heap to improve the looks of the birds, but don't help the taste of the white meat.

Green is said to be very restful to the eyes, but too many men never look at anything green except the cover of a poker table.

A couple of good ads are taken from this sheet, too, and shown herewith as Exhibits 28 and 29.

Summerfield, Kansas

No. 30

I realize that I am consuming a lot of space this month with reproductions, but, since this Summerfield Sun (also of the great Sunflower State) is so positively ideal in its mechanical makeup, throughout, and therefore so forcibly illustrates the ideas of this department as regards that feature of newspaper-making, I cannot resist the temptation of reprinting here the front and back pages (Exhibits Nos. 30 and 31). With the issue of January 16, last, Orr & Orr, brothers, assumed control of the Sun, former editor H. B. Finlayson retiring. The Sun in many respects is a praiseworthy little sheet, and this department wishes its new publishers much success.

A Good Suggestion

No. 31

* * *

In last month's installment of these paragraphs I had occasion to mention the Christmas special of the Forest Grove (Oregon) Press, and the good things which I was then and there inspired to write return to me now as I view a copy of the regular edition of the same excellent weekly. I can't describe the artistic front page on this publication so well as I can reproduce it, so here it is (Exhibit 32). I ask the reader to note particularly the perfect balance in makeup, and the delightfully correct heads. Editor G. Edwin Secour still merits this department's compliments for his high class work, and all other features are up to the eminent standard set by the editor.

SUBSCRIPTION RATES—In the United States, Cuba and Mexico, $2.00 per year. Canada, $2.50 per year. Foreign subscriptions, $2.85 per year.

CHICAGO, MAY, 1913

Sources of information have been so multiplied in the past half century, and are so varied that it is sometimes debatable, as one cannot possibly utilize all, which to choose and which to forego.

The conventions and expositions in the lines of printing and publishing have become so numerous and of such high character, that it seems a hardship not to be able to avail one's self of very many of these, yet were one to undertake to be a member of all useful organizations or to share in all conventions and attend all expositions, it would take nearly all one's time and involve an expense that would not be justified.

Yet, every printer and publisher needs all possible knowledge to keep up with the rapid advances that are being made. Happily, a technical or trade press has been developed, most excellent publications established, covering, as a whole, every possible branch and source of knowledge so that one need not deny himself anything that is important to any branch of the callings of typography or journalism.

The investment of ten dollars a year, in four publications devoted to printing and its different branches and to newspaper making, will furnish one all that is worth while or that is to be secured in any way, at one-fiftieth part of the cost of attending conventions and expositions. This does not mean that one should neglect membership in, or attendance upon the conventions of associations directly devoted to or in touch with his calling. These are means of united action, besides there is inspiration in the personal touch, association and comparing of views.

Conventions bring out new thoughts, opinions and valuable experiences. As to expositions that show all the wonderful new machines, inventions, contrivances and methods, seeing is always more satisfying and informing and convincing than can be the mere reading of descriptions, though, with the perfection of the modern art of illustration, a much clearer comprehension can be secured now from the pages of the journals than was possible at any other time in the past.

In any event, the journals are needed for the preserving of the knowledge — enlarging, explaining and bringing it home for application. Conventions and expositions are expensive, the latter costly alike to the exhibitors therein and to the attendants thereon. There is no doubt but that in many instances the expending by manufacturers or dealers in the trade journals equal amounts expended at expositions would bring a hundred-fold greater results, provided proper care were taken in illustration and making clear by description.

Yet, we would not discourage exhibitors. All methods must be used, but it should be remembered that displays at expositions will never take the place of advertising and that the proper, if not the only, way to secure full or permanent results from exhibits or sufficient returns to justify the great expenditures, is to exploit these exhibits in the trade papers, using the exhibits as the basis of new, interesting and enlightening advertisements.

A good deal of attention is given in this issue of the National Printer-Journalist to conventions and to expositions, past and to come, because we believe in them. Yet these can be made too costly, especially when indulged in to the neglect of the more permanent and useful distributors of knowlegde, the journals that are all the time devoted to the promulgation of all that can improve or benefit the members of the calling and to the promotion of the installation and the useful employment of all improvements for the securing of greater efficiency, economy and better and larger production.

✣ ✣ ✣

We were proud of our April issue of the journal and have received highly appreciative compliments thereon, for the great amount of valuable matter contained therein that had to do with the profitable, scientific and efficient conduct of both the mechanical advertising and the business management of printing offices.

The issue was equal to a whole volume of joint authorship by experts on the practical departments of a combined business and industry, that has been in the past too neglectful of systematic ascertaining of cost, proper estimating and wise charging, as well as of economy and carefulness as to equipment and orderly, time-saving arrangement and adaption.

The Managing Editor of the Navy

One of the best talks at the banquet of the combined daily press associations in New York, April 24, at the Waldorf-Astoria, where seven hundred and twenty newspaper men were present, was made by Josephus Daniels, Secretary of the United States Navy. "He talked about the navy in newspaper terms," says the New York World, "and talked about the newspaper in naval terms." He called himself "managing editor of the navy," and declared that Abraham Lincoln and Woodrow Wilson gave peculiar evidences of statemanship in that both of them chose newspaper editors to be Secretary of War. Since the chief job of a managing editor is "to know where hell will break loose next and have a man on the spot," Secretary Daniels said the editor is perfectly equipped for the secretaryship of the navy.

The importance of the newspaper in the service of the common good was discussed at length by Secretary Daniels.

"No Policy of Concealment"

"Speaking for the new Administration at Washington," said Secretary Daniels, in this one serious reference to the Wilson Administartion, "let me say it has no policy of concealment. It appeals not to any group or class, but its appeal is to the whole people of America, and it realizes that it will win their approval only as it carries out pledges and meets the just needs of all the people who oppose privilege and demand only a fair chance. It invites criticism in all that it does. It wishes to have the searchlight of publicity turned upon all its acts."

Editor Daniels has long been a subscriber to and reader of the National Printer-Journalist, one of this paper's warmest friends and earnest in his commendation of the work that it has accomplished for the press of the Nation. He is a member of the National Press Association and a speaker at the annual conventions. His paper is the News and Observer of Raleigh, N. C.

In the early part of the dinner Secretary Daniels received a long-distance telephone message from his home in Raleigh, and when he returned to the dining room he informed his friends that misfortune has overtaken him. His newspaper plant had been entirely destroyed by fire. The plant was one of the finest in the South, and of the equipment only one linotype machine was saved. Secretary Daniels said that The News and Observer would appear as usual the next morning, the other Raleigh papers having put their plants at his disposal. The Secretary left for Raleigh at midnight.

Secretary Daniels was the principal speaker of the evening, and when he was introduced his friends of the newspaper world jumped to their feet and cheered him.

Mr. Daniels began his speech with a reference to the appointment of Walter H. Page as Ambassador to the Court of St. James. Mr. Page was once a newspaper man in Raleigh, N. C., and the Secretary of the Navy told what a fine editor Mr. Page was some twenty-odd years ago. When Mr. Page left Raleigh for the North, Mr. Daniels succeeded to the Raleigh business.

"I have for thirty years been continuously engaged in sea service," said Secretary Daniels, "and my present position is my first short assignment in these years. For that long period I have been in command of a 'gunboat' on the sea of journalism, and a rough, stormy sea it has been at times, as all newspaper men will appreciate. A few weeks ago the Commander in Chief of the American Army and Navy decided that a man who had had thirty years of sea service ought to be detailed on shore, where he could make assignments for the officers of the navy.

The Newspaper Navy

"During the years that I have been commanding a 'gunboat' on the journalistic high seas, my friend, Melville E. Stone, has been in command of a dreadnought: William Randolph Hearst has been in command of a flotilla of torpedo boats, firing simultaneously from New York, Boston, San Francisco, and Los Angeles, not to speak of points in the interior; Ralph Pulitzer has been on the outposts and with hydroplanes able to drop bombs into the camps of the real enemies of true democracy; Col. Nelson has sought by the proper employment of submarines to blow up the old parties, having as his First Lieutenant the gifted Medill McCormick, while Frank Munsey has been the Paymaster General of this new flotilla of submarines which carried terror into many hearts toward the ides of last November; our venerable friend, Col. Henry Watterson, ranking Rear Admiral of the old Democratic fleet, commanding the battleship Kentucky, and sailing under no orders except those issued to himself, is the most brilliant and audacious naval officer since the days of John Paul Jones, to whom, in his adventurous spirit and enterprise, he is akin; always gallant, too, on the high seas is our distinguished Admiral Felix Agnus, commanding the cruiser American, who received his sailing orders a quarter of a century ago, and has led the old Republican fleet into many a safe harbor.

"I hope I will be pardoned for saying that we have had two Presidents in the last half century who gave peculiar evidence, from an editorial point of view, for the wise exercise of the high duties of the greatest office in the world. I refer to Abraham Lincoln and Woodrow Wilson. I say this, not because of the greatness of the martyred President, nor of the scholarship of our present Executive. I give them this high place solely because they are the only Presidents who knew exactly where to go when they came to name a Secretary of the Navy. Other Presidents have supposed that this training for this high office was to be found in law or in business or in seafaring. These two Presidents understood the real needs of the navy. They believed in the principle in "Pinafore";

"Stick to your deck and never go to sea
And you all may be rulers of the Queen's navee."

Managing Editor of the Fleet

"They understood that what is needed was not so much a man who could talk in the sailor vocabulary of starboard and port, (which by the way have been relegated into innocuous desuetude with the full approval of Admiral Dewey and the General Board,) but what really was called for at the head of the navy was a managing editor, one who understood how to make assignments, and to put the right men in the right places at the right time.

"Why do I single out Lincoln and Wilson for my highest praise? It is because each went outside of the field of politics and business to secure an editor as Secretary of the Navy. Arthur also chose a newspaper man in William E. Chandler, but the distinguished New Hampshire Senator had attained more reputation as publicist than as editor, while Gideon Welles and the present incumbent came direct from the sanctum to become managing editors of the Navy.

Program and Itinerary National Press Association

Twenty-eighth Annual Convention, Colorado Springs, Colo., June 16 to 23, 1913

Monday, June 16: The Colorado State Editorial Association will be in session, and will appreciate the attendance at their meetings of any who may be in the city in advance of the convening of the National Association.

Tuesday, June 17: Morning arrival of delegates, registrations, and general opening session, Chamber of Commerce rooms.

2:00 p. m.—General and department sessions.

Women take trip to Summit of Mount Manitou via Scenic Incline; spend afternoon in Mount Manitou Park.

8:00 p. m.—Smoker at Antlers Hotel or Chamber of Commerce.

Wednesday, June 18: 9:00 a. m.—General session of convention.

Women take high drive.

1:30 p. m.—Meeting of the Cost Congress department. Meeting of the Daily Paper Department.

5:00 p. m.—Union Printers' Home. (Definite program to be advised later.)

Thursday, June 19: 9:00 a. m.—Meeting of the Department of Journalism.

1:30 p. m.—Final session of the general session.

3:30 p. m.—Street car ride to Stratton Park. Visit South Cheyene Canon and Seven Falls.

5:30 p. m.—Outdoor picnic dinner in the canon.

7:30 p. m.—Band concert or dance at Stratton Park.

Friday, June 20: Sightseeing. Crystal Park auto trip. Pike's Peak on Cog Road; Cave of the Winds.

(Party will be divided, one section visiting one of these points of interest while the others are taking in some other, allowing all to take at least two and perhaps three of these trips.)

Saturday, June 21: 9:00 a. m.—Special train to Cripple Creek over the "Shore Line." All day. Details as to lunch in Cripple Creek to be advised later.

Sunday, June 22: Rest, or spend day as each individual chooses.

Monday, June 23: 9:00 a. m.—Automobile ride, covering the following points:

Garden of the Gods, residence section Colorado Springs, Palmer Park, Mushroom Park, Ancient Cliff Dwellings, Manitou and Colorado City, Ute Pass (convict-built highway) to Cascade, Broadmoor, Canon City convict-built highway, and other points of interest.

6:00 p. m.—Leave for Denver.

This program will probably be so arranged that departure for Denver will be taken on Sunday evening instead of Monday.

George E. Hosmer, of Denver, executive committeeman from Colorado, under date of April 4th, writes entertainingly as follows:

"You will notice on Wednesday a visit to the Union Printers' Home is arranged. Exactly what this will be has not been decided, but a letter from President Lynch of the International Typographical Union says that when their board meets at Colorado Springs in May, they will plan some definite entertainment.

"The superintendent indicated that it would probably be a dinner. Beginning after the close of the session on Thursday we have a very large entertainment program, including a picnic dinner in South Cheyenne Canon. The Friday's program is complete except that no contract has been signed with the Cog Road, although they have verbally promised. Their manager has been in the East for several months. All of Saturday will be taken by the trip to Cripple Creek. This is the first place where there is any possibility of expense to the members while out as the guests of Colorado Springs and the Colorado Editorial Association. So far we have not been able to get a definite promise regarding lunch at Cripple Creek, but I hope to arrange for one in one of the big mines there.

"In Denver the city has contracted to give an entertainment at its auditorium, which, in addition to a musical or other program, will consist of a demonstration of the quick change that can be made in the building from a theater seating 4,000 to an auditorium seating 15,000. The Denver Press Club wants to give some sort of an entertainment for the association, and the Denver Motor Club will provide an auto trip to one of the city's mountain parks and a ride through the city, showing Denver's beautiful boulevard and lighting system and parks.

"The headquarters of the Association will be (while in Denver) at the Albany Hotel, which has made us a rate of $1 for room without bath, and $1.50 with bath. This hotel also expects to give an entertainment to the visiting editors. I do not think it will be possible to see and do all the things which they will want to see and do in Denver in less than two days. We have then arranged for a special train to leave Denver in the morning at 8:30 or 9:00 according to the desires of the Association and spend a day visiting the rich agricultural section of Northern Colorado, making short stops at Boulder, Longmont, Loveland, Fort Collins and Greeley; taking lunch either at Fort Collins or Greeley. This trip is without expense to the member of the Association, being complimentary from the towns visited and the Colorado Editorial Association.

"The party will stop over night at Fort Collins and the next morning the members of the Association will go by auto to Estes Park, which is one of the most beautiful spots in the Rocky Mountains. The Stanley Hotel there, whose regular rates are from five to ten dollars a day, have made a rate of three dollars a day, American plan, for a two-days' stay at the park. The auto hire from Fort Collins to Estes Park in seeing the park will be $5.00 per person. This makes the total expense $11.00 per person for board and auto hire for the two days. The hotel accommodation at Fort Collins before going to the park would be $1.00 to $1.50 for rooms, with meals at 35 cents and up.

"This arrangement will, if the party should arrive in Denver Sunday evening, and spend Monday and Tuesday in Denver, make the agricultural trip on Wednesday and spend Thursday and Friday night at Estes Park, would bring the party back to Denver Saturday afternoon at about 1:30. You will notice that the total expense of the trips through Colorado, including two-days' auto trip, outside of hotel expenses during the meeting and while in Denver, is less than $15.00 per person."

HOTEL RATES

The Antlers—Room without bath, occupied by two people, $1.50 per day each person.

Room with private bath, occupied by two people, $2.00 and $2.50 per day.

The Acacia Hotel—Room without bath, one person $1.50. Room without bath, two persons, $2.50. Room with private bath, one person, $2.00. Room with private bath, two persons, $3.50.

New Kennebec Hotel—Room, single person, $1.00. Room, two persons, $1.50.

The Joyce Hotel—Room, without bath, one person, $1.00. Room with bath, per person, $1.50.

Alta Vista Hotel—Room without bath, one person, $1.00. Room without bath, two persons, $2.00. Room with bath, one person, $2.00. Room with bath, two persons, $3.00 to $4.00.

Hotel Rex—Room, one person, from 75c to $1.00. Room, two persons, 50c to 75c per person.

The Almo Hotel—On the basis of $1.00 per day and upwards.

The rates are on the European plan.

Cost System Department Congress

H. S. Neal, Chairman

Mr. B. B. Herbert, National Printer-Journalist,
Chicago, Ill.

Dear Mr. Herbert: In regard to the information which you ask for, I must say that I have not as yet received all the acceptances from those I have asked to take part in the program, but feel confident that they will do so.

The program for this session will be as follows:

"The Cost System and Efficiency," E. E. Sheasgreen, Secretary Ben Franklin Club of America.

"The Cost System and Credits," Frank Barhardt, Kansas City.

"Twenty Minutes with the Cost System," Fred Abernathy, Denver, Colo.

"Costs of the Country Newspaper," Chas. H. Browne, Horton, Kans.

I have selected as secretary of this session Mr. Gilmore, of Gilmore & Rush Company, Colorado Springs.

In arranging this program I have selected men whom I know are practically fitted to present these questions in the best manner possible. Of course, you realize this is subject to minor changes.

I should be glad to receive a copy of your publication, as well as that of last month, with bill attached.

Yours sincerely,
H. S. NEAL.

* * *

Program Country Weekly Department

Frank O. Edgecombe, Signal, Geneva, Neb., Chairman.

"The Production of a Profitable Country Newspaper," A. B. Crampton, Citizen-Times, Delphi, Ind.

"The Ad Club in Our Town," C. E. Curtice, Miner and Mechanic, Neosho, Mo.

"The Next Step in State Organization," E. R. Purcell, Chief, Broken Bow, Neb.

"Uncleanliness vs. Cash in the Printing Business," Walter Walker, Daily Sentinel, Grand Junction, Colo.

"The Country Editor's Divorce Problem," Prof. Merle Thorpe, Department of Journalism, University of Kansas, Lawrence.

Question Box and Round Table discussion, to be conducted by the chairman.

J. Byron Cain of the Belle Plain, Kans., News, has been appointed secretary of the department.

Journalism — Educational Section

Charles Dillon, Department of Industrial Journalism,
Kansas State Agricultural College, Chairman

First session of the Educational Section Tuesday afternoon, June 17, 2 o'clock.

"Accuracy in Newspapers," Fred R. Marvin, Editor of the Pueblo Leader.

"Liberty of the Press," Judge Smith McPherson, United States District Court for the Southern District of Iowa.

Discussion of both addresses will be welcomed. Judge McPherson's address, especially, will be of surpassing interest to every editor, and every editor will be invited to present his views or to ask questions. Few subjects have engaged more attention in the last year than the subject of which Judge McPherson is to speak.

Second session of the Educational Section Thursday morning, June 19, 9:30 o'clock.

Charles Dillon, Chairman.

"The Dignity of Journalism," Merle Thorpe, Professor of Journalism, University of Kansas.

"What Newspapers Can Do," George H. Perry, Director of Exploitation, Panama-Pacific Exposition.

"The Unhappy Humorist," Irvin S. Cobb, Humorist of the New York World, author of a good many things you've laughed over in recent years.

Other fine attractions promised.

* * *

JOURNALISM SUMMER SESSION

Course at the University of Missouri Will be First of Its Kind in Any School

For the first time in any university or college, instruction in journalism is to be given as a part of the regular summer session of the University of Missouri. This will give an opportunity to many persons, both in and out newspaper offices, who are unable to attend the regular session of the university.

The courses in journalism will be supplemented as in the regular sessions of the university, by practical work on the University Missourian, a general newspaper. All of the work of editing and writing for the paper will be done under the direction of members of the faculty of the School of Journalism by the students taking the courses.

Three courses dealing with the gathering, writing and editing of news and special articles will be offered. The course in news gathering consists of class discussion and lectures on news, its value, methods of gathering, treatment and classification and actual practice in writing. Reporting, the second course, gives the students laboratory practice in the gathering and writing of news and special articles for the University Missourian. The course in copy reading consists of copy editing and headline writing. All copy written by the students is used by the students of this class for discussion and is then edited under the direction of a member of the faculty.

The requirements for admission to the summer session are the same as to the regular session. Credit for work is given both in the School of Journalism and the School of Education of the university.

* * *

Mr. Paul M. Nahmens resigned as assistant secretary to the Milwaukee Franklin Club and the State Club on April 1st, and connected himself with the Broadway Press, formerly the Pollworth Press, in the capacity as president and general manager. He had held his position for two years and nine months and was successful in creating a larger membership and was instrumental in organizing a State Club and spreading the gospel of costs to printers throughout the state, having given numerous cost demonstrations and installed cost systems in quite a number of offices. It was regretted that he resigned, but says that he will still be able to give some time towards organization work, as he is a firm believer in organization and co-operation.

Concerning the Newer Punctuation

By Grace McKinstry, Fredonia, N. Y.

"Mamma, I know how to punctuate," said a little girl, who had begun school. "If you want to write, 'Who is that?' you mark a button-hook at the end of it, and if you want to write, 'What a big lion!' you mark a hat-pin after it."

It cannot be denied that the "hatpin" alluded to is penetrating our literature as conspicuously as it penetrates our hats. What psychological reason is there for the hat-pin and exclamation-pointages to coincide?

We take a seat in a street car, and the hat next to us strikes us as "a perfect poem" when first we gaze upon it, but it is spiked on with a deadly weapon which may cause us to leave the car looking as if we had fought a Heidelberg duel. The quatrain or the sonnet which strikes us as a perfect poem at first, gives an exclamatory scratch to our mind at the end, as if it feared that otherwise we might not see the point.

The last line of the poem is not more passionate than the first or second — the exclamation point seems to be merely a rule nowadays, which one would no more think of violating than he would think of commencing a sentence or a line of poetry with a small letter. To be sure, if the verses are humorous, the joke comes in the last line and, perhaps for fear that we won't see it, the exclamation-point accompanies it, to call our attention in the same way that the hand with the pointing finger was formerly so often used by printers, to call attention to short and otherwise obscure paragraphs.

This is an excitable age, of course, and the exclamation-point may be only another manifestation of the spirit which provides the flashing, ever-changing electrical advertisements on Broadway, the nerve-splitting motorcycle, and the speeding automobiles, with their discordant and startling horns. Yet, on the other hand, the Society for the Suppression of Unnecessary Noise has made us dream of a quieter, calmer day in the future, and some lovers of quiet have gone so far as to suggest that all auto horns should be keyed the same, which (as "Satire" aptly observed) would be a good idea, for then the toot ensemble would be more pleasing. And — returning to the hat-pin — various cities have made laws limiting the distance a pin may project beyond a hat. Paris, through M. Lepine, the perfect of police, has waged war against it thoroughly. Why not next ask the French Academy to put some limit upon the use of the literary hat-pin — the exclamation-point?

However, the French enjoy literature that is subtle, delicate, fine — so perhaps they don't overwork the exclamation-point as we do. We may think it necessary to hit a man in the head with our main idea, to "break it to him gently with an ax." It's very much the way we act toward foreigners who haven't mastered our language — we scream at them.

If we are to take up the matter of the explosive poem in a truly scientific spirit, we ought to compile a few statistics. We will now examine a recent number of Munsey's, because that magazine always publishes both light and serious verse. We find the whole number of poems to be 16, of which 7 are light, and 9 are serious verse.

Two of the serious poems end with the "button-hook.' Only one poem ends with a period — and this one evidently because the last line is, "Nothing would we ask save peace." Of course, we don't want to get excited over peace, but neither do we want to read poems that are not punctuated in an up-to-date manner. We are appeased, however, when we note that the fourth line from the end of this poem reads, "Hush thy music, wind of evening!"

Thus we may infer that, as regards modern usage, the period has come to a full stop. Or, like certain grains that appear on the breakfast tables, maybe it has been shot out of a gun, and exploded into an !. At any rate, the thirteen other poems in Munsey's end with the exclamation point. Here are their last lines:

Serious Poems

Amid the shadows Laura waits for me!
Build me a deathless joy!
The little old brown house is waiting for me!
For brethren shall not know his coming dim!
Always my heart will call: "My little girl!"
Lest she come not again!

Light Verse

The while I push it up and down the lawn!
God grant that I may ever be
    To my boy what he was to me!
He felt he must get in!
With all my heart I'll give you mine!
In those old-fogy times!
He seeks the combination still!
The newly married man!

It is highly probable that most of these closing lines, if printed a few years ago, would have ended with a period. But maybe our modern usage is right, in which case, should not the next compiler of an anthology inject (or interject) new life into the older poets with a few pricks of the literary hatpin? It may be just as important as it is to Modernize the spelling of Chaucer for the general reader. Gray, for instance, has only two exclamation-points in the whole "Elegy," and they are not at the end. We could easily sprinkle in a few for him:

"And leaves the world to darkness and to me!"
"No more shall rouse them from their lowly bed!"
"Some Cromwell, guiltless of his country's blood!"

Such endings would modernize Gray's stanzas considerably. And we could help the past writers of humorous verse to poke the ribs of generations to come:

"The Heathen Chinese is peculiar,
Which the same I am free to maintain!"

That, had she lived a twelve-month more,
She had not died today!

And as to the authors of new rhetorics, let them make haste to print, in bold type, the rule:

"Every line of poetry should begin with a capital, and end with an exclamation-point. If the closing sentence is really exclamatory, use two exclamation-points ! !

* * *

TOPEKA PUBLISHER SCATTERS FLOWER SEEDS

Over 3,000 boys and girls gathered in the office of the Topeka Daily Capital on Friday, April 4, and enrolled as members of the Juvenile Flower Club. Short addresses were made by the superintendent of the Topeka schools and other prominent citizens. By a unanimous vote they elected Arthur Capper president of the club. Each boy and girl was given a supply of flower seeds, which they promised to plant and cultivate. They also promised to take flowers to sick people this summer. Mr. Capper is at the head of the movement to beautify Topeka. Seven years ago he started the Juvenile Flower Club and has given over 100,000 packages of flower seeds to the children of Topeka.

Ordinary Printer—and Stuff

By A. Hoyt Levy, New York City, N. Y.

The fault is Mr. Herbert's — I mean Herbert the younger, for Herbert the elder, though still a youth, is past the age of fault.

On his recent trip to New York, he (Herbert the younger) stopped in to see me, and naturally the talk drifted to "shop." I showed him our booklet in which a section entitled "The Ordinary Printer and the Advertising Man" raps the "ordinary printer" with an implement of about the heft of a sledge hammer.

Mr. Herbert read it, and, instead of taking issue with me, he commended my argument and asked me if I wouldn't say as much in an article for his magazine. And so I repeat, the fault is Mr. Herbert's.

I've been in the advertising business a good many years, and as printing is the right hand of advertising, I've come in contact, professionally, with many printers. Like the cop force of New York, there are some good and some bad printers in the profession. But it is with neither of these I am concerned just now — it is with the great number of "ordinary" printers.

The "ordinary printer" is out for the money first, last and all the time. Not that it isn't a good trait in a man and perfectly proper, to look for all the money he can make. But I can't help but feel that the printing profession is so akin to art, that the printer who takes the proper pride in his profession should take a proper pride in his work.

The "ordinary printer" can, as a rule, do a good job when he wants to, but with him it's a question as to whether he can afford to give it the time required for the price he gets. And so he surrenders his ability for speed, which accounts for so much printed matter speeding to the waste basket.

The "ordinary printer" follows the geometrical rule that "a straight line is the shortest distance between two points." No matter how beautiful the byway may be, he will seek his destination by the straight, dull highway. And so, when he gets his copy, he begins setting up his type with little or no preliminary study, trusting to luck to make the copy fit the space. And if by chance he finds the copy too little for the space, he will fill up the emptiness with the first ornament he can pick up, regardless of its pertinence to the subject in hand or its artistic value to the job. To center lines, indent, equalize spaces, even up lines — in short, to do anything out of the ordinary which may improve the appearance of the printed matter, requires more than the usual care, and care means time.

To set up an attractive job, you've got to study your copy. In order to intelligently display the matter so that the type will "talk with gestures," you must sketch out designs just as the artist makes his pencil sketches before he begins his finished drawing. You can set a job in as many ways as you can skin a cat, but there's always a best way, and from the various sketches you make, you select the best and set the job accordingly.

Every job that comes into our office, large or small, is carefully planned before a letter of type is set. The series and points of type are selected with a purpose, and we know from the dummy just how the finished job will look. For my own part, I usually make a half-dozen or more sketches and with a water-color box at my side, work out various color schemes. This gives me a good opportunity for selection.

Does it pay?

Well, that's a question in economics. I find that it does pay. Occasionally a kicker makes a howl about our prices and tells us that a printer down his way does work for a great deal less. But merit bears the greatest weight after all, and once we land a customer, he rarely leaves us for "the printer down his way."

Get your man educated up to good work and he'll pay your price, although he may kick at first. It may require patience and even courage, but stick it through; give the people the best there is in you, and eventually you'll get 'em coming your way.

Don't get the idea from what I've said here that all the "ordinary" work is done by the compositor. The pressman is in the same boat. I have seen many an otherwise fine job ruined because the pressman had not taken a little more time on the overlay or in getting a perfect register. And worse yet, many an otherwise good job becomes fit for the ash-barrel because the printer could not afford to slip-sheet the job. When you stop to figure the cost of the stock, composition, ink, pressmanship, binding and the dozen other details, besides the later cost of the distribution of this very piece of printed matter, it's heartbreaking to think that for the slight additional cost of the slip-sheeting the whole blamed job goes down to demnition.

Somebody once said to me that printers were the most accomplished men on earth in the art of using swear words. Perhaps the reason may be found in the above paragraph.

It's a long time since I've written for publication, and I don't know when I'll get another chance to push my pen on the subject of printing. So I'll take advantage of Mr. Herbert's invitation to make mention in this article of one whom I believe to be a most "unordinary" printer, if I may use such an adjective.

In a recent issue of the National Printer-Journalist I noted reproductions of work by Mr. Harry Stuff and clipped them out. I have the clippings before me, including that one with his picture in pen-and-ink.

Here you have a man who is "unordinary." His face is one proof, for I don't remember ever seeing a printer with whiskers. But seriously speaking, in Stuff we have a man who really must love his work. He shows it in his words. He sees; he studies; **he does things only as he wants to do them.** He's different. He doesn't follow the straight line because it is the shortest distance between two points.

Stuff would rather walk four miles through the woods than one mile along the road. That's how I analyze Stuff from the little I have seen of his work. And he can certainly throw the bullcon.

I venture to say that if a man kicked at Stuff's price, Stuff would as soon tell the man to go to blazes as take in a show at the Orpheum. And I'll venture further that Stuff gets more money for his work than any printer in Seattle and yet gives his customers ten times as much for their money than they could get from any printer in the wild west of Washington.

Moral for the "ordinary printer: **Study Stuff!**

✣ ✣ ✣

SECOND ILLINOIS COST CONGRESS

The second Illinois Printers' Cost Congress will be held at Springfield June 13 and 14, 1913, with headquarters at Leland Hotel. An interesting program will be provided. In addition to a few well-chosen addresses by prominent organization men, there will be a Cost and estimating School held, thus making the meeting practical value to everyone who attends. All are asked to unite in making the Springfield convention a greater success than was scored last year at Peoria.

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, Parrsboro, N. S., Canada.

THE shadowtone idea in half-tone work — a graduation of color which gives the effect with one printing, two printings or more — is being very largely employed in advertisements in the leading magazines, and its possibilities in job work are many. Away back in September, 1911, the Williamson-Haffner Engraving Company of Denver, Colo., were featuring the "combination printing plate," as they called it, in their live house organ, the Lariat, "published every time the moon gets full."

✣ ✣ ✣

Nameplates of the Better Class

The use of "nameplates" in advertising has frequently been discussed in this department, and examples of many of the best nameplates have been given here. The most comprehensive collection of nameplates I have seen is in the booklet "Adcuts," issued by the Adcut department of the American Type Founders Company. A good nameplate, in these days when change of matter is so apparently an advantage in most advertising, is the part of the ad that helps a maintenance of an individuality, even when it is considered best to vary the general style. But what unsightly things many nameplates are, even when they are new! And a worn-out nameplate often spoils or partly spoils an otherwise attractive ad. Then there are many small cuts used for nameplates that are unskilfully mounted, and hence do not print well even when they are new. The cuts of the A. T. F. Co. are cast from type metal in type moulds, and are indubitably type high. It is claimed that no line of the artist is lost, even in the most minute reproductions, but naturally this does not prevent the clogging that is so common with the nameplate used day after day, month after month, in newspapers. However, there is no necessity for using such minute reproductions in newspapers. There are several excellent nameplates of printers among the many examples given in the booklet. The recipient is asked, if interested, to send for a large pamphlet showing many additional designs, giving prices, and telling how to order "adcuts."

The Advertising of Paper

A four-page circular sent by Bradner Smith & Co., 175 West Monroe Streett, Chicago, is printed in two shades of dark green on buff laid cold pressed Kenesaw stock. With its rich antique finish this stock has an old-style hand-made effect that is very pleasing. The two greens are not harmonious, though either of them would have looked well without the other on this stock. The heavy Roman capital letters do not seem to suit the Old English lower case, either, and the decorated initial is another feature which is pleasing enough with the body type, but which certainly does not harmonize with either of the other letters. With such beautiful paper and good type and lettering, would it not be well worth while to pay more attention to the typography of such an advertisement?

✣ ✣ ✣

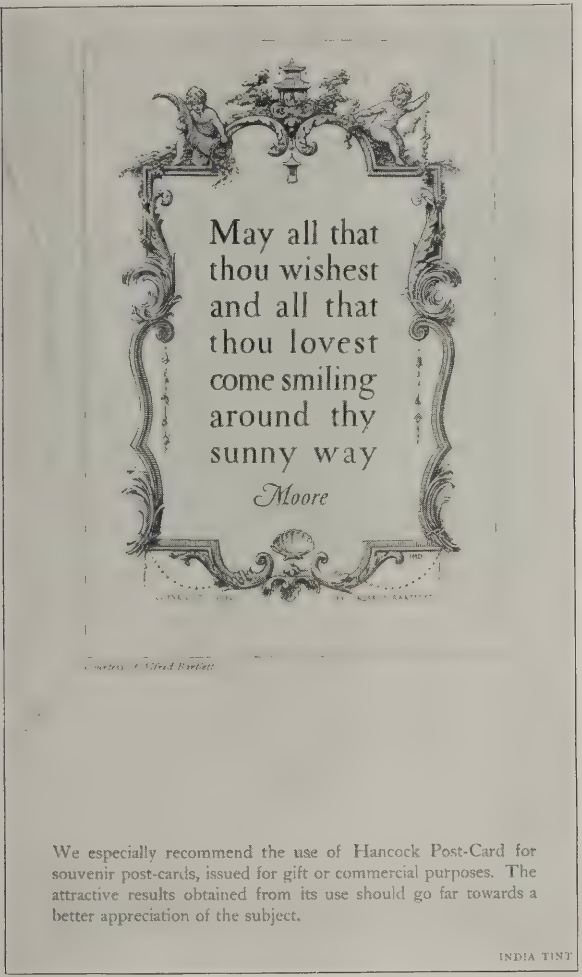
"You can't sell good printing unless you have good paper," says "A 'Strathmore Quality' Post Card," sent by Strathmore Paper Company, of Mittineague, Mass. It also says, "You ought to be selling a lot more good printing because you have a 'Strathmore Quality' Cabinet." So the card is evidently sent to printers who have such an office help. In the corner of the post card is a reply post card, with two perforations to insure easy removal, on which to specify any books that may be missing. The stock is bisque Fairfield Bristol, a paper with a look of refinement as well as a feel of strength.

✣ ✣ ✣

Neenah Paper Company, of Neenah, Wis., manufacturers of loft-dried writing papers, say, in a letter to printers, "Through our persistent advertising in magazines and newspapers of influence, and by strong personal letters to the consumer, we have familiarized letterhead users with Old Council Tree Bond." That is one paragraph of a good letter. And one of the best points of the letter is that its design, the color of the heading and the trademark at the bottom, and the gray ink of the body of the letter, are in such perfect keeping with the gray and elegant stock. The spacing and margins of the letter likewise harmonize perfectly with the chasteness and refinement of the design. Surely the pains bestowed on having stationery that is not merely beautiful of itself, but is likewise beautifully printed, will appeal not only to printers, but also to the ultimate consumer.

✣ ✣ ✣

A booklet of which the cover is 6 x 9 inches, Hancock post card stock, white tint, and the two inner leaves are gray and India tint Hancock stock, somewhat smaller, is issued by Swigart Paper Company, Chicago, Ill. The cover has a fine woodcut illustration of Hancock's home. The beautiful deep tone of the stock, with its soft, dull finish, is admirably suited for such a woodcut, and a half-tone of an old home on the gray stock is likewise very pleasing as to harmony of tone with the tint stock. The India tint is a particularly rich cream, and the ornamental border on the page (1) showing this tint is in a brown that is especially suited to the stock. The remainder of the page, including the lettering, whose slight irregularity has a peculiar charm, is in black.



May all that
thou wishest
and all that
thou lovest
come smiling
around thy
sunny way
Moore

Courtesy of Alfred Bartlett

We especially recommend the use of Hancock Post-Card for souvenir post-cards, issued for gift or commercial purposes. The attractive results obtained from its use should go far towards a better appreciation of the subject.

INDIA TINT

No. 1

✣ ✣ ✣

I am holding a document that is sufficiently imposing, witth its crispness, and its sheen from which any suggestion of flashiness is lacking. Oh, yes, it is a document, all right; for, as Nuttall says, 'Document, a paper for information or proof, containing instructions for the establishment of facts." This document gives not only information as to Mail Order Bond, a linen-finish paper, but also proof, for the outer sheet is the white of this stock, and the samples within are blue, opal, India, gold, brown, heather, gray. On the back of the job is the date line, "Issued April, 1912," which I have looked in vain for on samples when I desired such information. The bond is made by The Taylor-Burt Company, Fifth Avenue Building, New York.

✣ ✣ ✣

To make your loose-leaf books flat-opening use Whiting's Sterling Linen Ledger, flexible hinge, is the message of a sample leaf sent by Whiting Paper Company, 610 Federal Street, Chicago. The flexible hinge is made in the sheet at the time the paper is forming on the machine, and is sized and calendared at the same time as the rest of the sheet. The paper is admirably adapted for this work. Strength is assured by the high-grade linen stock, which is sized by a special process to withstand severe tests as to erasure and rewriting. It has a fine, clear, easy writing surface.

✣ ✣ ✣

Friend Woodworth: Just received the current issue of the National Printer-J and note with pleasure that you are again connected with the Journalist as department editor.

I noticed your comment on the work I sent you in June, 1910, and your invitation to send some more, so here "comes."

I am now located in the best city in North Carolina, and hope to remain here permanently, as I am at last satisfied with my position and surroundings, like it much better than up in the frozen North (with due respect to my old home).

I had to cut down the margin on the enclosed blotter about one-eighth of an inch all around in order to get it in this envelope.

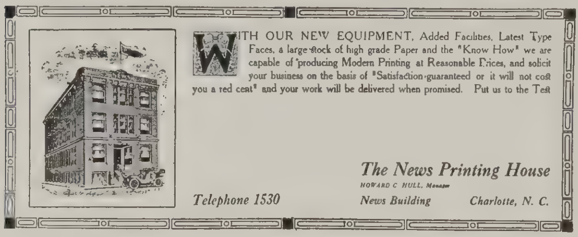
I do not do any mechanical work, only for myself; if I want a letterhead, envelope, card or blotter, I take off my coat and go back in the workroom and go at it.

With best wishes, I remain, Fraternally yours,
HOWARD C. HULL,
The News Printing House, Charlotte, N. C.

The phrases "An Introduction," "Glad to Meet You," and a cut of the motto, "Watch Charlotte Grow"— these are the principal features of the envelope that contains a handsome booklet with the title "Announcement — Introducing Our New Manager." The cover has a portrait of Mr. Hull, with whose features N. P.-J. readers are already familiar, as he has been a winner in this magazine's prize contests. Here is the allusion the firm makes to Mr. Hull:

> The manager of our job department, Howard C. Hull, is a practical printer of wide experience, whose work has received more comments and awarded more prizes by the trade journals than any other printer in North Carolina. Mr. Hull has been engaged in the printing business in Charlotte for the past year, and has made many friends since locating here.
>
> Before moving to Charlotte he was connected with the Hackney & Moale Co., of Asheville, N. C., a firm well known over the South.
>
> Having devoted fifteen years to the study of producing Correct Printing at the Correct Price," it is with the feeling of confidence in his ability to deliver the goods that he offers you his services.

"Correct Printing at the Correct Price" is a good phrase to use in these days of cost systems. "It will be our ambition," says the booklet, "to have our plant known as 'The Model Print Shop' of Charlotte" — another good term. "Thanking you for past favors and asking a continuance of same" is, however, bromidic. Even in a letter, "of same" should be avoided. It is not only commonplace — it has a curt, harsh sound that is out of keeping with modern business "literature."



WITH OUR NEW EQUIPMENT, Added Facilities, Latest Type Faces, a large stock of high grade Paper and the "Know How" we are capable of producing Modern Printing at Reasonable Prices, and solicit your business on the basis of "Satisfaction guaranteed or it will not cost you a red cent" and your work will be delivered when promised. Put us to the Test

No. 3

No. 3 shows the top of the letterhead. The border goes all around the sheet. The rules and the "P" of the initial are orange, the remainder black. The composition displays the name of the paper as well as bringing its printing department prominently to the attention.

Success to the Model Print Shop and Manager Hull, and may he get the Correct Prices!

✣ ✣ ✣

The associate editor of the National Printer-Journalist writes from New York:

> Dear Mr. Woodworth: I am sending you a small bundle of specimens of printing-advertising. The work of designing or planning, and writing, was by A. Hoyt Levy & Co., of Broadway and Park Place. Mr. Levy is an original, resourceful individual, and has done some mighty good work—a judgment with which you will probably concur after an examination of the samples, for they may be used as a criterion.
>
> If you happen to be in this part of the U. S. A. within the next three weeks, please establish connections.
>
> Sincerely, B. S. HERBERT.

I am glad to know that Mr. Herbert has so good an opinion of Mr. Levy and his work, for Mr. Levy was once a valued assistant of mine, and I wrote an article for an art journal on what he had accomplished through ability combined with resourcefulness, and that necessary accompaniment of worth while resourcefulness, pluck.

Here is the inside of a mailing folder. By the place for the address appears in reproduced handwriting: "This is a crackerjack ad. We're advertising men and we know. A Hoyt Levy & Co." And this despite that a front leaf of a booklet issued by the same firm quotes from Proverbs: "Let another man praise thee and not thine own mouth; a stranger, and not thine own lips." But Solomon did not live in an age of advertising, and a modern proverbial philosopher says that "consistency is the last resort of the commonplace." The ad (4) is undoubtedly a good one, though the stock is the brittle sort, with a thin coating, that is so commonly used for folders that it is desired to print exceedingly well — and the result is after that, as in this case, the ad is not only creased but cracked in various places by the time it gets to the one it is its aim to impress. There are a number of specimens of paper-makers' advertising sent for review in this issue; — would it not be a good plan for the advertisers of paper to advertise stock especially adapted to mailing folders?

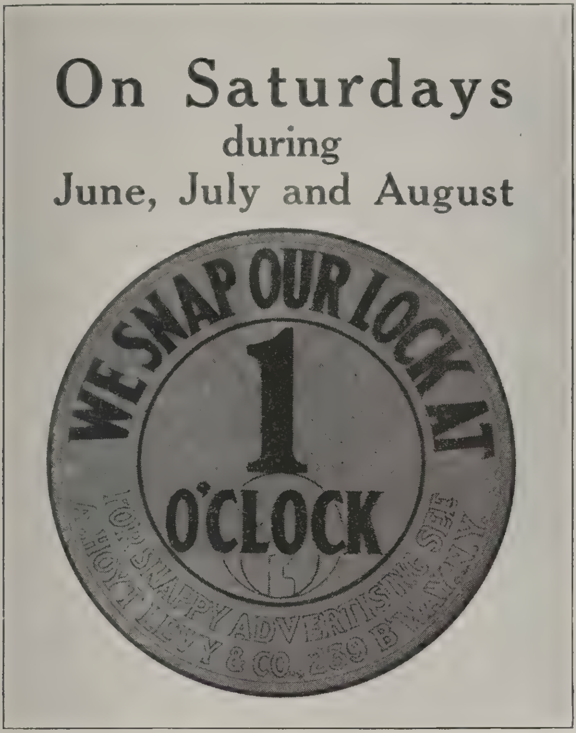
The advertisement is in red and black. Perhaps the red of the high light of the coat detracts more from the businesslike expression of the eyes and the revolver than if all the coat were black, as in the reproduction. However that may be, the red is distinctly appealing. There is always a charm about pictures whose points pursue; and some of the greatest painters have made a hit by the trick of drawing girls who just can't let their eyes behave.

The strongest part of the ad is the wording: Is not this good?: "The men who work for us, work with us. Every order that comes into this office is tackled with as much enthusiasm as though it were our own proposition. We put our hearts in our work." I believe you — and so, I have no doubt, will the other recipients of the folder. That part is worth a stronger display — the wording is simply strong.

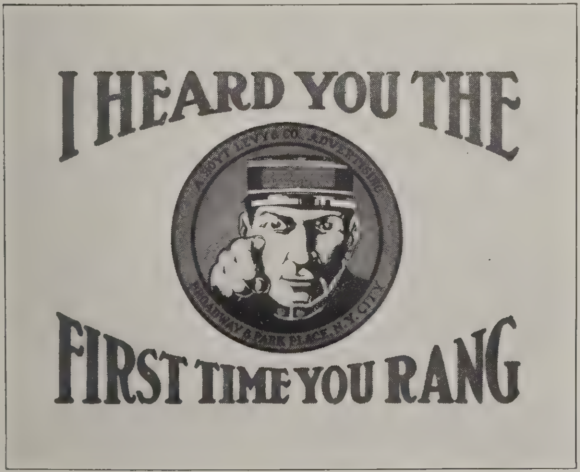
✣ ✣ ✣

There have been a good many different kinds of announcements of early Saturday closing, and here (5) is one that is poetical, whether intentionally so or otherwise, and it is not mere punning to apply the term "snappy" to it. Such ads attract the attention of the firm to which they are sent — certainly the favorable attention if they are used, and quite possibly if not used — besides that of visitors and passers-by.

The value of the elevator card as an advertisement is more subtle, but if it is in the elevator in the same building as the advertiser's place, it is often quickly suggestive — particularly to some one who already knows of the advertiser: "So Levy's in this building. Guess I'll see him, too," or it might induce a call even if the visitor knew that Levy's office was in the building. Such a card as this (6) is out of the ordinary, but is not the advertiser lending his name to something that would not put him especially en rapport as regards the man who has rung, and rung, and rung? But the pleasant elevator boy makes us all feel good; he can give a rebuke in a way that makes you respect and like him, and he is a good advertiser for the tenant or owner who uses him right.



No. 5

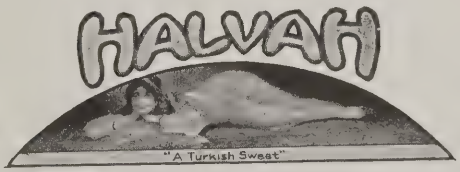


I HEARD YOU THE
A. HOYT LEVY & CO. ADVERTISING
BROADWAY & PARK PLACE, N.Y. CITY
FIRST TIME YOU RANG

No. 6

The most elaborate of the Levy productions sent me by Mr. Herbert is a remarkably well designed booklet with a heavy light brown embossed cover, with cover stock of the same shade, but lighter weight, bound next the cover. The booklet is 9¼ by 4 inches, without taking account of the deckle-edge flap on the last two leaves of cover stock.

The booklet's title is "a few letters of commendation and examples of our skill"—it being stylish after the style of Mandel Brothers, Chicago, to have titles and headings in lower-case. The commendatory letters are reduced from letterheads, and the examples of artistic skill are reproductions from street-car placards, magazine and newspaper advertisements, illustrations and mailing photo folders. Two pages of the booklet are shown as 7a and b. The headings are, of course, in a different color than those of the body of the pages. These two pages have human interest, for in them there is a suggestion as to the interest already alluded to that the artists take in their work.



No wonder the letter from the Double Claw Hammer Company said (look at reproduction 8): "In the work you have done for us, you have certainly outclassed everything we have had in this line in thirty years. We have changed from one house to another in the hope of getting the kind of work that stands out; until we were fortunate enough to secure the results of your striking genius, which is not only satisfactory—it is **great**." An advertiser is almost criminally modest if he does not use such as this, which has the ring of genuine fervor. And when so good an ad as the one that is shown as 8 is reproduced, it is easy to see that the hammer people were justified in their praise. A combination of such a letter with such a specimen of work is therefore advertising that is of the very highest order. The ad reminds one pleasantly of the moving pictures which show tools at work without the hands that moved them being visible. This is bringing a taste of the fairyland of the wonder-tales of childhood into the even more marvelous story of modern mechanical progress. Even in the days when Edgar Allen Poe wrote his stories he showed that the tales of the Thousand and One Nights were outclassed by the truth. The poetry business is not so good as it was, but there is plenty of practical, well-paid work today for the poetic mind. Mr. Levy started life as a poet and illustrator of poetry; and it would take a mighty good poet to say as much in so little compass as he does in five words with aid of five pictures. But even the words are not absolutely necessary.

No. 8

In work like this, the drawing, such as the lettering at the top, the border, the pictures, and the words "Strike," "Lift," etc., is done on a sheet whereon the rest of the wording has been printed, or else the printing is done over the drawing. The latter is generally the better way, care being taken with the register and ink, of course, so as not to spoil the drawing. Then a cut is made from the artist's and printer's work, when the reproduction is done in one color. The usual way is to make the drawing larger than in the reproduction, so of course in this case the type has to be set in larger faces than the letters appear to be composed in when reproduced. Such old-style faces as the foster, in which the type of this ad was originally composed, are the best to use for such work, as the reproduction has the same effect as if it were printed directly from type. Of course the words "Strike," "Lift," etc., could be set in type instead of lettered as they are in this case, care being taken with the alignment, but they are really part of the drawing, and their slight irregularity distinguishes the lettering from the letters made by type composition, which is a good feature, and the classes of letters harmonize one with another.

A Paper's Classic Home

"Every Year a Better Year in Davenport" is the very prominent phrase on the envelope of The Daily Times of Davenport, Ia. This live member of the Lee Syndicate of Newspapers sends an account of its new fireproof home. Judging from the description, it is as modern an office as can be found anywhere; and the picture shows it to be classically beautiful.

* * *

Emphasized by Excerpts

A handsome booklet with a fine embossed cover is entitled "Some Local Opinions of The Sun, Vancouver, British Columbia." Nearly every leaf gives, in the original size, facsimiles of letters sent to the Sun by Vancouver firms. At the top of each letter is a short extract from it, set in the following manner:

"we are sure it brings results"

There is a page of "interesting facts" about the wonderful city of Vancouver, and they are indeed interesting. Then there is a page of facts about The Sun, which seems to be keeping up with the Vancouver pace.

* * *

An Offer That Evinces Faith

A handsome mailing card from the Steel Electrotype Company, 304 E 23rd St., New York, makes some extraordinary claims for their electros of steel deposited directly on the mold. However, this offer is likewise extraordinary: "We will make free of charge for any reliable printer in the United States a half-tone 'steel' electro from any original, be the screen ever so fine, to prove that we can make good all our claims."

* * *

Samples, With Prices

Frank Roemmelt, of Elmira, N. Y., sends in one envelope a ruled notebook, a ruled and an unruled letterhead, a billhead, a statement, and an envelope, with prices for one, three and five thousand. On the envelope, in large letters, is "This Eevelope [sic] Contains Proofs." Sometimes it is easy to overlook an error like this in 36-point whereas in a smaller size it would likely be seen. There are laws in the text book or offices about such curiosities of vision, I believe; if not there should be.

A Book of Night Scenes

"Night in Little Rock" is a booklet sent with the compliment of the Arkansas Gazette. It shows that all the great white ways are not in little old New York. There are many in Little Rock.

Impressions By "A Cliver Deil."

Impressions BY APOLLOCRATRES, THE DEVIL, Editor & Hellbox Custodian, is the full title of the monthly house organ issued by The McCormick-Armstrong Press Co., Wichita, U. S. A. It has twenty-four 4 x 9 pages, and is a house organ that will be preserved for its beauty, its brightness, and its information—which is of the kind the modern buyer of printing wants. It has a large number of paragraphs and headed articles, and instead of dashes uses a Gothic slug, reading "M'Cormick-Armstrong Press, Wichita." It has none of the regular kind of folio numbers, but at the top of the pages, alongside the name of the paper, are such phrases as "Twenty pages yet to come," "Nineteen pages of good dope left," etc., "Eighteen pages yet —hot doin's," etc.

The company is a great booster of the monotype for job work, several paragraphs being devoted to its praise. Then it talks paper and ink in a way to interest a prospective customer. This month I am writing considerably about the advertising of paper. That this is something that can be done to the buyer of printing by the printer in such a way as to benefit himself directly is evident from this extract from the article "A Change in Stock":

> Paper makers are keeping pace with the progress of the printer and the engraver, and are now producing a large variety of stock for half-tone printing in which many of the disagreeable features of the coated or enameled paper are eliminated. This issue of Impressions is printed upon such stock. It is called "Mellocoated Book." Note the dull, smooth surface and the delicate tint of the stock. Similar papers are available in different grades and many colors, and are no more expensive than good coated papers.
>
> We have obtained some excellent effects by printing half-tone plates on these papers with "double-tone" or developing inks. When the sheets come from the press the impression made with one of these inks appears black, but in eighteen to twenty-four hours a rich secondary color develops in the middle-tones, giving a photographic effect. Such combinations of ink and paper require more expert knowledge of their use, and it is easy for an inexperienced pressman to spoil the job without knowing until too late that something didn't go right.

"It is fine," says Impressions, that this print factory pays its men more than do other shops. Yet each man knows he must earn his money, or he doesn't stay. That's why we can do eloquent printing at the price of the other kind." And here is an up-to-the-times allusion:

> If you'll take note (or if you'll not — what difference does it make?) every print shop in the country — not excepting those with more than a local reputation for doing sloppy printing — talk quality as an inducement for patronage. It used to be "price," but the average customer wants quality now. And he soon learns to discriminate between the shop that delivers the goods and the one that merely makes a loud noise.

There's a good deal in that word "merely." The McCormick Armstrong Press makes a loud enough noise, but it is there with the goods.

Service, Service!

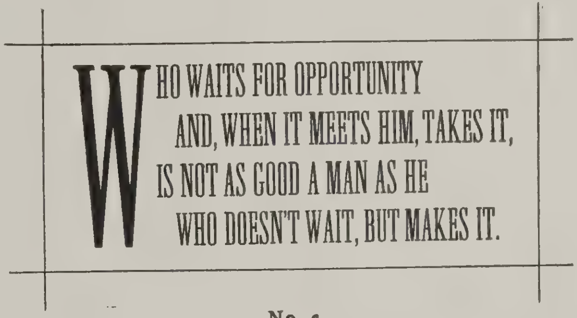
A booklet issued by the Renaissance, a firm of advertising makers at Three-Ten Monadnock, Chicago, Ill., is attractive typographically, because of its bright blue ink on oblong pages of light buff stock. It is likewise attractive because of its bright paragraphs. Here are a few that treat on that idea of Service, which is now recognized to be such an essential accompaniment of Advertising, and to be such a powerful force in Publicity:

> In the kaleidoscopic changes which advertising has undergone in the past score of years, none has been so marked as the attitude of the publisher to the advertiser.
>
> Then, all the publisher wanted was to get the advertiser into his publication and keep him there as long as possible.
>
> He didn't care whether the advertiser ran a battered wood cut week after week or month after month saying nothing worth saying.
>
> Today, the publisher's work has only begun when the solicitor sends in the contract.
>
> It is then up to him to see that the advertiser applies the force of advertising in such a way as to make the medium a paying one for him.
>
> This is the Service Idea, and Service is the order of the day.

I have waited over a month for the samples from the Cook Printing Company, and have been unable to trace them. Please send duplicates, for I remember the pleasure I took many years ago in a distinctly "different" package of printing I received from the Cook Printing Company.

A Motto And A Souvenir

Very few printers would take such type as that with which 9 is printed for a motto, but the Stuff Printing Concern, of Seattle, Wash., has a way of doing just such out-of-the-ordinary printing, and getting away with it. It makes a difference when, for instance, such a job is printed in antique red and a harmonious color on tinted linen-finish stock.



WHO WAITS FOR OPPORTUNITY
AND, WHEN IT MEETS HIM, TAKES IT,
IS NOT AS GOOD A MAN AS HE
WHO DOESN'T WAIT, BUT MAKES IT.

No. 9

✢ ✢ ✢

The title and colophon pages for the New Orpheum souvenir (10 a and b) are of such composition as is worthy of being kept. The initial, ornament and monogram on the title page is olive green, the remainder a rich dark brown. On the other page only the monogram is brown. The "A. D." is worthy of note by those who try tricks with these letters; there is no freakishness or wrong-font appearance about it, and it gives a break in the composition at a place where it is artistic and appropriate. An imprint is not always a thing of beauty, and is often unpleasantly obstructive, but that little

Colophon

This Souvenir of The New Orpheum Theatre was designed for Messrs. Sullivan and Considine by Harry G. Stuff and printed at The Stuff Printing Concern in Seattle. The Photographs are by Webster and Stevens, and the Engravings by Mering and Blake. In keeping with The Orpheum policy, neither pains nor expense have been spared in presenting herewith a Made-in-Washington Brochure de Luxe worthy of your perusal and preservation.

No. 10b

workmark of The Stuff gives a pleasing finish to the colophon page. Mr. Stuff certainly gets considerable advertising on this page, but he deserves it; and this very credit and gives an added interest to the souvenir. The embossed cover is a triumph in the harmony of stock and ink.

✣ ✣ ✣

A Matter of Truth

"This," begins a very striking folder of the Youngstown (O.) Vindicator, "is an advertisement, but it tells the truth." And why shouldn't it? Does the Vindicator wish to give the impression that advertisements, of which it is evidently proud of printing so many, generally do not tell the truth? If not, why convey this impression?

✣ ✣ ✣

Convincing Affidavits

The Iowa Daily Republican issues printed circulation sheets, each of which is signed personally by the manager and by the notary public before whom affidavit was made as to its truth. It also bears the official seal, and not merely a facsimile of it.

✣ ✣ ✣

The Day of the Farmer

Farm and Fireside issues a large illustrated booklet on plate stock showing some of the things farmers buy in different states. "Volume 1 — Texas" is before me. It contains such illustrations as that of "Court Day in Sherman, showing farmers coming in by trolley." One article is "Advertised Goods in the Stocks of Merchants of Sherman." It is illustrated by pictures of the stores and their interiors, and a list of the advertised products that are carried by the stores is given. The Hall Furniture Company's proprietor says he recently sold a $500 bedroom suite to a farmer. Many of the splendid homes of Texas farmers are shown, and an account of several farms is given, together with the advertised articles different farmers buy. There is also a map of the district covered in the booklet. The summing up of the article is as follows:

"The above truths show the reality of the farmer as a consumer of everything from a piano-player to breakfast food — everything which is covered by the broad term 'general merchandise'; and it shows this reality in strong contrast with the popular mental picture of the farmer as a specialized consumer of farm implements, stock foods, plug tobacco, etc., only."

✣ ✣ ✣

Advertising an Advance

The advancing of prices is a necessary procedure on the part of many printers both because of the high cost of everything and because cost congresses are raising the slogan, "Charge, charge, charge!" It takes good advertising to advance prices pleasantly as well as gracefully — and this is the kind that the Merrill Printing Company, Hinsdale, Ill., has been doing.

Advanced Prices

OWING to the heavy advances just made in the prices of paper by the mills and the jobbers, together with steadily increased production costs in all departments of the printing trade, we are compelled to announce to our customers that prices heretofore existing will be revised to meet these conditions.

The margins on which your trade has been handled in the past has been extremely close, and in order to protect ourselves we will be compelled to cover these advances. In most instances the paper prices have advanced 10 per cent., but as the paper mills and supply manufacturers have not yet definitely announced the advance in some lines—though it is expected that in some instances the increase will be 25 per cent.—we can not advise what rate of increase will be necessary until market conditions become settled. So far as we are able to determine from present advises the advance in our selling prices will *average about ten per cent.*

As all printers are similarly effected, we feel sure that you will continue your patronage as we have been able in the past to give you quality, service and a square deal in prices.

Yours truly,
THE MERRILL PRINTING CO.

May 15, 1912.

No. 11

Some printers do not seem to realize that such advertising should be typographically superior, as, in fact, all the advertising of printing should be. The circular of this concern seems to be such as to inspire the thought, "Well, we'll have to pay them the difference, for they certainly do good work." The composition of this circular (11) should prove suggestive to those wishing to make a circular of any kind where they want the aid of the letter-head effect that will still seem incorporated with the circular. There is a clean cut look about this circular.

* * *

Tricks With The Types

Atwell Printing & Binding Company of Chicago use one of the modern antique faces which has a cap A with a curl, and there is a cut of a telephone, next to which is a curve with an arrow point made so flush with the side of the A that it appears to be a part of the letter. The arrow point is above the telephone pad on which the phone number is given in red letters. Little catchy stunts in typography such as this, when so well done as this, are apt to catch the eye and hold the attention.

We'll Hear More of Dan Gross

Dear Sir: Am taking the liberty of sending you a few samples of "printin'" in a shop where I am foreman. These are not "a few of the best" but taken from the every-day run of work, although they are all advertisements for the office.

Thanking you for the favor and hoping to see the comment in a near issue of the Journalist, I remain

Very sincerely yours,
DAN M. GROSS,

In extending a welcome to this new contributor I may say that this letter-head (12a) on salmon stock, shows considerable of the originality that made Most Easy Budd most eternally famous. The job is in dark brown on salmon stock, with the rules and the cut in a light brown tint. I would not suggest anything as to a change of the size of type in some of the series used in this job, for evidently Mr. Gross, who is undoubtedly an artist, was striving for oddity rather than art after any recognized standard, and the letter-head is odd, and originally so. I'd like, however, to see the job done by Mr. Gross some day he has plenty of time, with the same excellent wording, and the same general idea of plan. Half the back of the letter-head is taken with "A Few Color Schemes and Combinations that are Simple, Effective and Easily Learned." These would certainly appeal to prospective customers, and there are some fine suggestions. It is not quite clear to me, though, why "A Few Mixtures of Ink for Tint Work" should also be given, unless it is simply to show that the printer knows them.

Dated[

No. 12a

This letter-head (12b) is in two colors, whose relation to each other and the tinted stock shows that Mr. Gross not only knows a good deal about colors, but also applies it. The outer rule border extends around the sheet. There should be a little more space between the ornament and the wording on either side, as so many are used to reading across where type is arranged in this manner. The way many would read the line is "A Live Town's Alert, Concise, Live Newspaper. Independent." It makes sense if we provide the stop, but was probably, however, meant to read the lines thus: "A Live Town's Live Newspaper" as one idea; "Alert, Concise, Independent" as another phrase. Here there is a good distinction between these phrases and the line, "North Chicago, Illinois," as the latter is in another color. This will not, however, show in the reproduction.

Immense Throngs Attend First Printing, Publishing and Advertising Exposition

Incidents and Impressions of the Opening Day

Reported by Benjamin Sweeney Herbert

THE first Printing, Publishing and Advertising Exposition, held in Grand Central Palace, New York, April 19 to 26, was notable for the immense throngs of people who attended, especially on the opening night. Veterans in the industrial show business declared that the first evening of the exposition was "the biggest ever."

Most of the exhibits were in place when the doors of the beautiful marble palace were opened at 7 o'clock, and from that hour until after 10 o'clock the crowds poured in. The followers of Franklin, old and young, with their wives and sweethearts, streamed up and down the aisles, moving from place to place, and, where an exhibit was of unusual attraction, gathering in such numbers as to almost blockade the passageways. Wherever handsome colored pictures were given away, there was a crush for the artistic souvenirs, which quickly exhausted the supply in several instances.

Great expositions are said to be "the time-markers of progress." The first Printing, Publishing and Advertising Exposition was indisputably a great score-maker for the sixth industry and offered quickly appreciable evidence that the end is not yet.

The automatic printing presses, for example — and there were a number of them on exhibition, turning out printed sheets at greater than human-fed speed — indicated to the old codgers in the business that the signs "Feeder Wanted" would soon be hung up no more forever.

The progress represented in the automatic press field was duplicated in other directions. The big Miehle press in the Zeese-Wilkinson Company exhibit, where reproductions of the great masters in art were delivered with marvelous speed from the steel cylinders, in perfect register and wonderfully true to the original paintings, was particularly well attended. The mechanical reproduction of the great works of art excited admiration among the printing tradesmen and awed the laymen.

The eager apprentices were legion in number, who made their exits with tired arms laden with souvenirs gathered from their visits to the scores of booths, were eloquent of either a thirst for knowledge or greed for gain. All the members of the large "Grabinski" family were present, and the depleted piles of literature evidenced their raids. The sane, intelligent, inquiring printers, publishers and advertising men evidencing their interest in the printing trade magazines, and their quick, incisive questionings, where machinery was on display, made up, in heaping measure, for the disgusting manners of the hopeless hordes of purposeless degenerates.

It was not so much amusing as it was encouraging and inspiring to exhibitors to see practical printers watching new inventions and improvements with keen zest. They were there to learn, and the earnest inquirer is always welcome, whether he attends upon the deft movements of the maker of a wooden whistle or upon the confident, intelligent direction and control of the genius who superintends the movements of a web-perfecting press.

Paper houses, with their attractive displays of stock, secured new customers, and the makers of tools and mechanisms of whatever sort made sales or secured promises, but many more, doubtless, will result, and will continue on the increase, as the visitors return to their printing plants and have opportunity to deliberate over what their eyes have seen and their ears have heard.

The work of placing the exhibits and of decorating the booths was nearly done in three days, and under repeated threats of strikes and walkouts by union men conscious of their strength and in full appreciation of the absolute dependence of the official decorator upon their co-operation. They compelled his acquiescence in all their demands.

GENERAL NOTES — SOME OF THE EXHIBITORS

The 200 exhibits were estimated to represent a total aggregate valuation of $2,500,000. Nearly everything in the printing, machinery and appliance line had a place in the show.

To describe the individual exhibits would more than exhaust all space in a single number of any printing trade journal. It is only possible, at this time, to enumerate the exhibits of those firms which have shown tangible evidence of desiring to secure the patronage of the National Printer-Journalist readers.

In the most prominent and especially desirable location, fronting the main entrance to the hall, the Mergan-thaler Linotype Company and the F. Wesel Manufacturing Company were found. The Linotype Company showed their quick-change models, numbers 8 and 9. The booth was a center of interest throughout the show.

No more artistic booth, among the scores of neatly arranged display spaces, could be found than the one occupied by the F. Wesel Manufacturing Company. The same scrupulous care evidenced in all their manufactures was displayed in the arrangement of the booth and even in the lettering of the gold-and-white sign.

The H. Hinze Machinery Company early in the week found that its space was entirely too contracted and arranged with the management for additional space. They exhibited two full size Caxtons and one one-quarter Caxton. Five of the presses were sold before the second day of the show closed.

Printed color sheets, beautiful reproductions of art, were taken up by the crowd as fast as the feeders in the John Thomson Press booth picked them out of smoothly running machines. "The Laureate" and "Model C" were shown and, evidently, to great advantage.

The Oswego Machine Works exhibited a 44-inch Auto Cutter which was soon sold after the onlookers had had a chance to see what the big handsome machine was capable of doing.

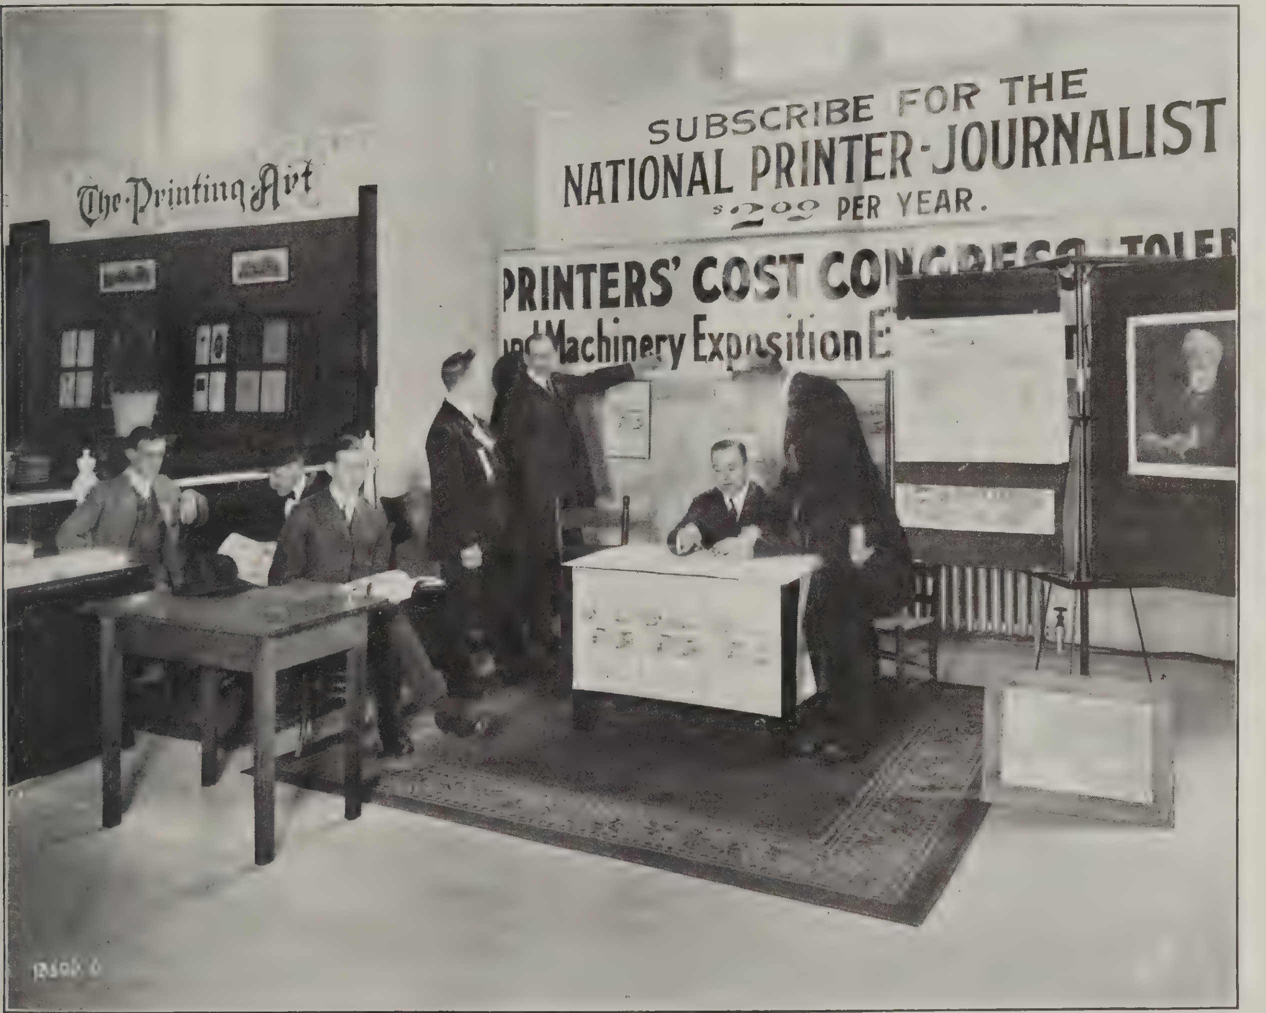
The Wetter Numbering Machine Company was visited by many of the sightseers. Numbering machines, from the tiniest to the largest, were shown in a large glass case. A special apparatus for use on the ordinary type-high platen press for numbering trading stamps, coupons, etc., seemed to be of particular interest; another exhibit of interest was that of special numbering heads for a flat-bed press.

The Miehle Printing Press Company had two of their machines, one in connection with the Zeese-Wilkinson Company exhibit and another with the Schilling Press. The former was the famous Five Naught (5-0) Two Color Miehle, and the big machine, turning out beautifully printed color work at good rate of speed, was watched by larger numbers than any other on the floor. This press was driven by a Diehl motor. Other attachments were a Cross Continuous Press Feeder, a Kohler Controller, and Wesel Registering Blocks.

The Lanston Monotype Machine Company showed the casters, units "A" and "B" and also the "B, C and D," as well as unit "F," the keyboard machine, and a Monotype storage cabinet.

The "Goss Comet" showed its wonderful abilities in grinding out newspapers at a high rate of speed from type forms. The printer-visitors, themselves, whose knowledge of newspaper printing machinery is often not found to be great, were decidedly interested in the mechanically perfect work done at surprising speed. The little press requires but six composition rollers, all of which are interchangeable. The inking fountains are of the thumb-screw pattern. The press is equipped with an automatic paper roll governor and web tensioning device, which eliminates the breaking of the web of paper while the press is running.

The Boston Wire Stitcher Company displayed five machines, the one getting greatest attention being the Multiple Head machine with capacity of carrying ten heads, or spools, at once.



Booth and Exhibit of National Printer-Journalist at Printers' and Advertisers' Exposition, New York City, April 19-26, 1913

The following machinery was shown by the Latham Machinery Company: Duplex Punch, No. 2 Box Stitcher, Corner Box Stitcher, No. 2½ Wire Stitcher, No. 1 Wire Stitcher, one Bench Embosser, one Extra Heavy Perforator, one Gauge Rear Delivery complete, one Multiple Punch and one Kramer Bundling Press.

The Swink Printing Press was shown in operation in George Damon & Son's booth.

The H. C. Hansen Type Foundry exhibit was a notable one for the amount of material represented in the display — type, brass rule, metal furniture and various utensils all of daily practical use to printers. The booth was neatly arranged and was the subject of favorable comment.

The Tucker Feeder Company was among the first to sell machines. The working of the feeder attachment pleased a good many and prospects of future sales are said to be promising.

The Standard High Speed Automatic Job Press, manufactured by Wood & Nathan Company, was a great attraction for a large number. Several presses were sold as a result of the very practical demonstration of the machine's capabilities.

The Duplex Printing Press Company exhibit, in charge of the genial B. E. Dowe, was of interest to the newspaper publishers. The following machines were shown: Duplex Double Mechanical Compression Mat Dryer, Duplex Improved Mat Drying Machine, the Tubular Plate Improved Casting Box and Tubular Plate Finishing Machine.

IMPORTANT NOTICE

Next year's show will be held in the Grand Central Palace the week of April 18th to 25th, 1914, inclusive.

We have just leased the three floors, and the main floor will be devoted to showing machinery and supplies; second floor to paper and allied trades exhibits, and the third to the showing of posters, lithographic work of all descriptions, business equipment, systems, etc.

In other words, it will really be an International Graphic Arts Exposition.

NATIONAL EXPOSITION CO.
By Harry Cochrane.

Conventions of Daily Newspaper Makers

FROM April 22 to 26 inclusive, was New York's week of conventions of newspaper makers and printing trade publishers. The Associated Press, a strictly business organization, for the gathering and the transmitting to its members the news of the world, met at the Astor Gallery of the Waldorf-Astoria, Tuesday morning, the 22d, in its fourteenth annual convention. President Frank B. Noyes of The Washington Star, was in the chair, flanked by General Manager Melville E. Stone. A report was made of new souces of news gathering, and the manner of handling recent big news stories, such as the Western floods, and the death of J. Pierpont Morgan, was shown.

At an afternoon session lasting less than half an hour the result of the balloting for five Directors for the full term and one Director for two years, to fill the vacancy caused by the retirement of Frederick Roy Martin on becoming Assistant General Manager of The Associated Press, was made known. The retiring Directors were Charles Hopkins Clark, Hartford Courant; Charles A. Rook, Pittsburgh Despatch; Clark Howell, Atlanta Constitution; Charles W. Knapp, St. Louis Republic; and V. S. McClatchy, Sacramento Bee.

The Nominating Committee, which met in Washington last January, had renominated all of the retiring Directors, together with these opposition candidates: Rosecrans Pillsbury, Manchestor (N. H.) Union; Bruce Haldeman, Louisville Courier-Journal; W. Y. Morgan. Hutchinson (Kan.) News; Josephus Daniels, Raleigh (N. C.) News and Observer, and Isaac N. Stevens, Pueblo (Col.) Chieftain. Mr. Daniels, however, was not a candidate, owing to his appointment as Secretary of the Navy since his nomination for Director.

The result of the vote for Directors was that all of the five retiring Directors who had been renominated were re-elected, while Samuel Bowles, Springfield (Mass.) Republican, was elected to fill Mr. Martin's unexpired term.

Daily Newspaper Association

The Daily Newspaper Association, and organization whose purpose is to educate the business world in the value of newspaper advertising, also opened its convention at the Waldorf at the same time. The topic of chief importance discussed was the proposed merger with the United Newspapers and the National Dailies, two organizations having a similar purpose. At the afternoon session a special committee of the Daily Newspaper Association was appointed to confer with similar committees of the other two organizations. The association elected these officers:

Officers—Louis Wiley, President. New York Times; Edward Flicker, Vice President, Cincinnati Enquirer; Leland M. Burr, Treasurer, New York Evening Post; J. W. Adams, Secretary.

Executive Committee—G. J. Auer, Albany Knickerbocker Press; H. F. Gunnison, Brooklyn Daily Eagle; W. P. Goodspeed, Buffalo Evening News; W. J. Pattison, New York World; D. B. Plum, Troy Record, and J. B. Woodward, special representative.

Board of Directors — Charles D. Atkinson, Atlanta Journal; Edward Flicker, Cincinnati Enquirer; A. G. Carter, Fort Worth Star-Telegram; F. P. Glass, Montgomery Advertiser; E. V. Alley, New Bedford Standard and Murcury; C. C. Rosewater, Omaha Bee; Milton B. Ochs, Philadelphia Public Ledger; W. H. Cowles, Spokane Spokesman-Review, and C. M. Palmer, St. Joseph News-Press.

The Twenty-seventh Annual Convention of the American Newspaper Publishers' Association was opened in the Waldorf-Astoria Wednesday, the 3d, and 181 members from all parts of the country had signed the register at 10 a. m., when Elbert H. Baker of the Cleveland Plain Dealer, President, Called the session to order. The first business was the address of the President, in which he said:

"The association has had a busy and worth-while year, closing this period with the largest membership in its history, and I am sure that our members may look forward confidently to a still broader activity and a larger usefulness in the coming year." Expressing appreciation of the work done in the New York office under L. B. Palmer, General Manager, Mr. Baker continued:

"Members often might save themselves annoyance and money if they would avail themselves more extensively of the credit ratings, the collection department, and the general information at command of the New York office. I cannot too strongly urge our members to treat all information coming from the central office as strictly confidential, and especially to see that code books are not permitted to fall into hands other than those for whom they are intended."

President Baker outlined the chief events of the year with the work of the Special Standing Committee, the Paper Committee, the Press Agent's Committee, and the Advertising Agents' Committee, after which the session was ended with reports of the Treasurer, the General Manager, and the Advertising Agents' Committee. There was much discussion of the topic, "Is the question of uniform rate cards and uniform discount date submitted by the Advertising Agents' Committee for discussion of interest to members"?

Another topic discussed without action was "What has been done by members in the line of editing, restricting, or eliminating the advertising of medicines and remedies"? The discussion showed there was a strong and growing tendency to cleanse advertising columns. Many members said their papers were not printing advertisements of medicines known to be fraudulent.

The afternoon's session was devoted to reading and discussion of committee reports, all of which were accepted as read. H. L. Rogers of the Chicago News, Chairman of the Committee on Co-operative Fire Insurance, stated such a department had been established and was a success. He added the outlook for mutual insurance among publishers was hopeful.

Don C. Seitz of the New York World, Chairman of the Committee on Second-class Postage, appointed to safeguard the rider to the Postal Association Act, reported a test suit was pending. John Norris, chairman of the Committee on Paper, told of efforts to get cheaper paper, which seemed likely to be realized in the Underwood bill. It was decided the work of that committee should be continued until the Tariff bill had been passed.

Interesting discussion followed Mr. Seitz's report as chairman of the Committee on Press Agents, in which he showed free publicity had been reduced greatly in the year. The committee was appointed four years ago to expose the sources and objects of many uninvited contributions.

Another step in the amalgamation of the Daily Newspaper Association, The National Newspaper, and The United Newspapers, three organizations having the same object, to spread the gospel of newspaper advertising, was taken when a committee composed of Louis Wiley of The New York Times, President of the Daily Newspaper Association; Hopewell L. Rogers of the Chicago Daily News, President of the National Newspapers, and Jason Rogers of the New York Globe, President of the United Newspapers, waited on the Publishers' Association and requested that a special committee be appointed to confer with it, to see wether the work done by the first three organizations could be taken up by the Publishers' Association and performed by a special bureau.

A special committee was appointed by the publishers as follows: E. V. Alley. New Bedford, Mass., Standard and Mercury; H. C. Adler, Chattanooga Times; C. C. Marquis, Bloomington, Ill., Pantagraph, and J. F. McKay, Toronto Globe.

The programme for Thursday 24th consisted of the reports of the Special Standing Committee and the Committee on Educational funds, and the discussion of labor topics. Presidents of international unions addressed the convention.

A banquet was given at the Waldorf Wednesday night, the 23d, at which Mayor Gaynor was a guest of honor.

Other speakers and the subjects were Inez Milholland, "The Psychology of Advertising"; Prof. Paul T. Cherington, of the Graduate School of Business Administration of Harvard University, "National Advertising from the Consumer's Standpoint"; O. H. Blackman, President of the Blackman-Ross Company, "The Conservation of the National Advertiser"; James Schermerhorn, Publisher of the Detroit Times. "Testing the Beatitudes—A Twentieth Century Newspaper Experiment" and Charles W. Dietrich, Secretary of the Central Branch Y. M. C. A., of Brooklyn, "The Ethical side of Advertising."

Mayor Gaynor in his remarks paid some left handed compliments to certain New York Dailies but, on the whole, praised the press of the Nation, saying, as reported by the N. Y. Times:

"Now, you are from all over the United States, and you represent a press that I undertake to say is not surpassed in any nation in Europe. I have done some traveling in Europe for twenty years or more, and I have observed the English press, the German press, and the French press. But I undertake to say that, take the press of this country as a whole, there is not a cleaner or better press in the world, nor a more enlightened press.

"We have some splendid newspapers here too," observed Mayor Gaynor, "but they are all stricken more or less with the infirmity of imitating the other kind. They think their circulation will slip away from them if they do not have suitable headlines and suitable exaggerations and suitable falsehoods, and editorials that are more smart than truthful. But we have papers here that are of the first order.

"I have a small notion that I have added to the circulation of them somewhat. I think in some of the greatest affairs of this day, where I have deprecated the rag-bag and infamous methods of some of the papers here, that it has had some little effect, and the number that they have lost in readers must have gone to some other papers. Why, I think Wiley's paper has increased its circulation since I became Mayor by about 100,000 (laughter). Editorially, they don't give any credit to me for that, but I think it is about time they should do so." (Laughter).

Praises Outside Newspapers

The press of New York City was not to be immitated by the press of the country, was the advice of Mayor Gaynor. He told the men and women from the South that their press was excellent because controversies in that section easily could be settled on street corners. He believed it a good thing for the editor to have to be decent. Consequently, the Mayor said, as one proceeded to Albany, to Utica, and Syracuse, and so on through Buffalo to Chicago and Kansas City, he found an "excellent press." A trip across the continent five years ago convinced Mr. Gaynor that every city he visited, with the exception of "those cities which were infected by two newspaper prprietors, had absolutely correct and honorable newspapers."

"No man in public life, no writer of books, no artist, nobody who invites public attention deprecates that the newspapers should discuss what he says and does," the Mayor said. That is legitimate and leads to enlightenment. But when, instead of doing that, the newspapers simply denounce and abuse those who are obliged to come before the public, then they degrade themselves and the community.

"The newspaper proprietor is the root of all evil," asserted Mayor Gaynor, when he recalled that his toast was 'The Newspaper Proprietor.' If you leave the news reporter and the editor alone, they will do all right. They will do nobody an injustice.

"The press is the greatest force that we have in this country. It may be the force of good and it may be the force of evil. Those who try to make it a force of evil do not usually succeed. As a whole the press is a force for good.

"It is better to leave the press, with all its lowbred proprietorship, alone than to attempt to curb it. It is better to leave the press entirely free, with only the exception that the proprietors be held accountable for whatever they may say. But I reiterate that the condition of the press in this country is not grave. The journalists and the newspaper proprietors are on the eve of reclaiming themselves, and then journalism is to be brought back."

At the joint banquet of the Associated Press and the American Newspaper Publishers' Association the speakers were as follows:

Secretary of the Navy Josephus Daniels, Raleigh (N. C.) News and Observer; Norris C. Osborn, New Haven Journal-Courier; Charles H. Grasty, Baltimore Sun; Herman Ridder, New York Staats Zeitung and Congressman Frank L. Green, St. Albans (Vt.) Messenger.

✣ ✣ ✣

"NEWSPAPERS AS PEACE MAKERS"

President Charles A. Richmond of Union College, spoke at the great newspaper banquet in New York, April 24, of the opportunity of newspapers as peacemakers in the class struggles. "By their unique position of advantage they are able to do the work of uniting classes better than any other instrumentalities," said Dr. Richmond. "It is not merely a question of news, or of circulation. Large circulation does not necessarily mean large usefulness. Some newspapers are epidemics. Some are evangelists. The most potent instrumentalities for fomenting ill will are the newspapers; and the most potent instrumentalities for advancing good will are the newspapers. A commercialized newspaper is worse than a commercialized college or a commercialized church."

He said that if Benjamin Franklin had happened to walk into the Waldorf-Astoria and been taken from there to see one of the great newspaper plants in New York he would have been intrested but not surprised.

"If he read your papers," added Dr. Richmond, "Franklin would undoubtedly have marked: 'Well, here at least, you have nothing on me.' A newspaper was as much of an educator as a college or university. He was glad to admit, however that there were no greater forces for good in the world than the newspapers. He closed with a tribute to the great American editors of the Greeley period.

A Successful Banquet

The Seventh Annual of the Chicago Ben Franklin Club

Organizations among printers and publishers and members of allied trades have tended not only to improvement in all business methods, efficiency and good understanding, but to the increase of social occasions, acquaintance and friendships. This was evidenced at the banquet, the seventh annual, of the Ben Franklin Club of Chicago at Hotel Sherman, April 8.

It was the most successful in the history of the organization. There were five hundred and forty-seven in attendance. The decorations, menu and service were all that could be desired.

President W. J. Hartman presided. Rev. Fred V. Hawley invoked the Divine blessing on the feast and guests, and, after enjoyment of the excellent menu, before the opening of the speaking program, a humorous interlude was furnished by a supposedly ideal country publisher, "Si Perkins, publisher of the Clarion, Tioga, Hancock County, Ill.," who had all the characteristics of the olden-time printer, including tricks with playing cards.

President Hartman led off with a hearty welcome to guests and gave some interesting incidents in the history of the club. The first meetings were held in a hotel bedroom, and the contrast between the small beginning and the present was made evident by this assembly, occupying the magnificent Louis XVI. and two adjoining halls of the great modern Hotel Sherman, that so greatly surpassed its predecessor.

This evening, as he listened to the motor cars driving up to the palatial building and witnessed the filling of the halls with the well-groomed, prosperous appearing men and their handsome ladies, dressed in their rich, beautiful gowns, he could but contrast the older days with the present, and the first meetings of the club, with the present gathering that indicated so great prosperity.

Each year he had noticed a distinct improvement in conditions. The effort had been, from the first, to make the club of real financial value to each member. It was in evidence tonight that the greatest progress in the printing business ever before made had now been achieved. The spirit and practice of mutual confidence, helpfulness and co-operation that had been attained, had helped the members immensely.

He was glad to see the ladies present, and appealed to them to insist that their husbands regularly attend the meetings of the club and do their share in making the organization of some practical benefit and power. They were making rapid strides, and if they continued to make the same progress during the next six years they had in the past, they would stand at the head of the business world. (Loud applause.) They must do as was suggested in the poem:

Just Keep On Keepin' On

If the day looks kind of gloomy
  And your chances kinder slim,
If the situation's puzzlin'
  An' the prospects awful grim,
And the perplexities keep pressin'
  Till all hope is nearly gone,
Just bristle up and grit your teeth,
  And keep on keepin' on.

There ain't no use in growlin'
  And grumblin' all the time,
When music's ringing everywhere
  And everything's in rhyme;
Just keep on smiling cheerfully
  If hope is nearly gone,
Just bristle up and grit your teeth,
  And keep on keepin' on.

(Cheers.)

The Rev. Fred V. Hawley was down to speak to the toast of "Ben Franklin." He expressed the pleasure it gave to him be present and have the opportunity of speaking not only of Ben Franklin as a printer but as a man. To his (the speaker's) mind Franklin was one of the wonder-workers of the eighteenth century. He rose from humble surroundings and parentage to one of the highest positions in this country. Throughout his life he set an example to his fellow countrymen. The spirit which he at all times displayed was worthy of emulation by all. He excelled in everything from being a good printer to being a worthy citizen imbued with the desire of mutual helpfulness, which he was glad to hear was one of the fundamentals of their organization. This seemed to be an age of specialization, and to his mind there was too much of it, for many were getting into a rut and losing sight of the manly qualities which helped to make for a better industrial community.

Hon. Quin O'Brien was on the programme to talk upon "Am I My Brother's Keeper?" but was prevented from being present owing to being called out of town by the illness of his wife. His place, however, was taken by H. N. Tolles, of the Sheldon School of Salesmanship, who gave an address which was much appreciated. He spoke of the great good which was being accomplished throughout the country by the Ben Franklin clubs in fostering the spirit of co-operation which was so helpful in every line of business.

J. J. Miller voiced the sentiments of the guests in proposing a hearty vote of thanks to the entertainment committee, and particularly to the chairman, Harlo R. Grant, and Mrs. Grant, for the thoroughness of the arrangements made for the comfort of the guests. The proposition was seconded in several places and carried by a rising vote.

During the banquet several telegrams were received by President Hartman and read, wishing the company a pleasant and happy evening. They were from the Missouri Valley Cost Congress at Omaha, Secretary Sheasgreen of the Ben Franklin Club of America, Franklin W. Heath of Philadelphia Printers' Board of Trade, and Warren B. Hait of the Master Printer, Philadelphia.

At 10 o'clock an adjournment was taken for a few minutes in order to allow the room to be cleared for dancing. In the interval the hostesses took the opportunity of making a presentation of a handsome cut-glass compote to Mrs. Harlow Grant as a slight mark of their appreciation of what she had done in the matter of helping her husband and the committee in the planning and carrying out the musical and other arrangements, which could not have been surpassed.

Shortly before half past ten a grand march was started. Two pages attired in court costume of the eighteenth century led the way, immediately followed by Mrs. W. J. Hartman and President W. A. Grant and President Hartman and Mrs. Grant. The ballroom was all ready for the devotees of terpsichore, and at the conclusion of the march a capital dance program was provided, a large majority tripping the light fantastic until past midnight, when, to the strains of "Good Night, Everybody," the party broke up with the unanimous verdict that the entertainment could not possibly have been excelled.

The success of the affair was attributable in no small measure to the following committees:

Entertainment Committee — Harlo R. Grant, chair-

Flashlight Photograph Showing the Speakers' Table and a Portion of the Brilliant Assemblage at the Annual Banquet of the Ben Franklin Club of Chicago man; Harry L. Ruggles, George H. Benedict, Charles P. Soule, Albert W. Michener, James H. Rook, George S. Thompson, Wm. C. Hollister, Wilson J. Hollinger, Franklin Wanner, Fred S. Dresskell, Hector E. Delbare, Henry G. Prosser, Vernon F. Bloom, Benjamin S. Herbert, Barnard F. Chittick and Arthur B. Rice.

Hostesses — Mrs. W. J. Hartman, chairman; Mesdames J. W. Hastie, J. J. Miller, Roderick Ross, A. W. Michener, A. C. Jacobus, W. R. Goodheart, J. H. Walden, T. F. Walton, G. A. Kinney, Jeremiah Cox, B. F. Chittick, Joseph Hays, John I. Oswald, Charles E. Wells, Charles P. Soule, E. F. Haiman, H. L. Ruggles, A. F. Wanner, James H. Rook, George E. Benedict, F. S. Dresskell, H. E. Delbare, V. F. Bloom, J. C. Kirchner, E. F. Hamm, J. A Singler, Daniel Boyle, E. W. Kirchner, M. H. Kendig, Henry Allen, R. D. Welsh, C. W. McDonouth, F. H. Farnsworth, Otto Schroder, and Misses Viola Hartman, Louise R. Grant, Lucy Miller.

One feature of the banquet and ball which must not be overlooked was the menu card and programme. It was a very handsome piece of work, with an embossed picture of Ben Franklin on the cover which enclosed an eight-page folder of high typographical merit. The work was generously donated by Arthur B. Rice of the Review Publishing Company.

NEW YORK BANQUET FOR EXPOSITION VISITORS A DECIDED SUCCESS

The banquet given at the Hotel Savoy, New York, for the exposition visitors and exhibitors Friday evening, April 25, was a decided success. The affair was originated and carried to splendid conclusion by the New York Picas and the New York Salesmen's Guild.

Mr. John Clyde Oswald was the toastmaster. The speakers were: Mr. Harry A. Cochrane, president of the National Exposition; Mr. C. Frank Crawford, president of the New York Master Printers' Association; Mr. Chas. G. McCoy, of the Printing Trade News and spokesman for the local Pica organization; Mr. S. Evans Clark, secretary Central States Exposition General Committee; Mr. Charles Francis, president Printers' League of America; Mr. William Hartman, president Ben Franklin Club of America; Mr. Robert W. Nelson, president American Type Founders Company; Mr. Philip T. Dodge, president Mergenthaler Linotype Company and the International Paper Company, and Mr. Joe Mitchell Chapple, editor of the National Magazine.

Mr. Nelson told of his satisfaction in the manner in which the printers were joining the organizations and aiding one another instead of engaging in ruthless, self-destructive competition. The speaker advocated the establishment of a central meeting place in New York City, where the stranger-printers of the nation could get together when visiting the metropolis. The suggestion met with instant approval and there is strong probability of some action being taken to bring about the fruition of the idea.

Mr. Dodge compared the printing industrialism of America with that of foreign countries. It was his opinion that the organization, and especially the apprentice system prevailing in German printing offices, was superior to that of America. He expressed his gratification over the advance made by the printing industry within the last decade, and predicted a more wonderful development in the future.

Mr. Chapple proved himself to be the orator of the evening, his address sparkling with wit, wisdom and fervid patriotic eloquence. He toasted "The American Printer," and Mr. Oswald, editor of the magazine whose name is made up of the same words, with quick adroitness urged the banqueters not to forget Mr. Chapple's words of praise.

Adjournment was had early and permitted the visitors and exhibitors to return to the exposition before nine o'clock.

CENTRAL STATES MILLION DOLLAR EXPOSITION AT TOLEDO, OHIO, SEPTEMBER 6, 1913

A great million dollar exposition for the printing and allied trades will be held at Toledo, Ohio, September 1-6, inclusive, 1913. The advance agents appeared at the National Exposition at the Grand Central Palace, New York, and sold space to a goodly number of the exhibitors there.

Mr. S. Evans Clark, the secretary of the Central States Exposition General Committee, upon invitation, made the National Printer-Journalist booth his headquarters. Mr. Henry C. Vortriede, vice-president of the Ohio Printers' Federation and chairman of the Exposition General Committee, and Mr. Colby C. Hade, vice-chairman of the Exposition General Committee, were visitors at the New York exposition, and received assurances of interest in the Toledo "show."

The exposition at Toledo will not be a private money-making enterprise, but will be conducted by printers for printers. Among the exhibits which are already agreed upon are: A model composing room, newspaper printing presses, automatic, platen, cylinder, scoring and embossing presses; stitching and numbering machines; type machines, cutting machines, perforators, automatic feeders for job presses, printing ink, and paper stock manufactures.

The exposition building is 115,000 square feet in area, and includes more space than is found in either the Madison Square Garden in New York or the Coliseum building in Chicago, and it is all on one floor.

A variety of entertainment is to be offered the visitors. A trip to Toledo Beach, including a luncheon, a moonlight excursion, an excursion to Put-in-Bay, and a cruise around the islands, a visit to Cedar Point and, on Thursday night after the close of the congress, a vaudeville entertainment and ball will be given in the large convention hall.

Philadelphia Club of Printing House Craftsmen

On April 10 the Philadelphia Club of Printing House Craftsmen held their monthly meeting and dinner. There was a very good attendance, as over four-fifths of the members were present.

Much interest was taken in the samples of work put on a table set aside for displaying them, and President Sorensen's idea of the different members bringing samples of good work each month, promises to be very popular and beneficial to all.

Mr. E. R. Currier, of the Curtis Publishing Company, was the speaker of the evening, taking for his subject "Standardization as Applied to Printing." He spoke at some length on having set sizes of papers and about four different page sizes for all printed matter. He also said that if we use less faces of type, having about three or four different families only, in the composing room, that it could be run more economically and harmoniously. His talk was very instructive and interesting, as we have had nothing along this line before.

Mr. Edward Stern, of the Edward Stern Company, was also a guest and gave us a short talk of encouragement to continue, as he thought we were doing a good work, in getting together each month to thresh out our workroom troubles. N. E. HOPKINS, Secretary.

BEN FRANKLIN CLUB OF CHICAGO MONTHLY MEETING, APRIL 17

The Ben Franklin Club of Chicago held their regular monthly meeting at the Hotel Sherman Thursday evening, April 17. Business of great importance relative to the local amalgamation was considered after the banquet had been served. The opinion expressed in favor of an amalgamation on the line of the original agreement of the joint committee and the proposition offered by the Chicago Typothetae was rejected. But in order to leave the way open for further negotiations the committee was empowered, provided the Chicago Typothetae would so instruct their committee, to further negotiate on a plan of amalgamation that would be satisfactory to both parties.

After the business of the evening had been taken care of E. R. Pritchard, secretary of the Department of Health of the City of Chicago, was then introduced to speak on Industrial Efficiency. In a general way he outlined the publicity and preventative work of the department and then dealt with the fresh air problem to show how efficiency can be increased in store, shop, factory, and mine.

The speaker said that a human machine had to sleep once in twenty-four hours, eat three times in the day, but had to breathe eighteen times a minute. He showed that human efficiency depended as much, if not more, on the air breathed than on the food taken into the body.

He illustrated this by citing an instance where the operators at one of the big Boston telephone exchanges were exceedingly efficient in the spring and summer, when the windows and doors could be open, allowing fresh air to be supplied in great quantities, and then how, in the winter time, this efficiency was greatly reduced because of the windows and doors being closed and the fresh air shut off. It took a long time for the managers to find the reason for the inefficiency. When found, the problem was worked out by running ventilators down the length of the ceiling of the room. In a week's time the high efficiency of the operators had been restored.

Many other illustrations were given to show how efficiency was gained and maintained, the same being turned into dollars and cents, not only for the employers, but for the employes as well, since the health of the worker is always better in well ventilated rooms, and doctor and medicine bills are reduced.

He condemned the flat as being an unholy place in which to live, and especially in which to rear a family. He illustrated this somewhat as follows:

"Hello, Johnny."

"Hello."

"Where do you live, Johnny?"

"In Chicago."

"Yes, I know that, but — but — but where do you live?"

"In the third flat down there."

"Where were you born?"

"Gee, I don't know, Mister; I'll go ask ma," and Johnny runs to his mother and says, "Ma, where was I born?"

"Why, in Chicago, Johnny."

"Naw, that ain't right, ma; that fellow wants to know where I was born."

Johnny's mother looked out of the third-story flat window for a moment, then turning to her husband, said, "Say, John, what flat were we living in when Johnny was born?"

The point Mr. Pritchard made was that a flat was not a home, and robs childhood of certain influences in memories which come only by living in detached homes — **real** homes.

As Mr. Pritchard concluded his address several called "Riley," "Riley," "give us some of Riley's poetry," and for nearly a half hour more Mr. Pritchard quoted in a most admirable manner from the works of the Hoosier poet.

* * *

ARRANGEMENTS FOR THE PRINTERS' CONVENTION AT NEW ORLEANS

New Orleans, April 10, 1913:

It is doubtful if any city has ever taken hold of the preliminary arrangements for a convention with greater enthusiasm than has the committee which has in charge the arrangements for the 1913 annual convention of The United Typothetae of America, and The Fifth International Cost Congress, to be held in New Orleans October 20th to 25th. Notwithstanding the fact that a most elaborate entertainment program has been tentatively outlined, already ample funds have been pledged to take care of the expense, and on August first, the committee will begin a wide and comprehensive campaign, designed to reach every printer in the country, and especially those of the Southern states. Special literature will be issued, both on New Orleans and the convention program.

The General Committee and sub-committee have all been appointed, and each committee knows its duties and everything is in shape for a systematic campaign to make the convention the greatest in the history of the organization.

At its last meeting the committee selected the official headquarters for the convention, which will be at the historic St. Charles Hotel.

The St. Charles is one of the most famous hotels in the country, replete with historic associations, which however, has kept pace with modern progress and development, and today is one of the most attractive and best conducted hostelries to be found anywhere.

The erection of the old St. Charles Hotel was commenced in 1835 and completed in 1837, and cost $800,000., a fabulous sum for a hotel building in those days.

The new hotel created quite a sensation throughout the country, and as a result of its construction, New Orleans was given the credit of being the most enterprising — it was already recognized as being the most aristocratic — City in the United States.

This was before the Americans had become hotel building people. The St. Charles was the best of the great hotels of the United States; it was built before The Palmer House of Chicago, and before The Astor House of New York.

On January 18th, 1851, with eight hundred guests in the house, the hotel was discovered to be on fire, and notwithstanding a most stubborn fight, was completely destroyed. It was insured for the insignificant sum of $150,000., about one seventh of its value.

The loss was a severe one to the young city, but the men of those days did not despair easily. Within two days the directors of the hotel had met and decided to rebuild. Work was begun in a few weeks, and within twelve months of the fire a new building had arisen from the ashes of the old one.

In the new St. Charles occurred many of the political events in the stirring period between 1851 and 1861, which made history for the country and the world. It was in Parlor P. "so famous in history" that Jefferson Davis and a number of leading Southern politicians met on their way to the Charleston convention in 1860, and decided in caucus on the course they should pursue there, and probably laid the foundation for the gigantic strife between the States, that followed soon afterward.

In 1862, while New Orleans was occupied by the

Federal forces, the course of the manager of the hotel in refusing General Butler accomodations, came near precipitating a serious disturbance. Mr. Hildreth, the lessee, was a Northern-born man, and a relative of General Butler's wife, nee Hildreth, but was strongly Southern in his sympathies, and an active member of the Confederate Guards.

THE MISSOURI EDITORS

Harvey Ingham, editor of the Des Moines Register and Leader, has accepted an invitation to deliver an address at the annual meeting of the Missouri Press Association, which will be held the week of June 23, at Pertle Springs, a summer resort near Kansas City. Mr. Ingham was a country newspaper publisher before he went to Des Moines, and will talk shop to the editors of Missouri.

Ovid Bell, editor of The Fulton Gazette and president of the Missouri association, is arranging an attractive program for the meeting. One whole session will be devoted to a consideration of the problems of the country newspaper published in a town of 1,500 or less. The subjects will be: "Getting the News," "Getting and Keeping Circulation," "Getting Business," "Business Methods," "Shop Equipment," and "The Editorial Page." Six of the brightest and most successful young country newspaper men of the state will be the speakers.

Another session will be devoted to a discussion of the effort made by a committee of the association to secure amendments to the state's libel laws at the recent meeting of the legislature. Jack Blanton, of the Paris Appeal, who represented the association before the legislature, will lead the discussion, and the other speakers will be the seven country newspaper men who were members of the legislature, besides Lieutenant Governor W. R. Painter, editor of the Carrollton Democrat. The purpose of this session will be to show the newspaper publishers of Missouri that they draw water and haul wood for the politicians, and then are reviled by them. A good deal of straight-from-the-shoulder talk is expected at this session.

The members of the association will meet in St. Louis on Monday, June 23, and go to Pertle Springs on a special train furnished by the Missouri Pacific Railroad Company. The remainder of the week will be spent at Pertle Springs. Sessions will be held each morning, and the afternoons will be devoted to resting and visiting among the members. Secretary Jack Blanton is arranging details for the meeting, and he is confident the attendance will be unusually large.

✣ ✣ ✣

CALL FOR MEETING OF COUNTRY PUBLISHERS

To the Country Publishers of the United States — Greeting:

At 10 a. m., June 12, 1913, in hall L-38, Great Northern Hotel, Chicago, there will be a convention of country publishers of the United States. This gathering is called at the request of hundreds of publishers throughout the country, and will be the result of the efforts of the national organizing committee appointed by the Washington State Press Association July 12, 1912.

The principal object of the convention will be the organization of a national association of country publishers, to be conducted on strictly business lines, and which will endeavor to secure:

More foreign advertising at better rates for the country papers.

The abolition of all free advertising.

Concerted action on all legislative matters affecting the interests of country publishers.

The discontinuance on the part of the government of printing envelopes and wrappers in competition with private individuals and concerns, and many other matters of vital importance.

Addresses will be made by men of national prominence in the publishing world.

As is was impossible to guarantee the number of publishers who will be present, no special railroad rates can be secured, but the date has been selected so that those desiring to attend can take advantage of the low summer schedules, and to suit the convenience of those who will attend the meeting of the National Press Association.

Publishers who propose to attend the Chicago convention are urgently requested to notify the chairman of the committee (Arthur A. Hay, Camas, Wash.), so that proper arrangements can be made. Please do not fail to do this.

Fraternally, ARTHUR A. HAY,
The Camas Post.
ALBERT JOHNSON,
The Daily Washingtonian.
THOMAS CRAWFORD,
Centralia Daily Chronicle.

✣ ✣ ✣

SOUTH CAROLINA PRESS

The executive committee of the South Carolina State Press Association at a recent meeting selected Thursday and Friday, June 19 and 20, as the dates for the annual convention, which will be held at the Isle of Palms, Charleston. It was decided to take a trip to New York following the meeting, the party to sail from Charleston on Saturday morning, June 21. It was only after much correspondence and hard work on the part of H. L. Watson, the president, that the Clyde line consented to make a rate of $20 for the round trip from Charleston to New York, provided as many as eighty were secured for the trip. The $20 will include fare both ways, meals and berths. The matter of securing an orator for the annual meeting was left with the president and he was empowered to complete any arrangements necessary for the meeting. The Master Printers of the state will probably hold their annual convention in Charleston two days previous to the meeting of the press association. Reservations for the trip to New York should be made at once, and those desiring to go should communicate with H. L. Watson of Greenwood, S. C. Those attending the executive committee meeting were: Robert Lathan, E. H. DeCamp, A. B. Jordan, H. L. Watson, J. L. Sims, A. H. Seats and W. F. Caldwell.

✣ ✣ ✣

WOMAN'S PRESS CLUB OF INDIANA

The Woman's Press Club of Indiana was organized March 18, 1913, at a luncheon in the Ayers' tea room, at Indianapolis, Indiana.

Meetings will be held upon the second Tuesday of each month.

Officers of the Club

Mrs. A. D. Moffet, Elwood, president; Miss Blanche C. Foster, Indianapolis, first vice president; Miss Helen Ernestinoff, Indianapolis, second vice president; Mrs. Dora Budenz, Martinsville, third vice president; Miss Laurel Thayer, Indianapolis, recording secretary; Mrs. Virgil L. Lockwood, Indianapolis, corresponding secretary; Mrs. Henry B. Wilson, Delphi, treasurer; Miss Anna McKenzie, Indianapolis, historian.

The club will establish a press bureau to disseminate information upon matters in which women are especially interested and causes with which they are actively identified.

The association decided to affiliate with the National Press Association.

The outlook for the club is very bright for a large membership as well as a life of much usefulness.

UNIVERSITY OF MISSOURI

School of Journalism — Office of the Dean
Columbia, April 7, 1913.

Dear Sir:

You are invited to attend a conference of publishers of the near-city daily newspapers of Missouri, Wednesday, May 14, 1913, during Journalism Week at the University of Missouri, to discuss:

1. The Development of Home Advertising for Missouri Daily Newspapers.
2. Plans for Bringing More Foreign Advertising into Missouri.
3. Circulation Methods and Problems.
4. How to Get a Just Advertising Rate.
5. How to Combat the Press Agent and the Charity Advertising Evil.

Every publisher of a daily newspaper in Missouri has these and similar problems. Let's discuss them and formulate plans for their solution.

* * *

SEEIN' TYPE-LICE

When the presses cease their grinding,
At the closing of the day,
And the office is deserted
Then my thoughts drift far away,
And I'm carried back, through fancy
To the times I used to know,
And I dream of "seein' type-lice"
As a "devil," long ago.

I had come in from the country,
With a healthy coat of tan,
Thinking that to be a Printer
Was the grandest aim of man;
(And to tell the truth that feeling
I have never yet outgrown).
Soon I heard of "seein' type-lice,"
And I wanted "to be shown."

Thus, the very friendly (?) youngster
Who preceded me, took care
To accommodate my wishes,
So, one day he lead me where
He had lately placed the "news forms"
After running off the "sheet,"
Saying, "Boy, I'll show you 'type-lice,'
Here are some that can't be beat."

Then he opened up a column
Of that good old phat burgeois,
And he filled the space with water
As he said, "Don't make no noise,
Or you'll scare 'em. Get up nearer,
There, now. Look right down in close."
As I did so — swish! the water
Filled my eyes and mouth and nose!

What I said I can't remember,
I suppose it wasn't nice;
But I won't forget the fellow
Who took pains to show me "lice."
Thus, all care and toil 's forgotten—
Troubles vanish fast always,
When I dream of "seein' type-lice"
In my early 'prentice days.

— Roscoe E. Haynes, Fairport, N. Y.

AN ADVERTISER WHO THOUGHTFULLY AND THANKFULLY ACKNOWLEDGES THE BENEFITS OF SERVICE

New York, April 23, 1913.

National Printer-Journalist,

Gentlemen: It is a fitting and opportune time to express to you personally our gratitude for the co-operation you have given our trade agency since you became a member. With this expression of gratitude, however, comes a sense of conscious dependence, for we realize that every attainment in the past has been achieved, and every future success must be gained through the individual and united co-operation of each and every member.

Your co-operation has helped us to build up an organization which has the largest membership of any organization in the trade and reaches into every department of the industry, making it the trade center of credit information. Its unique position, as a strictly neutral body, enables it to act on all trade matters from a purely impartial standpoint.

Thanks to your help, no other organization has been able to maintain so large a group of trained specialists who are giving every business hour to the careful consideration of trade problems and requirements; none is seeking harder to eliminate serious trade abuses, and none has more effectively brought about true trade co-operation, as shown in the Typo Credit Clearance Service.

Your continued co-operation, which we count upon, will help us to make the Typo Service of increased value to you and to every member, and of greater benefit to the whole trade. Faithfully yours,

THE TYPO MERCANTILE AGENCY,
William T. G. Weymouth, President.

AMALGAMATION RESOLUTION

Whereas, we, the employing printers of the ...., in convention assembled at ...., the ——— of ————, 1913, believe that the study of cost finding and general business efficiency is the greatest business educational work the printer has ever become engaged in; and,

Whereas, the United Typothetae of America and the Ben Franklin Club of America, as national bodies, have been great forces in this new cost finding and efficiency movement; and,

Whereas, it is our steadfast belief that the work they are doing as dual organizations can best be done as one, thereby saving those who support them a great expense, and permit of a still greater work to be done; be it therefore

Resolved, That this convention go on record as favoring unanimously the amalgamation of the two bodies mentioned above into one body, and along the plan adopted at the Hotel Sherman, Chicago, Ill., February 9, 1913, by properly authorized commissions from both organizations, said amalgamation to take place July 1, 1913; and be it further

Resolved, That this convention recommend to all printers that they, either through local bodies, or as individuals, join said new amalgamation, to be known as The United Typothetaes and Franklin Clubs of America; be it still further

Resolved, That copies of these resolutions be sent to the national secretaries of both the old organizations.

Adopted at Omaha and Atlanta congresses and submitted to Kalamazoo, Louisville, New York and Minneapolis conventions.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

The Oswego cutting machine at the National Exposition, held in New York, was one of the principal centers of interest for visitors, and a number of sales of the machine were made as a result of the actual demonstration of its remarkable abilities. Among the recent sales of the Oswego are: Charles D. Robbins, American Bank Note Co. (2), American Lithographing Co. (2), Brown, Lint & Pitt (2), Eugene C. Lewis (1), Lever Bros., Port Sunlight, England (1), C. H. Slingerland (2), Gugler Litho. Co., Milwaukee (3).

* * *

At the National Printing Exposition in New York last month, the Duplex Printing Press Company exhibited four machines used in modern stereotyping departments. An automatic steam table known as the Duplex Mechanical Compressor, proved a great attraction to publishers visiting the big show. The big machine is a powerful, compact, simple mechanical device that does away with all air tanks, pumps, air or fluid compressors and other auxiliary and emergency devices always considered necessities in any pneumatic or other fluid table. In this table complete and perfect "follow-up" of compression is secured by a very heavy and powerful mechanism, this compression being regulated at will by a single adjustment, up to any desired pressure. The entire action is automatic, controlled by the operator simply pulling the lever at the side of the table, or is operated by foot-treadle if preferred. Either platen can be used independently of the other, and the entire machine, accommodating two forms, can be operated by a little two-horsepower motor located practically within the table. This machine, entirely self-contained, requires no fixtures, tanks, piping or other attachments in the room. It can be placed wherever wanted and freely and easily moved if desired. While regularly built for steam heating, the table can be adapted for electric heating.

Another machine exhibited by this company was the Duplex Mechanical Compressor Matrix Drying Table. It is claimed to be the only automatic table that is complete in itself. The machine is of the utmost simplicity in design, and has air or steam compression with the necessary extra devices, such as air compressors, special apparatus for operating, tanks, valves, cylinders, etc., etc. It requires no emergency devices or attachments for operation by hand.

* * *

The new catalogue of the Mergenthaler Linotype Company is not only usefully informing in conveying and describing all present standard models of Linotypes, that is a work of highest typographic excellence and beauty. The book was wholly composed on the linotype and printed direct from the slugs at the works of the Mergenthaler Linotype Company, at Park Avenue and Ryerson Street, Brooklyn, N. Y. As a specimen of linotype work, it must be classed as a model, showing the possibilities of highest artistic production. The facts given as to the development of the linotype, as well as to the broad fields now covered by the two, three, and four-magazine machines are most interesting and important.

Kihn Brothers, bank-note engravers and printers, of 203 Beekman Street, New York, are new advertisers in the National Printer-Journalist. They produce the very finest bond and stock certificate blanks at reasonable prices ready for the printer. By securing specimens of the blanks and submitting them to possible purchasers the local printer can make a handsome profit on the jobs and still undersell others and, incidentally, keep work from going out of town.

The idea is firmly established that the production of securities should be surrounded by every possible safeguard and that their attractiveness should induce their purchase by investors.

Those most keenly alive to this necessity have long ago discarded the use of cheap and inferior methods of printing securities and have resorted to the use of bank-note engraving.

"K. B." Blanks make possible the production of high-class securities embodying the best features of bank-note engraving at reasonable cost, and leave a large margin of profit.

They are steel engraved in the highest bank-note style. Originality and exclusiveness of design, and the lavish expenditure of work in their production, render counterfeiting practically impossible.

The text may be lithographed, or type printed by you. thus rendering the work rich and attractive in appearance, and making the entire cost small compared with all steel engraved securities. Or, if it is desired, the work may be prepared by Kihn Brothers from all steel engraved plates throughout, in accordance with stock exchange requirements.

A choice of six colors—green, brown, blue, carmine, orange, and old gold—are carried in stock and enable the use of various colors where several denominations are required.

The paper used is Crane's No. 25 glazed bond for the stock certificate blanks, and Crane's No. 29 glazed bond for the bond blanks—the best that the market affords.

Securities produced in this manner are preferred by dealers and investors and command higher prices than others; their cost is within the means of the smallest corporation or municipality.

The attractiveness of such securities and the practical features of producing them in this manner are readily apparent; the pecuniary benefits to be derived should induce the adoption of this method.

* * *

Owing to the large amount of business coming out of Philadelphia and adjoining cities, the Latham Machinery Company has found it necessary to have their Mr. C. W. Toberan reside in Philadelphia.

He has been handling this territory for the past year, and his friends in the trade will be glad to hear of his move.

He is considered an authority on the Latham line, as he spent eight years in their factory at Chicago, and there are few things about a stitching machine that Mr. Toberan does not know.

* * *

Those doing business with the government and wishing to know whether the Ashcroft paper tester may be used for the 1914 specifications of the general supply committee, should address inquiries to the Bureau of Standards, Washington, D. C., exactly as follows:

"Will you please advise us if the Ashcroft paper tester is considered by the Bureau of Standards as a suitable instrument for determining the bursting strength of paper under specifications of the general supply committee, class 1, 1914."

The Bureau has been annoyed in the past by receiving a large number of inquiries, many of which were worded in such a manner as to draw the bureau out on their opinion of the Ashcroft paper tester.

This is a position in which no government department can be placed, and all inquiries addressed to the bureau should be worded as above indicated.

The Ashcroft paper tester does just what its name suggests it will do. The instrument is made by the Ashcroft Manufacturing Company of New York.

* * *

Mr. B. H. Wallace, formerly assistant sales manager of the F. Wesel Manufacturing Company, is now with the Latham Machinery Company's New York office. Mr. Wallace was with the Wesel Company eleven years and has had considerable experience in selling the printing trade of the United States, and will be a valuable addition to the Latham Company, whose New York business alone has increased over 100 per cent in the past two years.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . .

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

FOR SALE—Lever paper cutter, "Leader." In condition for immediate use. A bargain for some one. Address, Sohm Electric Co., Ravenswood, Chicago.

SPECIAL BARGAINS in Duplex, Goss Clipper, Hoe Flatbed Perfecting, two-revolution presses for newspaper plants; 8-page Scott web for $900; 24-page list. Write for List A, Peckham Machinery Co., 1 Madison Avenue, New York City, newspaper outfitters.

Bargains in Printing Presses

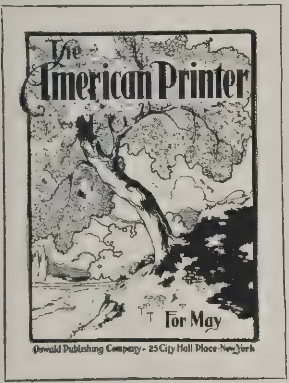
Are You Satisfied With What You Know?



The great Contest in Printshop Knowledge, just closed, brought home to many of us that we need to learn more about the printing business. The man in any walk of life, the printing business in particular, who ceases to learn, automatically eliminates himself from the great onward movement. Why dig a grave for your hopes and ambitions and sit idly waiting for the man with the frock coat? Keep young, revive your ambitions, march with the big men in the printing business—

That's where your Ledger Customers are made

The bookkeeper in the office may not pass out the orders, but he's mighty close and influential with the one that does when it comes to the subject of Ledger Paper. Explanations to him are aught but soothing; it is quality he wants, and quality he must have, if you seek his good will.

Ledger Paper gets all sorts of treatment, under all kinds of conditions, and unless constituted to survive the ordeal, remains a constant reminder of the mistake in judgment of some printer or stationer.

It has been our aim to put the quality into our Ledger Papers that would assist our customers in the development of their Ledger business. "Butler Brands" of Durable Ledger Paper are the dependable solution of your Ledger problems.

BERKSHIRE LINEN LEDGER

A Ledger Paper made to your order. List all of the features that would constitute your ideal Ledger Paper and compare ***Berkshire Linen Ledger*** with your specifications, and you will find that we have produced just the paper you have been looking for.

The new linen rags used in making this paper are manipulated with the one idea of producing paper of faultless quality, paper with a perfect writing and ruling surface, and pure, bright color—a sheet that will take repeated erasures.

If you want real Ledger satisfaction at a price that will effect a saving, you will get it in this brand.

ESTABLISHED 1844

Now You Have Time to Brighten Up Your Type Faces

We take advantage of the summer lull in business for making a general clean-up of type and material. We go over each case and work back from the letterpress department to the theatre program and poster department, discarding all worn and obsolete faces, reserving some of the doubtful fonts for the latter department. We box and weigh the old metal preparatory to sending to the foundry. After this trimming process we are prepared to give attention to renewals. We go over the late specimens and weigh their fitness for our work. In making selections we avoid conflicting variety, preferring harmonious faces, and plan to have each font an active unit of the whole. We order liberal weight fonts. It is cheaper to sometimes have a little unused type in the bottom of a discarded case than to have your compositors hunting for sorts.
—*C. X. Brando, Mgr. Sudsworth Ptg. Co., Washington, D. C.*

NEARLY every shop has a slackening up of work during the summer months. Use the time as does this Washington printer. It will bring you better returns than going to all the ball games—better even than canvassing for work when there is none to be had except at bargain prices.

A clean-up and rejuvenation of your shop, and the exchange of worn-out type for some which is new, sharp and up-to-date, will put you in a position to command the best work at the best prices when business opens up again.

Our printing office experts will be glad to advise you as to the most serviceable faces to put in. Write us freely as to the size of your shop, class of work done, the type you already have, etc.

American Type Founders Company

PACKARD—The Latest Type Face

How the Spirit of Co-operation Built the Largest Type Foundry and Printers' Supply Business

EVER since its inception the American Type Founders Company has been dominated by a policy of co-operation with the trade that it sells to. This spirit is not actuated by a motive of altruism. It is purely a business proposition. For this Company realizes that continual advancement of its business depends solely on the continual advancement of the industry it deals with. There never has been a forward movement of any importance or a reform, or an advance in the printing or publishing business or the allied trades, that has not received the most hearty and practical endorsement and co-operation of the American Type Founders Company

And the printing industry has never made a step forward during the life of the American Type Founders Company that has not materially increased the business of the Company. It is purely an automatic arrangement. The American Type Founders Company has always co-operated and will continue to co-operate to advance the interest of printers and publishers because such advancement means much greater success for the Company. The printers who have benefited by the progress in business at the same time have helped to make the American Type Founders Company the largest and most progressive Type Foundry and Printers' Supply House in the world. This Company conscientiously believes it has done its part to make the Printing Industry the Sixth Business in the United States

A continuance of this mutual co-operation will tend to still further raise the standard of the printing industry, and as a result, to increase the business of the Largest Type Foundry and Printers' Supply House

NEW YORK OFFICE: No. One Madison Avenue, Metropolitan Building

Says Barnhart's Jake:

Remember the first girl you were in love with? She was the daughter of the village milliner. You met her at a Picnic in Downer's Grove. At least that was when you first became conscious of her. She had big, blue eyes, and the freckles (you thought) only added a touch of piquancy. Well, she was a pretty girl.

But you are mighty glad now you didn't marry her. She wasn't the kind that lasts.

Some types are like our first loves. They are pretty. But they don't last.

Barnhart type is different.

The Babcock Optimus

The Babcock Optimus

We have recently put out the *No. 35 Optimus Pony,* a new two-revolution, printing a 22x32 sheet with half-inch margins. It is the most perfect of small presses. Makes 3000 smoothly. In its way is as good as the famous No. 43 Optimus. Just the machine for high-class small work, and a lot of it. Ask for description.

No firm or individual can use a fraction of the critical care in buying a press that it is in our power to exercise.

No buyer has as much at stake as we, or could less afford to be at fault in judgment.

Our tests are those of day by day use; our conclusions must be drawn from actual experience.

These find us watchful and alert; we approach them open-minded, as ready to criticise as the most stubborn enemy we have; for if fault exists it is vital that we know.

Not with one machine have we worked, but with thousands; not under one condition, but under all known to printing; not for weeks or months, but for years; not in one section, but in every section and country.

They leave us confirmed in the knowledge that in the Optimus two-revolution we offer the trade a press without an equal.

The Optimus is the one press the buyer must know if he wishes to excel in equipment and secure attendant benefits.

He may at once acknowledge that it is the equal of any other press. Without risk or loss, he therefore can install an Optimus, and for himself test the claims of superiority that we make. We pledge that under like conditions it will show better and faster work than he secures from any similar press; and in doing it that there will be less cost for repairs, less wear to forms.

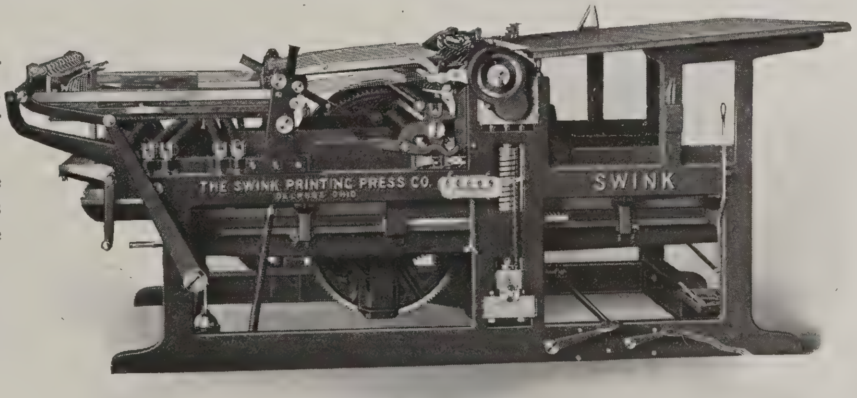
The SWINK Two Revolution Press

Was the HIT of the New York Exposition. Our display attracted more attention and more favorable comment than any other exhibit. The SWINK appeals to all thinking printers—



It has less parts than any other presses which means less wear, less attention and less cost for maintenance.

It will do heavier work because the contact on the type forms is less and the cylinder lift is more rigid.

It produces sharper impression on account of its small cylinder.

It is easier to operate and occupies less floor space.

It reduces the necessary idle time.

It will produce work equally as fine and will run equally as fast and in operation there is much less jar and vibration.

Let us explain to you fully wherein its advantages over other machines exist. A postal card will bring you a catalogue or a salesman—Also a sample sheet of the work we produced at the New York Show.

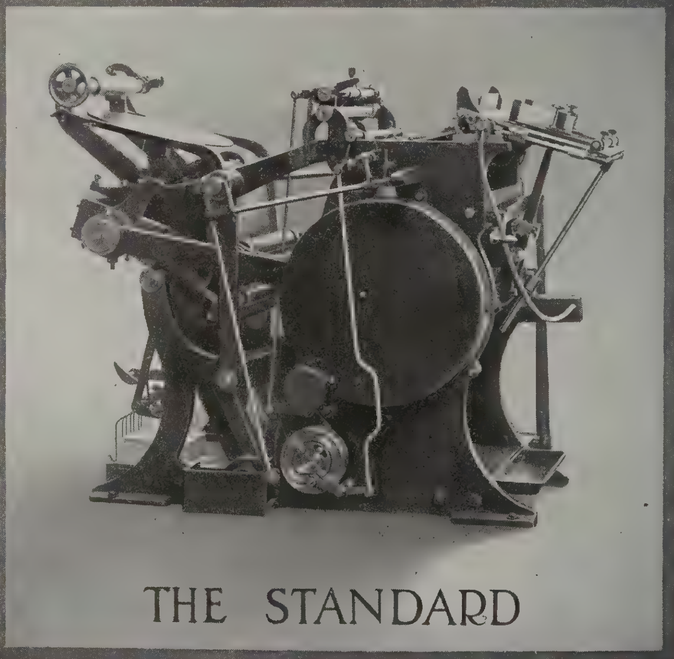
The Printers' Big Money-Maker

THE Double-Feeding Attachment was shown for the first time at the Printers' Exposition, April 19-26, 1913, at the Grand Central Palace, New York. It can be installed on any outstanding STANDARD. Ready for delivery in 30 days. Price $150.

The STANDARD is the biggest money-maker in the printing business to-day. Nothing else can compare with it as a profit earner. We have been constantly sold ahead; the orders now in hand will take our output for the next 30 days. Prompt reservation should be made for early delivery.



THE STANDARD

The price of the STANDARD is $1,750. (Double-Feeding Attachment, $150 extra.) The terms are $250 Cash, when press is erected, the balance being covered by monthly notes of $100 each, bearing interest at 6%. A discount of 5% is allowed on the entire purchase price if the balance is paid within 30 days after installation.

WOOD & NATHAN CO.

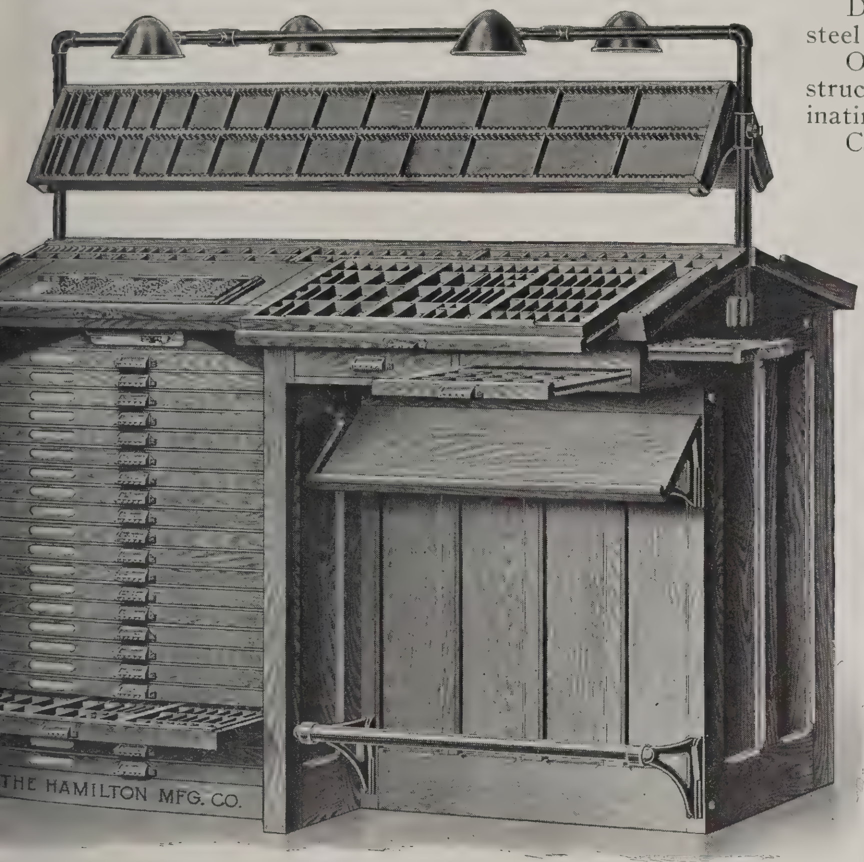
Minimum Lost Time Maximum Efficiency

For 31 years the Hamilton factories have been producing Printing-Office Furniture and Wood Type.

In all that time Quality has been the first consideration. The furniture we produce now is backed by this knowledge of the requirements of more than fifty thousand practical working printing-plants, covering a period of more than a quarter century. The element of experiment is thus reduced to the minimum. Why experiment in considering the purchase of new equipment?

In the new line of steel equipment this long experience in equipping the composing-room is a direct advantage. With a knowledge of what is required it is a natural step from wood to steel.

The resulting product is practical, efficient, lasting.



No. 4 Ad.-men's Cabinet in Wood Construction

Distinctive features of Hamilton steel equipment are:

Of first importance, one-piece construction, wherever possible, thus eliminating seams, joints and connections.

Cabinets are constructed with double walls with the angle of the case runs concealed between walls. eliminating all projections which might interfere with the easy running of the cases or drawers.

One-piece letter boards, stamped from a single sheet of heavy metal.

One-piece stamped steel paging galleys.

Type cases with steel covered fronts.

Hamilton Composing-Room Furniture saves labor by eliminating time lost in useless running about for material widely scattered and out of reach. This saving runs from 10 to 25%, according to statements from offices already equipped.

The saving in floor space runs from 25 to 50%. These figures represent vital factors in cost reduction.

Why not investigate? Let an expert demonstrate the possibilities. No order will be coming to us if our claims are not made good.

New Ad.-man's Cabinet Nos. 3 and 4

This Cabinet combines all the good features found in other popular Composing Cabinets.

Extension front for type cases; mortised label holders; electric lighting for type cases and banks; copy drawers; sliding trays for quarter-size rule cases; supplementary galley bank; removable working top; adjustable two-faced overhead lead and slug bank; foot rails; mortise in bank with justifying lead and slug cases and with sliding working bank on which the type case is placed, thus making this justifying material readily avalable without removng the type case.

This Cabinet has two tiers of type cases, one on each side. Two men work at the cabinet, one from each side, without interruption, each having complete equipment at hand, both sides of the cabinet being exactly alike. Supplied in wood or pressed steel construction.

Send for complete descriptive circular.

Selling Engravings to the Nation

Because of the detail and the individual attention involved in the production of illustrations and engravings it was long supposed that no engraving concern could satisfy more than a local demand.

Back in 1902 ***Barnes-Crosby Company*** took the first step in shattering this fallacy by installing a branch office at Detroit. Since that time not a year has passed that has not seen a new B.-C. office established.

Today, with two immense manufacturing plants located in Chicago and St. Louis, eleven permanent branch offices and a force of traveling salesmen, Barnes-Crosby Company stands as the highest type of business organization.

Our experience in meeting the varying needs of so many customers is part of the intrinsic value you secure in dealing with us. The above map will help you to locate our nearest branch office.

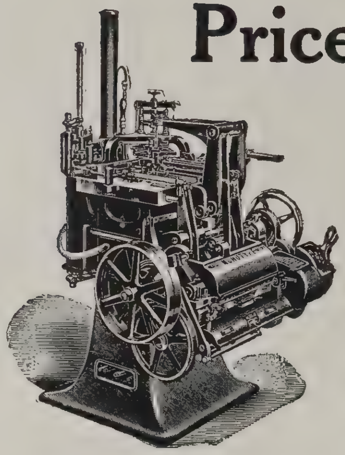
70-80 Cranberry Street, - Brooklyn, N. Y.
New York, 10 Spruce St. Chicago, 431 So, Dearborn St.

It Pays to Cast Your Own Type



Price $1950

Price includes molds for casting type, high and low quads and spaces in 6, 8, 10, 12, 14, 18, 20, 24, 30 and 36 point

THIS Type Caster is the only Type Caster that makes type so rapidly and economically that it costs less to use new type for every job than to distribute.

The Monotype is the only Type Caster that can supply you with the faces you want—when you want them.

Over 1050 fonts of the newest and popular faces for rental on the Matrix Library plan at a cost of $1.67 per font.

Water-cooled molds insure steady running on type of the highest quality, and a choice of nineteen speeds provides for casting every size type at the greatest possible speed.

Until type founders make type of steel, depreciation on foundry type is a needless waste of real money.

Some interesting facts on the Type Caster question and a copy of our new Specimen Book of Faces is yours for the asking.

NATIONAL PRINTER JOURNALIST
A JOURNAL FOR PRINTING AND ALLIED TRADES

Volume Thirty-One Chicago, June, 1913 Number Six.

Why You Must Scheme, Plan and Think

Address Delivered by Herbert L. Baker, General Sales Manager C. B. Cottrell & Sons Co., Delivered During the Annual Journalism Week at University of Missouri, Columbia, Mo.

IT is important, of course, that good printing should be done by every ambitious printer. It is important that he know the art principles upon which good printing depends.

Balance, display, appropriate type faces, proper combinations of type and ornament — these are important. Tasteful combinations of colors, of inks and papers, good presswork and good workmanship in every detail — these are important.

But the printer who devotes his attention to these matters while he neglects other things will never attain financial or any other kind of independence. These things are only incidental to the business of printing and publishing.

What has become of all the men who used to call themselves "art printers" on their stationery? You never see that title now.

A man who is making something for sale may wisely devote himself to the art side of his product, because he will thus attract more buyers. But printing and advertising are done only to order, and the important thing is to get orders at a profitable price.

No matter how great the printer's skill or how complete his facilities, he must secure orders or fail. Most printing is done for plain business men for plain business purposes, and they instinctively fight shy of one who claims "art printing" as his sole product.

A few years ago we used to see business cards of men advertising themselves as "practical printers," as if the important thing were the fact that they could do printing with their own hands.

It is still as important as it ever was, but men have waked up to the fact that business success depends upon something else than being workmen themselves. Therefore the "practical printers" have disappeared.

Practical Versus Piratical

The only way for "practical printers" to succeed was explained to me by a friend of former years. He said his first job was a card for himself. It read, "Milton H. Smith, Practical Printer, 10 Mill Street, Rochester, N. Y." He took out the line "practical printer" to be run in red ink. He put the rest of the form on the press, told the boy how he wanted it done, then went out to get his first order. That evening he got back to the office and picked up a card to see if the boy had done it right. He found the black lines were correct, but the boy had evidently "pied" the red line, so the card read, "Milton H. Smith, Piratical Printer, 10 Mill Street, Rochester, N. Y." He said that, not having the money to buy more cards just then, he had to use these. Of course, he had to live up to what he advertised himself to be, and hence his success.

Mr. Smith may have put over a fairy story on me, but it exactly illustrated the reason why the "practical printer" so often fails in business. He is practical as a printer, but not practical as a business man, and financial success requires some knowledge of business.

The boy who grows up in a store or a business house quickly acquires some knowledge of the relation between cost and selling price — some idea of how to make sales and handle customers.

The boy who grows up in a printing office knows only that his wages are so much per hour, the paper costs so much, and the rest he thinks is profit. As for salesmanship, he knows absolutely nothing about it.

That is what is the matter with the printing business in this country. That is why a cost system is absolutely necessary to success in printing.

Two Systems

Every printer has a system by which he figures out his charges, so the question is not whether he will have a system or not. The real question is, Will he have a guess system or a cost system?

Do you know who was the first printer who busted himself doing work below cost? Well, it was Father Gutenberg himself, the inventor of printing. He borrowed funds from the rich merchant Faust in order to finance his business, and finally Faust closed him out and turned the whole thing over to Peter Schoeffer.

So, you see, this method of conducting a printing business on the guess system below cost of production has the approval of hoary antiquity.

The business began on a wrong basis and has so continued for so long that it is hard to change the custom, but I call your attention to the fact that failure overtook the very first one who did business on that basis.

If the first printer, with no competition on earth, could not succeed by the guess system, how in heaven's name can any one else expect to do it?

O, I have been all through it. I was a practical printer with a guess system and failed miserably after three or four years of heart-breaking struggle. Many a Saturday night I went home with less money than I paid to any of my workmen. I cannot understand now why I was such a fool for so long; but, you see, I had the practical workman's attitude and his business ignorance.

I had a customer for whom I did labels for $2 a single thousand. He had a fire and required 90,000 thousand labels in one order. I printed them in big sheets and figured by my guess system that I could do the lot for $85. After the bill was made out it occurred to me that I had joined the Typothetae and owed $15 in dues. So I made out a new bill for $100. Well, that even sum looked rather fishy, so I made out a third bill for $115. That extra money was coming pretty easy, so it occurred to me that $1.50 per thousand was a substantial reduction from his regular price, and I made out a final bill for $135, with the feeling that I was a highway robber. I presented the bill with fear and trembling, ready to "correct" if the customer kicked, but he paid it promptly with a note of thanks for the concession in price.

I cannot understand now why that did not teach me anything. As a matter of fact, the actual costs were so far beyond what I thought they were that the right prices would have seemed to me "piratical," which is what Mr. Smith meant.

No Excuse for Ignorance

Modern cost systems were unheard of then, and each ignorant printer struggled along with no chart to guide him. Today complete information can be had by any printer for the asking, and there is no excuse for ignorance on the subject.

I must have unwittingly robbed some of my customers or I should have failed quicker. That is the trouble with the guess system — it is likely to rob one party or the other on every transaction.

But many a one has said to me: "I can't get more than at present. I am getting all they will pay for printing or advertising. What's the use of finding out what my costs are?"

Well, no man ever got $1.20 per hour for his work who believed down in his heart that 60 cents was profitable. No man ever got 20 cents an inch for space who really felt that 12 cents paid him a profit.

But the man whose cost system tells him what his work or his space costs will manage somehow to get the right price for it, sooner or later. If his present customers won't pay it he will find others who will. He will be content to do less business if necessary, but such as he does will show a profit in real money.

Now, I wish to discuss the real basis of success in any business — the sine qua non of the profit we are all in business for.

Salesmanship, service, such usefulness to the community that they will pay well for it.

There was a farmer in a western valley who cursed the bits of dirty rock which occasionally jolted the point of his plow in a certain upland field, utterly unmindful of the fact that this rock was quartz which showed a rich vein of silver ore worth a million times the meager crops he raised above it.

Just Like That Farmer

Out of every 1,000 printers 999 are in exactly the position of that farmer. The world would gladly heap rich rewards upon them if they would only get below the surface and bring up the valuable material their fields contain.

The little German grocer on the corner painfully writes a few ungrammatical sentences on some wrapping paper and gets one thousand handbills printed for $1.50.

That does not pay the printer. Why should it? Neither does it pay the grocer.

But suppose the printer made a study of the grocer's business, laid out a campaign of attractive advertising, showed him the best way to get more business — in short, made himself his business promoter.

Would the grocer care what price the printer charged so long as it showed a profit in increased business? Don't you see that if your printing service is profitable he will have the money to pay for it?

This same idea applies just as well to a big merchant or manufacturer as to the little grocer. Many a man who can run a fine store or manufacture fine goods has no conception of how to write words that sell product or how to get his goods before the public.

The printer should study to make himself an advertising assistant to the business men in his territory. There is his silver mine.

Creating Business

Not long ago I met a very successful New York printer on Broadway with a bulky package under his arm. Said he: "The ——— Motor Company is going to get out a new catalogue. They don't know it yet. I'm just on my way to tell them so. At odd times I have taken photos of their trucks, either with big loads or with well-known names painted on them or beside famous buildings or in some unique service. I have fixed up a handsome dummy with thirty-two of these pictures, have added their own descriptions, put on a rich cover, indicated a beautiful design for the outside and made a price on 10,000 and additional thousands."

Next morning I phoned him to ask if he got the order. "Of course," was his reply. "The only thing I didn't know yesterday was the size of the edition. It's 25,000 to start with, and we're already on the job."

If there are one hundred business houses in your territory probably ninety-eight of them are constantly trying to discover means to increase their trade. That is the one most interesting and vital subject in the world to them.

The printer is the one man in the community who ought to know the most about advertising. That is his particular business, just as chemicals are the particular business of the druggist.

Parcel Post

The coming of rural free delivery and parcel post opens up a great new field for the printer. Most merchants outside the big cities are worrying a good deal over these new facilities.

Why doesn't the printer make a thorough study of this situation and show the merchants of his town what kind of printed publicity will meet this menace and turn it to their advantage?

Here is a new opportunity for a notable public service and incidentally for a lot of printing and advertising.

A local printer who also publishes a newspaper has golden opportunities to add to his silver ones.

It is a low estimate to say that the families who take a local weekly average to buy $500 worth per year. One thousand such subscribers would mean a purchasing power of at least $500,000 per year.

If I could show a wholesaler or manufacturer that I could get him sales of half a million per year I could demand and get $25,000 salary.

A local newspaper is in position to have some influence on at least half a million in purchases per year for every thousand subscribers.

What are you doing to utilize that influence for the benefit of your patrons and yourself?

Are you showing your local merchants how to attract more of that trade by publicity?

Are you showing distant manufacturers what sort of goods your community will buy, what the standing of your paper is in its field, and offering them intelligent co-operation toward making your space profitable?

I know of an instance where an editor's neighbor had a very satisfactory piano, bought at the nearest big city at a moderate price. The editor got a local merchant to take the agency for the piano and arranged with the maker to give him $50 in advertising on every piano sold in addition to the space sold to the local dealer. Seven pianos the first year were not many, but well repaid the little trouble the editor took to work out the plan, to say nothing of the profit his service gave to the merchant and the piano firm and the certain increase in succeeding years.

Five Dollars Per Subscriber

The newspaper cannot expect to turn all the half million in sales to its advertisers, but it certainly would not be difficult to so manage as to control 20 per cent of it. This 20 per cent would mean sales of $100,000, and his fair return would easily be $5,000 per year, or $5 per subscriber.

You see, business methods have changed.

No longer is the buyer's selection confined to the moth-eaten, dust-covered stock of the sleepy, old-fashioned merchant. The new modern facilities make it easy to buy wherever a two-cent stamp will carry his order.

The buyer will desire to purchase what he reads about in his favorite paper, if properly presented. He will prefer to buy from the home merchant he has confidence in, if the merchant carries the advertised goods and advertises the fact that he carries them.

The combination is perfect for the local publisher.

It may take a little time and effort to wake up the somnolents who are still doing business in the old, easy way. But the sure reward is well worth the effort, and a profit from advertising of $5 per subscriber not difficult to attain.

Means by Which—

But, some one may say, maybe I ought to be the advertising expert of my community. But suppose I don't know much on that subject. Then what can I do?

Well, any man can learn whatever he wishes to learn, and it is his own fault if he does not prepare himself.

There is a great wealth of helpful material at the easy command of every printer.

If there are 30,000 printers in the United States there ought to be 30,000 regular subscribers to every one of the splendid galaxy of American printing trade magazines.

No printer can afford to miss a single issue of any one of the great trade journals nor miss a thorough study of each copy of them.

Not only are they replete with general trade information, but they reproduce forms, newspaper advertisements, each of which may contain an idea the printer could work up into something salable to one of his own customers.

Then there are the splendid specimen sheets and clever advertising matter sent out by the various typefounders. The printer should make a careful study of these to see where he can find ideas he can turn into sales.

He should carefully scan every newspaper that comes into his hands and use the shears freely. Have a big envelope for each line of business — hardware, millinery, dry goods, etc. Clip advertisements from every possible source. He will find them a mine of wealth to furnish ideas and suggestions which he can sell to his advertisers.

Look for Ideas

Don't be afraid to clip even the trade journals, handsome as they are. Carefully cut out leaves that contain useful ideas and stick them in a scrap book for quick reference.

For instance, the National Printer-Journalist had an article about a new line of parcel post advertising developed by some Detroit paper. Did you see it? If not, why not? If you did, what are you doing to apply that idea in your own field? Keep the eyes of your mind open while reading the printing trade magazines, and you will find ideas in every issue which you can transmute into golden nuggets.

(Photo from life) SPARROW HAWK
Collection H. W. Fay, DeKalb, Ill.

Pick up samples of printing wherever possible, exchange samples with other printers, especially circulars, booklets, catalogues, and all forms of advertising matter. Keep all this material classified by businesses.

Whenever a dull day comes just run over them with the customers in mind. Ah, here's an idea for a soda water circular! Won't Jones, the druggist, give an order for a couple of thousand if it is fixed up and presented attractively? Here's a clever idea for a garden tool advertisement. Won't Smith, the hardware man, print it in half a column if the copy is placed before him?

The ramifications of the plan are endless when once one begins to think along these lines.

Above all, the printer should take his own medicine in season and out. Advertise continually and in all sorts of ways. Keep right after every possible customer, with every possible form of appeal. Never let them forget that he is an advertising expert. Where or how he gets his ideas is nobody's affair, just so he gets them.

Scheme, Plan and Think

The great trouble is that most printers and publishers are mentally inert, even lazy.

Too many of them are like the man who worked one day a week and loafed six, then wondered what made him so tired.

They don't think, scheme, plan, work.

They let matters drift along as easily as possible.

Why, dozens of them have told me with pathetic and ridiculous pride that they never asked anybody for business, but it came unsolicited. That is never quite true, because a printer's whole business is advertising, and even the sign on his front is business solicitation.

But imagine a farmer sitting down on his stool and waiting for the cows to back up in position to be milked. It might happen, because some cows have more intelligence than that kind of a farmer, and might connect the waiting farmer with relief for their surcharged milk reservoirs.

No man in these days of strong competition builds up any business to success without scheming, planning, thinking — trying in every possible way to increase his trade and profits.

So very few do it in the printing and publishing business that opportunities are open everywhere for remarkable successes.

I hear so many wish they were located in big cities, where they would have a chance. Location is an unimportant factor in these days of modern transportation facilities. I could name many small towns which are the homes of printing concerns of such importance as to be among the big industries of their several communities.

Must a brick house fall on you before you wake up, O ye sleepy and sluggish ones?

Service Brings Success

Just one more suggestion on the subject of salesmanship.

In selling printing the important point is what it will do for its buyer. Make your printing of such a character that it will be effective in making money for its user. Study the customer's advantage and impress that point strongly on his attention. That will make price an entirely secondary consideration. When you have spent time and thought to work out a good idea for your customer, don't forget to charge that somewhere in your price. You will have richly earned it, and he will pay it.

After all, the years go by pretty fast. We cannot forever be looking forward to "the good time coming." Good times don't come unless we make them come.

The printer or publisher who really works with his mind six days every week, studying how to be most useful and helpful to his clientage, need not worry about the financial results of his labors — unless he charges by the guess system and ignorantly gives away his profits.

Service is the great central purpose of business.

Service is the only legitimate excuse for the existence of your business or mine.

The greater the service you render your community the greater will be your reward and the deeper your personal satisfaction.

If you can help other business men to increase their business and profits by the printing and the space you sell them, you are truly doing a praiseworthy service, and, after all, the only real, enduring thing in life is helpful service to others.

The Hundredth Man

You will remember I said ninety-eight out of every hundred business men are studying how to increase their trade and profits. That left two who are neglecting opportunities and not trying to get more profits from their business.

The ninety-ninth man runs a general country store in the Connecticut village where I spend my summers. One morning the delivery wagon did not bring my favorite breakfast food, and I asked the boy why not. He replied that the boss was not going to keep it any more because so many people bought it that it kept him orderin' and orderin' and orderin' — and he was tired of orderin' it.

As for the hundredth man, consider whether he may not be you yourself.

NEW HANDBOOK OF NEWSPAPER WRITING AND EDITING

Dr. W. C. Bleyer, Head of Course in Journalism at University of Wisconsin, Writes Practical Guide

"Newspaper Writing and Editing," a practical handbook of all the details of newspaper work by Dr. Willard G. Bleyer, chairman of the Course in Journalism at the University of Wisconsin, is announced for publication in June by Houghton Mifflin Co. The book is based on Prof. Bleyer's experience in newspaper work and on his seven years' teaching of journalism at Wisconsin.

"No one but a practical newspaper man could write such a book," writes a prominent newspaper editor, who read the manuscript, and whose opinion is quoted in the publisher's announcement. "It is an account of how to be a thorough-going newspaper man, reporter, desk man, correspondent, make-up man, or headline writer." according to this editor.

"The book which is intended for those who do not go to college as well as for those in college courses in journalism, discusses fully the subjects how a newspaper is made, news and news values, news gathering, structure and style in news stories, reporting speeches and trials, news stories of unexpected occurrences, interviewing, feature stories, special articles, follow-up and re-write stories, editing copy, writing headlines, reading proof, making up the paper, and the function of the newspaper.

A large number of examples printed in the usual newspaper type of standard column width with column rules on both sides, illustrate the current practices in all kinds of stories and head lines. "This book is unique," according to the publisher's announcement, "in that it meets fully the requirements of courses in journalism in our colleges and universities, and at the same time it appeals to practical newspaper men as a most interesting and suggestive treatment of the subject."

With two "Buick" touring cars as the capital awards, and pianos, diamond rings, watches and scholarships as the minor awards, the Albuquerque Morning Journal of Albuquerque, N. M., is conducting a state-wide circulation campaign under the auspices of the Northeastern Circulation Company, of Davenport, Iowa. The campaign to date has proven highly successful and promises to place The Journal among the leading circulation getters of the Southwest.

The Northwest Cost Congress at Minneapolis, Minnesota

AS to the Cost Congress at Minneapolis, May 1, 2 and 3, it may well be said that it proved a great success, both in instruction and social enjoyment. The attendance was splendidly representative of the progressive printers of the Northwest, though not as large as had been anticipated.

President E. K. Whiting, who is known and honored as a public spirited, progressive man, untiring in his work for the advancement of the craft, called the convention to order at 11 A. M., May 1, and introduced Rev. Frank Newell White, of Minneapolis, who offered an appropriate invocation for the seekers of knowledge in a calling that renders service to worthy men in all the vocations of life.

Hon. Wallace G. Nye, Mayor of Minneapolis, an able attorney and legislator, and a brother of the late celebrated humorist, "Bill Nye," extended the welcome of the city of great industrial establishments, of wonderful enterprise, growth, wealth and progress, to the assembled, ideal representatives of the cities of Minnesota, the Dakotas and Northern Iowa.

On motion, by unanimous vote, the temporary officers were made permanent, as follows: President, E. K. Whiting, Owatonna, Minn.; Vice-President, F. H. McCulloch, Austin, Minn.; Secretary, F. J. Scott, Minneapolis, Minn.; Treasurer, Clare Blakeley, Rochester, Minn.

Robert E. Withy, President of Typothetae, St. Paul, Minn., told "Why Are We Called Together." The "Whys" were pleasing and numerous and all sufficient, and need not be repeated to master printers who have struggled under the old conditions of lack of mutual understanding, of co-operation or any standard system of cost finding.

A short address was made on association affairs and work by Mr. H. W. Flagg, Secretary of the U. T. A., Chicago, who was followed by Mr. R. T. Porte, Secretary of the Ben Franklin Club of America.

In the afternoon, "The Natural Laws of Cost Finding and Invested Capital" were discussed by Mr. E. E. Sheasgreen, Secretary of the Ben Franklin Club of America, illustrating his talk with lantern slides. He was entertaining and instructive and he gave valuable views of the underlying, scientific principles of business.

Mr. R. T. Porte gave explanations, illustrated with lantern slides, of "A Simplified Cost System," adapted to small offices, and also an exhibition of the floor plan of a small printing plant arranged with a view to convenience, economy and efficiency. Mr. Porte proved an entertaining and effective teacher of system and cost finding and kept up a lively interest by making his hearers take part in the reaching of results.

In the evening the members and visitors attended the theater and listened to an excellent rendition of the objective printers' play, entitled the "Revised Proof," written and first staged by William Griffin of the Charles Eneu Johnson Ink Company of Philadelpiha. The play has been presented on several occasions in different cities to the great profit and satisfaction of members of cost congresses and printers' conventions. The play enforces with pointedness and power the moral of cost finding and efficiency. The play was put on by members of the Minneapolis Typothetae and local supply men and showed good acting, thoroughness in the parts and a good deal of theatrical and dramatic ability, C. N. Dickey, of Minneapolis printerdom, winning especial favor in the character of "Printer's Devil." It was suggested that, having found his power as an actor in a humorous part, he might be tempted to leave the print shop for the stage.

We are pleased to be able to present the whole troupe in costume in this article.

On Friday morning, Mr. Porte, as teacher, continued his instructive talk on Cost.

J. C. Morrison, of Morris, Minn., delivered a most valuable and illuminating address on "The Cost of Produc-

Banqueters at Northwest Cost Congress, Minneapolis, Minnesota ing a Country Newspaper and Why." It was an eye-opener to many who had never seen the cost of production of a newspaper analyzed, some of whom had been selling advertising space at six cents an inch and less, when they were shown that the cost was eleven cents and more per inch.

One of the incidents of this session was the marching into the hall of the members of the Minneapolis Branch of the Order of Pica, with visiting members, all clothed in the uniform of the order — complete monk's black robes and hoods, with faces masked. The Picas were received, marched to the President's desk and presented a handsome scroll, containing a message of greeting, goodwill and mutual help in the cause of the cost congress and efforts for advancement, co-operation and improvement among printers.

Friday afternoon, W. F. Cole, of Minneapolis, told "Why Specialty Printers Have an Advantage over Other Printers in Price Making," and all wished that they were manufacturing printers or, at least, that they were not apparently compelled to give bids, prices or guesses or estimates, as to the same, in advance of securing the work, and often on very meager specifications.

"Service" was ably handled by Arthur E. Southworth, Treasurer of the Chicago U. T. A. His address is printed in full elsewhere in this issue and will repay careful reading.

Cast of "Revised Proof" Minneapolis Printers

Mr. E. M. Spencer, of Minneapolis, gave a very interesting "Analysis of Seven Similar Jobs of Printing." These consisted of leaflets used in announcing and promoting the Cost Congress. The variation in estimates and prices was marked in several instances and showed how difficult it is for different offices to reach the same prices in estimating or even when the work is completed.

The cost system and a standard hour cost help very materially and prevent loss, but differing equipment and efficiency will always result in differences in estimates as well as, also, a variance in cost.

Mr. W. S. Tuttle, of Rutland, Vt., made some good points in "Just a Talk on Cost Finding," while J .C. Adderly, Secretary-Treasurer of the Ben Franklin Mutual Casualty Insurance Company, gave an informing talk on "Cost of Liability Insurance to the Printers, Having Special Reference to Workmen's Compensation Laws." He showed a complete mastery of the subject in hand and his reference to the risks in different callings, as revealed by careful records kept in Germany, which showed that the risks in the printing trade were lower than those in almost any other industry, proved interesting and especially gratifying.

His arguments in favor of a separate, mutual insurance company for printing offices, to protect, and to provide for workmen's compensation, were convincing and certainly seemed unanswerable. It would be impossible here to give an adequate review or outline of his able address, but all who wish information — and this ought to include all owners of printing offices or employers of printers — can doubtless secure the same by writing to the secretary, as above.

An "Exhibit of Job Printing from Various Sources," by E. J. Scott, Minneapolis, with remarks and comparisons as to work and prices, proved especially entertaining and enlightening. There is scarcely anything more profitable for printers' cost congresses and conventions than that of exhibits of samples of work with statements as to manner and conditions of production and of the costs of the different jobs, with explanations as to why, etc.

Friday evening was given up to a very enjoyable and satisfying banquet. Jens K. Grondahl, Vice President of the Ben Franklin Club of America, and editor and publisher of the Red Wing, Minnesota, Daily Republican, acted as toastmaster and performed his duty to the satisfaction and great pleasure of all. He was right up in all that is meant and intended by a cost congress and showed broad knowledge along all the lines of discussion and of mutual efforts for betterment. He proved witty, congenial and happy as well as instructive in his remarks and introductions.

B. B. Herbert, of the National Printer-Journalist, Chicago, responded to the first toast and was introduced as the founder of the institution which the toastmaster was now conducting at Red Wing. Mr. Herbert's toast was "Memories and Contrasts." He spoke briefly of his first trip to Minneapolis or rather to St. Anthony — since incorporated into the younger city, in 1861 — when he traveled by steamboat to St. Paul, then walked to Fort Snelling, crossing the river on a flatboat or ferry run by a single ferryman by means of a rope stretched across the stream and the aid of the current. After a visit at the fort with members of the First Minnesota Regiment, he walked to Minnehaha Falls, feasting his eyes on all its entrancing, undisturbed and magic loveliness and then to St. Anthony to visit a student comrade. There were no street cars, no railroads, no automobiles, nor even a bus line then, and only scattered farm houses or cottages were to be seen where Minneapolis now stands. His hearers, who had viewed this splendid city during the past few days, with its great mills and other industries, its palatial homes and magnificent business blocks, public buildings and hotels, could imagine the contrast.

He then compared the conditions of the printing business, when in all the smaller cities power presses were unknown and the old Washington hand press still held sway and human muscles furnished the only power. Prices were fixed by tradition without any dream as to the conditions now existing, of equipment, standard hour cost production, system and efficiency. He named a number of the early printers, grand men and leaders in their day, who, with the exception of David Ramaley, the good old man of St. Paul, and two or three others, have passed away.

The members of the Pica then put in an appearance and gave to President Whiting one of their peculiar "sky-rocket salutes." The whole membership of the congress joined in cheers that compelled and brought out a happy and feeling response from the popular president.

Arthur E. Southworth, of Chicago, responded to the toast, "Now, Then and When," giving hopeful and inspiring views and eloquently complimenting Minneapolis and her printers and those of the great Northwest in attendance. He related a visit, not like that of Mr. Herbert, on foot, but by automobile as the guest of a Minneapolis printer, to Minnehaha Falls, still possessing its enchanting loveliness during the afternoon, when he played hookey from the Cost Congress to view the modern city of wonderful attainments.

Mr. H. W. Flagg, of Chicago, presented a most able address in response to the toast, "Organization," wherein he reviewed the great work that had been accomplished and made honorable mention of the self-sacrificing, earnest workers who had made possible the wonderful accomplishments.

On Saturday morning "Gene" Turner, of Chicago, Ill., and Scratcher of National Order of Pica, talked of "The Order of Pica and Other Things," mostly "other things," helpful to the owners and conductors of printing offices, but enough of the "Pica" to show that it was an order of good-will and helpfulness, bent on lending a hand to all measures intended for the benefit and advancement of the printing art and all the branches thereof.

"The Cost System vs. Estimating and Co-Operation" was ably handled by E. E. Sheasgreen, with aid of stereopticon slides, making all clear and enlightening.

Mr. O. H. Pollard, of Winnipeg, extended greetings and brought "A Message from Canada" both encouraging and electrifying.

There was again a "Talk on Printing Exhibit," by F. J. Scott, and more "Cost Instruction" by R. T. Porte.

A luncheon was enjoyed at 12:30 P. M. at the Commercial Club, all breaking bread together and joining in conversation, felicitations and congratulations, after which many started for their homes after hearty hand shakes and wishes of good will and kindly good byes, but many others remained to accept the hospitalities of the Paper and Supply Houses of Minneapolis and St. Paul to attend a base ball game and to enjoy a play at the Metropolitan Theater.

ITEMS OF INTEREST

"The News in the County Paper," the fourth of a series of bulletins on newspaper work published by the School of Journalism, University of Missouri, has just been issued for free distribution among newspaper workers. Charles G. Ross, associate professor of journalism, is the author.

The bulletin discusses the gathering and writing of news, country correspondence, the make-up, the editorial page, headlines and other phases of editorial work. Outlines are given of many feature stories that may be developed by the small paper. The Desk Book of the School of Journalism is reprinted as an appendix. The bulletin contains forty-four pages and is illustrated with cuts showing the first-page make-up of several Missouri papers.

The next bulletin of the school will be "Journalism Week in Print, 1913," issued after Journalism Week, May 12 to 16, similar to that issued last year after the annual meeting of newspaper workers in Columbia. Succeeding issues will deal with newspaper correspondence and business office systems.

* * *

On February 24 of this year the Executive Committee of the National Educational Association met in Philadelphia to designate a meeting place for the fifty-first annual convention in 1913. The committee was unanimous in its vote for Salt Lake City, and announced the dates July 5 to 12. In the interest of the delegates who will attend this convention, the passenger department of the Denver & Rio Grande railroad has just issued a handsomely illustrated folder descriptive of the many attractions in and around Salt Lake City, as well as the noted scenic points en route through the Rocky Mountains. The folder contains a splendid street map of the city and is enclosed in a beautiful cover picturing bathers at the pavilion in great Salt Lake.

* * *

A set of nine striking Rocky Mountain pictures, reproductions of scenes visible from the car windows, form a series of beautifully colored panoramic views put up in folder form, which are now being distributed by the passenger department, Denver & Rio Grande Railroad. Every editor who receives and inspects one of these folders and enjoys the looking upon the views presented therein, will want to attend the meeting of the National Press Association and enjoy all the supremely enchanting scenery portrayed in this folder.

A Ball of String and a Bunch of Keys

By Edward U. Roper

ONE of the evidences of inefficiency in a composing room, and one that has been seen and avoided by men in other lines of manufacture, is that of trying to use the same string over and over again to tie up pages or jobs while in process.

A ball of page cord, five to the pound, contains 525 feet, and costs twenty cents per pound, or four cents per ball.

By actual time observations in a great many cases of my own work, and whenever opportunity offered, observing the work of others, I have found that the tying up of the job or page the first time, looking through the box for the right size, or many times tying two or more pieces together, takes two minutes.

When the page comes back for correction, the taking off of the cord and wrapping it around your fingers to put away for future use takes one-half minute, and tying the page with the same cord to await revise, one-half minute more. This makes no allowance for the time taken by one compositor to tell another what he thinks of the proprietor who will not buy a ball of cord. This will repeat itself for each proof and revise, of which there are usually four before it is ready to be locked up for the press.

When the job or page goes to the stone man, there being no definite arrangement as to where the tuck may be, and the length of the string unknown, it may be tucked at any one of the four corners; and, to facilitate the waste of time, the string may go just around the corner and be tucked through. This has averaged three minutes on a sixteen-page form. When the form comes back to be unlocked, and the type put on the dead-board, it has averaged two minutes, and resulted in many a pied form from inefficient tying, or a long end being left to get caught under some other page.

Now, this piece of string that has been saved is on an average nine and one-half feet long, what would be necessary to go around a letterhead five times; and as it is safe to figure that you will tie and untie every job five times, you have saved forty-seven and one-half feet of string that cost you .36 cent. Of course the question now is including the cost of the string; how much would it cost the other way, and what is the other way.

The other way is to cut it, and lift it all off at once, when you are untying, and when tying up, to have a ball swinging from a holder over every stone and frame, so that no one will waste a minute looking for cord.

The amount of time taken in this way tying up never exceeded fifteen seconds on a page, and was so small that I did not consider my figures accurate enough for reference.

I transferred my field of observation to the stone, where pages were being tied and untied in sixteen and thirty-two page forms, and I have more than once seen the string taken from a sixteen-page form in two minutes, and this on a 7 x 10-inch page; and a thirty-two stripped in three minutes.

But, taking the proposition at my first observation of fifteen seconds to the operation, and tie and untie five times from the compositor to the press, and you have a total of two and a half minutes, and .36 of a cent for string.

Bringing the two together, we have present way in most shops, New York prices:

11 minutes, 4-5c per minute	$0.088	
String under economical handling	.00072	
		$0.08872
New way, 5 times tying and untying, at 30 seconds each, 4-5c per minute	$0.02	
String thrown away, 47½ feet	.0036	
		.0236
Waste in old way over new		$0.06512

And this has taken no credit for the old string, that can be sold; or, if you wish to be real economical, give it to the cheap errand boy and let him tie the ends together and wind it up into a ball and give it back to the compositor to use over. Though even this will make your string cost fifty cents a pound, for a boy given that kind of work will not be in a hurry to get back to the shop.

You can figure this into the wages of your locality and see if you are not paying a high price for your string.

Then remember the greatest waste of time comes when you are in a hurry.

The proofs have the customer's O. K., and a press is waiting, so that the minutes carry far more than the mere wages.

This is not a one-shop experience; nor is it the experience of non-system shops. It is general.

You can buy a stop watch for $3.00, good enough for any timing you have to do; then do some observing in your own shop, not only on this question, but on others that relate to the lack of material.

The foreman says composition cost is high because we lack sorts, quads, spaces, leads. Well, we do not have to buy sorts, quads, etc., for machine composition; so, on every occasion where possible I want you to buy machine composition.

When the bill comes from the electrotyper with extras for faulty composition, charge it to the composing room.

When the press is held up, work delayed, to say nothing about being spoiled, because the machine type does not stand up under the strain; charge it to the composing room.

This only shows what you can do if you can hide the expense in the pay roll.

Why, I was doing foundry lock-up in a New York office, four pages to the form, and three of us on the stone.

There were two men doing press lock-up at the same time, and we had two quoin keys. One day the five of us wasted three hours and forty minutes waiting.

And it was not my fault, for I asked the foreman and did not get them. One day the proprietor stood by me at the stone, and asked how the work was coming. I said it would facilitate matters a great deal if we had a few more quoin keys. He was very much surprised and said there were plenty in the pressroom. I told him it was not my business to go there for them, and there the matter was dropped. Afterwards I found that they had one large and one small quoin key for each of two presses.

The loss of time in this way is a source of income to any office, if you are going to charge your work by the number of hours it takes to do it. The reducing of the number of hours on a piece of work only reduces the price to your customer, supposing that you have plenty of work to fill up the time saved.

If you have not the work to keep yourself busy during this time, you have only reduced your chargeable hours, and consequently increased your hourly cost.

While a cost system is an absolute necessity, and must be kept by any shop desiring to know its condition, its corollary, an "efficiency record," is more important, and gives you what you want and must have: a record of your men and machines and something to charge by.

Some problem, this efficiency?

Service

Address Before Northwest Printers' Cost Congress May 2, 1913

By Arthur E. Southworth, Treas. U. T. A.

SEVERAL very good definitions, home-made and otherwise, confront us today, such as "giving the buyer what he wants when he wants it," and "a printer's promise, seldom kept," but I have one of my own. It is—

"That something which in most printing offices results in passing the buck."

If the compositors had thoroughly understood the instructions; if the stone-man had locked the form properly; if the pressman had not lost so much time on account of register; if the cutter had not been so busy; if two of the bindery girls had not been sick; or, if the errand boy had not stubbed his toe, the job would have been delivered on time.

Service really consists of **co-operation between the buyer, the seller and the seller's organization.** So let us start with the point where the trouble occurs — the seller and his organization.

The seller accepts a contract to deliver a certain job of printing at a stated time — in most instances he accepts all he can get of them — and then goes out and advertises "Service" in order to get more.

The chances are that he does not know how many hours he has to sell — how many of them he has already sold — but **relies entirely on his ability to "stall" the buyer.**

The fault with this service business, or rather the lack of it, lies not in the workshop, but in the front office.

The chances are that in your zeal to do all the printing that is in the market in your locality you have overlooked your capacity entirely. If you continue to dump rush orders into your plant, without consideration or regard to hours and men, **the men are more apt to shirk than they are to work.**

There is **a limit to the possibilities of every plant.** Service cannot be given without regard to that limit, and you cannot deliver your organization beyond a certain endurance, even by working night and day.

Tax your capacity to the limit, but not beyond. The moment you overstep, you start to destroy co-operation and organization.

It is quite the style nowadays to advertise both quality and service. Despite all the advertising you can do, in the end the quality you put into your product is bound to regulate the quality of the business that comes your way.

A reputation for service is much the same, and it will be of equal value to you when established. In many instances, business will come your way for the reason that the buyer realizes that you can deliver.

This brings us face to face with the necessity of the front office knowing at all times the exact conditions in the plant. In other words, **the office must know, every hour of the day, how many promises it can deliver,** and the wise manager today is thoroughly posted at all times on the capacity of his business. Never promise beyond that capacity, if you expect to gain a reputation for service.

Be sparing of your promises and make every promise the pledge of your whole organization. The master who cannot deliver his shop, cannot establish service.

First, the office must have a knowledge of the number of hours it has to sell — regular hours; then, it should also know the number of emergency hours it can deliver.

Who ever heard of a printer refusing anything, you ask? I have. So has every other man within the hearing of my voice who established service.

Let me give you one experience. Three years ago I was called to the telephone by one of the largest buyers of printing in Chicago. He asked if we could set up a full-page trade-paper ad in our best style, send him a proof, and deliver an unmounted electro in about eight hours' time.

It was possible, but I refused. He was not a customer, but I would have refused had he been, for we were promised up — overtime and all.

I met the gentleman at luncheon shortly after, and he said, "Some day you'll be sorry you turned me down on that order; I got it all right." I explained the reasons we had for denying him — not that it was a physical impossibility, but that we were **"promised up."**

"**'Promised up,'**" he said; "who ever heard of a printer being 'promised up'"?

I told him that if he ever gave an order to us, he would get all that was promised.

Fortunately, shortly after, he had a service proposition and he asked if it were possible to do a certain thing in a certain time. **I told him it was, with over-time, and with the buyer's co-operation.** Again I got a "rise" out of him.

"**Buyer's co-operation**"? he asked. "What do you mean?"

"I mean that your organization will be in readiness to approve or disapprove of all proofs and questions put to it at any hour." To which he agreed.

The job in question was ordered on a Thursday and our office door did not close until Sunday noon, and proof was O. K.'d at the "wee small hours," under protest. But he got the job, and never questioned the price.

Let us get back to the subject, taking it for granted that you do know the number of hours you have to sell — **which is the first principle of service.**

Let us take an order which will require five hours of editing, one hundred hours of composition, including proofing, six hours of imposition, eight hours of make-ready, twenty hours of presswork, forty hours in the bindery, and five hours in cutting and trimming, plus packing and delivery.

Yes, we can edit it today, so place upon the ticket: **"This job must be in composing room at 8 a. m., May 3."**

We can deliver one hundred hours from the composing room by Tuesday noon, correct and send proof Wednesday morning. So on the next line: **"This proof must be in office Tuesday, May 6, quitting time."**

You must allow reasonable loss of time in departments.

Send the proof out Wednesday morning, at the latest, and notify the buyer of the hour you expect its return. Failure to return by the hour requested, will extend delivery on equal number of hours.

For illustration, say, in this instance, **"return today."**

Now, you are reasonably sure of six hours' imposition Thursday morning, May 8, and at three o'clock at the latest the same day delivery to the pressroom of twenty-eight hours' work for one machine.

It is an easy matter with this advance information to be in readiness to receive it in each department as it advances, and, by making these calculations, to know and not guess delivery.

A promise book should be kept and entries made of every definitely promised job — composing room, hours and date; pressroom, hours and date; cutting or trimming, hours and date; shipping room, instructions as to packing and delivery, and date.

Make a departmental promise-sheet and have it filled out every morning in strict accordance with the promise-book. Thus each department will know exactly what it is expected to advance on that day.

This method of dispatching orders through the plant is not as difficult as you would at first imagine, and results in a machine-like exactness that is surprising.

It is exacting service and can only be accomplished by co-operation, upon which every successful business depends.

The cost system is invaluable to a service proposition, inasmuch as it not only shows you the cost per hour, but by small economies, how to decrease the hour production, allowing quicker and better service.

I will venture to say that every man in this room can shut his eyes and see the exact position of every piece of furniture and every machine in his plant, and I will also venture the remark that few of you know the actual capacity of the various departments of your plants, **to say nothing of the individual ability of the workmen employed** — you never figured it that way.

Just for example (all any of us need is something to set us thinking):

How many characters are there in the average thousand ems of type, including spaces?

To avoid embarrassment of some of you old-timers, I am going to answer the question myself:

2,400 or thereabouts.

Suppose you have a man in your employ setting straight matter who has one false motion; **he makes 2,400 false motions, at the least calculation, to set a thousand ems.**

The only way to absolutely know the possibilities of a department is to maintain a record of the employes in that department, and to absolutely know what the **individual delivers and not what the department delivers for him.**

It is not a question of wage — that should be the least consideration; it is a question of being able to deliver.

Service is not a disease, but you must inoculate both co-operation and enthusiasm into your organization if you expect to establish a service reputation.

You cannot have enthusiasm without co-operation, and co-operation is an education in itself that results in enthusiasm and perfect harmony between and in the various departments.

If I had one man, and he the most valuable, individually, in my employ, who was not in harmony with the organization, who, in other words, would not co-operate, I would dismiss him instantly, and, with a less valuable man as an individual, get far greater results.

Do you look upon labor merely as a commodity — a dollar-and-cents proposition? If you do, you had better not advertise service, for you can never hope to deliver.

Do not assume that labor is not intelligent enough to grasp the spirit of its master.

The manner in which some men deal with their employees brings to mind the explanation the little girl made of a man with a balky donkey in the street. She said:

"He patted the donkey with the lines and talked low to him; then he got out and patted the donkey on the back and on the neck and talked a little louder to him, but the donkey didn' go, then he sat down on the curb and told the donkey all about 'Jesus Christ.'"

Some men mean well enough, but, like the donkey-driver, things have to come their way suddenly — when patience would have won.

To get what there is in a man you must know the man — and for one, I do not want any heads of departments who do not understand men and how to treat them diplomatically.

This wonderful industry of ours, with its endless problems, is a great study, both of men and conditions.

If success, through service, is the goal, attention, yes, marked attention, must be paid to that certain something found in men that cannot be bought — **loyalty to the business,** it is produced by justice to ability, and is the keynote of service.

The man who gets no pleasure, no play, out of his business is in the wrong business.

Do you come down to your business in the morning with a dark brown taste in your mouth, and frown at the smiles that the freshness of a bright morning create?

If you do, that is the best method of killing enthusiasm known. It may be pardonable at great intervals, but as a steady diet — NEVER!

Come down in the morning with a smile for everybody — even if you have the stomach-ache — a smile that will make sunshine out of a cloudy day — IT'S AN ASSET.

Say, "Hellow, business, glad to meet you; let's see how amicably we can get along and how much we can do today."

Enjoy your work and your organization will, through contact, catch the contagion, and work will prove a pleasure for all.

Labor is far more than a commodity to you; **it is your mainstay.** There can be no petty jealousies in co-operation. There can be no favoritism among your employes. Every tub must stand on its own bottom, and it must, of necessity, work in harmony with the washboard on the one side and the wringer on the other.

Listen to no one-sided complaints from your employes, be they salesmen, foremen, laymen or errand boys. Go into every complaint that arises in your shop; but dissect each complaint in the presence of all who are interested in the autopsy, if you wish co-operation, that valuable essential from which service is derived.

Reprimands are necessary in every business — but the "bawling out" process has long since been relegated to the obsolete. Personal contact is the greatest aid to co-operation.

When you have established in your plant, the conditions that service requires, it will be safe to advertise, but do not make any misleading statements.

It is a great study — service — and the results to be obtained through a clock-like regulation of business conditions, and many of us are placed in the position of the little girl who, in saying her prayers, added, "God, make Helen a good little girl, and, if at first you don't succeed, try, try again."

And to those of you who have done nothing along these lines let me say, **it is worth a try,** and to those who are not giving your customers real service, **but are trying,** it will be well for your signal success to "try, try again."

TWO OF A KIND

North Judson, Ind., May 14, 1913.

Dear Mr. Herbert:

Enclosed is check for $2.00 on subscription. I have enjoyed the monthly visits of the National Printer-Journalist the past year immensely and don't for the life of me see how any printer or newspaper publisher can keep shop without it. Success to you and yours.

CHESTER A. McCORMICK,
State Senator and Publisher
North Judson News.

East Hartford, Conn., May 13, 1913.

Dear Daddy Herbert:

We again pen our signature to the check enclosed and every time we take up the "Journalist" our memory flashes with the good times we have had together at the N. E. A. conventions and the "Journalist" continues those happy days. Yours truly,

H. B. HALE,
Pub. The Weekly Gazette.

Interesting Incidents of the Ohio Flood

How to Help a Deserving Printing and Publishing House

The great floods in Ohio and Indiana have passed into history, but the disastrous results still remain, as the following letter, which we intended to publish in the May issue of The National Printer-Journalist, fully indicates:

"Hamilton, Ohio, April 24, 1913.

"National Printer-Journalist, Chicago, Ill.:

"Gentlemen — Hamilton, as you know, was visited by a disastrous flood on Tuesday, March 25. We were the last city in the chain of cities in the Miami Valley that were swept by the flood disaster caused by the Miami River. We got it in its greatest fury, and our entire city was inundated, in some places as much as twenty and twenty-five feet. The water was at least fifteen feet higher than ever known in the history of this valley. Our waterworks, city gas works and city electric light plant were all under water and there was no power or light for three weeks, and but a single telephone wire between here and Cincinnati in operation for several days. Everybody in the city was marooned for at least two days from Tuesday morning until Wednesday night, and some portions of the city from one to three days longer, waiting for the water to go out.

"Our newspaper press, in our basement, was in twenty feet of water, and our entire printing presses were also under water, but they have all been taken down and re-erected, and are in first-class working condition.

There was no power in the city, but we had a Washington hand-press and we got out a paper on this press on Tuesday, the day of the flood, and sent a man out in a boat to circulate this paper. Of course, this circulation was very limited. Then, on Thursday, we issued another edition of our paper, and every day since until April 14. This paper consisted of two pages devoted wholly to reading matter and reading notices, no display advertisements. We would get out two and three editions in a day. As soon as we had two pages of matter set up, we would go to press. Very frequently we had two editions in a day, and some days as many as three.

"We are sending you, under separate cover, some of these papers that were gotten out under these conditions. At first there was no paper in the house except some brown craft paper that we had in our shipping department to wrap up catalogues, and we cut up this paper and used it for the printing of our first issues. On April 14 we resumed publication and got out our flood edition, copy of which we are sending you also. This is the first paper published in Hamilton after the flood, except, of course, the little sheets printed on the Washington hand-press in our engraving department.

"We would thank you for such notice as you may think it worthy of in your publication.

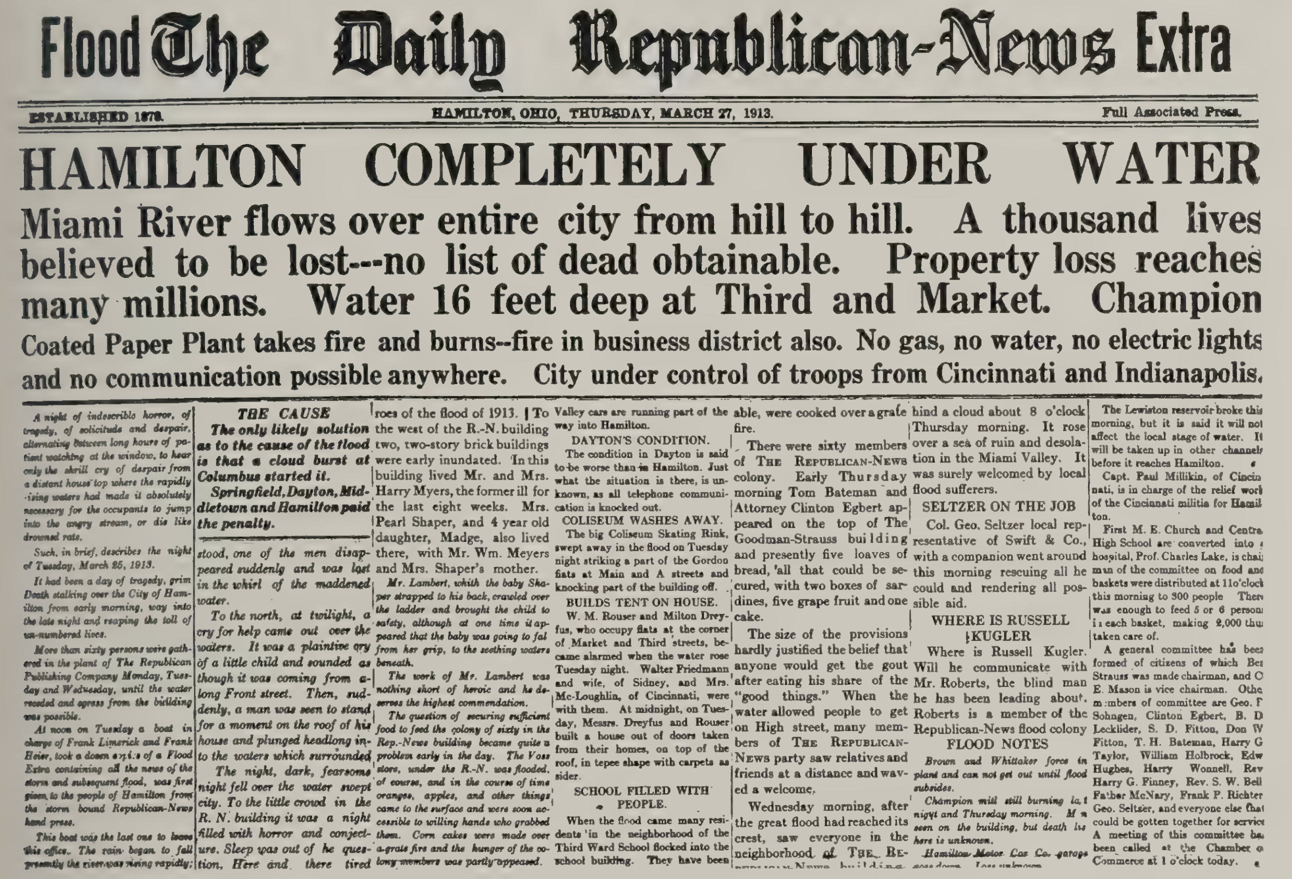
"Yours truly,

"THE REPUBLICAN PUBLISHING CO.,

"W. L. Tobey, Manager."

The papers mentioned by Manager Tobey as issued under such difficult and trying conditions show the indomitable will of the publishers, and copies will be of historic interest a hundred years from now. Those of March 27 and 31 were printed on one side of single sheets, but on April 2, both sides of the sheet were printed. Naturally, nearly the whole space was given up to the flood and the horrors brought thereby, but on April 2, one column was given up to news by the Associated Press.

The following letter, with every word of which we fully agree, tells how deserved and substantial help can be given to the worthy and enterprising company of which



Flood The Daily Republican-News Extra

ESTABLISHED 1876. HAMILTON, OHIO, THURSDAY, MARCH 27, 1913. Full Associated Press.

HAMILTON COMPLETELY UNDER WATER

Miami River flows over entire city from hill to hill. A thousand lives believed to be lost---no list of dead obtainable. Property loss reaches many millions. Water 16 feet deep at Third and Market. Champion Coated Paper Plant takes fire and burns--fire in business district also. No gas, no water, no electric lights and no communication possible anywhere. City under control of troops from Cincinnati and Indianapolis.

A night of indescriblo horror, of tragedy, of solicitude and despair, alternating between long hours of patient watching at the window, to hear only the shrill cry of despair from a distant house top where the rapidly rising waters had made it absolutely necessary for the occupants to jump into the angry stream, or die like drowned rats.

Such, in brief, describes the night of Tuesday, March 25, 1913.

It had been a day of tragedy, grim Death stalking over the City of Hamilton from early morning, way into the late night and reaping the toll of un-numbered lives.

More than sixty persons were gathered in the plant of The Republican Publishing Company Monday, Tuesday and Wednesday, until the water receded and egress from the building was possible.

At noon on Tuesday a boat in charge of Frank Limerick and Frank Heier, took a dozen copies of a Flood Extra containing all the news of the storm and subsequent flood, was first given to the people of Hamilton from the storm bound Republican-News hand press.

This boat was the last one to leave this office. The rain began to fall presently the river was rising rapidly; stood, one of the men disappeared suddenly and was lost in the whirl of the maddened water.

To the north, at twilight, a cry for help came out over the waters. It was a plaintive cry of a little child and sounded as though it was coming from along Front street. Then, suddenly, a man was seen to stand for a moment on the roof of his house and plunged headlong into the waters which surrounded

The night, dark, fearsome night fell over the water swept city. To the little crowd in the R. N. building it was a night filled with horror and conjecture. Sleep was out of he question. Here and there tired roes of the flood of 1913. To the west of the R.-N. building two, two-story brick buildings were early inundated. In this building lived Mr. and Mrs. Harry Myers, the former ill for the last eight weeks. Mrs. Pearl Shaper, and 4 year old daughter, Madge, also lived there, with Mr. Wm. Meyers and Mrs. Shaper's mother.

THE CAUSE

The only likely solution as to the cause of the flood is that a cloud burst at Columbus started it.

Springfield, Dayton, Middletown and Hamilton paid the penalty.

Mr. Lambert, whith the baby Shaper strapped to his back, crawled over the ladder and brought the child to safety, although at one time it appeared that the baby was going to fal from her grip, to the seething waters beneath.

The work of Mr. Lambert was nothing short of heroic and he deserves the highest commendation.

The question of securing sufficient food to feed the colony of sixty in the Rep.-News building became quite a problem early in the day. The Voss store, under the R.-N. was flooded, of course, and in the course of time oranges, apples, and other things came to the surface and were soon accessible to willing hands who grabbed them. Corn cakes were made over a grate fire and the hunger of the colony members was partly appeased.

Valley cars are running part of the way into Hamilton.

DAYTON'S CONDITION.

The condition in Dayton is said to be worse than in Hamilton. Just what the situation is there, is unknown, as all telephone communication is knocked out.

COLISEUM WASHES AWAY.

The big Coliseum Skating Rink, swept away in the flood on Tuesday night striking a part of the Gordon flats at Main and A streets and knocking part of the building off.

BUILDS TENT ON HOUSE.

W. M. Rouser and Milton Dreyfus, who occupy flats at the corner of Market and Third streets, became alarmed when the water rose Tuesday night. Walter Friedmann and wife, of Sidney, and Mrs. Mc-Loughlin, of Cincinnati, were with them. At midnight, on Tuesday, Messrs. Dreyfus and Rouser built a house out of doors taken from their homes, on top of the roof, in tepee shape with carpets as sider.

SCHOOL FILLED WITH PEOPLE.

When the flood came many residents in the neighborhood of the Third Ward School flocked into the school building. They have been able, were cooked over a grate fire.

There were sixty members of The Republican-News colony. Early Thursday morning Tom Bateman and Attorney Clinton Egbert appeared on the top of The Goodman-Strauss building and presently five loaves of bread, all that could be secured, with two boxes of sardines, five grape fruit and one cake.

The size of the provisions hardly justified the belief that anyone would get the gout after eating his share of the "good things." When the water allowed people to get on High street, many members of The Republican-News party saw relatives and friends at a distance and waved a welcome.

Wednesday morning, after the great flood had reached its crest, saw everyone in the neighborhood of The Re- hind a cloud about 8 o'clock Thursday morning. It rose over a sea of ruin and desolation in the Miami Valley. It was surely welcomed by local flood sufferers.

SELTZER ON THE JOB

Col. Geo. Seltzer local representative of Swift & Co., with a companion went around this morning rescuing all he could and rendering all possible aid.

WHERE IS RUSSELL KUGLER

Where is Russell Kugler. Will he communicate with Mr. Roberts, the blind man he has been leading about. Roberts is a member of the Republican-News flood colony

FLOOD NOTES

Brown and Whittaker force in plant and can not get out until flood subsides.

Champion mill still burning last night and Thursday morning. M n seen on the building, but death list here is unknown.

Hamilton Motor Car Co. garage

The Lewiston reservoir broke this morning, but it is said it will not affect the local stage of water. It will be taken up in other channels before it reaches Hamilton.

Capt. Paul Millikin, of Cincinnati, is in charge of the relief work of the Cincinnati militia for Hamilton.

First M. E. Church and Centra High School are converted into hospital, Prof. Charles Lake, is chai man of the committee on food and baskets were distributed at 11o'clock this morning to 300 people There was enough to feed 5 or 6 persons in each basket, making 2,000 thu taken care of.

A general committee has been formed of citizens of which Be Strauss was made chairman, and C E. Mason is vice chairman. Othe members of committee are Geo. F Sohngen, Clinton Egbert, B. D Lecklider, S. D. Fitton, Don W Fitton, T. H. Bateman, Harry G Taylor, William Holbrock, Edw Hughes, Harry Wonnell, Rev Harry G. Finney, Rev. S. W. Bell Father McNary, Frank P. Richter Geo. Seltzer, and everyone else that could be gotten together for service A meeting of this committee has been called at the Chamber o Commerce at 1 o'clock today.

Flood Paper, Issued under Difficulties and Circulated by Boats

W. L. Tobey is the manager, without extending charity, for the Graphic Year Book is worth every cent that is charged for the same, besides it is a valuable contribution to the graphic arts each year that should be generously supported for the real value that the work is to the craft:

"Chicago, May 5, 1913.

"Ravenswood Press, Chicago, Ill.:

"Gentlemen — This letter is an appeal to you for help for our fellow craftsmen in the flooded districts of Ohio. The floods have subsided, the damage is done, but business has not, and cannot, resume without the assistance of every man in the trade. You, no doubt, have subscribed and have been appealed to, but we too soon forget a calamity of this kind. It is a greater disaster, by far, than the San Francisco earthquake — there is no collectable insurance in this case.

"Every line of business should be helped in general, but, in particular, we should direct our efforts to the assistance of our fellow craftsmen. I have particularly in mind our good friend, W. L. Tobey, of Hamilton, Ohio, whose entire work on the sixth volume of the American Annual Review of Printing and allied interests, i. e., "The Graphic Arts Year Book," about ready to be published, has been entirely lost in this disaster. The printing plant in which he held a large interest was under many feet of water. The loss in this department alone was over $50,000. They are endeavoring to get on their feet, and you can no better show your good will and assistance to him and his company than by immediately sending in your check for volume six of the Graphic Arts Year Book. If everyone takes this upon himself, not only as a duty, but as a pleasure, it will materially assist our friend in resuming business, and when you do this you will not be doing an act of charity, for sooner or later you will, for value received, have a copy of the book, which is the recognized standard for the graphic arts of the world.

"Much could be said in favor of this, but I am sure it is not necessary.

"The writer will consider it a personal favor, as well as an act of great business kindness, if you will comply with this request at the earliest possible moment.

"Very truly yours,
"E. W. HOUSER,
"President International Association of Manufacturing Photo-Engravers."

A HIGHER STANDARD OF JOURNALISM SOUGHT

More than sixty student editors and managers, representing more than a score of the leading universities, colleges and high schools of Pennsylvania, West Virginia and Ohio, attended the Conference of Student Editors at the University of Pittsburgh May 9 and 10, under the auspices of the department of journalism. The conference was arranged with a view of bringing about a higher standard of journalism in the publications of the institutions represented and to discuss problems of mutual interest. The students were addressed by Don C. Seitz, a prominent New York newspaperman and Dr. Talcott Williams of the Pulitzer School of Journalism.

CAPPER FARM PAPERS

Arthur Capper has announced that the growth in circulation and popularity of the Nebraska Farm Journal has made it necessary to change the paper from a semimonthly to a weekly. The first weekly number will appear on September 6. The subscription price will be increased to $1 a year and the circulation will be maintained at 102,000.

The New Secretary of the U. T. A. and His Assistant

Printers generally will be interested in the following brief sketches of the lives of the new secretary and his assistant, of the United Typothetae of America. The newly chosen secretary, S. Evans Clark, was born in Philadelphia, Pa., in 1874. At thirteen years of age he became connected with a weekly newspaper as printer's "devil" and later as general assistant, and later took a course in bookkeeping and accounting at Temple College, Philadelphia, and graduated at head of the class. He became advertising solicitor for H. I. Ireland Advertising Agency, Philadelphia, then did organization work in Philadelphia and St. Louis for four years. He took a course in office and accounting systematizing with the Library Bureau of Chicago. Subsequently he became manager of one of their branches; installed a system for taking care of salesmen's reports and mail order business in wholesale shoe houses and manager of the department. Later he was advertising manager and purchasing agent of Rice-Stix Dry Goods Company, St. Louis, including management of private printing plant and in charge of purchase of all outside printing; then went into business in St. Louis under the firm name of "Clark — the Letter Man," specializing in facsimile letters and small job printing, enjoying the reputation of being the highest priced man in the business anywhere. He consolidated this business with the Gould Press and Directory Company, now the H. S. Collins Printing Company, of St. Louis. He was appointed secretary of the Ben Franklin Club of Toledo in July, 1912, and since that time has inaugurated and put into effect successfully many departments, including an estimating school, cost installation, credits and collections, exchange for small paper and envelope stock, employment, and others.

S. EVANS CLARK
New Secretary United Typothetae of America

On account of his wide and varied experience and in appreciation of the work accomplished in Toledo, and in view of the fact that Mr. Clark has become one of the most prominent figures in organization work in Ohio, which state, by the way, is far in advance of the rest of the states in this work, the appointment of secretary of the United Typothetae of America was offered to him practically without solicitation on his part, and he will enter upon his new and important duties June 15, succeeding Mr. Franklin W. Heath. As advertising solicitor, manager and counseller, as office and accounting systematizer, as owner of his own plant, and in the other positions he has filled during the last twenty-three years, he has prepared himself as few men have for the arduous and multitudinous duties of general secretary of a national organization, such as is the United Typothetae of America.

At the present time, in addition to being secretary of the Ben Franklin Club of Toledo, Mr. Clark is also secretary of the Ohio Printers' Federation, secretary of the Exposition General Committee, which is in charge of the State's Million Dollar Exposition to be held at Toledo in September; chairman of the Boosters' Committee of the exposition, and member of the publicity committee.

E. E. Laxman, assistant secretary, was born in Concordia, Kansas, in 1885. He passed the early part of his life and until twenty-three in Topeka, Kansas, where Arthur Capper has made such a success as printer and publisher, and showed how much can be accomplished by thorough organization of an office, with mutual understanding, friendly interest and co-operation, resulting in the highest efficiency.

E E LAXMAN
New Assistant Secretary United Typothetae of America

Mr. Laxman as a boy always wanted to be a printer, and at the early age of nine he had made a rubber stamp outfit, consisting of some thirty-five characters. out of sheet rubber gained in a trade for a jack-knife.

At thirteen he began as "devil" in an average small shop, learning here the practical details of many departments. Five years later he purposely went with a wholesale notion and dry goods house, with the view of broadening his knowledge by knowing something of wholesaling, and served in this house as sample man. To prove his activity made while with this wholesale house, when leaving the institution he was being paid more than twice the amount the position had ever paid before.

At twenty-one he went back to the printing business, serving as general office man with the Adams Brothers Company. At twenty-three he resigned as secretary of this company, who were general printers and manifold book manufacturers, leaving Topeka for Kansas City, Mo. Here a varied and accurate knowledge of cost accounting and efficiency was acquired.

In January, 1912, he went to Atlanta as secretary-actuary of the Atlanta Typothetae, making it a one hundred per cent town nine weeks after arrival, and also inaugurated and maintained nine departments of efficient service.

He possesses an over-abundance of nervous energy. Ambitious and determined, his hobby is to make pleasure out of every task undertaken. He is continually studying and acquiring new knowledge, and reads much more than the average printers, many of whom are inclined to neglect the study of books and journals devoted to instruction in their art, though so properly called the "art preservative" of all arts, and for that very reason deserving, requiring and repaying above all others, much and patient study.

TRADE PRESS CONVENTION

Eighth Annual Meeting of the Federation of Trade Press Associations Called for New York in September

President H. M. Swetland of the Federation of Trade Press Associations in the United States has announced that the eighth annual convention will be held at the Hotel Astor, New York, September 18 to 20, 1913. The Federation includes the New York Trade Press Association, the New England Trade Press Association, the Chicago Trade Press Association, the St. Louis-Southwestern Trade Press Association, the Philadelphia Trade Press Association, and a number of unaffiliated publications, the total membership being two hundred and thirty-six, representing over seventy-five different trades, industries and professions.

President Swetland has appointed as chairman of the committee on arrangements, William H. Ukers, editor of the Tea and Coffee Trade Journal, who, as president of the Grocery and Allied Trade Press of America, was largely responsible for the highly successful grocery trade press convention held at the Hotel McAlpin, New York, last January. Mr. Ukers is arranging a program for the federation convention which will provide papers and addresses on topics of interest to manufacturers, sales managers and advertising men, as well as to trade paper editors and publishers.

Two sessions will be held daily. There will be editorial, circulation, advertising and publishing symposiums, under competent leaders. Many of the leading editors, business managers, buyers and sellers of advertising and authorities on modern merchandising methods will take part.

On Friday afternoon, September 19, there will be a mass meeting with addresses by representative business and professional men, on subjects of timely interest to editors, publishers and advertisers. Distinguished guests and worth-while speakers will be at the annual banquet, which will be made a memorable social occasion.

Invitations are being extended to manufacturers, sales managers, advertising men, trade paper publishers and all others interested in the idea of business promotion through trade press efficiency, which is to be featured at the convention.

"We Smile"

Winchester, Ind., May 17, 1913.

National Printer-Journalist, Chicago, Ill.

My Dear Mr. Herbert: Enclosed please find a check for $2 for the year of 1913. Now let us see you smile.

Wishing you success,
Yours,
Beeson Bros.

Mechanical Efficiency in Printing

By Alfred R. Gardner
4622 N. Lincoln Street, Chicago, Ill.

The cost of printing depends so largely on mechanical efficiency that one aquainted with conditions in many shops cannot but wonder if it is possible that any but the simplest jobs, where estimates are required and given in advance, are turned out at a price that will show a real profit — provided, of course, the customer expects to receive and is given, under a competitive bid, reasonable value for his money.

In the production of one color work the labor is generally so simple and competition so keen that a reasonable degree of mechanical perfection has been attained, whether or not any real profits to the office is realized, but with work requiring two or more colors, especially in making high grade catalogues, there is an unlimited chance for improvement. And even in one color work there are many shops where a better knowledge of the mechanics of printing will result in better work and surer profit. The attempt to run larger editions of high grade work from type forms is a good example of this fact and almost always results in disaster, either to the job or the profits.

It is quite frequently claimed and often believed by printers, that home-made type will stand a run of anywhere from 50,000 to 200,000 impressions without showing serious wear. This might be true in rare instances where the pages are protected by brass rules and where there are no halftones or exposed lines to interfere with a perfectly even impression over the whole form; otherwise the life of the type will be nearer 25,000 impressions if a thoroughly first-lass job is required. The two lines below will illustrate this fact very well. The first line is new type, the second stood a run of less than 20,000 before being used in this article. It may be said that this is an extreme example and possibly it is, but even so, the job would be no better than the poorest portion. The great fault lies in the fact that worn type cannot be replaced without resetting larger portions of a job or possibly all of it.

UPISTERFPRETITMNMUPIEISB
UPSITEDFMHNWMIUAEBEISB

As the life of good electros is from four to ten times that of type it would seem almost unnecessary to advocate the economy of their use for all jobs where the run is of any size and first-class work is required, yet there are some shops and a few customers who insist on printing direct from the type even at the expense of additional composition, makeup, lockup and make-ready which it necessitates. Where frequent editions of booklets are run it is but little short of criminal to print from type if the run amounts to anything, and quality of output is a consideration. A set of good copper electros will wear for several editions and nickel or iron plates much longer, while a form of type will very seldom make a run of 50,000 good impressions, especially if it contains small type. The proper way to do, if changes from one edition to the next are considerable, would be to keep the type standing to be corrected for the purpose of electrotyping the pages where alterations occur, or the entire job if the old plates are sufficiently worn to show wear.

In jobs where it is desirable to print from original halftones, these should be backed up in the foundry and mounted on the same block as the type matter, or if the plates are to run on patent blocks the parts should be soldered together. Where a job is to run more than one on, duplicate half-tones can be made by lead moulding, the type being moulded in wax and the parts combined as before. The cost of the electro is generally more than made up by the saving in composition, makeup, lockup, register, and standing time on the press, and the quality of the work resulting therefrom is far superior.

In making catalogues where the pages contain type, halftones and line cuts and print in two or more colors, with close register, the pages should be made up so that there is but one piece per page for each color, except where there would be plenty of room between the parts for register hooks in locking up. In other words the pages should be electrotyped with the type, halftones and line cuts in position and the plate so obtained used as a "key" for positioning the other colors. Especially is this true where tint plates with cut-outs or shading for the cuts are to be made. The transparencies or "transfers" for these plates should be printed from the electro and never from the original form of type and cuts, as this is liable to constant change of position in the form during printing, while the electro is not. In the days when tint plates were used as the "key" form and printed first it did not matter much if type and cuts were used to print from, as the runs were usually short, and once the form was in register it would stay. But in modern practice where the tint follows other colors and often covers portions, it is absolutely necessary that there shall be no change in the register of the pages and this can only be secured by printing entirely from plates.

The argument quite often heard against the use of plates, that they cannot be corrected economically will hardly pass muster at this stage in the game. As well argue that the old Washington is superior to a Miehle because easier to start. The fact of the matter is that no electros should be made until the author or customer has given his OK. for every page, and if this rule is strictly followed very little complaint will be had regarding the difficulty of making corrections.

However, some corrections and alterations are always liable to occur even with the most careful workmen or customers, but if the mechanical principles underlying the various plate making processes are understood considerable alteration can be made without resort to new plates. If the original halftones are used to make up the plates they may be re-etched or hand tooled as desired. Good electrotype halftones may also be hand tooled to a considerable extent if the shells are not too thin. Line cuts may be tooled and extra lines added. The text may be changed in almost any manner desired, provided space permits. Where the correction is slight type may be inserted in the electro, or if the alteration is extensive whole lines or paragraphs can be reset and the electros made therefrom, patched into the plate in proper place.

In case of accidents which destroy portions of plates while printing, renewals may be made with more accuracy than if printing from type. New cuts, if made from the original negatives can be inserted in the plates without changing the register of any of the colors. If tint plates are damaged beyond repair the "transfer" will enable a new one to be made which will register with the work already run. Where the plates are very difficult to make or the runs are long enough to warrant the belief that some will not stand the wear, duplicate electros or shells should be made to provide against possible delays.

The great fault in printing color work from forms of mixed type and cuts is that it is mechanically impossible to preserve a perfect register for long runs. Defects in justification, makeup, and lockup resulting from the attempt to register mounted plates within type forms, are constantly arising, which cause spaces to work up or unnecessary wear on portions of the form, all of which, reduce the quality of the work very materially and add excessively to the cost of presswork. The stock is also liable to stretch or shrink between colors and if the printing is being done from forms of mixed type and cuts or all type no change of register can be made that will compensate for this change in the stock; while if printing from plates the pages can readily be shifted to conform to the colors already run.

Modern printing is just as much a mechanical science as railroad engineering or watch making and requires as much or more ability, yet you will find very few shops where the mechanical work of producing good printing is planned by people practically qualified to do the work. If a railroad company undertakes a new work an engineer of recognized ability is placed in charge, a manufacturer does likewise, and there is no reason why printers cannot apply the same principle to their work. The demand for quality today is such that the printer working along the same lines he followed five or ten years ago and endeavoring to hold his output up to the modern standard will find himself hopelessly outclassed by the more progressive neighbor who has forgotten the myth of the "art preservative" and has made his trade a mechanical science for the reproduction of art.

EDITORIAL PHILOSOPHY IN DEFEAT

Advertising for an Office Not Wanted and Getting Sport as a Reward

Carrollton, Ill., May 6, 1913.

My Dear Friend Herbert: I enclose draft for $2 to pay my subscription to the National Printer-Journalist for the present year. I still like to sit down with it and let it talk "shop" to me, as it has for nearly twenty-five years.

I celebrated the twenty-fifth anniversary of my connection with the Patriot last month, by crawling complacently out from under a "landslide" and thanking my stars that I was a free man instead of mayor of this bailiwick.

Say, did you ever hear of a man putting up a stiff and strenuous advertising campaign for "business" that he didn't want? Well, that is exactly what I did this spring. And I succeeded in missing what I didn't want, too.

The enclosed clippings from the advertising, news and editorial columns of the Patriot will tell the story, and may amuse you some if you care to look them over. I got a heap of fun out of it myself, I assure you. The question in this case is, does advertising pay?

Yours truly, Charles Bradshaw.

Mr. Charles Bradshaw, Past President of the Illinois Press Association, and editor of the Carrollton Patriot and, by the way, one of the most popular and worthy members of the fraternity of home newspaper publishers of the State of Abraham Lincoln, was induced, in April, to enter the field as candidate for mayor of his beautiful home city, on a platform of law enforcement and public improvements. He made a good fight, but his opponent was a practical politician and adopted the enforcement and improvement platform and went still stronger and one better in protestation and promise. Editors are seldom practical politicians. They say what they do mean in black and white, and are compelled to stand thereby during the years, for their files are in evidence. It is their work to initiate and carry forward reforms, and reforms are not always popular at the beginning, and one perfectly natural fact is that where the reforms become popular, the prejudice still clings to the faithful editor who has led the people into the higher views. The practical politician, being an experienced navigator on political seas, knows how to shift the sails of the craft to catch the popular gales. We are not saying that these truisms especially apply to Mr. Bradshaw's efforts, but we are simply writing in a general way as to established truths.

Mr. Bradshaw made matters pertaining to his campaign interesting to his readers, although the campaign resulted in his defeat by thirty-six votes, and then he took his defeat philosophically and good-naturedly, as shown by the following, published in the issue of The Patriot of April 17, under the caption "After the Battle":

"Running for office is an experience that no able-bodied American citizen should miss — once in his lifetime, at least. Getting defeated adds much to the value of the experience, too.

"We know one candidate who, although defeated, has been surprised and gratified at the number and sincerity of his friends. He wouldn't take a small fortune for that part of his experience.

"He said that being defeated isn't such a crushing blow, either, especially when the office is one he didn't want in the first place. He has found no difficulty whatever in keeping the pre-election smile intact, just as it had been before 5 o'clock Tuesday evening.

"Though he didn't want the office, he put up the best fight he knew how to make, in order to be loyal to his friends. While some 'arguments' were used in the campaign that he could not meet on the same level, no dregs of bitterness remain. There are no 'accounts' to settle in the future.

"One can get a good deal of amusement out of the things he hears about himself. These have a wholesome effect in curbing his vanity and revealing some of his weaknesses. Bobby Burns never ran for office, else he would not have sought in vain for the gift to 'see oursels as ithers see us.'

"Then, on the other hand, it gives a man a little better opinion of himself when he finds that he has made a few enemies and knows that he came by them honestly.

"After a man has narrowly escaped a 'two year sentence' himself, he can look with larger charity upon the less fortunate fellow who has to take the punishment."

✣ ✣ ✣

THE SHERIFF'S DEPUTY

By F. M. Paull, of the Burroughs Adding Machine Company

In nine stores out of ten the sheriff has a "deputy." He is the lack of knowledge which would allow the retailer to know which things to do first — the lack of knowledge which keeps him so busy doing the wrong things that he never has time to do the profitable things — to work out plans that mean more business and less expense.

He represents neglected opportunities — lost chances to do the big, profitable things overlooked because the records do not show the merchant which of his efforts are most successful — does not allow him to know in which direction his real opportunities lie.

He is the dead stock which lies on the shelves, eating the profits the live lines earn — the idle dollars which earn no profits and cause the failure to grow.

He is the hidden leaks that do not come to the manager's eye but exist just the same — the dangerous leaks that could not exist in the face of accurate, search-light accounting any more than darkness could exist under a glaring, high-power street lamp.

He is the confusion caused by mixing methods of figuring profits, which more than half the 2,000,000 retailers in business today are doing — the dangerous mixing of methods which is the reason for the large number of failures among retailers every year.

He is the failure to get the true picture of every detail of the business — the depending on unsupported "judgment" for guidance — the judgment without charted facts which is merely guess-work — the effort to guess one's self to success in competition with business men who know.

He is the not knowing — from records that can be compared with records of similar periods, a month, a year or five years ago — which clerks are the consistent producers, and which are satisfied to let the goods sell themselves.

And it all sums up to this: It costs more not to keep and analyze accurate records than it does to keep them. Leaks and neglected opportunities are more expensive than bookkeeping. Every leak points an accusing finger at the accounting system in use — it must be wrong, or the leak could not exist.

Success depends not half so much upon ability, as upon analytical reports which will enable the manager to do the right thing at the right time — to see his opportunities and to seize them.

The successful retailer is the one whose eye can always see the things it ought to see — whose accounting system gives him facts on which to base his management — who isn't "making friends" with the sheriff.

NEW QUARTERS OF CINCINNATI BEN FRANKLIN CLUB

Here is a view of the new quarters of the Ben Franklin Club of Cincinnati. The club expects to occupy this building on June first, when it will be fitted up in extremely desirable style for their purposes.

A general lounging room for the use of the members will be furnished with settees, chairs, tables, etc. The directors' room will be furnished with a large director's table and all the paraphernalia necessary for the directors to conduct business. The secretary and assistant's office will be conveniently located and fitted with every modern convenience and appliance to handle the work. The Collection and Employment Bureau will have separate places to take care of these important divisions of the club work.

In connection with the club is a very large, well-lighted and ventilated hall, which will seat from two to three hundred people easily. This hall will be used for general meetings, etc.

The building is located on one of the best business streets of the city and right opposite the celebrated Garfield Park, the windows of the lounging room opening out on to the park, giving a delightful and restful view. It is a very desirable location.

It has been felt for some time that rooms of this character were needed and through the efforts of the Social Committee the securing and furnishing of the new club home was successfully accomplished.

UNIVERSITY AD CLUB WINS NATIONAL PRIZE

The University of Missouri Ad Club, the only college advertising organization affiliated with the Associated Advertising Clubs of America, has won a prize of $25 offered by the national organization to the club subscribing for the most copies of "Advertising as a Business Force." There are about two hundred advertising clubs in this country, made up of business and professional men interested in advertising, with a total membership of from five to eight thousand.

Two prizes were offered, one for towns of more than 25,000 population and the other for towns under 25,000.

Last summer at the convention at Dallas, Texas, it was decided to publish a book on advertising and Prof. Paul T. Cherington, instructor in the School of Business Administration at Harvard, was chosen to compile the work. This book, "Advertising as a Business Force," was put on sale in December and the contest closed January 15. Between three and four dozen copies were sold here, through J. B. Powell, instructor in advertising.

August Dieter, president of the University Ad Club, received a letter last week from G. W. Coleman of Boston, president of the Associated Advertising Clubs, notifying him that the club here had won the prize. This will be announced also in Associated Advertising, the official monthly publication, and at the next convention at Baltimore, in June, when the prize will be presented. Mr Coleman, the president, spoke at the University of Missouri last year.

The University Ad Club has about forty members. It is made up of the presidents or representatives of all the county and city clubs in the University, of sectional organizations such as the Dixie Club, a representative of the university women and a representative at large from each department.

The University of Wisconsin advertising club formerly was a member of the national organization but dropped out last year.

NOTES FROM BEN FRANKLIN CLUB HEADQUARTERS

The Northwest Cost Congress held in the Hotel Radisson, Minneapolis, Minn., May 1, 2 and 3, was a success from every standpoint. "Cost" enthusiasm ran high and every printer who attended went home feeling that he was engaged in an industry that could be made a topnotcher in financial standing, as well as in the amount of capital invested and the volume of business done.

There were over 200 registrations and 250 attended the banquet held the night of Friday, the second.

The convention was called to order by E. K. Whiting, of Owatonna, Minn., President of the Northwest Cost Congress. The address of welcome was given by Mayor Wallace G. Nye, of Minneapolis. Robert E. Withy, president of the St. Paul Typothetae, gave a short address on "Why We Are Called Together." This was followed by a short talk by Roy T. Porte explaining the Simplified Cost System.

The afternoon session was opened by Ed. E. Sheasgreen, secretary of the Ben Franklin Club of America, who gave a stereopticon lecture on "Capital, the Natural Laws of Cost Finding and Time." Roy T. Porte then followed with a stereopticon lecture on the Simplified Cost System. In the evening "The Revised Proof" was presented by members of the Minneapolis Typothetae to a full house at the Princess Theatre.

Friday morning J. C. Morrison, of Morris, Minn., vice-president of the Minnesota Editorial Association, gave a paper on "The Cost of Producing a Country Newspaper and Why." The discussion of this paper lasted all forenoon.

In the afternoon W. T. Cole, of Minneapolis, gave a paper on "Why Specialty Printers Have an Advantage Over Other Printers in Price-Making." E. M. Spencer, of Minneapolis, then took up "An Analysis of Seven Similar Jobs of Printing." Arthur E. Southworth, of Chicago, treasurer of the United Typothetae of America, gave an address on "Service," and F. J. Scott, of Minneapolis, gave "An Exhibit of Job Printing from Various Sources."

Friday evening 250 gentlemen, with their ladies, sat down to the banquet in the ball room of the Radisson Hotel. Jens. K. Grondahl, of Winona, Minn., vice-president of the Ben Franklin Club of America, acted as toastmaster. B. B. Herbert, editor and proprietor of the National Printer-Journalist, Chicago, and who was 70 years of age the 3rd of May, gave an address on "Memories and Contrasts." Mr. Herbert founded the printing business and paper at Red Wing, of which Jens. Grondahl is now owner and editor. After some "P. I. C. A." stunts Arthur E. Southworth, treasurer of the United Typothetae of America, gave an address on "Now, Then and When." Mr. Herbert Flagg, assistant secretary of the United Typothetae of America gave an address on "Organization and Co-operation."

Saturday morning Gene Turner, of Chicago, gave an address on "The Order of PICA and Other Things." W. S. Tuttle gave "Just a Little Talk on Cost Finding." Ed. E. Sheasgreen gave a stereopticon lecture on "Cost System vs. Estimating and Competition." This was followed by a continuation of "An Exhibit of Job Printing from Various Sources," given by F. J. Scott, after which Roy T. Porte answered questions from the question box. At noon over 60 printers had luncheon together at the Commercial Club on the tenth floor of the Radisson Hotel and over a hundred were guests of the Minneapolis paper and supply houses at the Metropolitan Theatre to hear William Crane.

A resolution favoring the amalgamation of the United Typothetae of America and the Ben Franklin Club of America was unanimously adopted and a committee appointed to devise ways and means of effecting a permanent state organization.

Thursday evening, May 8, the regular meeting of the Aurora, Ill., Ben Franklin Club was held in the offices of Finch and McCulloch. The secretary of the Ben Franklin Club of America spoke on the amalgamation question and along Cost System lines. The expressions from those present were that the Aurora Ben Franklin Club, at the next regular meeting, would take up the question of joining the new organization in a body, feeling that it is only as members on the "inside" that all the things can be done that will bring about the greatest good to the greatest number of printers.

Mr. J. C. Adderly, secretary of the Ben Franklin Mutual Casualty, of Chicago, spoke on the question of the "Employers Liability Insurance." A general discussion was entered into, many questions were asked and answered with a result that several printers are soon to take out insurance in Mr. Adderly's company.

On Saturday, April 26, the printers of southern Wisconsin held a meeting at Janesville in the library of the Janesville Gazette and organized a temporary organization to cover southern Wisconsin and northern Illinois. Twenty-three printers were present at the meeting and nineteen were at a banquet held at the Meyers Hotel. Mr. Frank Cantwell, of the Cantwell Printing Co., Madison, Wis., spoke on the "Value of Organization," while Mr. Paul Nahmens, of Milwaukee, gave a chart demonstration of the Cost System. Mr. J. S. Hubbard acted as temporary chairman and Mr. F. D. Slawson, of Janesville, was chosen temporary secretary-treasurer. A call for a meeting to be held May 10 was made to form a permanent organization and adopt a constitution and by-laws.

Mr. E. K. Whiting, president of the recent Northwest Cost Congress, made a trip to Iowa in the last week of April, to address the advertisers of that state on the value of cost finding in advertising work.

The second meeting of the printers of southern Wisconsin was held at Janesville Saturday, May 10, with the result that a permanent organization was effected. The name of "Rock River Valley Ben Franklin Club" was adopted. This organization will take in the printers of southern Wisconsin and northern Illinois and starts with a charter membership of sixteen. The charter is to be left open for another meeting to be held in Janesville, Friday May 23. A constitution and by-laws and code of ethics were adopted and the following permanent officers elected: H. L. Hoard, Fort Atkinson, Wis., president; H. H. Bliss, Janesville, Wis., vice-president; J. S. Hubbard, Beloit, Wis., secretary; and F. W. Kuhn, Edgerton, Wis., treasurer.

The secretary of the Ben Franklin Club of America was the guest of honor at a banquet at the Hotel Meyers and assisted in the organization of the new club. He also gave an address on "Organization and Co-operation," and took up the discussion of Cost Finding Systems. A solicitation of applications to the new United Typothetae and Franklin Clubs of America resulted in several promising to send in their applications as soon as they had been able to figure out their mechanical pay-roll. Out of town printers were in attendance from Beloit, Fort Atkinson, Madison and several other Wisconsin points. The meeting was held in the library of the Janesville Gazette and Mr. Bliss, of that publication, extended an invitation for the organization to meet there as often as it wished.

Mr. Hubbard, the new secretary, is also the state treasurer of the Wisconsin Ben Franklin Club and has been the leading spirit in the movement in southern Wisconsin which has crystallized into this new permanent organization.

H. L. Hoard, of Fort Atkinson, Wis., and recently elected to the presidency of the "Rock River Valley Ben Franklin Club," is the owner of a large plant and the publisher of "Hoard's Dairy Farmer," one of the best known farming and dairy publications in the United States.

HELP SPREAD THE GOSPEL

To win the battles of life nothing helps men so much as a hearty hand-clasp, a friendly whack on the shoulder and a cheering word. To have these come at a time when business has been going crosswise, then, especially, do these kindly acts strengthen and help men on to better and bigger things.

As it is in "business" so it is in "organization work" and when the following letter came from one of the "small fry," as Brother Cassius L. Coward is wont to call himself, it occurred to this office that there might be others of the "small fry" and possibly some among the "big fry" who could be cheered along as he has been, to that point where they would send in their application blank to The United Typothetae and Franklin Clubs of America.

Brother Coward, who runs a small newspaper at Lodi, Wis., says:

"Personally I feel that my membership in the Wisconsin State Franklin Club the past year has been a great inspiration to me. I have spent considerable time and money — for a "small fry" — in missionary work, but I feel that the increased earning power of my business, as a result of the helpful influence received, has much more than repaid me, even in dollars and cents; and I am sure it has given me a more exalted opinion of myself as a business man. So I am glad to contribute my small mite in the way of dues to assist in spreading the gospel."

Come on brothers, you who have not sent in your application to the new United Typothetae and Franklin Clubs of America, have the courage to do what "Cassius L." has done — help toward "spreading the gospel." The yearly dues that you might have to pay is no more to you than the mite Brother Coward is to pay. If you act in the same SPIRIT he has shown — and it is always the SPIRIT that counts — what wonderful things will then be recorded of the printers.

Dear printer friend, forget the past, look to the future, think only of the big things YOU can do, and that YOU can help OTHERS do, in clearing away old structures, in digging and laying new foundations deep enough, and broad enough, so that there may be erected the grandest organization that it has yet been the pleasure of man to behold.

With the consummation of the proposed amalgamation, we venture the assertion that at the New Orleans convention in October there will be assembled the representatives of the greatest number of employing printers ever organized into one body.

THIS CAN BE DONE BUT YOU MUST HELP.

So address the Secretary of the Ben Franklin Club of America, 1603 Monadnock Block, Chicago, for an application to new organization and **DO IT NOW.**

* * *

A NEWSPAPER BURNED OUT BUT "STILL IN THE RING"

Peotone, Illinois, suffered from a disastrous fire on May 8, making away, with many other establishments, the Vedette newspaper, power plant, newspaper press, stock, etc. Editor J. C. Adams, however, was not discouraged, but was out with a paper the next day, small in size — only two pages of three columns each, ten inches in length, worked off on a job press, but full of vim and optimism. Mr. Adams remembered this office with a copy of the diminutive sheet on which the following brief note was written: "Friend Herbert: This little paper tells its own story. We are still in the ring. See next page. Yours, Adams." The "next page" tells the story, not only of the loss but of that genuine helpful and fraternal spirit that has come to exist among newspaper publishers, as follows:

"We make no apology for this abbreviated number of 'The Vedette.' Indeed, we consider ourselves fortunate that facilities to print this sheet have been saved.

"When it was seen Thursday morning that 'The Vedette' office was doomed with the other business houses on the south side of Main street scores of friends assisted in carrying our movable property to places of safety. Racks, cases of type, cabinets, job press and all the smaller machines were carried to points outside the fire zone.

"Nearly all the news matter for 'The Monee Review' and 'The Vedette' had been set and was in galleys ready for the make-up.

"We saved the type but most of it is hopelessly pied. It will require many days of patient work to get things in working shape.

"Editors Stevens of the Beecher Herald and Decker of the Manteno Independent have kindly placed the use of their presses at our disposal. We appreciate their kindness and with the assistance of one of them expect to issue the paper in its usual form next week."

MORE WORK THROUGH PUBLICITY

Address all samples and communications for this Dept. to Harry Albro' Woodworth, 43 St. Botolph St., Boston, Mass.

Even Primitive Humor May Pay

GEORGE E. CLARK, of Lakewood, N. J., writes me that he ran a double column ad in a local weekly paper, the Lakewood Citizen, as follows:

> $500 REWARD
>
> LOST — A small boy, about the size of a man, barefooted with his father's shoes on. He was last seen shoveling wind off the Post Office Building trying to earn enough to get
>
> A BOX OF THOSE FAMOUS
> WARDSWORTH WEEK END CHOCOLATES AT
> CLARK'S
> Opposite Depot

Now, wouldn't that ad jar the most broad-minded critic of modern advertising? And as to the many critics who claim that even the most exquisite humor has no place in advertising, what would they say to this? A prominent advertising manager, in a recent address, laid this "direct command" on his hearers: "Shun humor in advertising as you would the very devil." Strange to say, this man is truly humorous in the very successful advertising he writes himself. He does not indulge in horseplay, however, which is probably what he meant to advise against. But what would he think of such crude humor as that in the advertisement just cited?

It seems to be pretty bad. And not so bad as the line "$500 Reward" where there is no reward. And yet —

Mr. Clark writes me that this ad, which he ran in the paper, and also printed on 5,000 circulars, which he distributed "all over town," "greatly increased his business." "In one week," he affirms, "the business nearly doubled."

Such testimony as this makes the life of the ad critic anything but "a 'appy un." The captious cantankerous critical critic should remember that the advertising of chocolates sometimes does not require the "reason why," and that, whereas the poet, Horace, said, "It is pleasant to play the fool in place," so it is sometimes profitable, as are many pleasant things; and that while publicity would undoubtedly be an exact science if anybody understood the human mind in all its moods and tenses, and knew all about the when, and the how, and the how-often, and the when-never, and the good, and the bad (and the good-bad, which never!), we could make axioms that would be quite axiomatic.

✢ ✢ ✢

A "House of Ideas" With a Good One

Review Printing and Embossing Company, 501 South Dearborn Street, Chicago, "the house of ideas," sends a circular letter to other printers. The envelope and the letterhead are superbly printed, being such especially good examples of a combination of different styles of embossing and color scheming that I would like to give an idea of them — but not even a half-tone would do them that justice which is ever the aim of the conscientious critic. But I will give the wording of the circular, as a hint of a co-operative tendency — a sensible division of labor — among printers, that is in keeping with the times, and is calculated to give the ultimate consumer a better job if the Review folk pay as much attention to making covers as they do to the stationery announcing them. The letter:

> Gentlemen:
>
> Let's get right down to brass tacks.
>
> You want to produce printed matter that is superior, and you do. The problem that confronts you is, how can you produce better work?
>
> We will take, for example, a catalogue or booklet which you have in hand. Your ambition is to make this job a little better than any you have produced before. What will add most to its attractiveness? General improvement, both in the body and the cover.
>
> We shall have to leave the body to your skill and judgment. Now, why not leave the cover to OUR skill and judgment? There are reasons why limitations are placed on you in handling the cover.
>
> Our business is to produce, every day, printed and embossed covers that are superior. We have become experts. Our work-people are educated along these lines, and we have the equipment — plus brains.
>
> CONFIDENTIAL TRADE-WORK IS OUR SPECIALTY. The larger houses send us their particular work. They do it for a reason. Their customers demand perfection — we give it. Now why should not you benefit by the production of better work? We do the work and you get the credit. Let's talk it over.
>
> When may I call?
>
> Very truly yours,

✢ ✢ ✢

Windows and Other Mediums

"A thing that is worth putting in the window is worth advertising in the Record," says the Recordette, the house-organ of the Canon City (Colo.)

Record. Show window and newspaper advertising are two distinct forms of publicity. Both are good; and in many cases the one is a most useful supplement or complement to the other. But there are many cases in which the window is of itself a sufficient advertising medium for something the dealer has in a limited quantity, and can dispose of quickly through simply bringing it to the notice of the persons who pass the window. It would, therefore, be useless advertising to use the columns of the newspaper in addition to the window, and in the long run it does not pay the publisher to urge unnecessary advertising expenditure. The welfare of the advertiser should be the chief thought of the publisher; it means his own permanent welfare. A merchant in a good locality should not neglect window advertising, but even if he finds the window sufficient to advertise one thing, it is the newspaper that is the best medium for a number of things. And in ever so many cases a newspaper man should advise a merchant to use both window and newspaper. Many a time phrases like "See Our Windows," "See the Display in Main Street Window," should appear in the paper ad. A window display often induces the passer-by to come right into the store; and a newspaper ad often makes the passer-by notice the window, or even impels him to go a block or two out of his way to see it.

✣ ✣ ✣

"Pictures With a Purpose" Will Achieve It

Leaves of plate paper assembled between a heavy cover of light brown. Pages of pictures that will be a joy to the lover of modern art because of their delineation and their effective effects of tone and color. Here are some: Black and color. Black and gray with the one printing or comprehensive chromatic harmonies with three or four. Art and humanness. Form and spirit. Pictures, but as the title of the production specifies, "Pictures with a Purpose." Use is the purpose. Utility is a beautiful quality; modern advertising is useful, a beautiful science; the purpose of these pictures is to sell things, but sales-ship is, too, a beautiful and beneficent science.

"Pictures with a Purpose" is an advertisement of an "organization" — a good name, indeed, for the great Barnes-Crosby Company of Chicago, St. Louis, New York, Detroit, Cincinnati, Toledo, Milwaukee, Dallas, Kansas City, Cleveland, Moline, Minneapolis, Indianapolis, Atlanta. To organize is, says the Standard Dictionary, to bring into systematic connection and co-operation the parts of a whole. An organization without a useful purpose would be a disorganization. So the aim of the Barnes-Crosby Company is not merely to make pictures or even pretty pictures. As the firm reasons, anyone with a bit of temperament and a wisp of camel's hair can make a pretty picture. It takes more than a mere picture-maker to create the big ideas that dovetail with selling campaigns and are in perfect and hence useful harmony with their purpose — to sell to those whose interest it is to buy aright.

The four-color cover design for a catalogue, showing an attractive young lady seated in a chair and holding a copy of the catalogue at arm's length, has all the essentials of a modern cover design, of which the chief are beauty, simplicity, charm, meaning, and suggestion. There is a black and white three-column newspaper ad which would dominate a newspaper page, while occupying only a corner, and in which detail and delicate shadings have no place. A bold and striking treatment rivets the attention of the most careless reader to one big central idea. Such ads are naturally good for their purpose — that of impressing an idea on the mind of the casual newspaper reader. Excellent indeed is such an advertisement for a manufacturer's product like a new cigar. But this is not the only kind of newspaper advertisement that is good; and the elaborate ads of automobiles which the Barnes-Crosby Company show as examples of good magazine advertising are likewise suitable for newspapers. They attract the attention of the man who reads a paper in haste; and when he has time to read the arguments he will be likely to do so, if he is interested and sees the ad in another paper or another edition of the same paper. Such ads as these, moreover, are often clipped for future reading. And it should be remembered that many a busy man reads a newspaper very thoroughly at some hour of the day, who seldom or never has time to look at magazines, or at their advertising pages, if they are not forninst some of the "pure reading matter" pages. McClure's is wise in giving extra pages and columns of stories and articles, and running ads on the same or opposing pages; it can thus more effectively compete as an advertising medium with such periodicals as the Saturday Evening Post.

Some of the other attractive features of the Barnes-Crosby portfolio are:

A really attractive picture of children to advertise children's underwear. It is none the less a picture because it really advertises the underwear.

A combination of line and wash drawing for an automobile that really shows what the automobile looks like. There is a charm to the scenery setting that has all the delightfulness given by some of the most refined English etchers.

A true-to-life illustration of seamless hose which some might regard as unseemly. "It shows," says the caption, "the possibilities of utilizing the models which Barnes-Crosby Company retains in its art studios. It is a good ad; and evil be to him who even thinks Honi soit, etc.

An Advertising Magazine's Admission

For four years a very prominent paper in a city of the United States having over 100,000 population has been carrying an advertisement of its job printing department, headed "A Lawyer's Admission." It begins: "A prominent lawyer the other day said: . . ." What he said doubtless had considerable advertising force shortly after he said it; but "the other day" is an expression that should be expunged from an ad that has run without change for four years

Without change? Ah, no; there is the change wrought by the hand of Time on linotype slugs, faithfully caught in their daily deterioration by the papier-mache matrix. So the advertisement is about as bad a one typographically as it has, because of its age, become to those who have seen it for years.

What the prominent lawyer is said to have said is: "I attribute my success in securing a recent favorable decision in the Supreme Court as much to the clear and legible printing of the argument in my brief as to the legal points therein presented." Really, as I know that the point of time could not have been what is meant by the idiomatic expression "the other day" when the lawyer made the statement, I am in doubt as to whether he made it at all, or whether he is prominent, and I have my doubts as to whether the briefs were printed at the office, as the ad does not say so, and I rather distrust that ad, anyway, with its disreputable appearance, among the "fresh-every-day" composition, and, "which is worse,' I am afraid that lawyers and possible customers of the publication may distrust it likewise.

✣ ✣ ✣

THE ADVERTISING STATISTICIAN

Here's the most of an ad in the Saturday Evening Post that explains itself:

> **125,000,000 Explosions**
> **Inside Every Grain**
>
> Each grain of wheat or rice contains at least 125,000,000 starch granules.
>
> Each of these granules holds in its center a tiny bit of moisture.
>
> Prof. Anderson's process does this:
>
> It seals the grains up in steel guns.
>
> It applies to the guns 550 degrees of heat.
>
> It turns the moisture to steam, creating a pressure inside of each granule of 175 pounds to the inch.
>
> Then the guns are suddenly unsealed. The steam in each granule explodes.
>
> And those 125,000,000 explosions blast every starch granule to pieces.
>
> **Why It Is Done**
>
> Digestive juices can't act well on the solid granules.
>
> They must be broken. That's why grain is cooked, baked or toasted before one tries to eat it.
>
> But no mere cooking breaks up half the granules.
>
> So Prof. Anderson invented this process. It breaks up all the granules.

Now isn't it simply awful? Here we have been eating grains of wheat and rice in each of which less than 62,500,000 granules were broken up.

No wonder we have indigestion.

Says the ad: "Folks ate last year 250,000,000 dishes" (presumably of the grains, and inside of each there were 125,000,000 explosions).

So there is hope!

However, how many explosions to a dish? Kindly be a little more explicit.

✣ ✣ ✣

A ¶

Here in the American Magazine, is an ad of "A History of the American People (in five volumes) by Woodrow Wilson" — a gentleman with whom, let us trust, all the readers of the National Printer-Journalist are now pleasantly acquainted. The advertisers are Harper & Brothers — with whom, for considerably over half a century, we have, as Americans, truly admired.

Now, Harper & Brothers will "send you the entire set of five volumes, all charges prepaid, on receipt of $1.00"— and "then some." If you do not like the books, send them back at Harper & Brothers' expense, and get the dollar back.

Good enough advertising, with the exception of this phrase, in the description of the book:

"To read the first page is to read the five volumes."

Now, isn't that easy? You get the five volumes — read the first page — send them all back, of course — why in the name of common sense, if the paragraph be true, read anything more?

✣ ✣ ✣

O. HENRY, THE EDITOR

In an article entitled "O. Henry the Editor," by James Melvin Lee, director of the Department of Journalism, New York University, in the Book News Monthly for May, appears the following announcement from an Austin (Tex.) paper at the time O. Henry (William Sidney Porter) edited it:

> For the next thirty days and from that time indefinitely, whoever will bring two dollars in cash to The Rolling Stone office will be entered on the list of subscribers for one year and will have returned to him on the spot FIFTY CENTS IN CASH.

✣ ✣ ✣

AN APPRECIATED AD

Surely modesty and 'stemed-contemporary love could no farther go than in this leading editorial note from the Book Review Digest, concerning the ad in a paper with a somewhat similar name:

> Here is a good bit of advertising that has recently caught our attention:
>
> > "All the world's news without our views is the policy of the Literary Digest; 300,000 subscribers who see things as they are — Not as we think they should be."
>
> It is so apt and is so justly applicable to the journal to which it refers that we dare not allow ourselves to be envious or grudgeful — but we wish we had thought of it, or something like it, first, for it describes, too, the policy

of our Book Review Digest. For we also give the world's news (about books) without the intrusion of our own views. We present each month an impersonal valuation of the books of the day — telling you not what we think of them, but what the best critics judge them to be.

And the Literary Digest folks were modest, too, in their weird combination of rhyme and blank verse. Are the original thoughts of the editors of these papers such unprintably unthinkable thinks?

✣ ✣ ✣

A GOOD TALK TO STIR UP LOCAL ADVERTISERS

The South Town Telegram, which is evidently published in a suburb of Minneapolis, is one of those few suburban papers that really represent their district in a live, interesting manner, and which do not allow themselves to be obsessed by the nearness of the metropolis. Here is a straight talk that the Telegram gave the business men of South Town at the beginning of a season that is appropriate at any time, with the omission of the first clause of the first sentence. Such sensible messages as this should be used frequently by the "local" press. They undoubtedly help the papers and the business men who heed them, as they will do ultimately:

> With the beginnings of the fall trade peeping out, South Town business men should sit up and take notice. There is no use expecting the residents of this section of the city to go around with a microscope trying to find out whether this or that is sold in South Town. The only plan that will work is to keep everlastingly telling them what you have on hand. That is the way the up-town merchants get their trade. There is no reason why the people of South Town should be expected to adopt any different method in regard to the business men of the South Side. Tell them what you have, let them know what it costs, show them you can save them time and money by buying from you — and then they will come to your store.
>
> There are hundreds — yes, thousands — of people within a couple of blocks of Washington, Cedar, Riverside, Minnehaha, Franklin, Bloomington and Lake streets who scarcely suspect what there is for sale on those thoroughfares. Let them know where you are. Invite them to your store. Tell them about your bargains. Show that you want their trade just as much as it is wanted by the up-town merchants — and a little more, by the way — and they will begin coming to you. But if you sit and wait and expect them to hunt you up, you are going to be very sadly disappointed.
>
> It costs more to keep goods a year before selling them — and they get shopworn and out of style. You can't get business without asking for it — and the best way to ask is by attractive advertising. The Telegram has men who can help you prepare the right kind of ads. That assistance will not cost you a cent. Space is very reasonable — and it touches the very spot you wish to reach. Think it over.

✣ ✣ ✣

Double and single tours of Europe and foreign lands featured the prize list of awards offered by the Charleston, S. C., News and Courier, one of the oldest papers in the South, in its circulation campaign, which has just been completed. The campaign, which was one of the most successful ever held in that section of the country, was handled by the Northeastern Circulation Company, Inc., of Davenport, Iowa.

A PRIZE ARTICLE BY STUDENT ON PRINTERS' CONGRESS

This Communication is Sent Forth from the Office of
THE STUFF PRINTING CONCERN
The Modern Printing Place at the
Sign of the Dollar Mark, Corner
Fourth and Pike, Seattle, U. S. A.

Under the personal direction of Harry S. Stuff

May 9, 1913.

National Printer-Journalist, Chicago, Ill.

Gentlemen: Enclosed please find proof of an article on the coming Printers' Congress to be held in Seattle July 14-17.

This story is the prize winner in a recent contest at the University of Washington, Department of Journalism. If you care to use it or any part of it we will be pleased to have you do so, giving the young lady credit for the authorship.

The Seattle Convention will be a success — and it should go without saying that we expect you as well as the rest of the live ones to be with us.

Respectfully,
HARRY S. STUFF.

The Pacific Coast Employing Printers' Congress at Seattle

By Blanche Krieger, Department of Journalism, University of Washington

The Pacific Coast Employing Printers' Congress to be held in Seattle July 14, 15, 16 and 17 promises to be just one rousing, ripping, roaring good time! Not that it's to be all one big celebration — not by a good deal, for there will be plenty of good solid business and profitable instruction — but there's going to be all kinds of an opportunity for a whooping good time on the side.

Appreciation of this doubly attractive program, combining valuable instruction with pleasant recreation, is being shown throughout the length of the coast. Letters of inquiry are coming in sheafs from Utah, Montana, Idaho, California, Oregon, and British Columbia, as well as from all parts of Washington, concerning the details of the convention. In fact, interest is running high, and everything promises a lively, entertaining, and profitable session.

The big bunch will get together July 15 and the contortions will continue until "early" on the night of the 17th, when the regular convention program will terminate. Then all ye merry visitors will don carnival attire and sally forth for their share in the big annual Golden Potlatch, which will just be blossoming into full vigor. During this three days' festival frivolity the worthy disciples of Ben Franklin will divest themselves of all surplus and encumbering dignity, and will sport about in holiday array reviewing the parades and rubbernecking with the best — and the worst — of them.

And even then, when the last horn has been tooted, the final shower of confetti flung, and another memorably picturesque Potlatch has passed into history, the Caxtonites will linger still and succumbing to the irresistible charm of a sweet mild Puget Sound summer, will make joyous pilgrimage to the shrines of natural beauty, so numerous in the Northwest — never so beautiful as at this time of the year.

This is the third annual get-together of this Western tribe. The first convention was held in Portland in February, 1911, and the second in Los Angeles last year.

It's double eagles to dimes that not one of the old guard is going to miss this session, while new converts are manifesting a degree of interest and enthusiasm which bodes well for the additional "pep" which they will inject into the gathering.

The California contingent, strengthened as to numbers and suffering, apparently, from an aggravated case of boostitis, are making an awful racket, and declare their intention of making the other delegations turn a deep dolorous ultramarine with envy at their brand new assortment of antics and stunts. For, true to custom, the outfit of Native Sons has promised to regale the brethren with an evening's entertainment of their usual — and own special — variety. Do you remember ——— ? Well, if you do recall their contribution in Los Angeles last year, there is no danger of your being eager to miss one like it this trip.

Portland, the Princess of Pulchritudinous Posies, otherwise known as the Rose City, desires withal to occupy no inconspicuous seat, but speaks for the center of the stage and the calcium glow. To substantiate her claim, she is sending an advance guard, occupying three special cars, within whose spy-proof compartments, plans are being deep-laid to back the other coast-city delegations off the boards with a whirl-wind display of spectacular and pyrotechnical polemics.

The Tacoma Gutenbergs are, almost but not quite, needless to say, coming over in droves. They are billed for Thursday, the 17th, the windup night of the convention and they're bragging that they've collected a bunch of warm material that'll warrant their playing more than a one-night stand. They're trying to have the Potlatch opening postponed so that they may continue their stunts without interference or competition right up to the final "curtains."

And Spokane, Vancouver, Victoria, Salt Lake — Oh, you'll hear from them.

The larger burgs are not going to have things all their own way, however. Ye ink-stained country editor will close up ye job office and hasten to foregather with others of his ilk at the big Seattle talk and fun-fest. From out the wilds of British Columbia, alone, will gather brother printers to the number of an hundred souls and over.

And "sister" printers, too, for that matter. For there is decidedly no law against bringing the ladies along. In fact, many of the women are quite serious in their threats of coming along to look after friend Husband. So much so, that the wives of the Seattle Employing Printers feel it their pleasing duty to take a lively interest in the matter and are making plans for the entertainment of a large number of them.

There will be one feature of the meet which will appeal quite as strongly to the Mrs. Eve as to the Mr. Adam of the party. This will be the occasion on which, the Everett delegation being in charge, the whole convention will be bundled, kits, cats, sacks and wives, aboard a big Sound excursion steamer and taken for a delightful ride up to Everett. Here they will be regaled by a good old-fashioned, inner man-satisfying, picnic lunch, and will then be turned loose to explore, without let or hindrance, the extremely interesting and vastly instructive modern mills of the Everett Pulp and Paper Mill Company.

So don't miss the chance to attend. You will have just one regret: that'll be that you hadn't attended the convention last year. Every one is going to get a lot of help and to give a lot more, and besides all the serious work that may be done, there will be enough diversion in the lighter vein to send the whole crowd home acutely conscious of having had the time of their fair young lives.

A VETERAN EDITOR DIES

William Tucker, aged 70, president of the Bessemer Printing Company and former editor of the Ohio Valley Manufacturer and the Steel Age, died on Thursday afternoon, April 24, at his home in Sherman avenue, Pittsburgh. Mr. Tucker was a member of Company H, First West Virginia Regiment, during the Civil War. He was a member of the Grand Army, Sons of the American Revolution, Union Veterans Legion, Master Printers' Association, Pittsburgh Typothetae, North Side Chamber of Commerce and the Unitarian church. His widow survives.

✣ ✣ ✣

IN HONOR OF WILLIAM TUCKER, DECEASED

April 25, 1913.

A special meeting the Executive Committee of the Typothetae of Pittsburgh was held on Friday afternoon, April 25, the committee having been called together by President H. P. Pears for the purpose of expressing the extreme sorrow of our association over the death of our beloved fellow member, William Tucker.

The following resolutions were unanimously adopted:

"Whereas, It has pleased Almighty God to claim for his own our beloved associate and fellow member, William Tucker, a loyal, upright, and active member of the Typothetae of Pittsburgh; therefore, be it

"Resolved, That the Executive Committee of the Typothetae of Pittsburgh for itself and on behalf of the entire membership, express to the family, associates and friends of our brother, our great sorrow over the loss of one whose passing is an individual and personal loss to every one of us. May we all so live that when the Grim Reaper shall summon us, it may be said of us, as we say of William Tucker, 'There was a man and a printer.'

"GEORGE R. DORMAN,
Chairman Committee.
"W. WADE MILLER,
"A. E. DAVIS."

William Dorman was born in Monongahela county, West Virginia, in 1843. He was a veteran of the Civil War, and a member of the G. A. R., Union Veterans' Legion, and the Sons of the American Revolution. He was identified with printing and publishing for more than thirty years in various sections of the country. About eight years ago he located in Pittsburgh, where he established the Bessemer Printing Company, of which he was the head until the time of his death, which occurred Thursday, April 24, 1913, at his home. He was prominent in the public affairs of the city, and was a member of the Chamber of Commerce. He was a loyal and consistent member of the Pittsburgh Typothetae. His sterling integrity, rugged honesty, and pleasing personality, won for him a host of friends who deeply mourn his loss.

✣ ✣ ✣

Mr. J. E. Britton, secretary of the Gary, Ind., Ben Franklin Club, reports that the work of collecting printers' accounts, which have been outstanding for a long time, has been progressing very nicely. Accounts that have been standing on the printers' books for several years have been collected. He reports the printers generally in better condition than they have been for years.

When the printers of a small town like Gary, Ind., hire a secretary to look out for their collections, and credits, their bookkeeping and Cost Finding Systems, it certainly shows the right kind of progressive spirit. What they are doing could well be followed by printers in larger cities.

CHICAGO, JUNE, 1913

Those who know and do not, are as foolish if not as culpable as those who, wrapped up in the mantles of their indolence, selfishness and conceit, do not even seek to know. The latter miss the pleasure that seeking knowledge and knowing bring and are possibly more injurious in their examples of dull sordidness, but as far as any good is concerned to themselves or others, are about on a par with the former.

The miser or non-user of his knowledge may exhibit a refined selfishness but is hardly less culpable than the wilfully and neglectfully ignorant.

✣ ✣ ✣

The facts given by "P. R." in the article published this month under the caption, "Ohio Printers Give Away Nearly Five Million Dollars in 1910," seem almost unbelievable, yet the writer has the carefully prepared records of the United States census back of him.

Ohio is now awake and it is not probable that the printers of the state will make another such record, but in how many other states are the printers improving over the reckless business methods of 1910? It is well for the printers and publishers to be public spirited and benevolent, but it is doubtful whether the loss of $4,812,620.00 by careless, unthrifty, inefficient business methods can be charged up to either public spirit or benevolence. The printers certainly get no credit and are rather blamed and disgraced. Charity that does not begin at home or that is not voluntary is without either merit or honor.

✣ ✣ ✣

Whoever does not study the papers by Herbert L. Baker, of New York City, and by Arthur E. Southworth, of Chicago, published in this issue of the National Printer-Journalist, fails in the opportunities afforded for clear understanding of the means of greatest possible improvement and misses richest feasts of practical wisdom.

He who, having studied, does not improve his business methods along the lines suggested, will show a stolidity as to his calling and worthy success therein that will deserve to be denounced as culpable.

✣ ✣ ✣

While we congratulate ourselves this month, as in the past, over the great amount of valuable matter that we have been able to give — probably all that our readers will read, study, digest and apply — we have left out more that we would have been glad to present.

In order to have a perfect understanding with our readers, we wish to state once more that we have adopted, during the past few years, the omission of news with regard to conventions, editors and printers, that we have reason to believe our readers will receive through weekly publications that are distributed free by plate, ready-print, and other houses or by organizations, confining this paper more to the teaching of principles and giving valuable and inspiring truths, ideas and experiences, rather to the giving of news and personals, however much we may be interested therein, excepting so far as such news may contribute to the usefulness and success of organizations that are working for the benefit and improvement of printers and newspaper makers.

The National Printer-Journalist is printed not to jolly or to flatter, but for the purpose of being helpful. We hope the plan adopted will be fully appreciated, for it is followed with some sacrifice to our own feelings, as we do like to give news of human interest, to be in close personal touch with men and to say kindly words about them personally and to tell of their whereabouts and their doings.

✣ ✣ ✣

The wonderful opportunities for securing practical knowledge, and the increasing interest in the seeking after better methods, more just, scientific and effective, are matters for congratulation, to which we have had occasion, from time to time, to call attention.

When printing establishments and newspaper offices are put to the test, however, it is a little discouraging to know how many have failed, either fully to appreciate or to put in practice the important principles that have been taught. In contemplating these conditions, our mind runs back to our early Bible teachings and we realize that men, with all the wisdom of the past and of the advancing present within their grasp, are very much as they were nineteen centuries ago.

There are many hearers of the truth, but too few doers of the word. Everything that pertains to human life and to one's relations with other human beings and with the community, city and state, whether as citizens, employers or customers, should be considered important and sacred — calling for action as much as for knowledge. Neither knowledge, theory or belief will make a man successful, nor meet the requirements of a vocation nor fulfill the obligations one owes to his business, to himself, to his family, his community or his country.

The duties of life are just as incumbent on one man as another. They include and mean efficient, intelligent, honest performance. It is pleasant to learn, to attend conventions and cost congresses and to read journals devoted to the callings, but the crux is in being doers, not simply hearers, readers or learners. Learning is a means to an end and what is heard or learned must be kept in mind and made a part of every-day life and work, whether one be a printer or editor, a follower of some less important calling, or be merely a public official or servant. The lives that are lived, not the truths that are known, determine the usefulness and character of the vocations followed and fix the destiny of individuals and their successors, as well as of communities and nations.

St. James, in A. D. 60, wisely wrote, under Divine inspiration: "But be ye doers of the word and not hearers deceiving your own selves. For if any be a hearer of the word, and not a doer, he is like unto a man beholding his natural face in the glass; For he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was. But whoso looketh in the perfect law of liberty (or of business which giveth honest independence, liberty, power, influence, helpfulness, encouragement and worthy, inspiring example and success) and continueth therein, he being not a forgetful hearer but a doer of the work, this man shall be blessed in his deed" and he will bless all who are dependent upon or associated with him.

An unprofitable, impoverished or pauperized printing or newspaper office, like an impoverished farm, is a curse to the owners and to the community and the state. Pauperized work is criminal and pauperized workers are curses and menaces to themselves, to their dependents and to society.

✣ ✣ ✣

The increasing interest, both in the professional side of newspaper making and in proper training therein, is one of the encouraging developments of the modern progress. The School of Journalism, of the University of Wisconsin, took advantage of the exhibition of the National Printing-Journalist at the Advertiser's Exposition in New York City to show some of the methods used and work done in teaching practical journalism in Wisconsin.

This newspaper school exhibit attracted attention from the first and the interest increased until during the last two days it became absorbing to such an extent that the paper had to occupy second place and our representative was mistaken for a professor in the school. There really should have been one of the teachers on hand to explain. We had opened our booth to all the newspaper schools and we showed a half dozen or more recent books on newspaper making, enough to prove that the interest in works on newspaper making is increasing.

✣ ✣ ✣

Editor Herrick to Tour Europe

Most of the members of the National Press Association remember, with feelings of kindliness and appreciation, Editor John P. Herrick, of the Bolivar, N. Y., "Breeze." His "Breeze" proved a richly laden harvest zephyr, bearing the aroma of full fruitage and successful garnering.

His success illustrates that it is not the size of the town but the size and character of the man that insures the winning of prizes in newspaper life. He was always up and doing, still achieving, still pursuing. In other words, he has been a live wire. He was always awake to every opportunity for improvement or betterment.

As a member of various editorial organizations he was always active, gathering knowledge that he garnered and used. He has taken, read and profited by the National Printer-Journalist, putting into use the truths, plans and teachings contained therein and now after visiting all parts of his own country as a member of the National Press Association, he is going to have a vacation and distribute some of his surplus of wealth among the needy peoples of Europe in exchange for what he can gain through travel and observation abroad, and the following is what one of his esteemed contemporaries has published with regard to the young newspaper man who has shown that "where there is a will there is a way" to signal success to a newspaper man, even in a small city of less than two thousand people:

> John P. Herrick, of the Bolivar Breeze, the able journalist and level-headed business man, who has demonstrated the possibility of running a country newspaper and making money at the same time — in real estate and oil — is going abroad. He will sail from New York on the White Star liner Olympic, on May 24, for a vacation trip to Europe. His plans are to see the most interesting sights in France, Germany, Switzerland, Italy and England, remaining abroad two months or more. This will be Mr. Herrick's first trip across the water. He has always believed that before going abroad a good American should see his own country. During the past 20 years Mr. Herrick has visited every part of the United States, traveled over Canada, the West Indies and Old Mexico, and is now looking forward with great interest to the moving picture that greets the eye of the visitor to the old countries that lie on the other side of the Atlantic ocean. Wish he could find time to tell the Blizzard family about his trip, as he knows how to do it interestingly.

✣ ✣ ✣

Prof. Frank L. Martin will occupy the position of Dean of the School of Journalism of the Missouri State University during the absence of Dean Williams, who is improving a year's furlough by travelling with his family in Europe.

Prof. Martin is abundantly fitted for the responsible place, both through knowledge and experience, as is shown in part by his work in the school and partly by the standard book on journalism which he collaborated with Dean Williams.

Newspaper Week at the University of Missouri

By C. M. Elliott

NEW journalism, a journalism of service, was the keynote of Journalism Week at the University of Missouri, May 12-16. Speakers from eight states were present. Topics from the cost system in printing to the writing of editorials and making of cartoons were discussed. The total attendance was estimated at about three hundred.

Some of the speakers were: Governor Elliott W. Major of Missouri; Lieutenant-Governors William R. Painter, of Carrollton, Mo., and Barratt O'Hara, of Chicago; James Schermerhorn, of the Detroit Times; Dante Barton, of the Kansas City Star; Erwin Craighead, of the Mobile, Ala., Register; M. D. Hunton, special advertising representative from New York; E. P. Adler, president of the Lee Syndicate, Davenport, Ia.; Julius Schneider, advertising counsel for the Chicago Tribune; J. C. Woolley, advertising manager for the General Roofing Company, of East St. Louis; John T. Barker, attorney-general of Missouri; S. E. Kiser, humorist of the Chicago Record-Herald; Mrs. Sarah Tyson Rorer, contributing editor of the Ladies' Home Journal; B. H. Reese, of the St. Louis Star; Miss Clara Chapline Thomas, of the Minneapolis Tribune; E. N. Smith, of the Kansas City Post; Robert Minor, cartoonist for the St. Louis Post-Dispatch; B. B. Herbert, of the National Printer-Journalist; Herbert L. Baker, lecturer at the Harvard School of Printing; C. A. Shamel, of the Orange Judd Farmer, and Wright A. Patterson, editor-in-chief of the Western Newspaper Union.

Group of Missouri Editors and Attendants on Journalism Week at the University of Missouri

Seven press associations held informal meetings in Columbia during Journalism Week — the Missouri Women's Press Club, the Southeast Missouri Press Association, the Northeast Missouri Press Association, the Northwest Missouri Press Association, the Southwest Missouri Press Association, the Missouri Press Association, and the Association of Past Presidents of the Missouri Press Association.

The number of women at this Fourth Annual Journalism Week was larger than ever before. Not only did the women editors of Missouri attend, but also the women of the city who were anxious to hear Mrs. Rorer, of cook-book fame, talk on "Special Writing," or Miss Thomas, who signs her name as a man and writes editorial paragraphs for the Minneapolis Tribune, tell about "City Journalism for Women" and Mrs. T. E. Dotter, of the Sullivan, Mo., News, tell of "Country Journalism for Women." B. H. Reese, managing editor of the St. Louis Star, spoke on "Women Readers and Women Writers." Mrs. Emily Newell Blair, of Carthage, Mo., told of "The Field of the Special Writer."

Mrs. Rorer said that men cannot write special articles for women, that she can tell a man's writing by reading between the lines. She spoke of the many fields open to women writers. In a later talk at a banquet given to all visitors by the Columbia Commercial Club Thursday night, Mrs. Rorer spoke from the viewpoint of a cook.

"Every woman can find a higher place in her own home than in any man's newspaper office," she said. "The highest title that can be given a woman is that of mother."

The week opened with an address on "The Profession of Journalism," by Edwin Craighead, editor of the Mobile, Ala., Register. He characterized journalism as the guiding profession.

A talk on "Newspaper Illustration — the Cartoon," by Robert Minor, of the St. Louis Post-Dispatch, proved highly interesting. "A cartoonist must do more than illustrate," he said. "He must be an inventor and see in news a significance that cannot be expressed in words. A picture that does not express something beyond the power of words is no good."

Dante Barton, an editorial writer on the Kansas City Star, spoke at the University Assembly on "The New Editorial." "Can a newspaper be entirely fair in its editorials? Yes, I think I can," said Mr. Barton. "The writers for the newspaper today are compelled to compromise themselves less than any other class of men. The fact that most of them write anonymously gives them greater freedom to express their views; they write more assuredly and more forcefully."

Left to Right—Lee Shippey, Higginsville (Mo.) Jeffersonian; Maurice Hicklin, University Missourian; S. E. Kiser, Chicago Record-Herald; C. R. Schaffer, Kansas City Star.

Wednesday was advertising day. "The Newspaper's Special Advertising Representative" was the subject of a talk by M. D. Hunton, of New York. "The qualifications of a successful advertising man," he said, "are the possession of a lot of technical and minute information, a genial address and the ability to write forceful and entertaining business letters." In the general discussion which followed his talk he suggested that the newspaper men of all the large towns and small cities of Missouri combine and hire a special advertising representative who should secure national advertising for their papers.

E. F. Adler, president of the Lee Syndicate, which conducts five daily newspapers in Missouri, Iowa and Wisconsin, told of the advantages of combining newspapers in this way, though not restraining them in any way editorially.

"The Problem of Retail Advertising" was the subject of a talk in the afternoon by Julius Schneider, advertising counsel of the Chicago Tribune, who is an expert on retail store advertising.

"Service in advertising is common in the best papers," he said. "It is opening new fields to many workmen. Advertisers are learning that there is more to be gained by legitimacy. A public awakening is driving the fakes to the last ditch and their last stand."

In the evening Attorney-General John T. Barker spoke on "Newspapers and the Law," and J. C. Woodley, advertising manager of the General Roofing Company, of St. Louis, and a member of the Vigilance Committee of the Associated Advertising Clubs of America, spoke on "The Policing of Advertising." He illustrated his talk with slides, showing examples of dishonest and fake advertising. Fake bargain sales, patent medicines, fraudulent mining and land schemes, quack doctors who scare people into thinking they are sick when they are not — all these were exposed by Mr. Woodley.

Thursday at University Assembly Governor Major of Missouri spoke on "The Newspaper and the State," and S. E. Kiser, humorist and "writer of poetry that is read" in the Chicago Record-Herald, spoke on "Humor in the Newspaper." Mr. Kiser's talk was continued in the Journalism Building and it was impossible to accommodate the crowds that wanted to hear him. "Write down what you hear and describe what you see" is his advice to would-be humorists.

Left to Right—Ovil Bell, President; Lewis W. Moore, Recording Secretary, and H. J. Blanton, Corresponding Secretary, Missouri Press Association

Barratt O'Hara, Lieutenant Governor of Illinois, and W. R. Painter, Lieutenant Governor of Missouri, Both Newspaper Men

J. West Goodwin, the Oldest Newspaper Man in Missouri

Lieutenant-Governor Barratt O'Hara of Illinois spoke Thursday afternoon on "How the Reporter May Help." He advocated a law which he has introduced in his own state for placing the reporter on his own individual responsibility as a professional man by licensing him. He also said that the reporter had made three-fourths of the national statesmen and four-fifths of the county leaders and he believed it was time for the reporter to step in and take a hand in govermental affairs himself. He told of the good influence the press had had in aiding the Illinois Vice Commission.

Thursday night the Commercial Club of Columbia gave a banquet for all the visitors. About three hundred persons attended. J. P. Hetzler, vice-president of the club, introduced Dean Walter Williams of the School of Journalism of the University of Missouri as toastmaster. S. E. Kiser, the Record-Herald humorist; Mrs. Rorer; Ovid Bell, of the Fulton, Mo., Gazette, president of the Missouri Press Association; H. L. Baker, New York City, lecturer in the Harvard School of Printing; Miss Thomas; William Southern, Jr., of the Jackson, Mo., Examiner; W. P. Moore, mayor of Columbia; A. N. Lindsay, secretary of the Missouri Federation of Commercial Clubs; Judge John R. Hairston, of Fayette, Mo., and Barratt O'Hara were the speakers.

All of the speakers congratulated Dean Williams on the close of the fifth successful year of the School of Journalism. "The idea of a School of Journalism was one that took courage to back," said Mr. Baker. "It drew the jibes of newspapers from all over the country at first. I come 1,500 miles to pay a tribute to Dean Williams for his achievement. The Missouri School of Journalism is attracting more attention to this university than is paid to any other university in the country."

Mr. O'Hara made a plea for decency in newspapers in his talk which closed the evening's program.

"The Art and Cost of Printing," by Robert L. Baker, of New York; "The Newspaper and the Farmer," by C. A. Shamel, of the Orange Judd Farmer, Chicago; a talk by Jewell Mayes, of the Richmond Missourian, and "How the County Newspaper May Help Itself," by Wright A. Patterson, editor-in-chief of the Western Newspaper Union, made up the program for Friday morning.

In the afternoon B. B. Herbert, editor of the National Printer-Journalist, spoke on "A Cost System for a County Newspaper."

He said that a reliable cost system was necessary to the protection of the printer from loss, failure and humiliation. Printers had been nearly two thousand years behind builders in understanding the importance of knowing the cost. The Great Teacher, the son of Joseph, the carpenter of Nazareth, as recorded in Luke 14-28, asked an enlightening question as to cost finding: "For which of you, intending to build a tower, sitteth not down first and counteth the cost, whether he hath sufficient to finish."

Had, in the economy of Heaven, the Great Teacher, who illustrated His teachings by things familiar to Himself and to His hearers, been sent in this day and been raised as a member of the family of an up-to-date, efficient printer, He probably would have said: "Which of you upon taking a contract for printing sitteth not down first and counteth the cost, whether he can complete the work at a price satisfactory to his customer and profitable to himself."

In order to count the cost there must be some accurate means of reaching results, and no other means have been found among printers so reliable as the standard hour cost, that allows for lost hours and for every item of overhead and other expenses, taking into full account the man and the equipment. He rapidly traced, by the use of the black-board — on which a student of the School of Journalism placed the items and figures furnished by those in attendance, and made the computation — the steps by which the standard hour cost was reached.

He spoke of education of customers up to a desire to pay full cost and to be too honorable and high minded to make good their church obligations by asking the printer to do printing free, and quoted the example of King David, as recorded in I Chronicles, 21st chapter, 24th verse, when Ornom, the Jebusite, had offered to donate the oxen and the fuel for David's sacrifice to the Lord, but King David being honest and a man of sincerity replied: "Nay but I will verily buy it for the full price: for I will not take that which is thine for the Lord nor offer burnt offerings without cost."

It is a text that should be put in large type and hung in every print shop. Honest business men are always willing to pay actual cost with a living profit and one great value of a reliable cost system is, to be able to show to honorable customers, and no others are profitable to a printer — what is the actual cost of production.

Printers are called on, by reason of the close relations of the business to all worthy institutions and benevolences of the community, to make contributions but should ever insist on pay for work. However, donations are legitimate charges against the business and should go with the other expenses, including subscriptions to trade papers, association expenses in computing the hour cost.

The newspaper, as to its mechanical production, should be treated as a job of printing; after ascertaining the cost as a job, the other items of editor's salary, cost of gathering news, etc., must be added, and the entire cost having been obtained, it will be possible to ascertain the cost of every column or inch in the paper, and to know how much must be charged for advertising space to pay cost and reasonable profit.

"The County Newspaper Field — News," by H. F. Childers, editor of the Columbia Herald and the Troy Free-Press, and "The County Newspaper Field — Circulation," by Ben L. Peery, of the Albany, Mo., Leader, were subjects of discussion in the afternoon.

During the week the problems of the country newspapers and city newspaper were both discussed informally, nearly everyone present taking part. Students in the School of Journalism were also given an opportunity to express their appreciation of the week.

'Testing the Beatitudes — A Twentieth Century Experiment in Journalism" was the subject of a remarkable address by James Schermerhorn, of the Detroit Times, which closed the meeting Friday night. "A paper based on the Sermon on the Mount" is his ideal and he says that in seven more years he will know whether or not it is possible to make a success financially.

There were many social events during the week for the visitors. J. A. Hudson of Columbia entertained the past presidents of the Missouri Press Association at his home Monday night. Tuesday night the women in the School of Journalism gave a dinner for the visiting women and Wednesday afternoon they gave a tea at the Delta Gamma House. Tuesday afternoon there was an automobile ride about the city, given by the Columbia Automobile Club. Wednesday and Thursday the visitors were the guests of the University at the Oklahoma-Missouri ball game, where they saw the Tigers win. Wednesday evening the Kappa Tau Alpha, honorary journalism fraternity, entertained with a dinner . The Commercial Club gave a dinner Thursday night. Tuesday and Friday nights the Dana Press Club gave informal smokers at their house on Maryland place, where opportunity was given to meet the visitors. The faculty of the College of Agriculture also took the editors for a trip over the college farm Wednesday afternoon.

It was a successful Journalism Week.

"Just Like an Old Friend"

St. James, Minn., May 1, 1913.

National Printer-Journalist, Chicago, Ill.

Dear Sirs: Enclosed find my check for $2 for another year's subscription to your most excellent magazine. I have taken it so many years that it seems just like an old friend, and I don't wish to get along without it.

Yours truly, Will Curtis.

Orno Strong, Deceased

The news of the death of Orno Strong, editor of the West Coast Trade, Tacoma, Washington, came as a shock to this office and brought sorrow to many of his newspaper friends throughout the nation. We had recently had correspondence with him in regard to his publication in which he contemplated certain changes and improvements. In writing, he spoke of the complete recovery of his health. He had not been in good health at the time of his removal from Michigan, many years ago, but completely recovered, finding life on the coast especially beneficial to him. We first knew Mr. Strong as a newspaper man in Michigan. He attended the meeting of the National Press Association at Cincinnati in 1886, and again at Detroit in 1889, and also many subsequent conventions, keeping up his interest in and attendance upon the conventions after his removal to the west. We remember especially at Hot Springs, Arkansas, where he made a brief, extemporary address that showed the depth of his friendship and the kindliness and tenderness of his heart, and again at New Orleans, in 1910, the occasion of the Silver Anniversary of the National Association, where he manifested his deep and abiding interest in the organization and its membership, and the history that had been made and the work that had been accomplished.

In Michigan, Mr. Strong was editor and publisher of the Nashville News, to which he gave the high character as a leading home paper, which it still retains. He made the West Coast Trade a power for the upbuilding of the state of Washington and the Pacific coast, maintaining branch offices at both Spokane and at Portland, Oregon.

The annual numbers of his paper were especially noticeable and we have had the pleasure of giving extensive and favorable review of the same in the National Printer-Journalist.

On April 27 last, he addressed a meeting of young people at Walla Walla, relates The Michigan Bulletin, and to all appearances was in the best of health, when suddenly he stopped and fell and died almost instantly. Heart disease was given as the cause of his sudden end.

We know little of his early life, but what matters; he lived nobly, worked for the good of his fellowmen and the upbuilding of the communities and the states where he lived, and died just as he had completed a last effort, through kindly words of counsel and advice, to aid young people to better meet the duties and enjoy the healthful, worthy affairs and pleasures of life.

* * *

ERRATA

On page 323 of the May issue of the National Printer-Journalist, there was a mix-up as to the specimens in the plate printed at the bottom of the page, credited to Brown Printing Company, Denver, Colorado. Mr. Ernest Edwin Adams, of Toronto, should have had credit, as is indicated by the text accompanying the plate and in the reference to "the printing department of the Y. M. C. A."

These specimens were problems in the International Typographical Union course in printing and sent out by Mr. Adams with his other work. The text read: "Ernest Adams sends another lot of beautiful work from the printing department of the Toronto Y. M. C. A. This work is so well designed, so clear cut, so thoroughly craftsmanlike, that I am delighted."

Under the cut was the line, "Some Admirable Specimens from Brown Printing Company, Denver, Colorado," a firm existing only in the imagination of Mr. Adams and used for typographical purposes in some of the specimens.

JOURNALISM CONVENTION MEETS IN MADISON

Fourteen Universities Are Represented by Scribes at Fraternity Meet

At the national convention of Sigma Delta Chi, the honorary journalistic fraternity, which closed last week at the University of Wisconsin, the following officers for the ensuing year were elected: president, Chester C. Wells, of the University of Wisconsin; vice-president, S. H. Lewis, of the University of Kansas; secretary, Roger F. Steffen, of Ohio State University; treasurer, Robert C. Lowry, of the University of Texas; national historian, Lee A. White, of the Detroit News-Tribune.

Hamlin Garland, the author, an honorary member of the fraternity, was the principal speaker at the convention. Joseph E. Davies, just appointed commissioner of corporations by President Woodrow Wilson, who is also a member of the fraternity, delivered an address on the power of the press in politics.

LEAST FLY CATCHER'S NEST

Collection, H. W. Fay,
De Kalb, Ill. Photo by Rowley.

The delegates and the universities they represented were as follows: Lawrence H. Sloan, Pulitzer School of Journalism of Columbia University; Roger F. Steffen, Ohio State University; W. P. Green, University of Denver; Robert C. Lowry, University of Texas; Frank Pennall, Lee A. White and L. N. Burnett, of the University of Michigan; Allen Dillingsley, DePauw University; J. A. Williams, University of Kansas; Carl F. Veisberg, University of Virginia; F. Lewis, representing the Universities of Oregon and Washington; Frank Mason, of Ohio State University; George Burgh, University of Illinois; Ward Neff, University of Missouri; and Arthur Hallam, of the University of Wisconsin.

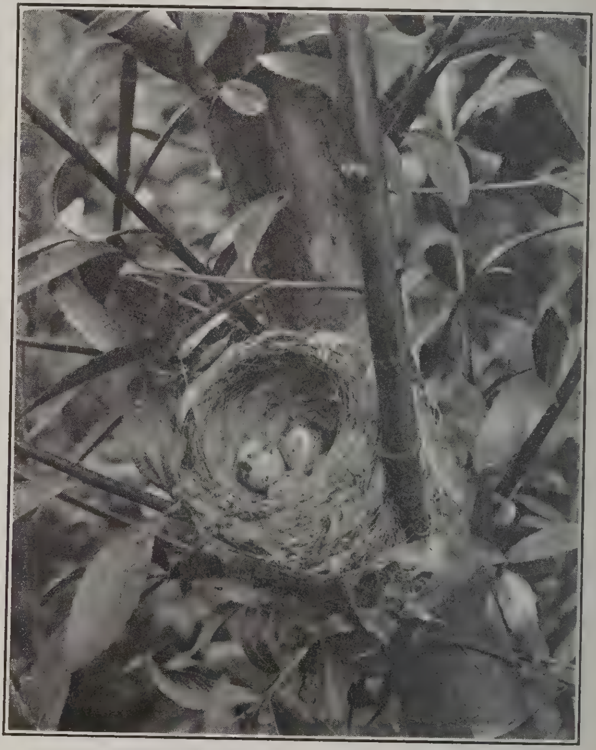
The convention closed with a dinner at the Park Hotel. During the banquet a cablegram was received from former Governor Chase Osborne of Michigan, a former president of the fraternity, who is now in central Africa.

LEAVE OF ABSENCE

Dean Walter Williams, of the School of Journalism, University of Missouri, has been granted a leave of absence by the trustees of the university for one year and will start with his family, on June 15, for a tour of Europe, possibly to be extended into a trip around the world. The good wishes of his pupils, his friends in Columbia and his associates in the university as well as of thousands of editors throughout the nation will go with him, with hopes for a prosperous, joyous voyage and a happy homecoming.

The Dean has worked untiringly, intelligently and successfully, during the past five years for the building up of the school of which he is the loved and honored head.

He has given, through his efforts, an enviable fame to the University of Missouri, which without the School of Journalism, the famed Newspaper Week each year, which he originated, and his persistent and peerless efforts, could not otherwise have been possible within the century.



SPECKED BEAUTIES

From Historic Collection,
H. W. Fay, De Kalb, Ill.

Th educators in journalism and the newspaper press of the whole country owe to him a very great debt of gratitude. His work has been not only of great benefit to the newspapers, but, in the results that have been realized and in the greater good that is to come, all the people are indirectly sharers and beneficiaries. A noble press, wisely, knowingly and conscientiously conducted, is the greatest blessing possible to a free, intelligent, self-governing people. Without such a press, good government, with all the rights of the people maintained in justice and equity, with personal liberty and equal protection and equal opportunity, would be impossible.

May the God of all good guard him and his loved ones, and return them to their country, their state and their home, refreshed and strengthened in bodies, minds and souls, and give to Dean Williams renewed and increased power for and zeal in his noble life work.

The Nebraska Press Association

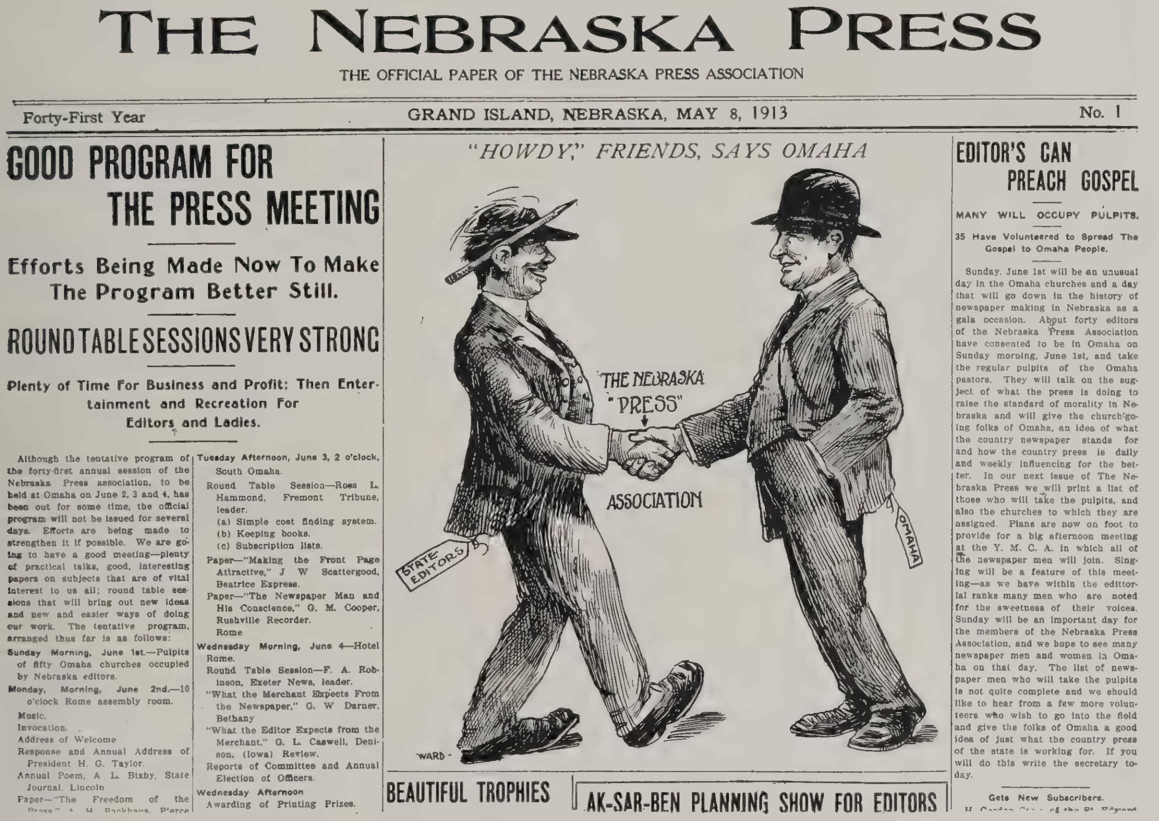
Thirty Editors to Fill Omaha Pulpits

NEBRASKA sets the pace this year by issuing a six-column four-page newspaper, advertising the convention at Omaha. We have received Numbers one and two, and show the top half of the first page of Number 1, Volume 1, herewith. It is a splendidly gotten up paper, printed on excellent stock in the best style of the printing art and of newspaper makeup and arrangement.

Number two, issued May 22, contains the completed program and many other items of interest and the story of the remarkably good program is entertainingly told.

A novelty is the assignment of thirty editors of Nebraska to deliver lay sermons at as many churches in Omaha, June 1, all the editors except two preaching at the morning services when all the pillars of the church are expected to be in attendance. The other two, because of special services previously arranged and at the request of the pastors, are to preach at evening services and naturally expect to have more of the young people and possibly more of the worldly, to hear them, besides this, the other twenty-eight lay editor-preachers can divide their forces and have the privilege of hearing their fellow editors expound the truth as to "What the Press Has Done to Aid in Raising the Standard of Morals in Nebraska."

All will admit that the press has done much, but how? and how much? and by what high religious standards? Now, if this issue of the National Printer-Journalist did not go to press just as the Nebraska editors are in session and we did not expect to have a full account in the July issue, we would give much more as to the interesting program — the story of which, including that of the entertainments and especially as to the party for the ladies, remarkably recounted — we would give more here. As it is, our readers must wait.



THE NEBRASKA PRESS

THE OFFICIAL PAPER OF THE NEBRASKA PRESS ASSOCIATION

Forty-First Year GRAND ISLAND, NEBRASKA, MAY 8, 1913 No. 1

GOOD PROGRAM FOR THE PRESS MEETING

Efforts Being Made Now To Make The Program Better Still.

ROUND TABLE SESSIONS VERY STRONG

Plenty of Time For Business and Profit; Then Entertainment and Recreation For Editors and Ladies.

Although the tentative program of the forty-first annual session of the Nebraska Press association, to be held at Omaha on June 2, 3 and 4, has been out for some time, the official program will not be issued for several days. Efforts are being made to strengthen it if possible. We are going to have a good meeting—plenty of practical talks, good, interesting papers on subjects that are of vital interest to us all; round table sessions that will bring out new ideas and new and easier ways of doing our work. The tentative program, arranged thus far is as follows:

Sunday Morning, June 1st.—Pulpits of fifty Omaha churches occupied by Nebraska editors.

Monday, Morning, June 2nd.—10 o'clock Rome assembly room.

Music.

Invocation.

Address of Welcome

Response and Annual Address of President H. G. Taylor.

Annual Poem, A. L. Bixby, State Journal, Lincoln

Paper—"The Freedom of the Press," A. H. Backhaus, Pierce

Tuesday Afternoon, June 3, 2 o'clock, South Omaha.

Round Table Session—Ross L. Hammond, Fremont Tribune, leader.

(a) Simple cost finding system.

(b) Keeping books.

(c) Subscription lists.

Paper—"Making the Front Page Attractive," J W Scattergood, Beatrice Express.

Paper—"The Newspaper Man and His Conscience," G. M. Cooper, Rushville Recorder.

Rome

Wednesday Morning, June 4—Hotel Rome.

Round Table Session—F. A. Robinson, Exeter News, leader.

"What the Merchant Expects From the Newspaper," G. W Darner, Bethany

"What the Editor Expects from the Merchant," G. L. Caswell, Denison, (Iowa) Review.

Reports of Committee and Annual Election of Officers.

Wednesday Afternoon

Awarding of Printing Prizes.

"HOWDY," FRIENDS, SAYS OMAHA

BEAUTIFUL TROPHIES

AK-SAR-BEN PLANNING SHOW FOR EDITORS

EDITOR'S CAN PREACH GOSPEL

MANY WILL OCCUPY PULPITS.

35 Have Volunteered to Spread The Gospel to Omaha People.

Sunday, June 1st will be an unusual day in the Omaha churches and a day that will go down in the history of newspaper making in Nebraska as a gala occasion. About forty editors of the Nebraska Press Association have consented to be in Omaha on Sunday morning, June 1st, and take the regular pulpits of the Omaha pastors. They will talk on the subject of what the press is doing to raise the standard of morality in Nebraska and will give the church-going folks of Omaha, an idea of what the country newspaper stands for and how the country press is daily and weekly influencing for the better. In our next issue of The Nebraska Press we will print a list of those who will take the pulpits, and also the churches to which they are assigned. Plans are now on foot to provide for a big afternoon meeting at the Y. M. C. A. in which all of the newspaper men will join. Singing will be a feature of this meeting—as we have within the edittorial ranks many men who are noted for the sweetness of their voices. Sunday will be an important day for the members of the Nebraska Press Association, and we hope to see many newspaper men and women in Omaha on that day. The list of newspaper men who will take the pulpits is not quite complete and we should like to hear from a few more volunteers who wish to go into the field and give the folks of Omaha a good idea of just what the country press of the state is working for. If you will do this write the secretary today.

Gets New Subscribers.

Reproduction of the Top Half of a Special Newspaper Issued to Advertise the Nebraska Press Association Convention at Omaha

The Nebraska Press is published by the association and issued from the office of C. C. Johns, secretary-treasurer, McAllister Building, Grand Island, Nebr. Get a copy and, in the meantime, read the following editorials from the May 22 issue, and go to work for your own association, which will never accomplish anything without honest co-operation, work and money:

Much of benefit should come from the appearance of the Nebraska Editors in the pulpits of the Omaha churches. For many years, a lack of understanding has dominated the people of the state as well as those of Omaha. Happily this has been reduced to the minimum through a closer relationship, the result of similar propagandas to this which will feature the annual meeting of the Nebraska Press Association.

Assuredly, it is a departure, this of having the editors meet the people of Omaha to discuss a topic which strikes a common chord in the heart of him who desires the advancement and uplift of the state of Nebraska and its people. The Sunday sermons will permit the people of Omaha to know the editors of the state as they are — broad minded and capable of considering the big questions of the hour. And it will give the editors of the state an opportunity to know the people of Omaha as they are — generous, law abiding and God respecting people.

Much of good can result and it is to be hoped that many similar methods will be utilized to bring the citizens of the state and the citizens of Omaha, who are a part of the great state, closer together. After all, man is the same the world over — he is made of the same stuff. The only difference in men is the difference of view point, in which environment and association are the controlling factors. More of these companionships and the nearer we are to a standard, which can be attained by all.

This Organization

The Nebraska Press Association is organized for the purpose of advancing the newspaper and printing industry of the state. How well it accomplishes its purpose depends upon the membership thereof. One or two newspaper publishers or a few printers cannot do much, but unite all the publishers and printers of the state and you have an organization so strong that much good can be accomplished.

Every person who is affiliated with the newspaper or printing industry of Nebraska is entitled to membership, and he or she should belong to this organization.

Why?

Because it is the clearing house where ideas about our own business are exchanged at par value.

Because its annual meetings provide an inspiration — that of knowing what the other fellow is doing and teaching you that you are not the only one who has "troubles."

Because it puts you on a better basis with your competitor.

Because at its meetings one gets the cobwebs brushed out of one's mental garret and enables him to get a broader and better view of the profession.

Because it is constantly drawing men in the same line closer together; thus bringing them to a point where they may be better business men.

Because the power for good that Nebraska publishers and printers can do, is multiplied over and over through united organization.

Because every other line of business is organized for mutual protection and advancement.

And there are scores of other reasons why every person in the state who is interested in the general welfare of the printing and publishing business should get behind this association and make it stronger.

Unless we hold firmly together there will be certain forces that will make inroads into our business — and instead of the profession rising, its standard will be lowered.

If you are not now a member in good standing of the Nebraska Press Association, just ponder over these suggestions:

I ought to boost my own profession.

I ought to help my own interests by uniting with such a body.

I ought to join the successful publishers and printers who attend the state meetings and talk "shop," thus bringing to me new ideas and new inspirations.

I ought to be a member because I can get fourfold returns in general trade knowledge at the meetings.

I can learn more about Nebraska.

I can have an ideal vacation.

I can meet with men who enjoy the same privileges and have the same troubles, and last, but not least:

I love my chosen work.

Just think of these things and then decide to become a member of this organization and with your shoulder to the wheel help make our business more firmly united.

One of the interesting features of this second issue of the Nebraska Press is an illustrated article filling nearly an entire page, entitled "Omaha Rises from Its Ruins as by Magic." The story of accomplishment is full of gratifying facts as to the results of co-operation and wonderful are the illustrations, showing the condition on the morning after the storm and now, after so short a time, the restoration.

The condition as it existed on Monday morning of March 24 and how the wonderful work of restoration was undertaken and carried forward, is graphically described and furnishes lessons and facts that may prove of vast usefulness in newspaper offices in whose cities like calamities may occur or where conditions exist that demand the co-operation and work of all good citizens:

Organization in an emergency was never better exemplified nor was a city ever given a better opportunity to take care of itself in a crisis than in Omaha, Nebr., following the disastrous tornado, which struck that metropolis on Easter evening. Happily the citizens of that city made the most of the condition, else this story would never have been written.

One hundred and thirty-nine dead, 1,137 homes badly damaged, 642 homes totally destroyed, these entailing a property loss of three and one-quarter millions and 2,000 families homeless was the combination that the citizens of Omaha awoke to find confronting them on the morning of March 24.

Death, destruction, desolation and chaos obtained everywhere in the stricken district, a path about six miles long and from two to six city blocks wide.

But hardly had the echoes of the terrific death dealing hell cloud ceased to reverberate, and long before many of Omaha's citizens realized the exact conditions, plans and arrangements were under way for the systematic handling of the situation.

* * * * *

The spirit back of the organization was the spirit which made Omaha possible and is making possible a better Omaha, a better citizenship and a better understanding among the people of the metropolis of the great middle west.

The spirit was shown when business men, who have to do with big things, pulled down their desks and deserted their offices until such time as they could conscientiously return to them with the knowledge that they had done all that could be done under the circumstances. Bankers, manufacturers, jobbers, professional men in all walks of life, newspaper men, owners and employes, and retired business men vied with one another in the work of relief and restoration.

There are "death dealing hell clouds," not so spectacular but equally destructive and more enduring, of crime, graft, immorality, defiance of law and of right, the means for the prevention of the devastation of which must be taken up with the like spirit and organization, by the aroused newspapers that have a right to tell not only of what they have done to raise the standard of morals in the cities and in the whole state, but what they propose to do by fearless, united effort to wipe out criminals and demagogues and to establish good government, community and public improvements, with the health, the morals and the personal property rights of all fully protected and preserved.

* * *

NOT A PRIVATE ENTERPRISE

In contrast to several printers' shows and exhibitions exploited of late, the Third Ohio Printers' Cost Congress and Central States Million Dollar Exposition Extraordinary is not in any sense of the word to be a private enterprise, nor is it backed by private individuals for personal gain; there are no stockholders in control of the greatest of all printers' exhibitions and congresses; there will be no dividends distributed after it is over; the Ben Franklin Club of Toledo was, and is its sponsor.

The colossal affair which opens at Toledo the first week of September is to be entirely in the hands of the printers of Ohio, Indiana, Michigan and Kentucky who have planned it and clamored for it. It is designed for the education, delectation and enlightenment of the craft, and if, as a result of the labor of the men who are doing the active work, the craft is assisted, the industry raised to a higher plane of efficiency, if those who attend this wonderful meeting — or series of meetings — gain a deeper insight into the possibilities of their noble industry and absorb the backbone to do their bounden duty to themselves and their contemporaries — the Third Ohio Cost Congress will be a tremendous success and its influence will be immeasurable.

Every feature that is proposed for either the Congress or the Exhibition has been chosen for its educational value, not for the financial return that it represents. We want every visitor to go away from Toledo feeling amply repaid for his visit, and wonderfully strengthened in his determination to make money in his business. The splendid education that an attendance upon this Congress and Exposition holds for those who plan to come, could not otherwise be realized in years of study at home. While educating the visitors, it is planned to "temper justice with mercy," as it were, by entertaining them royally and on a truly elaborate scale.

Here will be offered to the printers of the Central States by the printers themselves, a trinity unsurpassed for attractiveness — Education, Efficiency, Entertainment — in conjunction with the advantage of an exhibition of modern machinery and equipment that will comprise the last word in every branch of the industry.

A Novelty for Press Conventions

Utilizing the Attendants on State Press Associations

The managing editor of the Tampa, Florida, Times has arranged to introduce a new feature at the convention of the Florida Press Association to be held in Tampa June 26, 27 and 28. It is proposed to make the members show, as well as to tell, how to do it. He has assigned different members to positions on his paper for different days, as is fully explained. This might be called object teaching in a very practical school of journalism by practical, active newspaper men. The following letter by the managing editor, with the list of assignments, is worthy of reading as a model for such a plan in other associations and as to the way they have in Tampa.

Tampa, Fla., May 19, 1913.

To the "Hellhounds" of the Florida Press:

Greetings: For a long time we have been figuring how to get a day off to go fishing. A happy thought strikes us. Three loud cheers! Also Eureka!! Shall we unveil it to you fellows? Answer: We shall. Here it is:

We'll let a bunch of you run the Times during the three days of the Florida Press meeting and we'll take a brief layoff and watch the wheels go round, taking care not to do a tap of work. What do you think of it? A grand little idea, is it not? Don't say it is NOT, but come on in and let's make a good time of it.

We — that is, you — can get out an edition of The Times that will be a beauty.

(And right here let us say that no prize goes to the guy who first rises to remark "that for once The Times will get out a good paper." It's already been said.)

As you will see by the enclosed assignment list we are going to put on enough men so that nobody will have to work very hard and, anyway, there's little or no real work in getting out a daily paper. (Chorus of "Noes" from Felkel, Carter, Hetherington, Mays, Ferris and others who do.)

What do you think? Will you get in? Let us know and if you have any comment on the plan, let us have a marked copy of your paper, won't you?

We're planning to give you all a right nice time down here in Tampa and hope you'll all be on hand. Load the cares of the office on the "devil" for a few days and come over.

Yours truly,
ROBERT W. BENTLEY,
Managing Editor The Tampa Daily Times.

LIST OF ASSIGNMENTS

Thursday, June 26

Managing Editor — Harry L. Brown, St. Augustine Record.

Editorial Writers — H. H. McCreary, Gainesville Sun; M. F. Hetherington, Lakeland News; N. G. Stout, Ft. Myers Press; C. E. Howard, Orlando Citizen.

City Editor — H. A. Felkel, Pensacola News.

Assistant City Editor — W. W. Carter, Daytona Journal.

Telegraph Editor — M. B. Darnall, Key West Citizen.

Assistant Telegraph Editor — H. L. Dodd, Lake City Index.

Police Reporter — R. O. Davies, West Palm Beach News.

Federal Building Reporter — A. M. C. Russell, Palmetto News.

Board of Trade, Citrus Exchange — Lew B. Brown, St. Petersburg Independent.

Undertakers, General Local, Hotels, Railroads — R. O. Meek, Ft. Meade Leader.

Courthouse Reporter — S. J. Triplett, Kissimmee Valley Gazette.

City Hall and City Affairs — Moses Folsom, St. Cloud Tribune.

Assignment Man — C. O. Codrington, De Land News.

Assignment Man — R. E. L. McFarlin, Quincy Times.

Friday, June 27

Managing Editor — Clarence E. Woods, Eustis Lake Region.

Editorial Writers — Frank Harris, Ocala Banner; Eugene Matthews, Starke Telegraph; E. M. Law, Bartow Courier-Informant; R. F. McCormack, Live Oak Democrat.

City Editor — R. J. Holly, Sanford Herald.

Assistant City Editor — T. B. Hartig, Arcadia Enterprise.

Telegraph Editor — S. Bobo Dean, Miami Metropolis.

Assistant Telegraph Editor — Frank H. Matthews, Key West.

Police Reporter — A. K. Wilson, Ft. Pierce Tribune.

Federal Building Reporter — J. H. Humphries, Bradentown Journal.

Board of Trade, Citrus Exchange — G. M. Goolsby, Wauchula Advocate.

Undertakers, General Local, Hotels — B. E. Prevatt, De Land Record.

Courthouse Reporter — H. S. McKenzie, Times-Herald, Palatka.

City Hall, City Affairs — Joe Hugh Reese, Legislative Correspondent, Tallahassee.

Assignment Man — Rube Allyn, Sarasota Sun.

Assignment Man — W. L. Straub, St. Petersburg Times; how about cartoon on Florida Press Association?

Saturday, June 28

Managing Editor — Frank Mayes, Pensacola Journal.

Editorial Writers — J. H. Benjamin, Ocala Star; R. R. Tomlin, Plant City Courier; O. J. Farmer, Bronson Times-Democrat; W. R. Carter, Jacksonville Metropolis.

City Editor — J. P. Clarkson, Jacksonville Record.

Assistant City Editor — D. B. Potts, Kissimmee Journal.

Telegraph Editor — R. R. Carroll, Ocala Star.

Assistant Telegraph Editor — W. A. Wright, Florida Grower, Tampa.

Police Reporter — S. W. White, Fraternal Record, Jacksonville.

Federal Building Reporter — Charles H. Evans, Clearwater News.

Board of Trade, Citrus Exchange — A. P. Jordan, Punta Gorda Herald.

Undertakers, General Local, Hotels, Railroads — F. D. Wattlen, San Mateo Item.

Courthouse Reporter — C. B. Smith, Madison Enterprise-Recorder.

City Hall, City Affairs — A. B. Brown, Ft. Pierce News.

Assignment Man — F. B. Stoneman, Miami Herald.

Assignment Man — Wayne Thomas, Plant City Courier.

We have no suggestions to make except that it would be well for the editorial writers to caucus on their leaders, and it would be great to have an article, "What I Think of Tampa," from the assignment man each day, or from others to whom the city editor might assign the task.

R. S. V. P.— Which means let us know what you think about it and if you'll perform.

THE TIMES.

Ohio Printers Gave Away Nearly Five Million Dollars in 1910

Get the Dollar This Year

Not long ago I picked up a copy of the 1910 United States Census Report on manufacturing and casually came to Ohio. After looking over a mass of figures, seemingly meaningless, I got down to printing and publishing. This I could understand and was surprised to read that there were 1,655 printing concerns in the Buckeye State. The population of the state was given at 4,767,121, and by a very simple problem in mathematics, I found that there was one printing office for every 2,880 inhabitants of the state. Also that there were 22,754 persons engaged in the industry, or about one to every 209 people. This means that 209 people support a printer or one employed in the business in some capacity.

These figures grew pretty interesting, and so I perused them a little further and got down to Expense of the Industry, and to my amazement they told a story even more interesting and astonishing.

The total value of the product of the printing industry as made by the 1,655 shops was $41,657,306, or an average output of $25,171 for each establishment. Again I found that printing to the amount of $8.73 was done for each inhabitant of the state. That seemed a good record, and on that basis the printers of the state must have made a great deal of money, so I did a little more figuring to see if on the returns the printers made money for the year 1910.

The total expense, as given for the report for the 1,655 shops, was $34,565,572, or the cost of doing business for each shop amounted to $20,885.

The last item in the report interested me the most — it was the "Value Added by Manufacturer." The total business or value of the products were given, which means the value of the raw materials manufactured, and marketed, and as shown above to be $25,171 for each plant. The "Value Added by Manufacture" was given as $29,752,952 — which means that deducting the raw material — paper, ink, etc.— that amount was made by the offices of the state, or $17,905 for each.

It was clearly shown that the average expense of running a printing office amounted to $20,885, and that the value of the manufactured product, less the raw material, amounted to $17,905, and deducting this amount from the expense items gives the amazing sum of $2,980, on the average, lost by each printing office during the year 1910.

Can you imagine how astonished I was at the result of these figures? Yes, I am sure you can, as you can hardly believe that they are right and that I am mistaken. But, I am not, because they stand clearly forth as an official report of the industries of the state given by the official census bureau of the United States, and the result should make every printer study his own business very carefully. I doubt if another industry would make such a poor showing.

Getting it down to a finer point, and dividing the loss of each shop (2,980) by the average number of inhabitants to each office (2,880) we find that the loss is about $1.00 for each man, woman and child in the state. In other words, the printers in 1910 donated the sum of $1.00 to every inhabitant of the state. Some donation!

Taking another angle. The gross loss amounted to $4,812,620. There are 22,754 persons engaged in the industry, and dividing the total loss by the number of persons engaged, we find it amounts to $211.00 for each of those persons.

It is hard to write any comment on these facts, and perhaps it is best not to. We hope that the census people were wrong, but knowing things as they are, or were in 1910, we are inclined to believe them true. A different story will be told in 1920 — if you will try to get back that dollar donation and turn it into a dollar profit.

P. R.

Life Insurance for Employes

A copy of the Linotype Bulletin for May is an exceedingly handsome number typographically and contains many items of interest to all printers. Among others are thrilling stories of the recent great floods, with illustrations of printing offices practically submerged by the many waters. The narratives as to "Daily Newspaper Publishing Under Difficulties" reveal much that is characteristic, while telling of the grit, resourcefulness and optimism of newspaper men.

This is history, but the article that particularly attracted our attention will be found of value, by way of example, to all wise, progressive, benevolent-minded employers of men. It is the first article in the book and while many of our readers will probably have the opportunity to read the same in the Bulletin, we deem the matter of so much interest, worthiness and importance as to justify the reproduction of the same here, as follows:

"Life Insurance for Employes of the Linotype Factory

"The Mergenthaler Linotype Company has always taken an active interest in the personal welfare of its employes, and for many years it has been a substantial contributor to the Mergenthaler Mutual Aid Society, formed by the employes of its factories. It has also been the company's custom to donate the sum of $200 to dependents of deceased employes who were members of the society. The Mergenthaler Mutual Aid Society has about 1,100 members at this time. On the factory pay roll there are at present about 1,600 employes.

"As an evidence of its continued interest in and friendship for its employes, the company has now taken out in the Travelers Insurance Company, of Hartford, a policy which provides that there shall be paid, in the event of the death of an employe, to his or her family or other designated beneficiary, an amount equal to one year's salary, not to exceed $1,500. All employes desiring to participate in such insurance are required to sign an application in the form submitted by the insurance company. The insurance is furnished without the necessity of medical examination, and the employes have nothing to pay, the entire expense being borne by the Mergenthaler Linotype Company.

"It is gratifying in this connection to receive the assurance of experts, who have recently examined our factories in great detail, that the conditions under which our people are working, and their surroundings, are of the best, and that as a consequence our employes are entitled to be considered as preferred insurance risks."

The Mergenthaler Linotype Company was one of the first large industrial institutions to go to a nine hour basis in the company's works when the ten hour day was the rule in the mechanical trades. Since January 1, 1911, the factory has been on an eight hour basis. Both of these reductions in hours were made well in advance of the general adoption of the shorter work day and without any corresponding reduction in wages.

The management of the company deserve praise and congratulations for the broad liberal lines in which they have conducted every branch of the manufacturing end of the business. No expense has been spared in efforts to improve and make convenient and useful the machines manufactured or to care for the people employed.

NEWSPAPER CRITICISMS

Address all communications to O. Byron Copper, De Soto, Wis.

MAKERS of home newspapers should fully realize how completely they and their papers occupy distinct fields. This is true of all the smaller city papers, of which there are thousands in the United States.

I say that the publishers of such newspapers ought to realize their true situation, because the sooner such realization comes, the sooner will they cease endeavoring to go beyond their own sphere in the nature of the matter they promulgate.

Nowadays agricultural experts are crying for more intensive farming, for getting more out of the soil — not farming a greater area of the earth's surface, but more carefully and scientifically tilling and cultivating such land as each individual farmer already possesses. And the application of exactly the same principle is the urgent need in the newspaper business.

You have doubtless heard that facetious tale of the Swedish lumberjack, who concluded that he had taken too much territory, after he got smashed for boasting that he could lick any man in the United States. Well, it is my opinion that a great many home newspapers in like manner become failures simply through their endeavor to cover too much territory.

The publisher of a home newspaper should realize that the circulation of his sheet is built principally on the local pride and interest of home folks. In other words, people subscribe for the home paper chiefly because in its columns only can they expect to learn, from week to week, the facts about local institutions and interests, about current local history and the news about their friends and neighbors. And the home editor who is straining beyond his home field for matter with which to fill his columns, as a rule, is disappointing a large per cent of his subscribers, who, in these modern days, take state and national publications also, in which these subjects of the outside world are fully treated.

Every small town or small city publisher, I think, should size up his field and mentally fix its limits approximately in proportion to his space available for reading matter. This field, then, should be thoroughly covered through a staff of competent correspondents and the editor's own efforts.

Not alone in point of news should the editor of the home newspaper stick to the home field, but, as I have often hinted before in these pages, the success of the local paper will be greater, I firmly believe, if the editorial columns, too, are filled with paragraphs founded upon subjects more of local than of state or national interest.

To sum up, then, the point is this: The state and national papers by right cover well the world events and the great issues of every day, but they do not, because they cannot, cover the news and issues of the local field, which is the field of the home newspaper. And by more intensively, more closely, covering the home field does the home newspaper render itself an indispensable visitor every week in the greatest number of local homes.

* * *

Sherman, N. Y., May 6, 1913.

Dear Mr. Copper:

We enclose a copy of the "Presbyterian Comet," which has appeared in Sherman on the first day of May for the past four years. As you will doubtless perceive this little five-column sheet is a church paper gotten up "for revenue only," and this year the Presbyterian Parish Society netted $37 from advertising and the sale of the paper. It is published in conjunction with their annual May Breakfast, served on the first of May.

We know of no other paper like it and is certainly in a different class from any noticed by you in the National Printer-Journalist, which is a department we read with great relish.

Fraternally yours,
DORMAN PRINTING CO.

Messrs. Dorman, in the foregoing missive, have given us all that is really remarkable about this Presbyterian Comet of theirs. Of course, the paper is nicely printed (all credit to the Dorman Printing Company) and the contents, consisting in the main of light verse, are also creditable; but, so far as being in any measure ideal (as I should certainly want any such publication of mine to be) the fact that the "Comet," is purely a commercial enterprise, rather precludes the possibility. I regret to find neither the ad work nor the mechanical makeup modern or artistic, but the idea of issuing such a paper annually is a novel one; in fact, an idea worthy of introduction into other communities. It is, however, well to remember always the home press and the free service rendered thereby to the church.

Kiron, Iowa, March 29, 1913.

Mr. O. Byron Copper, DeSoto, Wis.

Dear Sir: Enclosed find copy of Kiron News, published in a town of less than 300 by myself and one apprentice. Please offer criticism on this aside from the flag over the editorial column which has not yet been reset.

Been out of the business for eight years and have had this plant for about one month.

When I tell you that I turned out more than $100 worth of job work during this month from the 3rd to the 29th, you will realize what getting out a paper like this means, aside from the fact that it is printed on a large jobber one page at a time, requiring folding, refolding and then another fold to mail, you will understand the amount of labor involved — and in a town where former publishers said they could find no news and used from three to five columns of slush weekly.

The ears are changed weekly, on the inspiration of the closing moment.

Would be glad to have your suggestion aside from better paper, which is ordered for next issue. Every copy but one for the files has been the result of this issue — there being an extraordinary demand for this issue.

Yours, truly,

D. PHILLIPS.

It has surely been many a day since I have gotten my "lamps" upon a sheet that has gripped me with interest and fairly convulsed me with wholesome merriment like this live and sprightly periodical from Brother David Phillips of Kiron, Iowa. I am really sorry that the News is not good enough typographically to warrant reproduction of a page or two of it, but before I have done with this comment I shall hope to have given a few hints that will enable Brother Phillips to so improve these respects, that the next time it comes I shall want to show it all. Be that as it may, let us consider the features about this specimen which have accomplished so much with my emotions, as freely confessed above. To begin with, the fact that Brother Phillips has been out of the business for eight years seems only to have sharpened his love for the game nor caused him to forget how to capture the news and dish it up to his readers in an inimitably delectable style. In fact, as intimated, few home editors have such an evident "nose for news" or such a versatile ability for presenting it. The Kiron News consists of an all-home-printed six-column folio, of which some fourteen columns of this edition are used by local advertisers — not bad for a little town the size of Kiron, eh? Four double-deck headed articles — each of unquestionable merit and interest — are presented, besides several other headed stories, an abundance of short locals, a column of editorial paragraphs, etc. No one realizes better than I what a volume of labor is involved in the getting out of a paper like this, especially under conditions as described in the foregoing letter, nor does anyone more fully appreciate the amount of talent, natural ability and ever alert susceptibility to news inspiration, which is required to conceive of and create the attractive little local news stories and special features with which this sheet abounds. For instance, one very original and commendable feature in this paper is a column of good stuff headed "Around the town," which consists of paragraphs personal, witty, newsy and otherwise, about sales and stocks of Kiron business men, alfalfa raising and other subjects intended to interest a large percentage of the editor's clientele. How cleverly Brother Phillips' work is done and how creditable those "Around the Town" squibs are especially, is best shown by quoting one of them verbatim as follows:

> The pig industry has attracted the notice of G. A. Norelius to such an extent that he has seven little thorobreds in his sty to which he is devoting lots of attention. All visitors to the Norelius department store who know anything about pigs are invited to dish up all the knowledge they have on how to raise pure bred pigs. As for the News, all it knows is that "pigs is pigs." Might as well tell the truth occasionally. We "desk farmers" only know it all part of the time.

I fully appreciate what my correspondent says with regard to the unwarranted claim of former Kiron News publishers, that there was "no news in the town." This again only verifies an assertion often reiterated in this department of the National Printer-Journalist, to the effect that in any town worthy of a newspaper at all — which is the same as saying any town of 300 souls or more — there is more news every week than any one six-column folio can possibly contain. The great trick is to get that news while it is news, and then get it reduced to type and printed. I know of another little paper very similar to this one which Brother Phillips is so ably creating at Kiron, Iowa, which is published in a town with a census under 400, but which is, nevertheless, seldom able to hold more than three-quarters of the printable stuff which occurs in its field every week of the year. This is something of a source of astonishment to the county seat publishers of the same county, who do not issue papers superior to this one, even in their city of five or six times the population of the little town from which the paper in point emanates. Which all goes to prove again that it is not the town, nor the actual happenings in the town, that make a good newspaper, but the natural ability and the hustling qualities of the editor and publisher. As I said, to make a good newspaper, the editor must be susceptible to the news influence; that is, he must have that enviable instinct for spotting the things among current local events that will interest the largest number of his subscribers — and not only must he have the instinct for spotting these things, but he must also possess the energy for going after them, getting them, jotting them down, remembering them, and then the ability for clothing them in fitting words of English. And all of these seem to be the blessings of Editor David Phillips of Kiron, Iowa. And now for the promised pointers for improvement of the News, all of which pertain purely to mechanical features: In the first place this contributor should learn how to write more symmetrical headlines, especially for the main stairstep lines. Both his key-lines and inverted pyramid decks are all right; but care should be taken in the stair-steps to see that each line is of equal length, or nearly so, and longer than is generally the case in this copy of his paper. Also, I might suggest that, in writing headlines it is well for editors even of home weeklies to aim to express such thoughts, especially in their main lines, as are intended to interest any man, rather than to interest only the class concerned. For instance, in the head over the Eckman-Lindberg wedding, or that over the death of C. Christenson, in this little sheet, in the first instance the main line ought to have conveyed the information of the fact of the marriage only, permitting the names of the contracting parties and similar details to be divulged in the subhead following, rather than vice versa; and just so also in the second case. The fact of the death of an old pioneer of the town (a fact of interest to anyone) is the proper information to be brought out in the main lines, exploiting the deceased's identity, age, time of death, etc., (facts purely of local interest) in the less prominent portion of the heading below. And, in conclusion, if Brother Phillips has been a close reader of Newspaper Criticisms for any great length of time, he can easily anticipate my objection to the displayed ads on the first page. Otherwise the mechanical makeup of the News is good, in some pages (as, for instance, the last page) being ideal. As to those "ears," they are indeed inspirational in wording, but would look much neater if boxed with borders of rule.

✣ ✣ ✣

Memphis, Texas, March 29, 1913.

Mr. O. Byron Copper, DeSoto, Wis.

Dear Mr. Copper: I am sending you under separate cover a bunch of "Hall County Heralds," for your criticism through the columns of the National Printer-Journalist.

I would especially like your opinion of our front page. Some three years ago, I sent you several copies of our paper and your severest criticism was on the advertising displayed on the front page. You will notice that we have cut this out. No man's money can buy space for display advertising on our initial page now. In the issue of March 29 you will notice a two column announcement card on the local page. For this card I got $2.50 for one insertion. Mr. Lindsey wanted it on the front page and offered us $5.00 for front page display, but we turned him down.

Would also appreciate any criticism on the ads in any of these issues.

Wishing you every success, we beg to remain

Fraternally yours,
HALL COUNTY HERALD,
E. C. Johnson, Asst. Publisher.

I hardly see how anything could be more gratifying to a conscientious critic than a letter like the above, from a former patron who had followed one's advice and then, some three years afterward, comes back fully convinced of the benefit of the change advised and adopted, and so good in so many respects as to excite one's unbounded admiration. The Hall County Herald of Memphis, Texas, is an all-home-printed six-column quarto and strictly up-to-date in every particular. Nothing more than the reproduction of one of the handsome front pages, together with parts of a couple of others, is required to demonstrate the liveliness and wide scope of this paper's news service. (Exhibits 1, 2 and 3.) As may be surmised, in an all-home-printed sheet of this size, there is naturally space for an abundance of reading matter, and that selected for the Herald is of an excellent character. The fine editorial page, replete with sprightly paragraphs of vital interest to Memphis readers particularly, all of which are well written, is especially worth commendation. No less worthy is the plentiful local news. And as to the advertisements, I seldom have the opportunity to show a better aggregation of displayed specimens (Exhibits 4, 5, 6, 7, 8 and 9). The Baldwin & Company exhibits are remarkable, chiefly for their fine empaneled effects;

Own Judge

Eearly Easter naturally calls for early purchases of Ladies' and Misses' Ready-to-Wear and Dress Goods

THOSE who desire the very latest styles in Ready Made Dresses or Dress Goods now have the opportunity of making their selection at our store. ¶ We are more than pleased with the unprecedented increase of sales shown in our different departments compared with any previous spring season since our coming to Memphis. There are two reasons for this unparalleled increase in our sales. The First is:—The people in general realize that we actually give vale received for every dollar paid us for merchandise.

The Second is:—That we buy in larger quantities than any other store in Memphis which enables us to get and to give better values for the money spent than any of our competitors.

Every day's express brings us something new in Ready-to-Wears. Exquisite designs beautifully trimmed in the latest effects of Balkan color combinations and other late fads.

IN OUR DRESS GOODS DEPARTMENT

WE ARE SHOWING A MOST BEAUTIFUL ASSEMBLAGE OF

sort of thing in an ad that makes it strong, as is true also with any kind of argument. Now, just a thought as to the mechanical makeup of this sheet, ere I conclude: That of the front page is highly artistic, attractive and pleasing, as the reproductions will easily prove; and I sincerely regret that I could not find the same degree of goodness manifested in other pages of this otherwise excellent paper. On the contrary, the makeup of all but the first page of the Herald is about as egregiously far from orthodox as it is possible for that feature to be. Now Brother Johnson may be inclined to feel "riled" over this frank criticism, but I beg of him to kindly recall that comment of some three years ago, during which I was moved to honestly deplore the displayed ads which at that time cluttered what has since become an extremely beautiful front page. I ask him to recall how my complaint was heeded,

BUY THE BEST

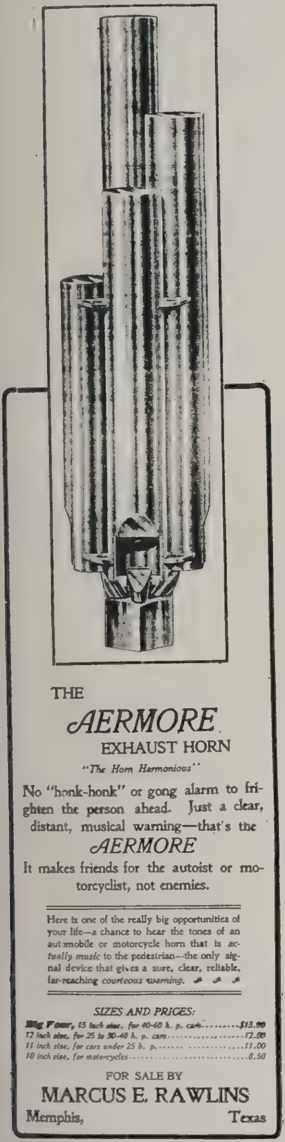
What is your idea of Coal? Does your interest in it stop when you pay the bill? Perhaps, like many other buyers, your purchase is governed wholly by the dollar mark. Consumers incur a big expense for boilers, engines, skilled labor and equipment, demanding the best. Why? Because competition and increased cost of production compel it. Do you do the same in the selection of your coal?

Coal is a vital problem. You know it, so do we. The coal that will produce the most value per ton at the best price is the coal you want. Phone us your order.

Memphis Milling Co.

No. 7

and how the advantage of my recommendations then have since proved themselves sound. If he will hark back to those old days of front page advertising, he will doubtless remember how certain advertisers invariably stuck for front page space. And now, even though double price is proffered by advertisers bidding for such space, it is turned down, because "money simply can't buy it." Now, as I have so frequently and fully outlined herein, the correct method of makeup, it seems scarcely necessary at this time to reiterate it; but in its adoption as proposed, no doubt the Herald makers think they foresee another strenuous scrap with their advertisers, who will stick for "preferred position" — for ads that are veritable islands in seas of straight matter — on the inner and back pages of the Hall County Herald, just as ardently and persistently as they once stuck for front page position; but let me, as one who has "gone through the mill" more than once, heartily assure you, brothers, that the results in this case, as in the other, are fully worth the struggle — the results fully pay the pangs of inauguration. And I want to add that I have never during my approximate score of years' experience as a newspaper reformer, found it very difficult to inaugurate anything reasonable in the way of improvement. This is so, because advertisers are usually business men, the livest kind of business men, and no one is more fully alive to the value of system and improvement in a product than a live, modern business man. A systematic makeup, therefore, at once appeals to an up-to-date advertiser, because he instantly sees the advantages accruing to him as an advertiser, through any innovation that improves the medium and renders it more popular with its subscribers, who are the folks, you know, whom he wishes to reach through his advertisements.



THE

AERMORE

EXHAUST HORN

"The Horn Harmonious"

No "honk-honk" or gong alarm to frighten the person ahead. Just a clear, distant, musical warning—that's the

AERMORE

It makes friends for the autoist or motorcyclist, not enemies.

Here is one of the really big opportunities of your life—a chance to hear the tones of an automobile or motorcycle horn that is *actually music* to the pedestrian—the only signal device that gives a sure, clear, reliable, far-reaching *courteous warning.*

No. 10

ures, in the main it is of a design of antiquated origin and time-consuming qualities that do not pay for the mediocre effect resulting. Masters in the art of modern advertisement composition will appreciate that I refer in the above remarks with reference to "design," to the architectural pillar or column represented at the left of this specimen. The typography of this ad, in connection with the general design, is fairly harmonious, barring the line of bold Gothic for the signature, which in its sharp squareness offers a jarring contrast to the round smoothness of the delightful Cheltenham faces used exclusively elsewhere in the ad. I very seriously doubt if I would have set this ad anything like it is here composed.

⁂

Russellville, Mo., May 3, 1913.

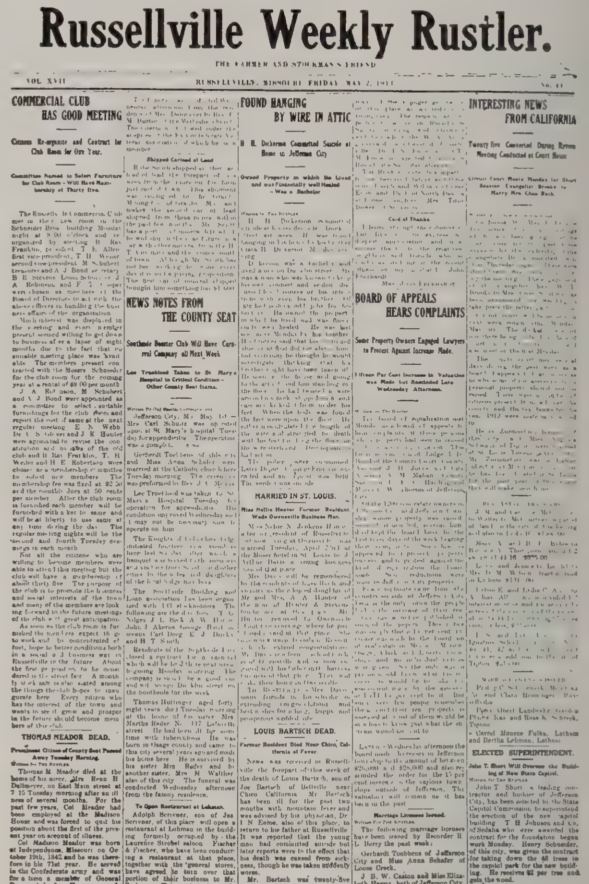
Mr. O. Byron Copper, DeSoto, Wis.

Dear Sir: Under separate cover we are sending you a copy of our third annual Special Breeders' Edition for your inspection and criticism, also a copy of a recent edition. Your criticisms are read with much interest and we assure you that they are very helpful to us and to anyone else who will read them. Whatever criticism you may offer will be greatly appreciated. Thanking you for past favors and trusting to hear from you soon, we remain

Yours respectfully,
C. O. WILLIAMS,
J. H. REA.

P. S. Mr. Parker, who has not been with us for the past seven months, has returned and will begin work in a few days.

I should certainly feel slighted indeed, if a year should slip by and I not be favored with a copy of this Special Breeder's Edition, gotten out as regularly as the month of March rolls 'round, by the rustling, hustling makers of the Russellville Weekly Rustler of Russellville, Mo. Think of it! This year's special breeders' edition consisted of twenty-four pages (all printed at home) with column after column of good stuff for the occasion and one great breeder's displayed ad after another. As I have doubtless written before on past moments of similar inspiration, the idea alone of putting out this special edition, affording breeders of the Rustler's field an opportunity to fittingly exploit the merits of their live stock, right at the particular time of year when that sort of information is particularly sought after, shows clearly the excellent business judgment of Publisher B. Ray Franklin; and the commendably neat and modern manner in which the edition is gotten up mechanically shows, beyond doubt, what a capable set of helpers that same shrewd brain behind the Rustler is able to collect around him. My sight is more than tickled with my inspection of this third Special Breeders' Edition, in which positively the only fault to be found is that the Rustler makers have not yet adopted this department's ideal method of mechanical make-up, despite the ideal opportunity for such a desirable innovation as is clearly knocking at their door. Aside from this one flaw, so far as my inspection has revealed, the making of this bright Missouri sheet is as nearly perfect as one can hope to meet with in a modern home weekly. The delightfully clean front page, the perfectly written, and attractively composed, headlines, the superlative local news service, including a gratifying array of special correspondence, the clean, inspired editorial department, with its crisp paragraphs on subjects of strictly local interest, the tasty typography, the careful presswork, and the attractive, artistic advertisement composition, make the Rustler a home weekly out of a thousand. In view of all these superlative qualities, one is not surprised that the sheet's circulation bids fair to soon reach the 2,000 mark. The price is only a dollar per annum — the only sad error I know in connection with the publication of this example. The price ought to be $4



Russellville Weekly Rustler.

A Close Inspection of Our Stock

Will reveal its supreme quality and convince you of the wide difference that really exists in lumber. You may imagine that lumber is all the same but you were never more mistaken in your life if you imagine that. There's as much difference between two boards that pass for the same grade as there is between a plug and a thoroughbred.

We invite a cordial examination of our stock simply because we know it to be much better than the average **Quality**. That's our hobby. When we sell you a bill of lumber we want to know positively that you will be satisfied, that you've got the best your money will buy and will come to us again when you want something else in building material.

We carry at all times a full line of building material and would be pleased to furnish estimates on your job no matter how large or how small.

✣ ✣ ✣

Hurley, Wis., March 22, 1913.

O. Byron Copper, DeSoto, Wis.

Dear Sir: I am sending you under separate cover two recent issues of "The Miner" for review of the ads and general makeup. The double page ad in both issues was set up in a hurry and was not set up for a newspaper ad, but for a bill, and hence is not a showing of my best efforts in this line. I read your department in the Printer-Journalist every month and usually get several good suggestions therefrom.

Yours truly,
MARTIN VICKERS,
Publisher.

I am very sorry to have to confess that the ads and general mechanical makeup of Brother Vickers' Montreal River Miner are both deplorably far from the ideal, and I sincerely hope that the esteemed brother will appreciate that I make this confession not without a complete realization of the sharp twinges which such criticism must cause in the heart of him to whom written — and the shock which these words must bring to his pride. But I plead with him to be reminded at once that it is also quite as painful to my own senses to have to express such convictions, and I do so only because I want to be an honest critic, who cannot be bribed or bought, realizing always that, unless I do thus fearlessly voice my honest opinions in these columns, my work as a reviewer must sink to a point of shame and worthlessness. The fact that the displayed ads in the Miner are of a low grade in point of design and composition is easily explained: In the first place, they lack that touch of art, recognizable in attractive designing, proper massing and correct display. The main defects in these ads are the too frequent combination of inharmonious type faces in individual specimens, and the too frequent setting of the bodies in too large type, which does not admit of adequate white masses and margins. That the mechanical makeup of the Miner is not high grade can be cited in the fact that displayed ads appear on the initial page and that the arrangement of the displayed spaces in other pages is without apparent system. Were these features of Brother Vickers' paper up to the standard of its contents, it would take a hard-hearted critic, indeed, who could offer anything in way of comment, other than unstinted praise, because the local news service is good and the editorial work, both in the news matter and the editorials proper (of which I am gratified to note a regular department of excellent stuff is maintained) shows unmistakable culture of mind and much natural literary talent. The presswork is fine, too.

✣ ✣ ✣

Kensett, Iowa, March 14, 1913.

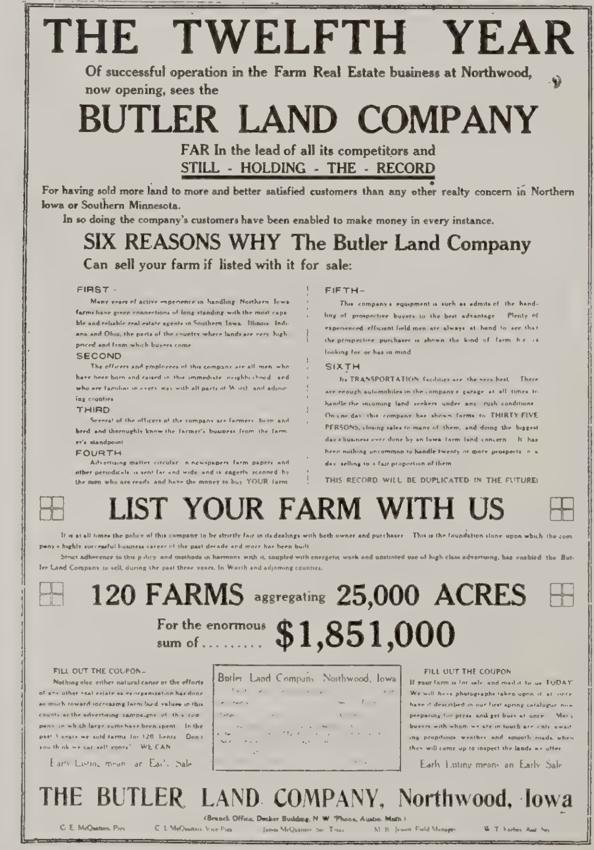
O. Byron Copper, DeSoto, Wis.

Dear Sir: I want to thank you for so ably "grasping" the situation in your write-up in the March number of the N. P.-J., and only wish you had been here to lend a helping hand the first of the year. Since January 1, I have been running the plant with but the help of a boy who can set nothing but straight matter, and had a rush of ads come in on me, as well as upwards of a dozen sets of auction bills. Under another cover I am sending you samples of four page ads — the best available at this time — to show what I have been up against. No. 1 came in for issue of January 30, with a rush order for five hundred bills before it was run in the paper. Then the ad had to stand for another insertion. Then at a late hour the following week the other three ads came in, with from five hundred to a thousand bills to be run from each — all rush, of course. As they all had to be on the same run there could be no "pulled letters," they had to be set according to our material. The composition on each ad, therefore, should not be considered alone, but the fact borne in mind that it would hardly do to put all the work and the best ad letter in one ad, to detract from the others. You will notice that they were all hand composition — did not have time to send out for any machine work. The point I wish to make — and which I think you may draw a picture of to the benefit of the brothers — is that it always pays to have plenty to work with! To be frank, I am not swelled up a little bit on the quality of the ad composition, and I am to blame for it all, but I do have a certain satisfaction in the fact that not very many country offices could have handled these ads in the same issue — much less got off four runs of page bills on a Cranston. And we came out on time, too.

It has been my study since I took possession of this plant to make my type work for me — not lay idle in the cases. Therefore I have nearly everything in weight fonts, plenty of leads and slugs, and a whole raft of reglet cut to right lengths for big ads, bills, etc., just on purpose for rush work like this. If such extra material is used but two or three times a year, the gain in time pays for it. It pays to have quads and leaders, advertising figures, and the like stored away for just such a contingency. There are a few old time faces still left in my shop that I am loath to part with, for they give good service when all the Chelts and DeVinnes are up, and it savors of ingratitude to relegate them to the hell box. With best wishes for the N. P.-J., and your personal prosperity, I am

Yours fraternally,
H. H. HALLETT.

Such letters as this one just quoted, from Brother Hallett, are worth a great deal to the editor of a department of this kind, because of several reasons. First, they are naturally very gratifying to the editor personally, because of the sincere expressions of sympathetic understanding and fellowship and good wishes. Second, because they go so fully and ably into interesting phases of the newspaper business, that a valuable lesson is imparted without the necessity of any personal comment required from the editor, more than to stamp the whole with his official approval and pass it on, with a reproduction of one of the page ads mentioned, as exhibit No. 17.



THE TWELFTH YEAR

Of successful operation in the Farm Real Estate business at Northwood, now opening, sees the

BUTLER LAND COMPANY

FAR In the lead of all its competitors and
STILL - HOLDING - THE - RECORD

For having sold more land to more and better satisfied customers than any other realty concern in Northern Iowa or Southern Minnesota.

In so doing the company's customers have been enabled to make money in every instance.

SIX REASONS WHY The Butler Land Company
Can sell your farm if listed with it for sale:

FIRST - Many years of active experience in handling Northern Iowa farms have given connections of long standing with the most capable and reliable real estate agents in Southern Iowa, Illinois, Indiana and Ohio, the parts of the country where lands are very high priced and from which buyers come.

SECOND The officers and employees of this company are all men who have been born and raised in the immediate neighborhood and who are familiar in every way with all parts of Worth and adjoining counties.

THIRD Several of the officers of the company are farmers, born and bred, and thoroughly know the farmer's business from the farmer's standpoint.

FOURTH Advertising matter, circulars, newspapers, farm papers and other periodicals is sent far and wide and is eagerly scanned by the men who are ready and have the money to buy YOUR farm.

FIFTH- This company's equipment is such as admits of the handling of prospective buyers to the best advantage. Plenty of experienced efficient field men are always at hand to see that the prospective purchaser is shown the kind of farm he is looking for or has in mind.

SIXTH Its TRANSPORTATION facilities are the very best. There are enough automobiles in the company's garage at all times to handle the incoming land seekers under any rush conditions. On one day this company has shown farms to THIRTY FIVE PERSONS, closing sales to many of them, and doing the biggest day's business ever done by an Iowa farm land concern. It has been nothing uncommon to handle twenty or more prospects in a day, selling to a fair proportion of them.

THIS RECORD WILL BE DUPLICATED IN THE FUTURE!

LIST YOUR FARM WITH US

It is at all times the policy of this company to be strictly fair in its dealings with both owner and purchaser. This is the foundation stone upon which the company's highly successful business career of the past decade and more has been built.

Strict adherence to this policy and methods in harmony with it, coupled with energetic work and unstinted use of high class advertising, has enabled the Butler Land Company to sell, during the past three years, in Worth and adjoining counties,

120 FARMS aggregating 25,000 ACRES

For the enormous sum of $1,851,000

FILL OUT THE COUPON- Nothing else, either natural cause or the efforts of any other real estate or organization, has done so much toward increasing farm land values in this county as the advertising campaigns of this company, in which large sums have been spent. In the past 3 years we sold farms for 120 clients. Don't you think we can sell yours? WE CAN

Early Listing means an Early Sale

Butler Land Company, Northwood, Iowa

FILL OUT THE COUPON If your farm is for sale and mail it to us TODAY! We will have photographs taken upon it at once, have it described in our first spring catalogue now preparing for press and get busy at once. Many buyers with whom we are in touch are only awaiting propitious weather and smooth roads, when they will come up to inspect the lands we offer.

✣ ✣ ✣

ROUTING OF DELEGATES TO NATIONAL PRESS ASSOCIATION CONVENTION

The routing will be by way of the Rock Island road, and tickets should be purchased reading, "Rock Island to Colorado Springs and Pueblo." Returning the tickets should read, "From Pueblo over the Colorado Southern to Denver" and home by the way of the Burlington.

A large majority of the delegation from Kansas, Missouri and other southern points will join enroute, and naturally their tickets will be routed somewhat differently, but the general instructions to all attending this meeting is to have their tickets read as indicated above, so that there will be no question of our party being always together.

My plans are to have the party leave Chicago on Sunday evening, June 15, on what is known as Number 13, at six P. M., which will bring them into Omaha at eight o'clock in the morning of the following day.

At Omaha we will be entertained by the citizens until one o'clock P. M. The principle feature of entertainment will be a sight seeing trip that will embrace the section of city destroyed by cyclone on Easter Sunday.

Leaving Omaha at the hour named, we will reach Belleville, Kansas, between five and six o'clock in the evening. We will be the guests of this hustling little city of five or six thousand people, for two hours, during which time they will show us the sights of their city and entertain us at a luncheon.

There will be no stops after reaching Belleville, until we reach Colorado Springs on the morning of the 17th at eight o'clock.

The program at Colorado Springs will be practically as outlined in the preliminary program, although necessarily there will be some slight changes on account of the numerous additional features that have been worked in by the Colorado people.

On our return after the conclusion of the entertainments extended to us in Colorado we will probably be entertained at Hastings, Nebraska.

GEORGE SCHLOSSER, Secretary N. P. A.

✣ ✣ ✣

Mr. and Mrs. A. W. Glessner and son, Herbert, of the Galena, Ill., Gazette, have just returned home after a three months' visit to Europe. Their itinerary covered in the neighborhood of eighteen thousand miles, including the more prominent tourist centers of the old world, such as Nice, Genoa, Pisa, Rome, Naples, Capri, Amalfi, Palermo, Tormena, Florence, Venice, Milan, Como, Bellagio, Lucerne, Interlaken, Lausanne, Ouchy, Paris, London, Edinburgh, Glasgow, Belfast, Dublin, Manchester and Liverpool. During the latter part of their visit Mr. Glessner, who was constituted an ambassador to the Rotary Clubs of the United Kingdom, was entertained, together with the members of his family, by the Rotary Clubs of England, Scotland and Ireland. Excellent weather, as a rule, was experienced and the trip proved an exceedingly enjoyable one. Since his return Mr. Glessner has made aldresses covering observations on the trip to the Chicago Rotary Club and also to the Committee on Relations with Other Illinois Organizations of the Chicago Association of Commerce.

The Galena Gazette has been publishing from day to day a series of letters written by Mr. Glessner in which descriptions have been given of the cities visited.

Well Known Newspaper Men Study University of Wisconsin

F. A. Van Valkenburg, of the Philadelphia North American; Owen Wister, the novelist; T. W. Entwisle, of the Philadelphia Ledger; and other newspaper men representing the Philadelphia and Pittsburgh papers accompanied the party of over 100 public officials and educators from Pennsylvania and Maryland, who spent four days at the University of Wisconsin, May 21 to 23, in studying the methods by which that institution is of direct service to the state and co-operates with the various departments of state government.

The visiting party, which was organized for the purpose of visiting the University of Wisconsin, under the auspices of the City Club of Philadelphia, traveled in a special train to Madison, where they were entertained by Governor F. E. McGovern, the faculty and regents of the University of Wisconsin, and the Madison Commercial Club.

The purpose of the visit is to develop at the University of Pennsylvania and other colleges of that state, similar methods of university extension and other means of bringing about closer relations between the colleges and the city and state governments.

Past President Tozier Criticises Publishers for Indifference to Their Own Interests

Portland, Ore., May 15, 1913.

Dear Bro. Herbert: Answering yours relative to persons who may attend the Colorado Springs meeting will say that at this date there is no certainty about Oregon being represented. I feel that I long ago did more than my share and have no regrets whatever. When a fellow attends twenty-four conventions without a miss, and seventeen executive meetings he has done enough, and if the other fellows in the business care not enough to continue the representation there will be no tears shed by me. Aside from yourself up to the 1910 meeting no one held the record that was held by myself.

The average newspaperman, like the dear old farmer, will vote for every interest save his own. Will vote against his church, his family and friends and stand by his party. His chief delight is in doing work cheaper and at a greater sacrifice than does his competitor. He opposes organization in his own industry but pays organized wages and organized prices for his goods. He will have an epileptic fit if asked to organize for his own protection, but will support others who organize. He delights in working long hours and making the county or city a present of the use of his columns for public printing. Why shed tears or lose sleep for a man who has no sympathy for himself? He who talks against the social feature of our association meetings and says he wants a business convention is the man who remains at home and does work cheap. He is neither a social human being or a business man. He is just a plain grunt and grind.

The social feature is what I like about the meetings of the National Press Association. The business part I can read in the National Printer-Journalist, pronounce the suggestions good, but follow along in the same old rut.

In this state there are several live organizations, and someone of the number should be willing to attend the Colorado meet. The Oregon Editorial Association has E. Hofer, editor of the Oregon Manufacturer, Salem, as president, and Phil Bates, of the Northwest, as secretary; latter address Portland.

The portland Press Club is a live organization.

The Willamette Valley Editorial Association, with Frank Jenkins, Eugene, president, and Elbert Bede, Cottage Grove, secretary, holds monthly meetings. Elbert Bede is a son of Adam Bede.

The State Woman's Press Club, of Oregon, is the strongest organization in the state. Miss Helen Sayr Gray, Box 692, Portland, is president, and Miss Mary C. Davies, 743 Greenwood avenue, Portland, is the corresponding secretary.

It is possible that someone taking the course in Journalism at the State University, Eugene, might attend.

I suggest that you send sample copy containing the program to Chester A. Dickey, business manager, and Alfred O. Mangold, editor of the Orange, the Junior Annual of the Oregon Agricultural College, Corvallis. I believe that if we will pay more attention to the amateur editors and those publishing school papers we will secure a class of members who will grow up in the N. P. A. and be its future life. No use wasting efforts on those past 35 or 40 years.

This is not written for publication, but to a friend.

ALBERT TOZIER.

* * *

DEAN OF JOURNALISM BECOMES EDITOR OF CAPPER FARM PAPER

Chas. Dillon, who has been dean of the department of journalism of the Kansas State Agricultural College for three years, has been appointed managing editor of the Capper Farm Papers at Topeka and will begin his new work July 1. Mr. Dillon spent his early life on a farm in the western part of Kansas but since manhood has been identified with Kansas newspapers. He has traveled much abroad, spent two years on one of the largest experimental farms of California, a year studying agriculture in the south, three years at the Kansas Agricultural College, and has had many years' experience in newspaper and farm writing, all of which has given him a broad outlook and a keen sympathy with the farmer and the farmer's problems. Mr. Dillon was for twelve years associated with the Kansas City Star in many capacities. His journalistic idea has always been the farmer wants information and not so much preaching and it was this idea which made the Kansas Industrialist, the college publication, the most unique and practical college paper in the world. Mr. Dillon has been a frequent contributor to the Saturday Evening Post, Collier's, Country Gentleman, American Magazine, Outlook, and many other leading publications. He is president of the journalism section of the National Press Association and undoubtedly will do much to increase still further the high standard of the Capper Farm Papers.

THE FIFTH (KANSAS) DISTRICT EDITORIAL ASSOCIATION

The Fifth (Kansas) District Editorial Association held its annual meeting at Clay Center, Kansas, Friday, May 23. About twenty-five Fifth District publishers were present, and they entered heartily into a discussion of the different papers presented. Prof. Merle Thorpe, of the School of Journalism of the State University, was the principal speaker. Clay Center people extended the glad hand and made it pleasant for the visiting members of the craft. This association was organized for the promotion of the fraternal and commercial interests of the Fifth District publishers and holds its meetings annually in different parts of the district.

The old officers were re-elected, as follows: A. Q. Miller, of the Belleville Telescope, president; H. E. Montgomery, of the Junction City Union, secretary-treasurer.

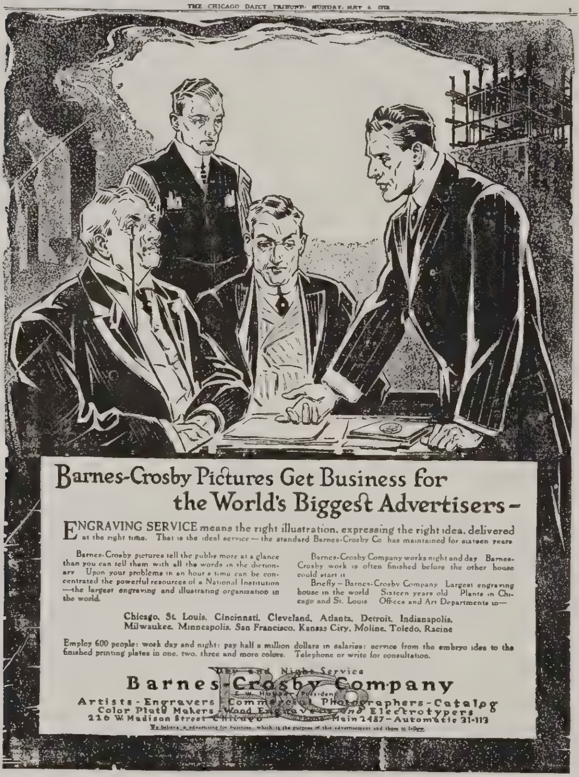
Yours, truly, A. Q. MILLER.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

GOOD ADVERTISING

We show, herewith, a reproduction of a page advertisement of the Barnes-Crosby Company that appeared in The Chicago Daily Tribune, May 5. It is one of a series and marks the beginning of a consistent newspaper campaign in the Chicago Tribune which will extend over seven or eight months. As an advertising proposition such a campaign is unique, as no other engraving house in the country has ever used big space in a newspaper of the class of the Chicago Tribune.



THE CHICAGO DAILY TRIBUNE: SUNDAY, MAY [illegible]

Barnes-Crosby Pictures Get Business for the World's Biggest Advertisers –

ENGRAVING SERVICE means the right illustration, expressing the right idea, delivered at the right time. That is the ideal service — the standard Barnes-Crosby Co has maintained for sixteen years.

Barnes-Crosby pictures tell the public more at a glance than you can tell them with all the words in the dictionary. Upon your problems in an hour's time can be concentrated the powerful resources of a National Institution —the largest engraving and illustrating organization in the world.

Barnes-Crosby Company works night and day. Barnes-Crosby work is often finished before the other house could start it.

Briefly — Barnes-Crosby Company. Largest engraving house in the world. Sixteen years old. Plants in Chicago and St. Louis. Offices and Art Departments in—

Chicago, St. Louis, Cincinnati, Cleveland, Atlanta, Detroit, Indianapolis, Milwaukee, Minneapolis, San Francisco, Kansas City, Moline, Toledo, Racine

Employ 600 people: work day and night: pay half a million dollars in salaries: service from the embryo idea to the finished printing plates in one, two, three and more colors. Telephone or write for consultation.

Day and Night Service

E. W. Houser, President

Artists-Engravers-Commercial Photographers-Catalog
Color Plate Makers-Wood Engravers and Electrotypers
216 W. Madison Street Chicago — Phone Main 2487 — Automatic 31-113

We believe in advertising for business, which is the purpose of this advertisement and those to follow.

The design of this advertisement is of interest to all who are interested in good and effective advertising. It was conceived by the Barnes-Crosby Art Department, executed by a Barnes-Crosby artist, and engraved in the Chicago plant of the company, and is in every way a Barnes-Crosby product. Naturally, effective illustration that gives life and effectiveness, is a prominent feature.

* * *

If the Monotype corps had been distributing dollar bills they could not have attracted a larger gathering than they did with the exceedingly instructive exhibit.

They showed a Style D and a DD keyboard, a composing machine setting from 6 to 12 point, a type caster casting type from 5 point to 36 point, and a composing machine setting 18 point. These machines were kept in operation constantly on all classes of work, illustrating the economies of the Monotype System of machine composition and casting type for the cases.

One of the features of the Monotype exhibit that attracted a large crowd of spectators was the operation of one of its keyboards on ordinary reprint copy at a speed of from 10,000 to 13,000 ems per hour. It is needless to say that to maintain this rate of speed the operator worked by the touch system, for his eyes were constantly on copy, and when working on narrow measure it seemed like a fraction of a second for him to travel from one end of the line to the other.

The Monotype's New York exhibit was a very successful one from every point of view and was in charge of Mr. F. H. Greene, the New York representative of the company.

* * *

A new branch of the printing supply business has been started by Barnhart Brothers & Spindler. It is located in Atlanta, and began operation May 1. It has taken over the business of the Dodson Printers Supply Company, which has for many years covered the Southeast Atlantic and Gulf states.

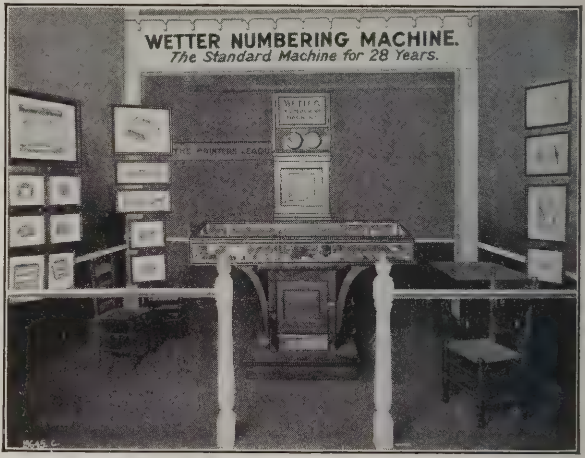
The manager, Mr. R. N. McArthur, is a Southern man thoroughly familiar with the trade of that section and well known in printing circles. A complete stock in every line will be carried at the house. The location is 20 S. Forsyth street.

* * *

THE WETTER EXHIBIT

As Quite Fully Described in Our May Issue

The Wetter Numbering Machine Company had a very interesting exhibit in Space 98 at the National Printing and Advertising Exhibition, held in New York, April 19 to 26, 1913, in the Grand Central Palace, and in addition to showing a full line of regular Type High Numbering Machines, they also exhibited several different styles of Special Machines for Rotary Printing Presses.



View of Exhibit of Wetter Numbering Machine Company at National Printing and Advertising Exposition, New York, April 19-26

These were in operation; something that had never been attempted before, and afforded many printers an opportunity never before offered in this line.

We give herewith an illustration of this exhibit that will serve further to give an understanding of the interesting showing made.

* * *

LINOTYPE MATRICES — ONE LINE

"Specimens" is the title of a 16 mo. book of 176 pages, in paper covers, just issued by the Mergenthaler Linotype Company. As the name indicates, the book contains "One-line specimens of Linotype faces" as the principal feature, and there are nearly one thousand matrix faces shown. The following, from the "Foreword" of the book, indicates pretty well and fully its scope:

"The introduction of multiple magazine machines so broadened the scope of the Linotype that its adoption for job and display composition, large newspaper headings, department store advertising, etc., has become almost universal. This, together with the large number of Linotypes now in use — more than 27,000 throughout the world — has rendered necessary the cutting of many new faces of matrices in order to meet the demand created by the phenomenal versatility of the Quick Change Model 8 three magazine Linotype and the Quick Change Model 9 four magazine Linotype.

This is a View of the F. Wesel Mfg. Co. Booth at the National Printing and Advertising Exposition Held in the Grand Central Palace, New York. It was, perhaps, the most artistic in arrangement of all the manufacturers' booths

"An edition of 'One-Line Specimens of Linotype Faces' was issued in August, 1910, in which were shown all matrices completed up to that time — a total of about 700 faces. By March, 1912, so many new faces had been added that a supplement to the 'One-Line Specimens' was printed, which included nearly 200 new faces. Since then 100 additional faces have been completed, bringing the total number of matrix faces now available to nearly 1,000.

✣ ✣ ✣

Barnhart Brothers & Spindler report an unprecedented business in electric welded chases, and particularly in stereotype chases, for which class they have received during the last sixty days orders for nearly 600.

Striking, as well as convincing, or strikingly convincing, may well be applied to the acting illustrations given in colors on the insert of the Mergenthaler Linotype Company, among the first advertising pages of this issue of the National Printer-Journalist. The facts are presented with instant effect, like the instant command of the linotype operator over the three magazines, containing six faces and three body sizes of type, on the Multiple Magazine, Model 8, of the wonderful Linotype Series. The pictures talk with clearness and distinctness. The saving of time and the convenience and economy of operation, over the single magazine machine are so apparent that one who runs may read and even a fool need not err as to the wondrous saving, secured.

✣ ✣ ✣

Barnhart Brothers & Spindler announce a new Handy Specimen Book of 160 pgaes, containing only type faces, borders and ornaments of their manufacture.

There are numerous display pages, some in colors, showing new uses for type and ornamentation and brass rule effects. Every face shown is up-to-date, and the numerous large families of their type are shown separately and in combination. It is stated that there is not one face in the book which is not standard — which will not always be usable in a printing office. All freak faces are barred.

On Sunday, May 4, the Denver & Rio Grande Railroad resumed operation of its popular open-top observation cars on daylight trains through the Royal Gorge and Black Canon of the Gunnison for the summer season of 1913.

These cars are unique in that they are regular passenger coaches with the top and sides removed above the window-sills, thus affording an unobstructed view, so much enjoyed by travelers through the Rocky Mountains. This opens a means for still greater enjoyment in viewing the wonders of Colorado to those who attend the convention of the National Press at Colorado Springs, June 17.

* * *

The American Type Founders Company not only show in their two ad pages this month splendidly attractive and practically useful and durable type faces but give some very valuable facts and wise advice for printers who are looking for economic methods and substantial success. It pays to read such advertisements. They are a joy to the eyes, while in the matter and substance they furnish priceless business wisdom.

The dull days of summer may be made the most profitable of all the days of the year. Preparedness is what makes the difference between success and failure. Preparedness means success and unpreparedness always portends, if it does not mean, failure. The summer season is the period in which to analyze the conditions and the wants of the plant—"to make a general clean up of type and material." To sort out worn and obsolete faces of types, to box, weigh and send to the foundry and exchange for new and up-to-date faces..

Read the advertisements on pages 374 and 375 and then act upon the wise suggestions contained therein.

* * *

"MORE THAN THE WORTH OF THE MONEY"

May 19, 1913.

Enclosed is bank draft for $2.00 in payment of my subscription to the National Printer-Journalist to January 1, 1914. It is a payment I very cheerfully make in this "high-cost-of-living" time, for I feel that in this instance I get more than the worth of the money.

Yours very truly, C. F. CLARK.

TYPE-HIGH NUMBERING MACHINE

Sold at Right Prices by All Type Founders and Dealers

Wetter Numbering Machine Company 343 Classon Avenue, Brooklyn, New York, U. S. A.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . .

A COLD SIMPLEX STEREOTYPING OUTFIT, $19 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage, for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine St., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

FOR SALE—Lever paper cutter, "Leader." In condition for immediate use. A bargain for some one. Address, Sohm Electric Co., Ravenswood, Chicago.

SPECIAL BARGAINS in Duplex, Goss Clipper, Hoe Flatbed Perfecting, two-revolution presses for newspaper plants; 8-page Scott web for $900; 24-page list. Write for List A, Peckham Machinery Co., 1 Madison Avenue, New York City, newspaper outfitters.

WANTED, TO BUY — COUNTRY NEWSPAPER plant, without power press. Reasonable. Address Taylor, 631 Dewey Place, Chicago.

OLD TYPE WANTED—Cash or exchange. Empire Type Foundry. (Not in the Trust), Buffalo, N. Y.

MONOTYPE WANTED—Second-hand. C. L. Darte, 306 Lexington avenue, Buffalo, N. Y.

Bargains in Printing Presses

of Printers' Binders' Photo-Engravers' Machinery, Supplies
and Equipment and Third Ohio Cost Congress
Toledo, Ohio, September 1 to 6, 1913

Your Opportunity, Mr. Printer and Publisher

to meet the master minds of your profession; to witness demonstrations of the newest machinery and processes; attend the instructive and interesting sessions of Cost and Estimating Schools; enjoy the entertainment features planned on an unusual scale, including all-day trip on Lake Erie. Reserve the week—September 1 to 6. Hotel reservations now being made.

Your Opportunity, Mr. Manufacturer and Jobber

to place your product before the leading printers of the six great Central States — 5,000 in all. Your competitor will be there. Can you afford not to be represented? In six weeks 60 per cent of space has been reserved. Special plans have been made to minimize your expense and increase effectiveness of your display. Write today for full information.

EXPOSITION GENERAL COMMITTEE
H. V. Buelow, Managing Director
Terminal Exposition Building, Toledo, Ohio

NOTE: This is not a private enterprise, but is entirely in the hands of the printers of Central States, acting with the Central States Publishers' Association and the Ohio Printers' Federation.

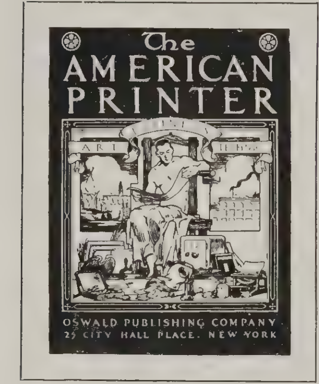
Do You Know THE AMERICAN PRINTER?



If not, send thirty cents for a sample copy, and you will be pleased. A letter received just before this was written said: "That sample copy was enough to satisfy me; here's a year's subscription." It is a magazine of wide interest to those in the printing business; something for the printer (employer and employee), advertising man, publisher (periodical and newspaper), engraver, bookbinder, and others. It prints the important organization and general news, and is not afraid to urge good printing at good prices. The editorial policy is constructive and toward a higher plane in production and method. The June number, just out, is filled with practical matter, liberally illustrated, and there is a number of handsome color inserts.

Send 30c for a copy of the June number, or $3.00 for a year's subscription.

COMBINATION OFFERS

No printer or publisher can invest his money to greater advantage than by subscribing to one or the other of these offers.

OFFER No. 1

Printing Trade News (weekly, $3) **Printing Art Suggestion Book (monthly, $1)** **National Printer-Journalist " ($2)**	**$5.00**

OFFER No. 2

National Printer-Journalist (monthly $2) **Printing Art Suggestion Book (monthly $1)**	**$2.50**

The Printing Trade News

The Printing Trade News, 64 pages, is published weekly and has a very comprehensive business news service from all sections of the country. It deals entirely with the affairs of the business office and the executives. It collects weekly beside printing house news, that of the binders and rulers, the electrotypers, engravers, trade composition houses, the supply trade paper houses, lithographers, etc., has a business fiction story each week, patents of interest to printers, and editorially reviews important doings of printers and publishers during the week.

The Printing Art Suggestion Book

This is a monthly publication issued by the University Press, Cambridge, Mass., containing examples of typographic and other designs intended to assist the printer and those who are printing in the choice of color schemes, inks, and papers. It contains samples of standard papers, as well as novelties which are brought out from time to time by the various mills. It is full of ideas and suggestions for typographic design, display, and color schemes.

The Sun Never Sets on Our 40 Cent Ink. It is used all over the world. It has the best value for the price of any black ink on the market. It is a 75c ink trimmed down to meet popular demands. All its value is there and the printer gets it. Our 25c magazine black is built on the same lines, has the same fine working qualities. We have cover inks that cover. White that is white. Specify 1061 Red for the finest brilliant red ink made. Black Diamond News, cleanest news on the market.

NATIONAL PRINTER-JOURNALIST

1776 JULY 1913

CENTRAL STATES
MILLION DOLLAR EXPOSITION

"Greater ground floor space than Madison Square Garden" gives an idea of the size of Terminal Exposition Hall, where the Million Dollar Exposition will be held. Reserve the dates, September 1 to 6, for visiting this most elaborate of all printers' expositions.

History will be made by the Central States exposition of printers', binders' and photo-engravers' machinery, supplies and equipment to be held in Toledo September 1 to 6.

Greatest of All Printers' Expositions

Never has any exposition been planned on such an elaborate scale. Never has such backing been assured as is represented by the printers and publishers of the Central States, individually, and in their organizations.

Here will be presented under one roof all the newest appliances and methods. Cost and estimating schools will be in charge of the leading men of the craft. Addresses will be made by the master minds of the industry. An unequaled opportunity will be presented for live men in the trade to come into contact with the newest and best thought and practice.

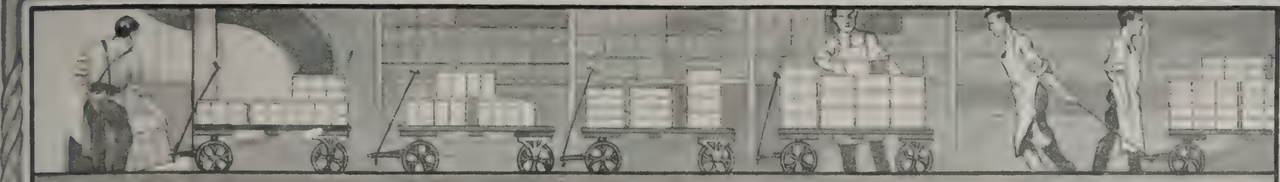
A Word to Manufacturers and Jobbers

You cannot fail to be impressed by the opportunity to place your product before this great gathering of printers, binders and photo-engravers, both employing and employed. Your reservation of space should be made at once. For details address

EXPOSITION GENERAL COMMITTEE
H. V. BUELOW, Managing Director, Terminal Exposition Building, Toledo, Ohio

NOTE — This great exposition is backed not by private enterprise, but by the printers of the Central States, and is under the direct management of the Ohio Printers' Federation. It will be held in connection with the Third Ohio Cost Congress.

Toledo, Ohio, September 1 to 6 (inc.) 1913



"The Home of the Envelope"

Hurry—Hurry—Hurry

Speed and Accuracy are the watchwords in our Open-Stock Envelope Department. If you were to visit this Department you would doubtless be amazed at the activity you'd see. The hum of business, mentioned in stories, is here an impressive actuality.

Just consider for a moment what it means to you to know that there is at your command an enormous stock of envelopes, of every description, for every purpose an envelope is used—from the most inexpensive Manila Coin Envelope to the costliest Patent Clasp Catalog Envelope—in all regular, and many odd, sizes, shapes, colors, weights and qualities.

"Butler Brands" of envelopes are not merely envelopes, as the word goes, but envelopes that show care and experience in gumming, cutting and folding: workmanship of the highest class—envelopes that are attractively packaged.

Whether you buy in large or small quantities you will find it to your interest to purchase of us. Two things are certain: you will get service that serves, and envelopes that are made to hold trade. That is how we built *our* envelope business.

Write us your requirements and we will submit samples and quotations.

ESTABLISHED 1844

Says Barnhart's Jake:

You know there are some folks sadly lacking in what we call an "ear for music." They can't carry a tune to save their w. k. lives. When they whistle you never know whether it's Home Sweet Home or the Gaby Glide.

There is a harmony in type, too. Most of us have enough instinct for it to recognize a first class, truly harmonious composition when we see it, but comparatively few of us have the technical skill to create type harmonies—rare and exquisite combinations that chime in perfect tune with the message of the words. That is great art. Few can reach perfection, but the basic principles can be learned.

That's why I think our new type book, BARNHART'S PREFERRED FACES will get a warm welcome in thousands of print shops. It shows not only beautiful expressive faces, but shows how to use those faces in the best and most profitable way.

You probably have received your copy. Look it over carefully. Put it where you can get at it quickly and easily. Study it. There's a heap of valuable and practical suggestions in those 172 pages. All for you.

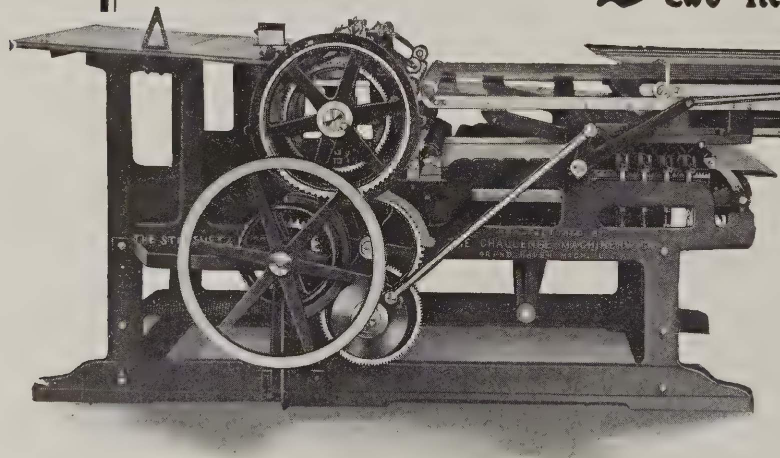
Stonemetz Two-Revolution

Printed-Side-Up (Carrier) or Printed-Side-Down (Fly) Delivery

Built in Three Sizes: 25x33"—26x38"—29x42"



THE STONEMETZ TWO-REVOLUTION CYLINDER PRESS possesses the strength to stand up under the heavy impression strain imposed by modern methods of hard packing and rigidly mounted plates.

¶ It registers perfectly, meeting the particular requirements of the multi-color printer—not only when new but always.

¶ It has splendid inking facilities—unsurpassed by any two-roller press on the market.

¶ It runs quietly, smoothly, speedily.

¶ It is simple in construction, therefore simple and economical in operation.

¶ It has a splendid record of service. Let us send you names of users in your locality, testimonial letters, samples of work and other information of importance to prospective buyers. Mailed free on request.

HAMILTON COMPOSING-ROOM FURNITURE

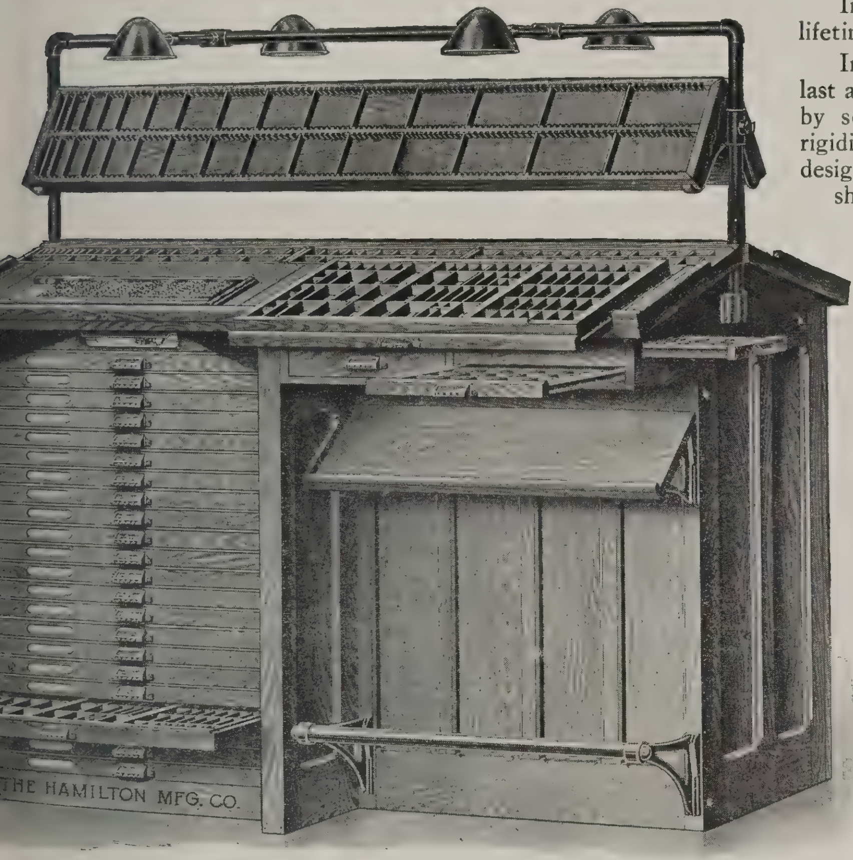
IN ALL WOOD OR STEEL CONSTRUCTION

HAS NO COMPETITOR WHEN IT COMES TO QUALITY

This equipment is used by more than fifty thousand practical employing printers in their composing and press rooms.

The high-grade men in the printing business are continuous users of Hamilton equipment. They are willing to pay a fair price for a good article.

The greatest asset we have or could possess is a line of continuous, satisfied customers who naturally gravitate to the Hamilton factories when they are in need of composing-room equipment.



THE HAMILTON MFG. CO.

No. 4 Ad.-man's Cabinet in Wood Construction

In wood construction we build to last a lifetime or longer as a full life is measured.

In steel construction our furniture will last apparently for all time, unless destroyed by some unforeseen agency. Strength, rigidity, compactness, convenience, pleasing designs, good materials and good workmanship; all these are characteristic of the product of the Hamilton factories. It will always be our aim to maintain this high standard of quality.

In building composing-room furniture we may use more and better materials than are necessary, but we prefer to do it that way.

We may take a little longer time to build than would always seem necessary, but we prefer to build right and that takes time.

The test of the printing-office is severe and continuous, and we have this always in mind when planning the construction of our equipment.

If your composing-room is not already equipped, let us show you how you can save from 25 to 50% of your floor space and from 10 to 25% of your composing-room labor. That should be inducement enough for any wide-awake printer considering the problems relating to cost of production and cost reduction.

Experts always at your service.

New Ad.-man's Cabinet Nos. 3 and 4

This Cabinet combines all the good features found in other popular Composing Cabinets.

Extension front for type cases; mortised label holders; electric lighting for type cases and banks; copy drawers; sliding trays for quarter-size rule cases; supplementary galley bank; removable working top; adjustable two-faced overhead lead and slug bank; foot rails; mortise in bank with justifying lead and slug cases and with sliding working bank on which the type case is placed, thus making this justifying material readily available without removing the type case.

This Cabinet has two tiers of type cases, one on each side. Two men work at the cabinet, one from each side, without interruption, each having complete equipment at hand, both sides of the cabinet being exactly alike. Supplied in wood or pressed steel construction.

Send for complete descriptive circular.

The Babcock Optimus

The Babcock Optimus

To print fast and pile slow—to work at speed and deliver at ease—is the amazing Optimus way.

Not another's way is like it. It is the best way—one of the big things in printing presses.

Sheets are not covered as fast as printed. Nor does the machine get behind at any point. No puzzle about it. The delivery is as fast as impressions, yet sheets are not covered as fast as printed.

Each gets open air treatment for practically three impressions. No claim necessary that this makes for better work; everybody knows it does.

It means more output. The Optimus need not run slowly to save offset when sheet exposure is three times longer than the common press permits at like speed.

More speed comes in another way—another surprising Optimus way: No change is made for different jobs.

Big or little, thick or thin, tissue or board, are all the same to the Optimus delivery.

No adjustment, setting or resetting, is needed to time it to size or adapt it to stock. It is ready; go ahead! More time saved; more work done.

Each year's saving is a good cash discount on press.

This feature—this rare Optimus way—takes no extra space. It is contained within the small limits of the press. The printed sheet from cylinder stops on rear of delivery. It advances to the front at the next movement, and the following sheet takes its place at the rear. The succeeding movement withdraws the carriage from under first sheet, which drops softly on the pile and is jogged into place; the second sheet has advanced, the third is on.

There are now two sheets on the delivery and one on the table, printed side up, with nothing to interfere with their complete exposure.

Three impressions place sheet on table; after that every impression adds another that has traveled the way of the first. There has been no hammering, no violent action. The sheet is perfect if perfect when fed.

Many times slip-sheeting is avoided. For exceptional forms, a separately sold attachment makes it easy at usual speeds.

Tissue is handled fast. It has been worked at 2000 an hour when a third of that was good work on another.

Delivery telescopes upon itself to open up front of cylinder. Front part of feedboard thrown back opens up cylinder at rear.

The nearly flat feedboard makes close register feeding easier.

Tape tension is automatic.

The Optimus delivery established its superiority years ago. Those old presses still give first-class service, with not a complaint from one of them.

It is far better now than then—a perfected feature promoting the production of work of the highest excellence with greatest certainty.

Selling Engravings to the Nation

Because of the detail and the individual attention involved in the production of illustrations and engravings it was long supposed that no engraving concern could satisfy more than a local demand.

Back in 1902 ***Barnes-Crosby Company*** took the first step in shattering this fallacy by installing a branch office at Detroit. Since that time not a year has passed that has not seen a new B.-C. office established.

Today, with two immense manufacturing plants located in Chicago and St. Louis, eleven permanent branch offices and a force of traveling salesmen, Barnes-Crosby Company stands as the highest type of business organization.

Our experience in meeting the varying needs of so many customers is part of the intrinsic value you secure in dealing with us. The above map will help you to locate our nearest branch office.

Johnsonized Printing Machinery

We are continually trying to increase the already high standard of JOHNSONIZED MACHINERY, and the new home of JOHNSONIZED MACHINERY has been a big help to us; large, light, comfortable quarters separated from our type and printing supply business—it enables us to carry a much larger stock and take advantage of more bargains than formerly. We have now probably the largest stock of reliable rebuilt machinery west of New York. Read what our customers say:

From the Sheridan County News, Plentywood, Mont.
May 30, 1913

"The press, together with our other new equipment, was purchased from the C. I. Johnson Mfg. Co., of St. Paul, Minn., and the name of the firm is sufficient to warrant that everything we have purchased is standard and up-to-the-minute stuff. The C. I. Johnson Mfg. Co., is one of the very few firms that is free from the big trusts, and the courteous treatment that has been extended to the writer is suffice to state that the newspaper boys of the Northwest will find the Johnson Manufacturing Co. a very competent firm, and one that will prove a great help to the newspaper fraternity. All hail the Johnson Mfg. Co. and their courteous way of doing business."

From the Cuyuna Range Miner, Cuyuna, Minn.
June 6, 1913

"Both machines were bought through the C. I. Johnson Manufacturing Co. of Saint Paul, Minn., which alone is a guarantee of their correctness."

From the Swea City Herald, Swea City, Iowa.
"Dad" Johnson Comes
May 29, 1913

"In connection with the new machinery the Herald is installing, the publishers were pleased to have "Dad" Johnson, himself, of the C. I. Johnson Manufacturing Company, arrive on the scene to supervise the work. Owing to many advance orders, the firm's press erectors were all at work, and it was necessary for the senior Mr. Johnson to get out on the job. He has had many years' experience as a machinist, and it is unnecessary to say that the work went off with exceeding smoothness."

THIS ADV. SET IN HANSEN CASLON FULL FACE AND CONDENSED

HALFTONE RUNION BORDER

A LETTER!

This is a copy of a letter sent by us to a large printing house concerning the STANDARD HIGH SPEED AUTOMATIC JOB PRESS fitted with the DOUBLE FEEDING ATTACHMENT. This is the most profitable printing machine ever invented.

GENTLEMEN:--

During the Printers' Exposition held at New York we were showing our Double-Feeding Attachment on the STANDARD HIGH SPEED AUTOMATIC JOB PRESS, and it made a big hit. With this Attachment the STANDARD automatically prints two jobs at a time at a speed up to 3,500 impressions an hour; the two jobs may be of different sizes and different kinds of stock; one job may even be cardboard and the other paper. If the quantities vary on the two jobs, a bar chase is used and after the job with the shorter run is finished, the form is simply unlocked and the one job dropped and the chase then put back into the press and the other job completed without further make-ready or any other change.

In a plant that is doing much job work it is possible to keep at least one STANDARD busy running two jobs at a time, and under these conditions the press would be a phenominal money-maker. If the selling price of the jobs did not amount to more than 75 cents per thousand, and if the press ran only 75% of the working time, and then only at a speed of 3,000 an hour instead of the full speed, the press would earn a profit of over $6,000 a year after deducting all operating expenses. Or if the press ran only 50% of the time under these conditions, it would earn a profit of over $3,500 a year. You can readily demonstrate this yourself, if you will go into the figures. We do not recommend reducing the selling price of the output, as the prices for job printing are established by the small printers who must feed their work by hand, and it is not possible for them to go lower and live, while the reputable concerns can get all this work they can handle, if they can meet the small printers' prices; it is for this reason that we mention 75 cents per thousand as a basis.

Running one job at a time the STANDARD will take a form 11 1/2x 17 1/2 and handle a sheet 13x19 inches; this would be two letter heads or two letter circulars; it takes all grades of stock from onion skin to 120-lb. cardboard at a speed of from 2,500 to 3,500 per hour; the speed would vary according to the nature of the work or character of the stock; thin paper on account of its lightness would have to be run at the slower speed, as it does not fall out of the delivery grippers as quickly as heavier stock. Long runs are not necessary, as make-ready can be done as quickly on the STANDARD as on a job press.

The Capacity of the Double-Feeding Attachment is a combined width of fifteen inches for the two jobs. The Double-Feeding Attachment adds but $150 to the cost of the press.

On the larger jobs which are printed one-at-a-time on the STANDARD, the selling price would probably average $1.00 per thousand, and if the press ran only 75% of the time at an average speed of 3,000 an hour, the STANDARD would earn over $3,500 a year profit, or if the average did not exceed over 2,500 an hour the year's profit would be over $2,750.

On long runs where it is customary to make electrotypes and print the job on a cylinder press, the STANDARD will beat out a cylinder even though the cylinder takes a sheet four times as large as would be printed on the STANDARD, for the reason that the speed of the STANDARD is nearly three times that of the cylinder and it costs only half as much to operate, besides saving the cost of electrotypes and the difference in the time and cost of make-ready; for the same expense the output from the STANDARD would be nearly 50% greater than that of the cylinder press. No automatic job press has the wide range and great scope of the STANDARD.

Another decided advantage of the STANDARD is the fact that during comparatively dull seasons the STANDARD maintains the efficiency of the pressroom with a limited working force. One man on the STANDARD can do the work of three or four job presses, and much of the work usually run upon a cylinder press can also be done on the STANDARD by dividing the forms so as to bring them within its size limits.

You could undoubtedly use two of these presses, one with the Double-Feeding Attachment and the other without.

Most of our sales have been made here in the East, and among the best houses. We had confined the territory because of the limited number of presses that were being turned out at the factory, and up to within the last few months we had done no advertising in the trade papers. Many of our customers have increased their original equipment so that in 15 of the plants 35 presses are in operation.

The price of the STANDARD is $1,750 (Double-Feeding Attachment $150 extra). The terms are $250 cash, when press is erected, the balance being covered by monthly notes of $100 each, bearing interest at 6%. A discount of 5% is allowed on the entire purchase price if the balance is paid within thirty days after installation.

With the foregoing facts before you we trust you will be able to decide the matter of purchasing, and we will appreciate it if you will drop us a line.

Yours very truly,

WOOD & NATHAN COMPANY.

Composition—Hand Vs. Machine

By Edward U. Roper

THE controversy between machine and hand composition cost waxes warmer, and as it gets warmer it gets more turbulent, and of necessity less and less clear.

This is perfectly natural from the condition of the minds of the contestants.

The men particularly and specifically interested in hand work are more anxious to prove the men interested in machine work wrong than they are to prove themselves right, or find out which is best for the printer — the man who pays the bill in either case.

The same desire and the same methods govern the machine men, only, I think, they are not so sure of their position, for they will not assist in an intelligent, systematic effort to find out what their composition does cost — either linotype or monotype.

The three classes are all wrong, and getting worse mixed every day, in that they do not know or seem to care what constitutes composition.

And further, they do not recognize the difference in the term in the different shops.

Does composition include all the work that is done on the type, and its cost, from the time it enters the compositors' hands until it is turned over to the pressman; or does it go farther and include the time of registrar and proofreader for final O. K., or does it stop somewhere in between?

Does it include the wear and tear caused by the press room on long runs and bad paper?

Does it include the damage done by hammer and quoin key in smashing it down by careless pressmen?

Does it include the additional expense caused in distributing sticky, dirty type, because it has not been properly washed, and because the pressman has opened up the form and filled the space with gasoline, or stale beer, or some other sticky substance, so that letters will not pull up and spoil his work, or that the price of electrotypes may be saved?

Does it include the time spent in looking for sorts, or cutting leads and rules to special measure, because the artist, salesman, employer or customer orders a border made to the one-sixteenth of an inch, and the margin inside the same way; not one of the four knowing that type is made to one-sixth of an inch, and that these terms cease to be analogous at less than the quarter of an inch.

In fact, what is composition?

It is, and should be, the same in all cases. In the days of hand composition, before the machine was thought of, and before there was any controversy except between the employer and the compositor, there was a definite understanding as to what the term meant; it was so well understood that I see no reason why it should be changed, and if that definition were used now, and the debate started over, it would certainly be possible to arrive at a definite cost of machine and hand composition, and an understanding of the merits of each, and a putting of them in their proper place.

Composition is the putting in type of a piece of copy exactly in accordance with instructions received.

Any changes from this must come under some other heading.

If the author makes changes the office makes a charge for the time, and it goes into the hours sold. This is as it should be, and constitutes a source of revenue.

If the office makes changes, it should be charged to the office and not to the composing room. This is not done, and constitutes one of the largest sources of expense in the composing room.

I would like to cite instances. I would like to show some of the copy I have received, and the instructions with it. Show the first proof that is given to the foreman; the second, and sometimes the third; the first proof to the proofreader, and the efforts that have been made to get a proof without a bad letter. And then a moving picture of the salesman coming back with that proof to the foreman, and the changes and the time that goes into I know not what, except that it is the indefinite, nondescript term "non-chargeable" that is carried by the chargeables, and, as I have said before, is lost in the payroll of the composing room. So can be put over as only a matter of debate, as it is certainly past understanding why these charges should continue so persistently.

Before I am through I hope to show how these various problems may be solved, and how they should be treated in estimating and price fixing.

They can, to a certain extent, be eliminated, but never entirely; though they can be placed in the cost sheet where they belong, and the responsibility for them fixed.

When you realize that the customer has told the salesman what he wanted in a rather hazy, indefinite sort of way, while they were talking about the ball game, their next fishing trip, or the one that is past; that the salesman has given his instructions to the office in a decidedly offhand manner, and then as he remembered it; and that the order has gone to the foreman by the order clerk, who did or did not put down what he remembered, and that the foreman has gone to the compositor with the definite (?) instructions for the work that may have been given to him orally (or may not).

Is it any wonder that you have changes in size, style, and copy, that cannot be laid to anybody's door, and that the charge must go into the overhead. Have your system show you what these items are, and charge them as such, and you will have no trouble in knowing and proving what composition costs per hour. They do not belong in composition cost any more than freight, or rent, or insurance, or bad accounts.

I want to show next time how this can be found by the thousand ems, and how it may be used for estimating and charging.

✣ ✣ ✣

The Forty-Ninth Annual Convention of the Illinois Press

ATTENDANCE at the forty-ninth annual convention of the Illinois Press Association at Decatur, Ill., June 3, 4 and 5, was not large, but the meetings, otherwise, were most satisfactory, as were the local entertainments. The early days of June have been more than once proven as not propitious, as to time, for holding editorial gatherings.

This year the papers presented were of a high order of excellence and of much practical value. The people of Decatur, as represented by the officers and members of the Decatur Club, the faculty of the Millikin University, the high school officials and the teachers, as well as the manufacturers whose plants were visited, proved excellent entertainers and attentive hosts.

There was much to show and all were justly proud of their city and its institutions. Without boom or noise, Decatur has grown to be a city of thirty-five thousand people, half of that growth having been within fifteen years. The improvements in all lines have more than kept pace with increase of population.
